

Objectives

Q. "He ran towards the store" which thematic role in it

Agent theme instrument **goal**

Q. According to Palmer there are two familiar grammatical categories gender and **_(Number)**

Q. It is the study of meaning as communicated by the speaker and interpreted by the listener **_(pragmatics)**

Q. The context of the text itself is called **_(co-text)**

Q. A lexical entry is said to be a combination of **___ Morphological specification, Syntactic Specification and Semantic Specification**

Q. The term **___** is used to refer to development and change of meaning. **(Semantics)**

Q. Which of the following distinguish between events in the real world and events in the future/imaginary world **___ (Illusion)**

Q. Proper noun denotes

Groups Societies **Individuals** All the given options

Q. the word kill is.... Causative

Extrinsically **Hastily**

Q. The theory of linguistic relativity provides explanation for a/an---- experience when dealing with different languages

(Specific) (Exceptional) (Irregular) **(Common)**

Q. Pragmatic study of the people.

(Meaning) (Enormous)

Q. According to Grice, it is the knowledge of the maxims that allows hearers to draw..... About the speaker's intention and applied meanings.

Anticipant Manner Plight **Inference**

Q. Which is called the process by which an institutionalized lexical diverges from theoretical meanings..

Bi-directionality Recursiveness Open-ended **Pertification**

Q. in Sanskrit, plural belongs to..... Term system...

4 **3** 2 5

Q. our interest in semantic relation is with....

Images Set Range Lexeme

Q. the flower is super ordinate of.....

Roses pansies tulips all the given

Q. Fillmore has suggested cases of case grammar. Six

Q. Connotative meanings compared with conceptual meanings are and open-ended. Indeterminate

Q. Different phonological words which have the same or similar meanings. Synonymy

Q. Relevance theory emerged in 1980s in the collaborative work of Wilson and Sperber

Q. Meaningful utterances may be the products of incomplete utterances

Q. The process of creating and interpreting symbols is Semiotics.

Q. A sentence is a syntagm of words.

Q. Conversion is a change in the syntactic function (and usually the meaning) of an item without a corresponding change in morphological form

Q. Exophora is dependent on the context outside the text, e.g. proper nouns,

Q. Necessary and sufficient conditions are one traditional approach to describe concepts

Q. Hyponymy is always transitive but meronymy may or may not be

Q. thinks, loves, like, have, remains etc. are stative verbs and do not contain physical actions

Q. Charles J. Fillmore suggested the six cases of grammar case

03 Marks Questions

Q. write a note on metaphor (3)(imp)

Metaphor is a type of figurative speech. Typically, a metaphor ascribes to an entity a property that it does not, strictly and literally speaking, possess, although not all metaphors fit this definition. Metaphors are not restricted to any particular type of word or phrase (Allott, 1988). The metaphorical element of a sentence can be a noun phrase, as in 'John is an iceberg.' Verbs can also be used metaphorically, as in 'Flintoff drilled the ball to the boundary.'

Q. What Is the Perfect Aspect? (with Examples)

The perfect aspect (or complete aspect as it's sometimes called) is the aspect of a verb which expresses a completed action. Perfect aspect is the term for verbs in a perfect tense. Examples of Verbs in the Perfect Aspect We had seen. I had cleaned. She had drunk. How does traditional logic concerns with semantics Traditional logic is also concerned with semantics as some of its proposals range from simple syllogism to highly complex logical syntax. Logic makes use of concepts found in ordinary language ('and', 'or', etc.).

Q. Social pragmatic

Social pragmatics which focuses on various aspects of the relationship between language use and more general social and cultural factors. Social pragmatics is common with the fields such as conversational analysis and discourse analysis.

Q. Tense and aspects

Tense is a category which allows a speaker to relate situations to time. EG they will cut the grass tomorrow' is future tense. Aspect System allows the speaker to relate situation and time, and to view an event in various ways: as complete or incomplete. Aspects have to do not with the location of an event in time, but with its temporal distribution or contour).

For example: She is coming. ' (incomplete), _She has come. ' (complete).

Q. Define signifier, signified and sign or differentiate. (imp)

Signifier: Any material thing that signifies, e.g., words on a page, a facial expression, an image.

Signified: The concept that a signifier refers to Together, the signifier and the signified make up a meaning.

Sign: The smallest unit of meaning. Anything that can be used to communicate

Q. Define Lexical Cohesion.

Lexical devices help to maintain cohesion in the text; i.e. Repetition, Synonyms, Subordinates, and General words. Consider an example, _I met a person who believes in Allah, Prophets, HolyBooks, Angels and the Day of Judgement.' The alternate sentence can be _I met a Muslim.' Of all the lexical cohesion devices, the most common form is repetition; repeated words or word phrases, threading through the text. Substitution and Ellipsis avoid repetition; lexical repetition exploits it for stylistic effect. Synonym is; instead of repeating the same exact words, a speaker or writer can use another word that means the same or almost the same.

