EDU301 Mid Term Subjective File by Tanveer Online Academy

What is the purpose of lessons planning?

Answer:

The purpose of lesson planning is to provide a roadmap for effective teaching and learning. It helps teachers organize their thoughts, identify learning objectives, select appropriate instructional strategies, and assess student progress. Lesson planning ensures that educational goals are met, promotes student engagement, and allows for adjustments based on student needs and feedback.

Define Cognitive Domain and write its levels?

Answer:

The cognitive domain refers to the mental processes involved in acquiring, organizing, understanding, and applying knowledge.

Levels of Bloom's cognitive domain

- Knowledge
- Comprehension
- Application
- Analysis
- Synthesis
- Evaluation

What is observational learning?

Answer:

Observational learning is a process in which individuals learn new behaviors or skills by observing and imitating others. It involves paying attention to the actions of others, retaining the observed information, and reproducing the behavior when the appropriate opportunity arises. This form of learning is influenced by factors such as attention, retention, motor reproduction, and reinforcement.

Write 5 examples of Unit Planning in daily life?

Answer:

- Planning a grocery shopping trip.
- Creating a daily household chore schedule.
- Designing a workout routine.
- Mapping out a weekly meal plan.
- Planning a commute to work or school.

What is a Lesson plan?

Answer:

A lesson plan is a structured guide outlining the objectives, activities, and assessments for a single instructional session, helping teachers effectively deliver content and engage students.

What is Social cognitivism?

Answer:

Social cognitivism is a theory of learning that emphasizes the role of social interactions and observational learning in cognitive development. It posits that individuals learn through observing others and participating in social activities, with an emphasis on factors such as

modelling, imitation, reinforcement, and cognitive processes like attention, retention, and motivation.

Prerequisites for essay writing?

Answer:

- Clear understanding of the topic.
- Research skills to gather relevant information.
- Critical thinking for analysis and evaluation.
- Organizational structure for effective communication.
- Proficient writing skills for clarity and coherence.

Simpson's model?

Answer:

The Simpson's model, also known as the Simpson's paradox, is a statistical phenomenon in which a trend appears in several different groups of data but disappears or reverses when the groups are combined. It highlights the importance of considering the nuances and potential confounding variables when interpreting statistical results, as the overall trend may not accurately reflect the underlying relationships within subgroups.

Define Modelling?

Answer:

Modelling is the process of representing real-world phenomena using simplified representations or structures. It involves creating mathematical, conceptual, or physical models to simulate, understand, and predict the behavior of complex systems or processes, aiding in problem-solving, decision-making, and analysis.

Difference between students and teachers notes?

Answer:

Aspect	Students' Notes	Teachers' Notes
Purpose	Capture key information for personal study	Guide instruction and ensure topic coverage
Content Depth	Summaries, highlights, personal annotations	Detailed explanations, examples, supplementary materials
Organization	Varied, reflecting individual understanding	Structured for coherent instruction and student comprehension
Language	Informal, may include abbreviations and personal shorthand	Formal, precise terminology, tailored for instruction
Accessibility	Personal use, may not be shared	Shared among colleagues, used for planning and reference

Factors avoiding Gender Bias?

Answer:

- Gender-neutral language.
- Equal representation.
- Fair assessments.
- Inclusive classroom environment.
- Diverse curriculum design.

What is meant by additional learning in lesson plans?

Answer:

Additional learning in lesson plans refers to supplemental activities or resources that extend beyond the core content objectives. These activities may include enrichment exercises, extension tasks, or opportunities for further exploration of the topic. By incorporating additional learning components, teachers can cater to diverse learning styles, interests, and abilities, enhancing students' understanding and engagement with the subject matter.

Vertical Dimensions of planning?

Answer:

Vertical dimension of planning:

In vertical level, it includes link between standards, benchmarks, learning outcomes and instructional objectives.

Interpersonal Relationships?

Answer:

Interpersonal relationships refer to the connections and interactions between individuals, encompassing various aspects such as communication, trust, empathy, and mutual respect. These relationships can range from casual acquaintanceships to close bonds, and they play a fundamental role in shaping social dynamics, personal well-being, and emotional satisfaction.

Write the four steps in Taylor's model of curriculum?

Answer:

- What is the purpose of the education?
- Which educational experiences will attain the purposes?
- How can these experiences be effectively organized?
- How can we determine when the purposes are met?

Note on Affective Domain?

