Q.1 Consider the following Student table and identify the column which causes that the table is not in first normal form (1NF). Student (Std_ID, Std_Name, Std_CGPA, Std_Hobbies)

A. Std_ID

B. Std_Hobbies

C. Std_Name

D. Std_CGPA

Q.2 Which one among the following is not an advantage of horizontal splitting?

A. Increase I/O Overhead

B. Organize tables for different queries

C. Fast data retrieval

D. Enhance security

Q.3 _____ is applicable in Profitability analysis.

A. Information System (IS)

B. Management Information System (MIS)

C. OLTP

D. Data warehouse

Q.4 One goal of horizontal splitting is spreading rows of a table for exploiting _____.

A. Randomness

B. Parallelism

C. All of the given options

D. Sequentialism

Q.5 In _____ nested-loop join of quadratic time complexity does not hurt the performance

A. OLAP

B. Typical OLTP environments

C. DSS

D. Data warehouse

Q.6 Ad-hoc access of data warehouse means:

A. That could be accessed by any user

B. That have predefined database access pattern

C. That could not be accessed by any user

D. That does not have predefined database access pattern

Q.7 Decision support system (DSS) is a/an _____.

A. Collection of relational database management systems

B. Interactive system which enable decision makers to use databases and solve un-structured problems

C. Decision tree where each node represent a decision

D. Single database of an organization

Q.8 One of the fundamental purpose of de-normalization is to _____ a number of physical tables which ultimately reduce the number of joins to answer a query.

A. Decrease

B. Increase

C. Delete

D. Share

Q.9 In a fully normalized database, too many _____ are required.

A. Values

B. Joins

C. Queries

D. Conditions

Q.10 Data warehouse stores _____.

A. Log files data

B. Operational data

C. Meta data

D. Historical Data
