Q.1 Which hypervisor type is commonly used for personal desktop virtualization and software testing?

A. Type 4
B. Type 2
C. Type 1
D. Type 3

Q.2 Which type of hypervisor is more suitable for non-resource-intensive applications where high performance is not a critical requirement?

A. Type 1
B. Type 2
C. Type 4
D. Type 3

Q.3 What is the primary advantage of a Hardware-Defined Data Center (HDDC)?

A. Simplified management and reduced complexity
B. Higher performance and lower latency
C. Enhanced scalability and flexibility
D. Lower hardware costs

Q.4 What is the benefit of using virtual hard disks in a virtual data center?

A. Reduced hardware costs and better resource utilization
B. Increased physical storage capacity and faster data access
C. Enhanced data security and encryption capabilities
D. Improved network connectivity and lower latency

Q.5 Which type of virtualization allows multiple virtual servers to run on a single physical server, sharing the underlying hardware resources?

A. Application virtualization
B. Server virtualization
C. Network virtualization
D. Storage virtualization

Q.6 Which technology companies are known for operating massive data centers to support their services?

A. Amazon and Netflix
B. Microsoft and Apple
C. Facebook and Google
D. Twitter and LinkedIn

Q.7 Which technology provides the solution of Application level virtualization?

A. Microsoft Azure
B. Microsoft App-v
C. Google Cloud Platform
D. Docker

Q.8 What is the first step in creating a virtual machine (VM) using a Type 2 Hypervisor?

A. Install the Type 2 Hypervisor on the host operating system
B. Allocate resources such as CPU, memory, and storage to the VM
C. Configure network settings for the VM
D. Create a virtual hard disk for the VM

Q.9 Which feature allows multiple virtual machines to access a shared storage system concurrently while maintaining data integrity?

A. Storage area network (SAN)

B. Distributed file system

C. Network-attached storage (NAS)

D. Storage virtualization

Q.10 What is the primary advantage of a Software-Defined Data Center (SDDC)?

A. Faster data processing speed.

B. Improved security

C. Reduced hardware costs.

D. Enhanced scalability and flexibility
