

CS306 MCQs - Part 3 (Topics 1-20, MCQs 101-150)

Question No: 1 (Marks: 1)

Which term best completes the following statement: '_____ for CS306 introduction to python'?

- A. for
- B. introduction
- C. python

D. Notes

Explanation:

The correct answer, 'Notes', is directly supported by the provided text: 'Notes for CS306 introduction to python'.

Question No: 2 (Marks: 1)

Which term best completes the following statement: 'Using Context Manager (with Statement) Python provides a convenient way to handle file operations using a context _____'?

- A. readline
- B. noor

C. Manager

- D. and

Explanation:

The correct answer, 'Manager', is directly supported by the provided text: 'Using Context Manager (with Statement) Python provides a convenient way to handle file operations using a context manager.'.

Question No: 3 (Marks: 1)

Which term best completes the following statement: 'The math Module Common Functions: _____
math.sqrt(x) Description Square root math.pow(x, y) x raised to the power y math.floor(x) Round down
math.ceil(x) Round up math.pi Value of π Example: import math print(math.floor(4.7)) # Output: 4 ■ 5.'?

A. Function

- B. functions
- C. any
- D. usage

Explanation:

The correct answer, 'Function', is directly supported by the provided text: 'The math Module Common Functions: Function math.sqrt(x) Description Square root math.pow(x, y) x raised to the power y math.floor(x) Round down math.ceil(x) Round up math.pi Value of π Example: import math print(math.floor(4.7)) # Output: 4 ■ 5.'

Question No: 4 (Marks: 1)

Which term best completes the following statement: 'It is used to initialize attributes. Example: class Student: def __init__(self, name, roll_no): self.name = name self.roll_no = roll_no _____ Objects: s1 = Student("Ali", 123) s2 = Student("Sara", 456) Accessing Attributes: print(s1.name) print(s2.roll_no) # Output: Ali # Output: 456 ■ 4.'

- A. instances
- B. refers

C. Creating

- D. representation

Explanation:

The correct answer, 'Creating', is directly supported by the provided text: 'It is used to initialize attributes. Example: class Student: def __init__(self, name, roll_no): self.name = name self.roll_no = roll_no Creating Objects: s1 = Student("Ali", 123) s2 = Student("Sara", 456) Accessing Attributes: print(s1.name) print(s2.roll_no) # Output: Ali # Output: 456 ■ 4.'

Question No: 5 (Marks: 1)

Which term best completes the following statement: 'Introduction to Python _____ In Python, a library is a collection of pre-written code that provides functionality for various tasks like file I/O, math operations, system operations, and web development.'

A. Libraries

- B. system
- C. understand
- D. faster

Explanation:

The correct answer, 'Libraries', is directly supported by the provided text: 'Introduction to Python Libraries In Python, a library is a collection of pre-written code that provides functionality for various tasks like file I/O, math operations, system operations, and web development.'

Question No: 6 (Marks: 1)

Which term best completes the following statement: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes _____ CS306 introduction to python Noor institute of technology'

- A. python

B. For

- C. institute

D. noor

Explanation:

The correct answer, 'For', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'.

Question No: 7 (Marks: 1)

Which term best completes the following statement: 'o _____ child classes inherit from a single parent. ■ 6.'?

A. classes

B. Multiple

C. check

D. can

Explanation:

The correct answer, 'Multiple', is directly supported by the provided text: 'o Multiple child classes inherit from a single parent. ■ 6.'.

Question No: 8 (Marks: 1)

Which term best completes the following statement: '_____ for CS306 introduction to python'?

A. python

B. Notes

C. cs306

D. for

Explanation:

The correct answer, 'Notes', is directly supported by the provided text: 'Notes for CS306 introduction to python'.

Question No: 9 (Marks: 1)

Which term best completes the following statement: 'Polymorphism Polymorphism allows different classes to define methods with the same name, but possibly different behaviors. Example: class Bird: def fly(self): print("Bird can fly") class Airplane: def fly(self): print("Airplane flies in the sky") # Polymorphism using function def fly_test(entity): entity.fly() b = Bird() a = Airplane() fly_test(b) fly_test(a) # _____: Bird can fly # Output: Airplane flies in the sky ■ 8.'?