Answer:

The affective domain, as defined by educational psychologist Benjamin Bloom, encompasses attitudes, emotions, and values. It focuses on the development of students' feelings, beliefs, and motivations. Teaching strategies in the affective domain aim to cultivate characteristics such as empathy, responsibility, and enthusiasm, fostering holistic growth and promoting positive attitudes towards learning and personal development.

What is Sequencing?

Answer:

The art of developing logical plan for instructional activities is called sequencing. Such a plan consists of interlink steps.

Note on Zone of Proximal Development?

Answer:

The Zone of Proximal Development (ZPD), proposed by psychologist Lev Vygotsky, refers to the gap between what a learner can accomplish independently and what they can achieve with guidance and support. It highlights the importance of providing appropriately challenging tasks that are within a student's ZPD to promote optimal learning. Through scaffolded instruction and collaboration, educators can facilitate students' progression through their ZPD, fostering cognitive growth and skill development.

Psychomotor domain?

Answer:

Psychomotor domain is the domain where your body movements are involved. There is learning also, if we are drawing a painting or writing something, our muscles are involved in

it. Some students are very good at writing but others are not, because we do not provide opportunities to them so that they can learn in this domain.

Importance of planning?

Answer:

Planning is crucial in teaching as it helps organize instructional objectives, resources, and activities to achieve educational goals effectively. It ensures that lessons are coherent, purposeful, and aligned with student needs, maximizing learning outcomes. Additionally, planning allows educators to anticipate challenges and make necessary adjustments, fostering a conducive learning environment.

Importance of sequencing?

Answer:

Sequencing is vital in teaching as it determines the logical order of content delivery, ensuring smooth progression of learning. By sequencing instructional material appropriately, educators can scaffold knowledge and skills, facilitating easier comprehension and retention for students. It also helps build upon prior knowledge and gradually introduce more complex concepts, enhancing the overall learning experience.

Discuss in detail two components of unit plan.

Answer:

Components of a unit plan:

Subject/ topic: Unit subject is the title of the whole unit. E.g. in science, Human system is the unit; its chapters would be digestive system, circulatory system, nervous system etc.

Rationale: Teacher has to decide which content have to be taught and which must be omitted.

Whenever you select a topic to teach, there are reasons of it. So, you need to give reasons under the heading of rationale.

What is learning?

Answer:

Learning is the process of acquiring knowledge, skills, behaviors, or attitudes through study, experience, or teaching. It involves a change in behavior, understanding, or capability that results from interaction with stimuli or experiences in the environment. Learning can occur consciously or unconsciously, and it is a fundamental aspect of human development and adaptation to the world around us.

Where should take children to get knowledge?

Answer:

Children can gain knowledge from various sources such as schools, libraries, museums, nature parks, and educational programs. Additionally, engaging with parents, teachers, peers, and online resources can also contribute to their learning journey. Providing diverse and stimulating environments fosters curiosity and supports holistic development in children.

Explain any 3 elements of lesson planning.

Answer:

The elements of lesson planning typically include:

Objective or Learning Outcome: This specifies what students are expected to learn or achieve by the end of the lesson. It should be clear, measurable, and aligned with curriculum standards or educational goals.

Instructional Materials and Resources: This involves identifying the materials, resources, and equipment needed to facilitate learning effectively. It could include textbooks, handouts, multimedia presentations, manipulatives, or online resources.

Instructional Strategies and Activities: These are the methods and techniques used to deliver the lesson content and engage students in learning. It includes a variety of activities such as lectures, discussions, group work, demonstrations, or hands-on experiments.

Is a teacher being a decision maker?

Answer:

Yes, teachers are decision makers, responsible for choices ranging from lesson planning and instructional strategies to classroom management and student assessment. They assess student needs, adapt curriculum, and select appropriate teaching methods to ensure effective learning outcomes. Teachers also make decisions about fostering a positive classroom environment, addressing behavioral issues, and providing individualized support. Their decisions significantly impact the educational experience and success of their students.

Tyler's model four step?

Answer:

1. What educational purposes should the school seek to attain? **(Defining appropriate learning objectives).**
2. How can learning experiences be selected which are likely to be useful in attaining these objectives? **(Introducing useful learning experiences).**
3. How can learning experiences be organized for effective instruction? **(Organizing experiences to maximize their effect).**
4. How can the effectiveness of learning experiences be evaluated? **(Evaluating the process and revising the areas that were not effective).** (Tyler 1969; John 2006, 484)

What is difference between unit plan and lesson plan?