Q. Explain compositionality principal

This theory says that the meaning of a piece of language is based solely on the meaning of its parts, and the way they are put together. With this theory we come to know that semantics has a very strong relation with syntax. To understand the structure of a sentence we need to have enough knowledge about its components such as noun, verb, adjective etc.

Q. Write a brief note on cataphoric expression.

Cataphoric expressions link forward to a referent in the text that follows. This type is opposite to anaphora

Q. COOPERATIVE PRINCIPLE

The cooperative principle is a principle of conversation that was proposed by Grice 1975, stating that participants expect that each will make a "conversational contribution such as is required, at the stage at which it occurs, by the accepted purpose or direction of the talk exchange." Relevance theory is the study of how the assumption of relevance holds texts together meaningfully.

Q. how cognitive and communicative theory relates to relevance theory?

Any external stimulus or internal representation which provides an input to cognitive processes may be relevant to an individual at some time. Utterances raise expectations of relevance, not because speakers are expected to obey a cooperative Principle and maxims, but because the search for relevance is a basic feature of human cognition.

Q. Communicative Principle of Relevance

It is an attempt to work out one of Grice's central claims that an essential feature of most human communication, both verbal and non-verbal, is the expression and recognition of intentions. We keep on producing stimuli which gain other people's attention and thus lay the ground for communication. It is the tendency to maximize relevance that makes it possible to predict and manipulate the mental states of others knowing your tendency to pick out the most relevant inputs.

Q. Proposition define with example

Proposition is a declarative sentence, when uttered to make a statement, that is, to say something true or false, about some state of affairs in the external world. The word proposition has come from philosophy and is the lowest level of lang. Propositions are words that exist in the lexicon and have a meaning. A sentence is a group of abstract grammatical elements obtained from utterances. A well-formed string of words put together by the grammatical rules of language (Huang, 2014). The sentence is some higher level of lang, it may have many propositions. When a proposition is combined with grammar, it becomes a sentence. We can say that a sentence is a complete expression while proposition is partial.

Q. Grammar category note on gender:/ SYNTACTIC FUNCTION Grammar is not restricted to the study of form or function words.

It is concerned, more widely, with categories such as tense, gender, number and with syntactic functions such as subject and object, e.g. 'Ali' (Noun/Subject, etc.). These categories can be on 'phrasal level' as well, e.g. 'Ali the son of John' is a noun phrase. According to Palmer, there are two familiar grammatical categories, 'Gender' and 'Number' but English has strictly no grammatical gender at all. It has, of course, pronouns he, she, it but, these are essentially the markers of sex. The category of person (first person I, we, second person you, and the third person he, she, it, they) is often closely associated with the number and with gender in the verbal forms of languages. The first person relates to a speaker while, the second person relates to the hearer.

Q. The distinction between 'Grammar and Lexicon'

It can be posed in terms of the distinction between 'grammatically unacceptable sentence' and 'those that are excluded on lexical grounds'. *The boys are in the room. is incorrect but the meaning is not vague. Chomsky invented the sentence Colorless green ideas sleep furiously, which seems faultless grammatically, yet is completely unacceptable lexically. Therefore, if a sentence follows to grammar, but be completely deviant lexically, it would seem that grammar and lexicon are distinct.

Q. Diversity Portner (2005) has used 'Possible Worlds' one of the most popular tools for representing diversity within semantics.

Model-Theoretic Semantics Model is based on 'what reality is like which is useful for semantic purposes' i.e. truth, falsity or inadmissible. Truth-conditions of sentences are defined in terms of a model of reality appropriate to how language works, with it being a further issue how that model relates to reality itself —intended model' and the—intended interpretation'.

Q. What are two practical conditions of writing dictionary

Leech (1981) has used different terminologies for dictionaries such as: ‘Theoretical dictionaries, ‘flesh-and-blood dictionaries or practical dictionaries’, such as the Concise Oxford Dictionary, compiled by lexicographers – we all consult regularly. It has been argued that the lexical definition, as part of the native speaker’s linguistic equipment, can be precisely represented only by a special formal language

Q. Write a brief note on the term utterance.

An utterance is an instance of the production of a sentence or a fragment of a sentence. The most obvious distinction between the sentence and utterance is that utterance will have spatiotemporal and physical properties while, the sentence does not. Sentences are abstract linguistic structures; they do not have contexts and they are not produced by speakers or received by hearers.