A. Output

B. example

C. super

D. allows

Explanation:

The correct answer, 'Output', is directly supported by the provided text: 'Polymorphism Polymorphism allows different classes to define methods with the same name, but possibly different behaviors. Example: class Bird: def fly(self): print("Bird can fly") class Airplane: def fly(self): print("Airplane flies in the sky") # Polymorphism using function def fly_test(entity): entity.fly() b = Bird() a = Airplane() fly_test(b) fly_test(a) # Output: Bird can fly # Output: Airplane flies in the sky ■ 8.'

Question No: 10 (Marks: 1)

Which term best completes the following statement: 'File Handling with Binary Files In addition to handling text _____s, Python also supports binary file operations.'?

- A. properly
- B. will
- C. mode

D. File

Explanation:

The correct answer, 'File', is directly supported by the provided text: 'File Handling with Binary Files In addition to handling text files, Python also supports binary file operations.'

Question No: 11 (Marks: 1)

Which term best completes the following statement: 'Dynamic Attributes Attributes can be added to an object at runtime. d.age = 5 print(d.age) # Output: 5 However, this is not a common practice and may lead to inconsistent object structures. Notes for CS306 introduction to _____ Noor institute of technology ■ 8.'?

- A. concepts
- B. oop

C. Python

- D. each

Explanation:

The correct answer, 'Python', is directly supported by the provided text: 'Dynamic Attributes Attributes can be added to an object at runtime. d.age = 5 print(d.age) # Output: 5 However, this is not a common practice and may lead to inconsistent object structures. Notes for CS306 introduction to python Noor institute of technology ■ 8.'

Question No: 12 (Marks: 1)

Which term best completes the following statement: 'Libraries help avoid writing repetitive code and make programming faster and more efficient. _____ types of libraries:'?

- A. efficient
- B. system

C. Two

- D. explore

Explanation:

The correct answer, 'Two', is directly supported by the provided text: 'Libraries help avoid writing repetitive code and make programming faster and more efficient. Two types of libraries:'.

Question No: 13 (Marks: 1)

Which term best completes the following statement: 'Closing _____ It's crucial to always close a file after performing operations to free up system resources. Syntax: file.close() ■■■ 6.'?

- A. opening
- B. exclusive

C. Files

- D. after

Explanation:

The correct answer, 'Files', is directly supported by the provided text: 'Closing Files It's crucial to always close a file after performing operations to free up system resources. Syntax: file.close() ■■■ 6.'.

Question No: 14 (Marks: 1)

Which term best completes the following statement: 'The __str__() Method The __str__() method is used to define how an object is represented as a string. Example: class Book: def __init__(self, title, author): self.title = title self.author = author def __str__(self): return f"{self.title} by {self.author}" Usage: b = Book("Python 101", "John") print(b) # _____: Python 101 by John ■ 9.'?

- A. all
- B. hello

C. Output

- D. __init__

Explanation:

The correct answer, 'Output', is directly supported by the provided text: 'The __str__() Method The __str__() method is used to define how an object is represented as a string. Example: class Book: def __init__(self, title, author): self.title = title self.author = author def __str__(self): return f"{self.title} by {self.author}" Usage: b = Book("Python 101", "John") print(b) # Output: Python 101 by John ■ 9.'.

Question No: 15 (Marks: 1)

Which term best completes the following statement: '■ Lecture Objectives •••• Understand what libraries are in Python. _____ how to import and use external libraries in Python. Explore some commonly used standard libraries in Python. Learn about third-party libraries and how to install them using pip. ■ 1.'?

- A. functionality

B. Learn

- C. tasks

D. python

Explanation:

The correct answer, 'Learn', is directly supported by the provided text: '■ Lecture Objectives •••• Understand what libraries are in Python. Learn how to import and use external libraries in Python. Explore some commonly used standard libraries in Python. Learn about third-party libraries and how to install them using pip. ■ 1.'

Question No: 16 (Marks: 1)

Which term best completes the following statement: 'Defining Classes and Objects Classes A class is a blueprint _____ creating objects.'?

A. For

- B. output
- C. name
- D. person2

Explanation:

The correct answer, 'For', is directly supported by the provided text: 'Defining Classes and Objects Classes A class is a blueprint for creating objects.'

