Q.1 ____ do not restrict themselves to something lying wholly in either set A or in set not-A.

A. Classical sets

B. Boolean sets

C. Fuzzy sets

D. Complex sets

Q.2 _____ is the process of formulating the mapping from a given input to an output using Fuzzy logic.

A. FIS

B. FIZ

C. FOS

D. None of the given

Q.3 _____ problems usually have well-defined steps.

A. Refined

B. Defined

C. Complex

D. Simple

Q.4 In Candidate-Elimination algorithm version space is represented by two sets named:

A. H and S

B. G and F

C. G and S

D. S and F

Q.5 The Candidate-Elimination algorithm represents the _____

A. Elimination Space

B. Solution Space

C. None of the given

D. Version Space

Q.6 Mamdani's method was among the first _____ built using fuzzy set theory.

A. Control Systems

B. Expert Systems

C. Decision analysis Systems

D. Intelligent System

Q.7 Hypothesis space uses the _____ of the attributes.

A. Negation (NOR)

B. None of the given

C. Conjunctions (AND)

D. Disjunctions (OR)

Q.8 Usually a _____ graph is chosen to represent a fuzzy set.

A. square

B. Circular

C. Triangular

D. Conical

Q.9 Choose the field(s) in which Fuzzy inference systems have been successfully applied:

A. Data Classification

B. Decision Analysis

C. Automatic Control

D. Automatic Control, Data Classification and Decision Analysis

---

Q.10 If the true _____ of a concept [c(xi)] is 1 or 0 for an instance, then the _____ by our hypothesis [h(xi)] is 1 or 0 as well, respectively.

A. output, input

B. output, output

C. input, input

D. input, output
