Q.1 Which type of cipher uses a keyword to encrypt plaintext?

A. Caesar cipher

B. Vigenere cipher

C. Rail fence cipher

D. One-time pad cipher

Q.2 What is the main purpose of password hashing?

A. Protecting passwords from unauthorized access

B. Generating complex passwords

C. Making passwords difficult to remember

D. Storing passwords in plaintext format

Q.3 The reversibility of the Feistel Network allows for:

A. Protection against brute-force attacks

B. Efficient encryption and decryption

C. High-speed data transmission

D. Easy key generation

Q.4 What is the minimum key length required for RSA encryption?

A. 1024 bits

B. 56 bits

C. 128 bits

D. 512 bits

Q.5 What is the purpose of cryptography?

A. To provide a way to communicate without encryption

B. To provide entertainment to people

C. To provide secure communications in the presence of an adversary/attacker

D. To provide a way to store data without encryption

Q.6 What does RBAC stand for?

A. Resource-Based Access Control

B. Role-Based Authorization Control

C. Role-Based Access Control

D. Restricted-Budget Access Control

Q.7 AAA stands for:

A. Access and Accounting Audit

B. Authentication, Authorization, and Accounting

C. Authentication, Audit, and Access control

D. Access and Authorization Audit

Q.8 Which type of cipher replaces each letter with another letter based on a fixed shift value?

A. Caesar cipher

B. Vigenere cipher

C. Rail fence cipher

D. One-time pad cipher

Q.9 Which of the following processes verifiy the identity of a user?

A. Access control

B. Authentication

C. Accounting

D. Authorization

Q.10 Which type of encryption uses the same key for both encryption and decryption?

A. Steganography

B. Hashing

C. Symmetric encryption

D. Asymmetric encryption