Question No: 17 (Marks: 1)

Which term best completes the following statement: '_____ and Objects in Python Creating a Class: class Student: pass This defines an empty class named Student. Creating an Object: s1 = Student() Here, s1 is an object (or instance) of the Student class. ■■ 3.'?

A. Classes

- B. called
- C. paradigm
- D. subtract

Explanation:

The correct answer, 'Classes', is directly supported by the provided text: 'Classes and Objects in Python Creating a Class: class Student: pass This defines an empty class named Student. Creating an Object: s1 = Student() Here, s1 is an object (or instance) of the Student class. ■■ 3.'

Question No: 18 (Marks: 1)

Which term best completes the following statement: 'Example: Simple Inheritance class _____: def speak(self): print("Animal speaks") class Dog(Animal): pass d = Dog() d.speak() # Output: Animal speaks Here, Dog inherits the speak() method from Animal.'?

A. Animal

- B. here
- C. better

D. output

Explanation:

The correct answer, 'Animal', is directly supported by the provided text: 'Example: Simple Inheritance
class Animal: def speak(self): print("Animal speaks") class Dog(Animal): pass d = Dog() d.speak() #
Output: Animal speaks Here, Dog inherits the speak() method from Animal.'

Question No: 19 (Marks: 1)

Which term best completes the following statement: 'Defining Classes and Objects Classes A class is a blueprint for creating _____'?

A. concepts

B. implement

C. Objects

D. defines

Explanation:

The correct answer, 'Objects', is directly supported by the provided text: 'Defining Classes and Objects
Classes A class is a blueprint for creating objects.'

Question No: 20 (Marks: 1)

Which term best completes the following statement: 'Introduction to File Handling File handling in Python allows you to read from and write to _____s'?

A. File

B. returns

C. etc

D. exists

Explanation:

The correct answer, 'File', is directly supported by the provided text: 'Introduction to File Handling File
handling in Python allows you to read from and write to files.'

Question No: 21 (Marks: 1)

Which term best completes the following statement: 'The __init__() Method (_____) The __init__() method is automatically called when a new object is created.'?

A. this

B. dog

C. Constructor

D. create

Explanation:

The correct answer, 'Constructor', is directly supported by the provided text: 'The `__init__()` Method (Constructor) The `__init__()` method is automatically called when a new object is created.'

Question No: 22 (Marks: 1)

Which term best completes the following statement: 'It defines the attributes and methods common to all objects of that class. _____ to Define a Class: class ClassName: # constructor (`__init__` method) def `__init__`(self, attribute1, attribute2): self.attribute1 = attribute1 self.attribute2 = attribute2 # method def method_name(self): pass Example: class Person: def `__init__`(self, name, age): self.name = name self.age = age def greet(self): print(f"Hello, my name is {self.name} and I am {self.age} years old.") Notes for CS306 introduction to python Noor institute of technology Objects An object is an instance of a class.'

- A. creating
- B. python
- C. object

D. Syntax

Explanation:

The correct answer, 'Syntax', is directly supported by the provided text: 'It defines the attributes and methods common to all objects of that class. Syntax to Define a Class: class ClassName: # constructor (`__init__` method) def `__init__`(self, attribute1, attribute2): self.attribute1 = attribute1 self.attribute2 = attribute2 # method def method_name(self): pass Example: class Person: def `__init__`(self, name, age): self.name = name self.age = age def greet(self): print(f"Hello, my name is {self.name} and I am {self.age} years old.") Notes for CS306 introduction to python Noor institute of technology Objects An object is an instance of a class.'

Question No: 23 (Marks: 1)

Which term best completes the following statement: 'Libraries help avoid writing repetitive code and make programming faster and more efficient. Two types of _____:'?

- A. import

B. Libraries

- C. development
- D. more

Explanation:

The correct answer, 'Libraries', is directly supported by the provided text: 'Libraries help avoid writing repetitive code and make programming faster and more efficient. Two types of libraries:'.

Question No: 24 (Marks: 1)

Which term best completes the following statement: 'o Square root of 100 o Value of pi o Result of `math.pow(2, 5)` _____ for CS306 introduction to python Noor institute of technology'?

A. Notes

- B. for
- C. value
- D. pow

Explanation:

The correct answer, 'Notes', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'.