Q. Contextual effects and processing efforts

Contextual effects include such things as adding new information, strengthening or contradicting an existing assumption, or weakening old information. The more contextual effects, the greater the relevance of a fact. A new fact unconnected to anything already known is not worth processing, whereas a new fact taken with something already known is worth processing. As far as the processing effort is concerned, the theory says that the less effort it takes to recover a fact, the greater the relevance. The speaker assumes which facts are accessible for the hearer and speaks in such a way that the hearer can make the correct inferences without too much effort.

Q. Explain modality and its types.

Modality is a linguistic category (like aspect or tense) that modifies the meaning of the event or action we talk about to include ways to “influence” the event described. Modality may express what the speaker wants to do (give permission, describe ability, suggest, request, offer, prohibit, express desires or necessity, etc.) It also expresses whether the speaker believes, or is sure that what he or she is saying is true. There are two types of modality:

Epistemic Modality expresses the degree of knowledge how sure the speaker is in his communication and

Deontic Modality shows, where the verbs mark the speaker’s attitude to social factors of obligation, responsibility, and permission.

Q. Actual and partial Acceptability

Actual acceptability is a graded concept. If, for example, we take the suffix ‘less’ with a list of English nouns. The principle of partial productivity that we have seen to operate in suffixation can be observed equally clearly not only in other types of word-formation, such as prefixation and compounding but in semantic transfer. The unacceptability of a lexical entry not allowed for in the lexical rules at all. For example, *sheepable (suffix –able is added should be added to a verb, i.e. adjustable, gradable).

Q. Write a brief note on Saussure’s concept of notion of value in lexical semantics. (IMP)

Many of the basic ideas in this topic are derived from de Saussure’s notion of ‘value’. He pointed out that a knight on a chess board is a knight not because of any inherent quality (shape, size, etc.), but because of what it can do in relation to the other pieces on the board (Saussure). He stressed this relational aspect of language, saying that there were only differences and no positive terms. As differences are in some way related. eg, he argued that ‘sheep’ in English has a different value from ‘mouton’ in French because English has also the word ‘mutton’.

Q. Orthographic words

Words can be identified at the level of writing, where we are familiar with them being separated by white space, where we can call them orthographic words. In phonology, they are strings of sounds which may show internal structuring. In syntax, where the same semantic word can be represented by several grammatical distinct variations e.g. walk, walking walked. However, for semantics, these are instances of the same lexeme, the verb 'walk'.

Q. Write a note on metaphor (3) (imp)

Metaphor is a type of figurative speech. Typically, a metaphor ascribes to an entity a property that it does not, strictly and literally speaking, possess, although not all metaphors fit this definition. Metaphors are not restricted to any particular type of word or phrase. The metaphorical element of a sentence can be a noun phrase, as in 'John is an iceberg.' Verbs can also be used metaphorically, as in 'Flint off drilled the ball to the boundary.'

Q. Note on Idioms. (IMP FOR OBJECTIVE + SHORT)

Idioms are expressions whose meaning cannot be inferred from the meaning of its parts. Usually, these are translated with semantically and not necessarily lexically equivalents in the target lang. Majority of idioms are homophonous, such as 'by and large' or 'far and away'. They are grammatically well-formed and semantically transparent expressions. We can't replace its parts with other semantically or syntactically equivalent lexemes. Idioms involve collocation of a special kind, eg, 'kick the bucket', 'fly off the handle' and 'red herring'.

Q. Collocations

Collocation is a familiar grouping of words, especially words that habitually appear together and thereby convey meaning by association. Collocations also define a sequence of words or terms that co-occur more often than would be expected by chance. e.g., Strong tea is a correct expression and Powerful tea is considered as the wrong expression.

Q. Define connotative meaning 3 marks (IMP)

Connotative meanings include not only physical characteristics but also psychological and social properties (sociability, maternal instinct). These may also include the putative properties of the referent based on certain social viewpoints. Connotative meanings are concerned with the realworld experiences, one associate with the expressions one uses or hears. The boundary between the conceptual and connotative meaning is based on the distinction between 'language' and the 'real world'. Connotative meanings are peripheral. These are relatively unstable as it varies according to culture, historical periods and experience of the individual. Connotative meanings, compared with conceptual meanings, are indeterminate and open-ended that may belong to any characteristics of the referent, real or imaginary.

Q. Linguistic botanizing

Austin organized a group of philosophers whose work is known as ordinary language philosophy. The prevailing method was 'linguistic botanizing'; to see the distinctions made by ordinary language on the assumption that the way people speak makes many subtle distinctions, worthy of philosophical investigation. These philosophers were drawn into thinking about questions such as 'what saying or stating involves' and 'what else speakers do with language'.