Answer:

Key differences between a unit plan and a lesson plan:

Aspect	Unit Plan	Lesson Plan
Scope	Covers a broader period, typically spanning several days, weeks, or even months.	Focuses on a single instructional period, usually lasting one class session.
Objective	Specifies the overarching learning goals and outcomes for the entire unit.	Specifies the specific learning objectives for the individual lesson.
Content	Includes an outline of the topics, themes, or concepts to be covered throughout the unit.	Focuses on the detailed content to be taught during the specific lesson.
Sequence	Organizes the sequence of lessons and activities to ensure logical progression and coherence across the entire unit.	Organizes the sequence of activities, instructions, and assessments for a single lesson.
Assessment	Outlines assessment methods and strategies for evaluating student learning at the end of the unit or at key milestones within the unit.	Includes assessment methods and strategies tailored to evaluate student understanding and progress within the specific lesson.
Resources	Identifies the instructional materials, resources, and technologies needed to support teaching and learning throughout the unit.	Lists the specific materials, resources, and aids required to deliver the lesson effectively.
Flexibility	Provides flexibility for teachers to adapt and adjust instructional plans based on student progress and needs over the course of the unit.	Offers flexibility for teachers to modify teaching strategies or activities during the lesson based on real-time student responses and understanding.

Can interpersonal relationship help students to become social?

Answer:

Interpersonal relationships play a significant role in helping students become social by fostering communication skills, empathy, and cooperation. Positive interactions with peers and teachers provide opportunities for students to practice social norms, resolve conflicts, and build

trust. These relationships create a supportive environment where students feel valued and accepted, encouraging them to engage in social activities and develop a sense of belonging within their community.

Post lesson activity?

Answer:

A post-lesson activity is a reflective exercise conducted after a teaching session to consolidate learning and evaluate student understanding. It often involves tasks such as group discussions, individual reflections, or completion of worksheets aimed at reinforcing key concepts, identifying areas for improvement, and providing feedback. These activities help students internalize the lesson content, assess their own learning, and allow teachers to gauge the effectiveness of their instruction.

What is Abstractions?

Answer:

Abstraction refers to the process of simplifying complex ideas or phenomena by focusing on essential characteristics while ignoring irrelevant details. In various fields such as mathematics, computer science, and philosophy, abstraction involves creating models or representations that capture the fundamental aspects of a concept or system. It allows for easier understanding, analysis, and manipulation of complex information, facilitating problem-solving and innovation.

Teaching is a science or art?

Answer:

Teaching is both a science and an art. The science lies in understanding pedagogical theories, educational psychology, and evidence-based practices. It involves the systematic application of techniques to facilitate learning. However, the art comes into play in the nuances of communication, creativity in lesson planning, and the ability to inspire and engage students on a deeper level. Effective teaching requires a balance of both scientific principles and intuitive, creative approaches to meet the diverse needs of learners.

Write about Piaget theory?

Answer:

Jean Piaget was a Swiss psychologist renowned for his theory of cognitive development. According to Piaget, children progress through four stages of cognitive development: the sensorimotor stage (birth to 2 years), the preoperational stage (2 to 7 years), the concrete operational stage (7 to 11 years), and the formal operational stage (11 years and older). Piaget emphasized that children actively construct their understanding of the world through interaction with their environment. He proposed that cognitive development occurs through processes like assimilation, where new experiences are incorporated into existing schemas, and accommodation, where existing schemas are adjusted to fit new experiences. Piaget's theory revolutionized our understanding of child development and continues to influence educational practices worldwide.

What is Communicative diversity?

Answer:

Communicative diversity means that students vary in communication skill as well. There are some students who stemmer very fluently, but the teacher needs to know that the students can't do that. It is a responsibility of a teacher to some extent to do speech therapy of the students. But it is not possible for a teacher in a great context.

What are the Application levels of learning?

Answer:

- Classify the following materials in transparent, translucent and opaque objects.
- Classify the given foods into vegetables, fruits and meat group.
- Use the formula.
- $\text{Breadth} \times \text{Length} = \text{Area}$ (to find out area of your geometry box).

Why should we prevent the practice of profession by unqualified?