Question No: 25 (Marks: 1)

Which term best completes the following statement: 'Inheritance in Python Inheritance allows a class (child/subclass) to inherit attributes and methods from another class (parent/superclass). Benefits of Inheritance: • • • Code reusability _____ organization of code Supports extensibility Syntax: class Parent: # parent class code class Child(Parent): Notes for CS306 introduction to python Noor institute of technology # child class code ■ 2.'?

A. Better

- B. class
- C. allows
- D. code

Explanation:

The correct answer, 'Better', is directly supported by the provided text: 'Inheritance in Python Inheritance allows a class (child/subclass) to inherit attributes and methods from another class (parent/superclass). Benefits of Inheritance: • • • Code reusability Better organization of code Supports extensibility Syntax: class Parent: # parent class code class Child(Parent): Notes for CS306 introduction to python Noor institute of technology # child class code ■ 2.'.

Question No: 26 (Marks: 1)

Which term best completes the following statement: '_____': File Handling with Exception try: with open("marks.txt", "r") as file: data = file.read() print(data) except FileNotFoundError: print("The file was not found.") finally: print("File operation complete.") ■ 9.'?

A. debug

B. Example

- C. else
- D. knowing

Explanation:

The correct answer, 'Example', is directly supported by the provided text: 'Example: File Handling with Exception try: with open("marks.txt", "r") as file: data = file.read() print(data) except FileNotFoundError: print("The file was not found.") finally: print("File operation complete.") ■ 9.'.

Question No: 27 (Marks: 1)

Which term best completes the following statement: 'The math _____ Common Functions: Function
math.sqrt(x) Description Square root math.pow(x, y) x raised to the power y math.floor(x) Round down
math.ceil(x) Round up math.pi Value of π Example: import math print(math.floor(4.7)) # Output: 4 ■ 5.'

A. Module

- B. practice
- C. programs
- D. ceil

Explanation:

The correct answer, 'Module', is directly supported by the provided text: 'The math Module Common Functions: Function math.sqrt(x) Description Square root math.pow(x, y) x raised to the power y math.floor(x) Round down math.ceil(x) Round up math.pi Value of π Example: import math print(math.floor(4.7)) # Output: 4 ■ 5.'

Question No: 28 (Marks: 1)

Which term best completes the following statement: 'Importance of Encapsulation • • • Controls access to the internal state of objects. _____ code maintainability and flexibility. Protects object integrity by preventing unintended changes. ■■■ 3.'

- A. conventions
- B. level
- C. state

D. Improves

Explanation:

The correct answer, 'Improves', is directly supported by the provided text: 'Importance of Encapsulation • • • Controls access to the internal state of objects. Improves code maintainability and flexibility. Protects object integrity by preventing unintended changes. ■■■ 3.'

Question No: 29 (Marks: 1)

Which term best completes the following statement: 'Closing _____ It's crucial to always close a file after performing operations to free up system resources. Syntax: file.close() ■■ 6.'

- A. entire

B. Files

- C. interact
- D. text

Explanation:

The correct answer, 'Files', is directly supported by the provided text: 'Closing Files It's crucial to always close a file after performing operations to free up system resources. Syntax: file.close() ■■ 6.'

Question No: 30 (Marks: 1)

Which term best completes the following statement: 'This is essential _____ working with data stored in files like text files, CSVs, and log files.'?

A. For

- B. stored
- C. which
- D. txt

Explanation:

The correct answer, 'For', is directly supported by the provided text: 'This is essential for working with data stored in files like text files, CSVs, and log files.'

Question No: 31 (Marks: 1)

Which term best completes the following statement: '■ Lecture Objectives •••• Understand how to create, open, read, and write files in Python. _____ about different file modes. Use the with statement to handle files safely. Handle file exceptions. ■ 1.'?

A. try

B. Learn

- C. except
- D. multiple

Explanation:

The correct answer, 'Learn', is directly supported by the provided text: '■ Lecture Objectives •••• Understand how to create, open, read, and write files in Python. Learn about different file modes. Use the with statement to handle files safely. Handle file exceptions. ■ 1.'

Question No: 32 (Marks: 1)

Which term best completes the following statement: '_____ dir() Function Lists all functions, classes, and variables defined in a module. import math print(dir(math)) ■ 8.'?

