Q.1 If a digital transmission system transmits 10 bits within a half-second interval, the system's bit-rate will be _____.

A. 25
B. 10
C. 15
D. 20

Q.2 Two PCs and one printer are connected in a network within a room; it is an example of _____.

A. WAN
B. LAN
C. MAN
D. SONET

Q.3 The bandwidth-delay product defines the number of bits that can fill the_____.

A. Network
B. Switch
C. Link
D. Hub

Q.4 In layered architecture of network, logical connection between layers means:

A. They are connected in peers
B. They can perform identical opposite tasks
C. They have identical names
D. They communicate directly

Q.5 _____ is correct formula to determine the total number of ports needed for one system connected in a mesh network.

A. N+1
B. N(N+1)
C. NxN
D. N-1

Q.6 _____ is the encoded message sent from one station to another when they are connected securely.

A. Cryptogram
B. Cipher Text
C. Secure message
D. Encrypted data

Q.7 In a ___topology, each computer or station is linked to others in a circular arrangement.

A. Bus

B. Mesh

C. Star

D. Ring

Q.8 Multipoint channel can be shared in _____ manner.

A. A lot of ways

B. Temporal

C. Spatial

D. Both spatial and temporal

Q.9 Which of the following best illustrates the concept of decapsulation in internet protocol layering?

A. Writing a message on a piece of paper before placing it in an envelope.

B. Encrypting a sensitive email to send it securely.

C. Converting a digital image into sound waves for transmission.

D. Unzipping a compressed file on your computer to access its contents.

Q.10 Which communication mode allows data transmission in one direction only, without any feedback or response from the receiving device?

A. Simplex

B. Half Duplex

C. Full Duplex

D. Bidirectional
