Q.1 One problem with Gouraud shading is that the ---------- intensities can never be greater than the intensities at the edges.

A. Polygon

B. Triangle

C. Square

D. Rectangle

Q.2 The Phong reflection model simplifies light-matter interactions essentially into 4 vectors and a number of constants. Each piece of the Phong model uses different vectors and constants. Which portion does NOT include taking a dot product?

A. Diffused specular

B. Diffuse

C. Specular

D. Ambient

Q.3 An algorithm that clips a polygon must deal with many ---------- cases. The case is particularly note worthy in that the concave polygon is clipped into ---------- isolate polygons.

A. Similar, two

B. Different, two

C. Similar, three

D. Different, three

Q.4 The attenuation formula is f =----------, where C, L and Q are the constand, linear and quadratic attenuation factors and d is the distance between the vertex being lit and the light source.

A. 1/(C + Ld + Qd2)

B. 1/(C + Ld + Qd)

C. 1/(Cd + Ld + Qd2)

D. 1/(C + L +d + Qd2)

Q.5 The Phong reflection model simplifies light-matter interactions essentially into 4 vectors and a number of constants. Which piece of the Phong model is responsible for giving spheres their bright white spots?

A. Specular

B. Ambient

C. Diffuse

D. Ambient and Diffuse

Q.6 Light in the real worlds loses its --------- as the inverse square of the distance.

A. Frequency

B. Colors

C. Intensity

D. Speed

Q.7 The reflected light wave turns out to be a ---------- case since light is reflected at the same angle as the incident wave when the surface is smooth and uniform, as we'll assume for now.

A. Unknown

B. Abnormal

C. Complex

D. Simple

Q.8 Projection can be defined as a mapping of point P(x, y, z) onto its image P`(x`, y`, z`) in the ----------, which constitutes the display surface. The mapping is determined by a projection line called the projector that passes through P and intersects the ----------.

A. Three Coordinate Planes

B. View plane

C. Mapping plane

D. Two Coordinate Planes

Q.9 _____ lights should be avoided because they are not for real time environment.

A. None of the given

B. Parallel

C. Spot

D. Point

Q.10 There is more penetration of light in case of _____ surfaces.

A. Conductor (like metals)

B. None of the given

C. Both conductor and nonconductor

D. Nonconductor (like dielectrics)