- A. function
- B. example
- C. power

D. Using

Explanation:

The correct answer, 'Using', is directly supported by the provided text: 'Using dir() Function Lists all functions, classes, and variables defined in a module. import math print(dir(math)) ■ 8.'

Question No: 33 (Marks: 1)

Which term best completes the following statement: 'o Square root of 100 o Value of pi o _____ of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'?

A. 100

B. value

C. Result

D. root

Explanation:

The correct answer, 'Result', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'.

Question No: 34 (Marks: 1)

Which term best completes the following statement: 'The isinstance() Function _____ to check if an object belongs to a specific class or its subclass. print(isinstance(d, Dog)) print(isinstance(d, Animal)) # True # True ■ 9.'?

A. vu1234

B. Used

C. aisha

D. different

Explanation:

The correct answer, 'Used', is directly supported by the provided text: 'The isinstance() Function Used to check if an object belongs to a specific class or its subclass. print(isinstance(d, Dog)) print(isinstance(d, Animal)) # True # True ■ 9.'.

Question No: 35 (Marks: 1)

Which term best completes the following statement: 'File Exceptions When handling files, it's important to consider errors such as: ••• The file not existing. Permission errors. File handling exceptions. Python provides exception handling to deal with such issues using try, except, and finally. Example: try: file = open("_____.txt", "r") content = file.read() print(content) except FileNotFoundError: print("The file does not exist!") finally: file.close() Notes for CS306 introduction to python Noor institute of technology ■ 7.'?

A. exists

B. Example

C. txt

D. into

Explanation:

The correct answer, 'Example', is directly supported by the provided text: 'File Exceptions When handling files, it's important to consider errors such as: ••• The file not existing. Permission errors. File handling exceptions. Python provides exception handling to deal with such issues using try, except, and finally. Example: try: file = open("example.txt", "r") content = file.read() print(content) except FileNotFoundError: print("The file does not exist!") finally: file.close() Notes for CS306 introduction to python Noor institute of technology ■ 7.'.

Question No: 36 (Marks: 1)

Which term best completes the following statement: 'Example: Write & Read Student Records Writing: with open("students.txt", "w") as file: file.write("_____, 85\n") file.write("Sara, 92\n") Reading: with open("students.txt", "r") as file: for line in file: print(line.strip()) ■ 9.'?

- A. overwrites
- B. appending

C. Ali

- D. always

Explanation:

The correct answer, 'Ali', is directly supported by the provided text: 'Example: Write & Read Student Records Writing: with open("students.txt", "w") as file: file.write("Ali, 85\n") file.write("Sara, 92\n") Reading: with open("students.txt", "r") as file: for line in file: print(line.strip()) ■ 9.'.

Question No: 37 (Marks: 1)

Which term best completes the following statement: '_____ Methods to a Class You can add multiple methods to perform actions related to the object. Example: class Calculator: def __init__(self, a, b): self.a = a self.b = b def add(self): return self.a + self.b def subtract(self): return self.a - self.b Using Methods: calc = Calculator(10, 5) print(calc.add()) # Output: 15 print(calc.subtract()) # Output: 5 ■ 6.'?

- A. class
- B. pass
- C. how

D. Adding

Explanation:

The correct answer, 'Adding', is directly supported by the provided text: 'Adding Methods to a Class You can add multiple methods to perform actions related to the object. Example: class Calculator: def __init__(self, a, b): self.a = a self.b = b def add(self): return self.a + self.b def subtract(self): return self.a - self.b Using Methods: calc = Calculator(10, 5) print(calc.add()) # Output: 15 print(calc.subtract()) # Output: 5 ■ 6.'.

Question No: 38 (Marks: 1)

Which term best completes the following statement: 'o Square root of _____ o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'?

- A. square

B. 100

- C. python
- D. noor

Explanation:

The correct answer, '100', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'.

Question No: 39 (Marks: 1)

Which term best completes the following statement: 'The isinstance() Function Used to check if an object belongs to a specific class or its subclass. print(isinstance(d, _____)) print(isinstance(d, Animal)) # True # True ■ 9.'?

- A. parent
- B. introduce

C. Dog

- D. method

Explanation:

The correct answer, 'Dog', is directly supported by the provided text: 'The isinstance() Function Used to check if an object belongs to a specific class or its subclass. print(isinstance(d, Dog)) print(isinstance(d, Animal)) # True # True ■ 9.'.

