Question:

Set of prime numbers is finite.

Options:

A. False

B. True

Question:

To prove by mathematical induction for

1+2+3+…….+n=(n)(n+1)/2 for all positive integers, the basis step is _____.

Options:

A. 1+2+3+……..+k=(k+1)(k+2)/2

B. 1+2+3+……..+k=(k)(k+1)/2

C. 1=(1)(1+1)/2

D. None of the above

Question:

The sum of two odd integers is ....

Options:

A. odd

B. even

Question:

The last step of describing algorithms formally is?

Options:

A. The output variable names.

B. An end statement.

C. The name of the algorithm.

D. The input variable names.

Question:

If n is an odd integer then '3n+2' is ……

Options:

A. odd

B. either even or odd

C. even

D. neither even nor odd

Question:

The predicate describing the final state is called _____.

Options:

A. None

B. pre-condition of the algorithm

C. post-condition of the algorithm

D. Input variables

Question:

The contrapositive of "5n + 2 is odd, then n is odd" is ……..

Options:

A. " if n is even then 5n + 2 is not even"

B. " if n is not even then 5n + 2 is even"

C. " if n is not even then 5n + 2 is not even"

D. " if n is even then 5n + 2 is even"

Question:

To prove by mathematical induction for 1+5+9+----------+(4n-3)=n(2n-1) for all positive integers,the basis step is _____.

Options:

A. 1=1(2(1)-1)

PREPARED BY VU SQUAD 0313-7248280
LMS AND PROJECTS HANDLER EXPERT

B. 1=1(2(1)+1)

Question:

A proof by ……is based on the logical equivalence between a statement and its contrapositive.

Options:

A. counter example

B. contradiction

C. contraposition

D. mathematical induction

Question:

In division algorithm 'r' stands for _____.

Options:

A. Remainder

B. Dividend

C. Quotient

D. Divisor

Question:

A box contains 5 different colored light bulbs. Which of the followings is the number of ordered samples of size 3 with replacement ?

Options:

A. 243

B. 8

C. 125

D. 15

Question:

The greatest common divisor (gcd) of two integers a and b is the largest integer that divides both a and b. It is called -------

Options:

A. the Euclidean Algorithm

B. the Division Algorithm

C. Pre-Condition of Algorithm

D. Post-Condition of Algorithm

Question:

Which of the followings is the factorial form of 5 . 4 ?

Options:

A. 5/3!

B. 5/3

C. 5!/3

D. 5!/3!

Question:

A student has 3 optional courses in mathematics and 5 optional courses in physics, how many total choices for him to take one course?

Options:

A. 7

B. 35

C. 9

D. 8

Question:

GCD of (330,156) is?

Options:

A. 8

B. 12

C. 5

D. 6

Question:

P(n, 2)=90, Which of the followings is the value of n ?

Options:

A. 90

B. 10

C. 15

D. 45

LMS AND PROJECTS HANDLER EXPERT

Question:

Sum rule in terms of sets, involves which set operation?

Options:

A. Union

B. Intersection

Question:

The method of loop invariants is used to prove ---------- of a loop with respect to certain pre and post-conditions.

Options:

A. falseness

B. correctness

Question:

If one event can occur in {n_1} ways, a second event can occur in {n_2} ways, a third event can occur in {n_3} ways, how ways all of the events can occur in the order?

Options:

A. {n_1}.{n_2}.{n_3}

B. {n_1} + {n_2} + {n_3}

Question:

If order matters and repetition is not allowed, then which counting method should be used in order to select 'k' elements from a total of 'n' elements?

Options:

PREPARED BY VU SQUAD 0313-7248280
LMS AND PROJECTS HANDLER EXPERT

A. K-Selection

B. K-Sample

C. K-Permutation

D. K-Combination

Question:

An integer n is prime number, if and only if

for all positive integers r and s, if n = rs then --------

Options:

A. r = 1 or s = 1

B. r = s

C. r < 1 or s < 1

D. r > 1 or s > 1

Question:

A non-zero integer d divides an integer n if and only if there exists an integer k such that ----------

Options:

A. n = d / k

B. n = d k

C. n = d - k

D. n = d + k

Question:

For every prime number n, n + 2 is prime.

Which of the following prime number disproves the above statement.

Options:

A. n=11

B. n=7

C. n=5

D. n=3

Question:

The sum of $(6 - 7\sqrt{2})$ and $(6 + 7\sqrt{2})$ is ……..

Options:

A. 12

B. 12-14√2)

C. 2(6+7√2)

D. 2(6-7√2)

Question:

The sum of any rational number and any irrational number is irrational.

Options:

A. False

B. True

Question:

Which of the following is not a rational number?

Options:

A. √7

B. 9/4

C. 2

D. 3.14

Question:

In the proof by contradiction, we lead the assumption to ----- ---------

Options:

A. tautology

B. Absurdity

C. None of these.

D. contingency

Question:

The Product of an even and odd integer is .....

Options:

A. even

B. odd

Question:

In the Direct Proof, we show that if the statement p is true, then the statement q is ----------

Options:

A. opposite to p

B. true

C. not necessarily true.

D. false

PREPARED BY VU SQUAD 0313-7248280

Question:

The predicate which describes the initial state is called the ---------- of the algorithm

Options:

A. post-condition

B. pre-condition