Answer:

Preventing the practice of a profession by unqualified individuals is crucial for several reasons. Firstly, it ensures public safety and well-being by maintaining standards of competence and expertise. Secondly, it upholds the integrity and reputation of the profession, safeguarding against unethical or substandard practices. Thirdly, it fosters trust among clients and consumers, knowing that they are receiving services from individuals who have met rigorous qualifications and standards. Lastly, regulating the profession promotes innovation and advancement by encouraging ongoing professional development and adherence to best practices.

Assumption of Performance objectives?

Answer:

Assumptions of performance objectives:

1. **Learning is change in behaviour.** The second name of performance objectives is behavioural objectives. While writing performance objectives, we have to use an action word that exactly shows the behaviour. If we are seeing learning in behavioural forms then it is not true that learning is change in behaviour. It can be an assumption because it is said to be the limitation of performance objectives.
2. **Learning can be measured.** While writing performance objectives, we focus on the action word because we can exactly measure that the learning has taken place or not? So, we believe

that learning can be measured. E.g. if a child is listening to a very good discussion, but he did not utter even a single word. It means that we are not measuring the learning. To write performance objectives is necessary, especially when we are going to start teaching. This is not true that if the learning cannot be measured then there is no learning. If someone is reading a book, his learning is not measured, but you need to appreciate him to do such activities. Though being a teacher, I am not able to measure that.

- 3. Observed learning outcome is directly linked to the teaching strategy, the content or media used.** Here we assume that whatever a student is learning, actually that all depends upon teacher's teaching. The content that is going to be taught, the resources that are used and the teaching strategy. We totally deny other factors that what is the prior knowledge of the students. What is his background or how many siblings he had? All these things have effect on students' learning.

Why resources are important for lesson planning?

Answer:

Resources are essential for effective lesson planning for several reasons. Firstly, they provide educators with materials and tools to support diverse learning styles and abilities, ensuring inclusivity in the classroom. Secondly, resources help in enhancing engagement and interest among students by offering varied and interactive learning experiences. Thirdly, they facilitate differentiation, enabling teachers to tailor instruction to meet the individual needs of students. Additionally, resources can aid in the demonstration of complex concepts, making abstract ideas more concrete and understandable. Overall, resources play a crucial role in enriching the teaching and learning process, fostering deeper understanding and academic success.

How language helps in learning?

Answer:

Language facilitates learning by providing a means of communication, enabling the exchange of ideas, knowledge, and information. It supports cognitive development by helping individuals organize thoughts, express concepts, and make connections between new and existing knowledge. Additionally, language enhances social interaction and collaboration, fostering a supportive learning environment conducive to growth and understanding.

Can teachers grow professionally without reflecting on their teaching? discuss.

Answer:

Reflection is integral to professional growth for teachers. Without reflecting on their teaching practices, educators may miss opportunities to identify strengths, areas for improvement, and effective instructional strategies. Reflection fosters self-awareness, encouraging teachers to critically evaluate their methods, adapt to student needs, and refine their skills over time. It also promotes ongoing learning and development, enabling educators to stay current with best practices and evolving educational trends. Therefore, without reflection, teachers may stagnate in their professional growth and struggle to meet the diverse needs of their students effectively.

What is reflective practice and explain its types?

Answer:

Reflective practice involves thoughtful examination of one's own experiences, actions, and beliefs to enhance professional growth and improve outcomes.

"Reflection on action" occurs after an event, where educators analyze past experiences to gain insights and identify areas for improvement. It involves looking back on what happened, considering the outcomes, and learning from mistakes or successes.

"Reflection in action" involves thinking critically and adjusting practices in the midst of teaching or professional activities. It requires educators to be mindful and flexible, continuously assessing and adapting their approaches in real-time to meet the needs of learners. Both types of reflection are essential for fostering continuous improvement, enhancing teaching effectiveness, and promoting lifelong learning in education.

What is psychomotor Domain?

Answer:

Riding a bicycle, Stitching. These are very skill-oriented things where our motor muscles are involved. So, anything which involves our motor muscles is called as psychomotor domain. Whatever we do, in all physical activities our mind is always working. This is the domain which involves physical and mental work.

List the Question cues?

Answer:

Question cues:

Following are the words which indicate that the question is of knowledge level.

- List
- Define
- Tell
- Describe
- Identify
- Show
- Label
- Who, When, Where?

Factors linked teachers motivation?