Question No: 40 (Marks: 1)

Which term best completes the following statement: 'It is used to initialize attributes. Example: class Student: def __init__(self, name, roll_no): self.name = name self.roll_no = roll_no Creating _____: s1 = Student("Ali", 123) s2 = Student("Sara", 456) Accessing Attributes: print(s1.name) print(s2.roll_no) # Output: Ali # Output: 456 ■ 4.'?

- A. creating
- B. may
- C. are

D. Objects

Explanation:

The correct answer, 'Objects', is directly supported by the provided text: 'It is used to initialize attributes. Example: class Student: def __init__(self, name, roll_no): self.name = name self.roll_no = roll_no Creating Objects: s1 = Student("Ali", 123) s2 = Student("Sara", 456) Accessing Attributes: print(s1.name) print(s2.roll_no) # Output: Ali # Output: 456 ■ 4.'.

Question No: 41 (Marks: 1)

Which term best completes the following statement: 'Closing _____ It's crucial to always close a file after performing operations to free up system resources. Syntax: file.close() ■■ 6.'?

- A. line
- B. append
- C. performing

D. Files

Explanation:

The correct answer, 'Files', is directly supported by the provided text: 'Closing Files It's crucial to always close a file after performing operations to free up system resources. Syntax: file.close() ■■ 6.'.

Question No: 42 (Marks: 1)

Which term best completes the following statement: '(Inheritance and Polymorphism) ■ Lecture Objectives • • • • Understand the concept of inheritance in Python. Learn how to create subclasses. Explore the use of the super() function. Understand _____ and method overriding. ■ 1.'?

- A. use
- B. organization
- C. simple

D. Polymorphism

Explanation:

The correct answer, 'Polymorphism', is directly supported by the provided text: '(Inheritance and Polymorphism) ■ Lecture Objectives • • • • Understand the concept of inheritance in Python. Learn how to create subclasses. Explore the use of the super() function. Understand polymorphism and method overriding. ■ 1.'.

Question No: 43 (Marks: 1)

Which term best completes the following statement: 'Getter and Setter Methods Used to safely access or modify private attributes. Example: class BankAccount: def __init__(self): self.__balance = 0 def get_balance(self): return self.__balance def set_balance(self, amount): if amount >= 0: self.__balance = amount else: _____("Invalid amount") acc = BankAccount() acc.set_balance(1000) print(acc.get_balance()) # Output: 1000 ■ 8.'?

- A. outside
- B. convention

C. Print

- D. decorator

Explanation:

The correct answer, 'Print', is directly supported by the provided text: 'Getter and Setter Methods Used to safely access or modify private attributes. Example: class BankAccount: def __init__(self): self.__balance = 0 def get_balance(self): return self.__balance def set_balance(self, amount): if amount >= 0: self.__balance = amount else: print("Invalid amount") acc = BankAccount() acc.set_balance(1000) print(acc.get_balance()) # Output: 1000 ■ 8.'.

Question No: 44 (Marks: 1)

Which term best completes the following statement: 'Example: Simple Inheritance class Animal: def speak(self): print("Animal speaks") class Dog(Animal): pass d = Dog() d.speak() # _____: Animal speaks Here, Dog inherits the speak() method from Animal.'?

- A. overriding
- B. speak

C. Output

- D. organization

Explanation:

The correct answer, 'Output', is directly supported by the provided text: 'Example: Simple Inheritance
class Animal: def speak(self): print("Animal speaks") class Dog(Animal): pass d = Dog() d.speak() #
Output: Animal speaks Here, Dog inherits the speak() method from Animal.'

Question No: 45 (Marks: 1)

Which term best completes the following statement: 'Polymorphism Polymorphism allows different classes to define methods with the same name, but possibly different behaviors. Example: class Bird: def fly(self): print("Bird can fly") class ____: def fly(self): print("Airplane flies in the sky") # Polymorphism using function def fly_test(entity): entity.fly() b = Bird() a = Airplane() fly_test(b) fly_test(a) # Output: Bird can fly # Output: Airplane flies in the sky ■ 8.'?

