Q.1 A digital signal is expressed through _____ values.

A. Discrete
B. Periodic
C. Digital
D. Analog

Q.2 In a bidirectional communication, each layer performs two _____ tasks in each direction.

A. Similar
B. Identical
C. Complimentary
D. Opposite

Q.3 In transmission impairments _____noise occurs from the random motion of electrons in a wire.

A. Cross talk
B. Impulse noise
C. Thermal noise
D. Induced noise

Q.4 A frequency is called ------, if the rate of change in sine wave is instantaneous.

A. Zero frequency
B. Frequency hertz
C. Infinite frequency
D. Bandwidth

Q.5 Datagram (packet) travels across ____ in a network.

A. Modem
B. Hub
C. Switches
D. Routers

Q.6 According to the Fourier analysis, frequencies obtained after decomposition of digital signals are _____.

A. Homogeneous
B. Discrete
C. Bit length
D. Continuous

Q.7 Mr. Asif while sitting in Lahore is talking with his friend in Dubai through Skype is an example of _____.

A. Wide Area Network

B. Metropolitan Area Network

C. Local Area Network

D. Home Based Network

Q.8 _____ layer is responsible for creating datagrams.

A. Session

B. Network

C. Physical

D. Data Link

Q.9 Which communication mode allows data transmission in one direction only, without any feedback or response from the receiving device?

A. Half Duplex

B. Simplex

C. Bidirectional

D. Full Duplex

Q.10 If 16 bits are transmitted within a one-second interval, the bitrate for that signal is _____.

A. 16

B. 64

C. 32

D. 8
