Q.1 Constant values used in the program are called_____.

A. Real Numbers

B. Constant Numbers

C. Positive Numbers

D. Magic Numbers

Q.2 If a function changes the value of some other accessible data object along with returning its value after execution, is called _____.

A. Short Circuiting

B. Abstraction

C. Side Effects

D. Modularity

Q.3 Identify the TRUE statement:

A. Size of data types vary from one machine to other

B. Portability effects security

C. Size of control structures vary from one machine to other

D. To write portable code, use vendor specific language extensions as much as possible

---

Q.4 C++ header files should have the extension---- Source files can have the extension ----

A. All of the given

B. .c and .h

C. .h and .cpp

D. .cc and .h

Q.5 which of the following statements are same in output:

1) a = a + 2

2) a = a / 4

3) a = a * 2

A. (1) and (2) only

B. (2) and (3) only

C. (1) and (3) only

D. All procduce the same result

Q.6 The size of _____ plays a significant role in making the program easy or difficult to understand.

A. function

B. data type

C. object

D. none of the above

Q.7 STL Stnads for ----------

A. Standard Type Link

B. Standard Type Link

C. Standard Tempo Line

D. Standard Template Library

Q.8 One of the main reasons to make functions is _____.

A. Reliability

B. Reusability

C. Effeciency

D. Maintainability

Q.9 if a major rework is required to translate a program written for one environment to another, it means code is not or less _____

A. plateform dependent

B. Secure

C. Bug Free

D. Portable

Q.10 In case of header files, construction is to avoid ------ errors. The construction should appear in the top of the file (before the file header).

A. All of the given

B. compilation

C. run time

D. logical