A. inherited

B. Airplane

C. class

D. python

Explanation:

The correct answer, 'Airplane', is directly supported by the provided text: 'Polymorphism Polymorphism allows different classes to define methods with the same name, but possibly different behaviors. Example: class Bird: def fly(self): print("Bird can fly") class Airplane: def fly(self): print("Airplane flies in the sky") # Polymorphism using function def fly_test(entity): entity.fly() b = Bird() a = Airplane() fly_test(b) fly_test(a) # Output: Bird can fly # Output: Airplane flies in the sky ■ 8.'

Question No: 46 (Marks: 1)

Which term best completes the following statement: 'File Handling with Binary Files In addition to _____ text files, Python also supports binary file operations.'?

A. jpg

B. such

C. learned

D. Handling

Explanation:

The correct answer, 'Handling', is directly supported by the provided text: 'File Handling with Binary Files In addition to handling text files, Python also supports binary file operations.'

Question No: 47 (Marks: 1)

Which term best completes the following statement: 'Summary •••• Inheritance allows reuse of code from parent _____es. Method Overriding lets you modify inherited behavior. The super() function accesses methods from the parent class. Polymorphism enables different classes to use the same method names with different implementations. Python supports multiple types of inheritance, including multiple and multilevel. ■ Homework / Practice'?

A. gardening

B. Class

C. bird

D. that

Explanation:

The correct answer, 'Class', is directly supported by the provided text: 'Summary • • • • • Inheritance allows reuse of code from parent classes. Method Overriding lets you modify inherited behavior. The super() function accesses methods from the parent class. Polymorphism enables different classes to use the same method names with different implementations. Python supports multiple types of inheritance, including multiple and multilevel. ■ Homework / Practice'.

Question No: 48 (Marks: 1)

Which term best completes the following statement: 'Summary • • • • • Python provides open() for file handling with multiple modes (r, w, a, etc.). Always close the file or use with to do it automatically. Use exception handling to manage file errors. Files can be read as full text, line-by-line, or into lists. Binary _____ use 'rb' and 'wb' modes. Notes for CS306 introduction to python Noor institute of technology ■ Homework / Practice'?

A. reads

B. Files

C. technology

D. reading

Explanation:

The correct answer, 'Files', is directly supported by the provided text: 'Summary • • • • • Python provides open() for file handling with multiple modes (r, w, a, etc.). Always close the file or use with to do it automatically. Use exception handling to manage file errors. Files can be read as full text, line-by-line, or into lists. Binary files use 'rb' and 'wb' modes. Notes for CS306 introduction to python Noor institute of technology ■ Homework / Practice'.

Question No: 49 (Marks: 1)

Which term best completes the following statement: '(Inheritance and Polymorphism) ■ Lecture Objectives • • • • Understand the concept of inheritance in Python. _____ how to create subclasses. Explore the use of the super() function. Understand polymorphism and method overriding. ■ 1.'?

A. institute

B. Learn

C. cs306

D. from

Explanation:

The correct answer, 'Learn', is directly supported by the provided text: '(Inheritance and Polymorphism) ■ Lecture Objectives • • • • Understand the concept of inheritance in Python. Learn how to create subclasses. Explore the use of the super() function. Understand polymorphism and method overriding.

■ 1.'

Question No: 50 (Marks: 1)

Which term best completes the following statement: 'Properties (Alternative to Getters/Setters) Python provides a built-in @property decorator. Notes for CS306 introduction to python Noor institute of technology class BankAccount: def __init__(self): self.__balance = 0 @property def balance(self): return self.__balance @balance.setter def balance(self, amount): if amount >= 0: self.__balance = amount else: print("_____ amount") acc = BankAccount() acc.balance = 500 print(acc.balance) # Output: 500 ■ 9.'?

A. 500

B. Invalid

C. usman

D. 1000

Explanation:

The correct answer, 'Invalid', is directly supported by the provided text: 'Properties (Alternative to Getters/Setters) Python provides a built-in @property decorator. Notes for CS306 introduction to python Noor institute of technology class BankAccount: def __init__(self): self.__balance = 0 @property def balance(self): return self.__balance @balance.setter def balance(self, amount): if amount >= 0: self.__balance = amount else: print("Invalid amount") acc = BankAccount() acc.balance = 500 print(acc.balance) # Output: 500 ■ 9.'
