Q.1 In composition _____ are called from composing objects to composed objects.

A. Pointers
B. Constructors
C. Destructors
D. Member Functions

Q.2 Which of the following statement is TRUE about a class's Static Member Function?

A. It can access non-static data members.
B. It is used to access static data members only.
C. It can only be called by a particular object of class.
D. It can access constant data members of the class.

Q.3 While implementing _____ in OOP paradigm, objects can exist independently.

A. Aggregation
B. Inheritance
C. Composition
D. Polymorphism

Q.4 Which of these violates encapsulation in object-oriented programming?

A. Constructors
B. Friend functions
C. Destructors
D. Virtual functions

Q.5 Which keyword is used in the function header to define an overloaded operator?

A. new
B. overload
C. operator
D. function

Q.6 What is the arity of a binary operator +?

A. 1
B. 0
C. 2
D. Unlimited

Q.7 Student *ptr = new Student("Ali"); is an example of _____.

A. Dynamic memory allocation
B. Destructor
C. Static memory allocation
D. Constructor

Q.8 Memory is allocated to non-static members only, when _____.

A. Object is created
B. Class is created
C. Object is destructed
D. Program is compiled

Q.9 What does return *this; do in an overloaded assignment operator?

A. Returns a temporary object
B. Returns a reference to the current object
C. Terminates the function
D. Returns a pointer

Q.10 Which operator overload is necessary to support c3 += 0.087; in Complex?

A. operator =(Complex&)
B. operator +(double&, Complex&)
C. operator +=(double&)
D. operator +(Complex&, double&)

Q.11 Whole Part Structure is also called _____

A. Association
B. Specialization
C. Aggregation
D. Generalization

Q.12 _____ is concerned with decomposing a system into interacting sub-systems.

A. Control Modeling
B. System Structuring
C. Modular Decomposition
D. Work Breakdown Structure

Q.13 _____ architectural model is widely used in mainframe application.

A. Layered Model
B. Repository Model
C. Client-Server Model
D. Filter Model

Q.14 _____ has become a standard notation for object oriented system modeling.

A. C++
B. UML
C. OCL (object Constraint Language)
D. Java

Q.15 Aynchronous messages :

A. are shown by dotted line
B. occurs in multi-threaded applications
C. are implemented as operation call
D. These block caller before response

Q.16 Performance, Security and maintainability are the types of _____ requirements.

A. Business
B. Functional
C. Domain
D. Non-Functional

Q.17 A useful technique for evaluating the overall complexity of a proposed component's _____ .
architecture is to look at the

A. flow dependencies and sharing dependencies
B. size and cost
C. number and size of components
D. function points

Q.18 Maintainability and Portability issues are discussed in _____.

A. Code View
B. Physical View
C. Functional View
D. Logical View

Q.19 Defining the services of an object means:

A. Whome it knows?
B. What it knows?
C. Who knows it?
D. What it does?

Q.20 Selecting Objects (in a domain) include:

A. Only Actors
B. Only Actors and Places
C. Actors, Participants and Places
D. Only Participants