Q. Truth Conditions

Truth Conditions help us explain logical words (and, or, not) and semantic relations. But it also seems impossible for some scholars that the meaning of a question may be defined in terms of its possible answers. The meaning of imperatives may be seen as 'satisfactory' or 'unsatisfactory' instead of 'true' or 'false'

Q. Basic color terms.

1. Firstly, the term is monolexemic, i.e. not build up from the meaning of its parts - the term blue-grey are not basic.
2. Secondly, the term is not a hyponym of any other color, i.e. the color is not a kind of another color. Thus, English red is basic, scarlet is not.
3. Thirdly, the term has wide applicability. This excludes terms like English blonde.
4. Fourthly, the term is not a semantic extension of something manifesting that color. So turquoise, gold, taupe, and chestnut are not basic. English has eleven – white, black, red, green, yellow, blue, brown, purple, pink, orange, and grey – color terms in its system.

Q. Associative engineering

It is used as a positive term in advertising. When different words are used which have the same conceptual meanings, for example, one might call someone a lady rather than a woman.

Q. Hina raised the car with a jack. Enlist the entities which are related to the action verb "raise" Hina ,

Car and Jack

Q. Exophora with 2 examples.

Exophora refers to the context which does not exist inside the text. When there is no previous mention of the reference in the preceding text, we call it exophoric reference. Exophora is dependent on the context outside the text, e.g. proper nouns, etc. Consider an example: Ronaldo is a great player. Ronaldo' is a proper noun and it is being mentioned the first time. While, player is a common noun and does not clarify which sports does Ronaldo play? Therefore, situational or interpersonal knowledge can easily help to identify _Ronaldo' is a footballer. Outside context can be _Situational context, background knowledge, cultural or interpersonal knowledge.

Q. why do speaker rely on implicit meaning, give an example

When speakers appear not to follow the maxims but expect hearer to appreciate the meaning implied, we say that they are _flouting_. For instance, in Britain, its quite common to say, 'Do you find it's getting a bit chilly in here?' and mean 'I want to put the fire on'. When flouting a maxim, the speaker assumes that the hearer knows that their words should not be taken at face value and they can infer the implicit meaning.

Q. Interpersonal knowledge is knowledge acquired through previous verbal interactions

Interpersonal knowledge is knowledge acquired through previous verbal interactions or joint activities and experiences. It includes privileged personal knowledge about the interlocutor. **For example**, I ask my friend, _Do you have a watch?' In this example, _do you have a watch?' can be interpreted as _what's the time by your watch?'

Q. How to distinguish referring expressions:

Among referring expressions, we can distinguish between those that refer to individuals (singular – He, she, it) and those that refer to classes of individuals (general expressions – They, those). Other expressions such as Definite (The City) and indefinite (a place, a man); Referential and Attributive Uses; and Collaboration are also important to consider.

Q. Lexical rules: Major types:

1. Morphological derivation,

2. conversion, and
3. semantic transfer.

Q. Morphological derivation Or “Three types of lexical rules”

Morphological derivation It involves a change in the morphological specification. For example, the addition of an affix to the original morphological specification, which is called the base? Base= Base + Suffix (less). Conversion It is a change in the syntactic function (and usually the meaning) of an item without a corresponding change in morphological form. For example, ‘catch [verb] might have been changed into catch[noun]. Semantic transfer It often designated metonymy in traditional terminology, for examples, ‘Neighborhood objected to his plans’ and (Neighborhood=people in the neighborhood).

Q. Define Lexical Cohesion.

Lexical devices help to maintain cohesion in the text; i.e. Repetition, Synonyms, Subordinates, and General words. Consider an example, ‘I met a person who believes in Allah, Prophets, Holy Books, Angels and the Day of Judgement.’ The alternate sentence can be ‘I met a Muslim.’ Of all the lexical cohesion devices, the most common form is repetition; repeated words or word- phrases, threading through the text.

Q. Limitations of Relevance theory:

This theory says nothing about interaction. It does not include cultural or social dimensions, such as age, gender, status, and nationality. An objection that one may have to Sperber and Wilson’s model, as with Grice’s Cooperative Principle model, is that different cultures, countries and communities have their own ways of observing, and expressing maxims.

Q. Why reference and meaning theory influence semanticist:

Reference as a theory of meaning, the simplest theory of meaning is to claim that semantics is a reference (Saeed, 2004). To give the meaning of a word one shows what it denotes. Proper names denote individuals, whereas, common nouns denote sets of individuals. ‘Reference’ picks out elements in the real world.

