Q.1 _____ layer converts frames coming from Data Link layer into bits and sends them on the transmission medium.

A. Transport

B. Network

C. Physical

D. Application

Q.2 If a digital transmission system transmits 10 bits within a half-second interval, the system's bit-rate will be _____.

A. 20

B. 25

C. 10

D. 15

Q.3 In transmission impairments_____occurs from a signal with a high energy with a very short period of time.

A. Cross talk

B. Impulse noise

C. Induced noise

D. Thermal noise

Q.4 _____ is a network device which operates on the network layer in the TCP/IP protocol suite.

A. Hub

B. Gateway

C. Switch

D. Router

Q.5 _____ is the number of bits sent in 1 second.

A. Bit rate

B. Period

C. Frequency

D. Latency

Q.6 The layer of TCP/IP protocol suite which is on the top is known as _____ layer.

A. Transport

B. Application

C. Data link

D. Network

Q.7 Analog signal can take _____ levels of intensity over time.

A. Logical
B. Digital
C. Discrete
D. Infinite

Q.8 Two PCs and one printer are connected in a network within a room; it is an example of _____.

A. LAN
B. SONET
C. WAN
D. MAN

Q.9 Multipoint channel can be shared in _____ manner.

A. A lot of ways
B. Spatial
C. Temporal
D. Both spatial and temporal

Q.10 Which of the following best illustrates the concept of decapsulation in internet protocol layering?

A. Encrypting a sensitive email to send it securely.
B. Unzipping a compressed file on your computer to access its contents.
C. Converting a digital image into sound waves for transmission.
D. Writing a message on a piece of paper before placing it in an envelope.

VU TOOLKIT