Answer:

Some interviews are taken from the teachers in Pakistan to know their motivation factors. These are discussed below:

Interview 1:

Money is only a motivating factor that insists you to go to your job in routine regularly. But the incentives that are really important are the primary and secondary sources with which the students interact with you in their every aspect of life. We feel affiliation motivation that we are affiliated with the students in so many aspects. We get an opportunity to develop competence not only in ourselves but the students as well. You are the source of motivation for the students not only in terms of your profession rather you are also helping them in their daily life routines as well. That is the biggest achievement for a teacher.

Interview 2:

As a teacher trainer, I feel that motivation factor is something when student gain positive change in their thinking, behaviour and attitude. By the end of the day, I feel happy that I help them in bringing change in them.

Interview 3:

When there is no motivation, you cannot work properly at your working place. A teacher should be self-motivated. If a person is not self-motivated, then he could not perform a variety of tasks. By being in an organization, I have learned many things from many people. Besides that, the workshops and seminars also play a very important role in motivation of the teachers. These tell us where we stand and what we can learn from others. Recognition as a teacher is also motivating. Students come to you and they feel satisfied after you answer their questions. This shows that you are there to help somebody out. The students, the way they benefit from you, the way they seek help from you is also a motivation.

Project learning with example?**Answer:**

Project-based learning (PBL) is an instructional approach where students actively explore real-world problems and challenges. An example could be a science project where students design and conduct experiments to investigate environmental pollution in their local area. Through this project, students not only gain scientific knowledge but also develop critical thinking, collaboration, and problem-solving skills as they analyze data, propose solutions, and present their findings to the community. PBL encourages inquiry, creativity, and hands-on learning, making education more meaningful and engaging for students.

What is Affective domain?**Answer:****Affective domain:**

Cooperating, accommodating different ideas, respecting each other. It is important for every single being, related to any profession. Or in spending the life these things are really important. We are not living in isolation, we work with others and if we do not have life skills, we will not be able to interact with each other. If we are not able to communicate appropriately with them, our learning is deficient.

Zone of proximal development?

Answer:

Zone of Proximal Development (ZPD):

The gap between actual and potential level of a child is Zone of Proximal Development. Vygotsky is very famous for this concept of his theory.

Actual level is the initial level of child's learning and potential level is the level where a child can stand. The potential level is usually one step ahead the actual level. If student is at the actual level, he has the potential to come up to the potential level. The important role here is of the teacher, if a teacher helps the student, he/she can reach to the potential level very easily. The teacher helps the students at actual level of learning, or at the first level of any learning, it is easier for the student to go one step ahead of that level. When a student is standing at his potential level, he is one step ahead of the previous and needs the support of his adults or teachers again to go ahead of that potential level as well. E.g. if you are teaching mathematics to a student, you teach him about one-digit addition. You cannot take him straight to the concept of two-digit addition unless he is expert in one-digit addition by practicing it. You teach him the concept of ones and tens here. After he has learned one-digit addition, he couldn't start doing two-digit addition by himself. He needs the help of his elders or teacher to help him. Now the student has jumped from the actual level to the potential level i.e. from one-digit addition to two digit addition. After that you give him the concept of ones, tens and hundreds, and he can go to the third level by himself i.e. three-digit addition.

Questions that should be taken into consideration while evaluation of students or learners?

Answer:

Evaluation of students' learning:

We need to ask certain questions whenever we are evaluating. Whether we are evaluating our teaching or the learning of our students. Here are certain questions that must be taken into consideration while evaluating students' learning:

- What did my students learn?
- What did students not learn?
- What was interesting for the students?
- What was difficult for the students?
- What evidence do I have for these findings?
- What will children learn in future?

Feedback compulsory why?

Answer:

Feedback is considered compulsory in various contexts, especially in education and professional development, for several reasons. Firstly, it provides individuals with valuable information about their performance, helping them understand their strengths and areas needing improvement. Secondly, feedback fosters continuous learning and growth by guiding individuals toward achieving their goals and objectives. Thirdly, it promotes accountability and responsibility by facilitating open communication and dialogue between instructors, peers, and supervisors. Overall, feedback is essential for enhancing self-awareness, refining skills, and ultimately, achieving success in various endeavors.

Define Pedagogical knowledge?

Answer:

Pedagogical knowledge means the knowledge about how to teach the students. Pedagogical knowledge guides educators in effectively planning, implementing, and assessing learning experiences to facilitate student growth and achievement.

What are the purposes of keeping notes?

Answer:

Purpose of keeping notes:

- To keep record of teaching.
- To plan for future
- To learn from experience
- To communicate with the principal
- To write research report