Q. Explain cases Grammar.

A system of grammatical description based on the functional relations that noun groups have to the main verb of a sentence (Collins Dictionary Online). Palmer has given three cases ‘Agentive, Instrumental and Object’. Fillmore has suggested six cases, ‘Agentive, Instrumental, Dative, Factitive, Locative, Objective’. Agentive is typically animate perceived instigator, Instrumental is inanimate force or object causally involved. Dative is animate being affected. Factitive is object resulting from the action or state. Locative is location or spatial orientation. The Objective is the semantically most neutral case.

Q. define the term "inclusion" involved in the hyponymy

The concept of —inclusion involved in this relationship is the idea that if an object is a rose, then it is necessarily a flower, so the meaning of the flower is included in the meaning of rose. Or, the rose is a hyponym of flower.

Q. Define the term Davidson semantics - 3 marks

Davidsonian Semanticists argues that we can do semantics without possible worlds. They agree with other formal semanticists that the meaning of a sentence consists in its truth-conditions, but think that possible worlds and the like are not the right way to think about truth –conditions. Rather, they say that it’s better to simply and directly express truth-conditions with statements like, snow is white is true if, and only if, snow is white.

Q. Montage's pragmatics

The use of the word pragmatics to describe a separate field of study, on a par with syntax and semantics, was established during the 1970s. Around that time, the term was being used in a different way by different philosophers concerned with formal languages. The formal semanticist, Montague, wrote in the late 1960s and Bar-Hillel used this term in the 1950s, 'pragmatics was the study of any language containing indexical terms'.

Q. presuppose idea

The PM of Pakistan is coming this week

I m not regretting to leave the london

Q. Co text

The co-text of a word is the set of other words used in the same phrase or sentence. Co-text limits the range of possible interpretations we might have for a word. Consider a complicated example to understand co-textual context. 'She met (her) school teacher.'

Q. Write about on Deontic modality.with two example.

Deontic modality (abbreviated DEO) is a linguistic modality that indicates how the world ought to be according to certain norms, expectations, speaker desire, etc.

An example for a deontic mood is the imperative ("Come!"). However, many languages (like English) have additional ways to express deontic modality, like modal verbs ("I shall help you.") and other verbs ("I hope to come soon."), as well as adverbials (hopefully) and other constructions.

Q. Explain briefly the thematic meaning is mainly a matter of choice. Support your answer with at least two examples.

Thematic meaning is mainly a matter of choice between alternative grammatical constructions. In other cases, thematic meanings may be stress and intonation rather than grammatical construction that highlights the information in one part of a sentence. **Example:**

1. He likes Australian goods most.
2. Australian goods he likes the most
3. It is Australian goods he likes the most.

Q.What are the types of Sign? Expalin briefly

- Iconic signs: Signs where the signifier resembles the signified.
- Similarity between a sign and what it represents.e.g., between a picture and its real-life subject.
- Indexical Signs: Signs where the signifier is caused by the signified.

05 Marks Questions

Q. Paradigmatic relation of vertical axis 5 mark

Linguistics often refers to the paradigmatic dimension of language as the ‘vertical axis’ of selection, e.g. read the following sentence: “The cat was sitting on the rug.” Now, imagine the words ‘the’ can be replaced with. The word “the” is chosen from among a number of words such as “a,” “their,” “his,” and “my” that could have filled the same slot, that is, “the ‘vertical axis’ of selection.” And also, “cat” is chosen instead of “dog,” “boy,” or “baby,” and “was” instead of “is,” and so on.

Q. Pragmatics relation with linguistics....

Linguistics is the academic subject that is concerned with the analysis, description and explanation of human language while Pragmatics is often described as being a branch or field of linguistics that focuses on the interaction between language and context. Strictly speaking, pragmatics is described as outside of mainstream or ‘core’ linguistics (i.e. phonology, morphology, syntax and semantics) that are concerned with the analysis of language as a formal, isolated and identifiable system in its own right. Pragmatics stands apart because it is not, exclusively, a language itself. Rather, it is the production and interpretation of language in relation to the context of use. Pragmatics can perhaps be seen as an adjunct to linguistic theory. A phrase that becomes associated with the description of pragmatics was the ‘wastebasket of linguistics’. To Kasher “Chomsky’s own work has largely been restricted to syntax, ‘but its conception of objective, scientific methodology transcends syntax and lend themselves to interesting applications’, including pragmatics”.

Q. Formal semantics with other field

Syntax, Pragmatics, and the Philosophy of language are intellectual areas with which formal semantics makes the closest relation. New ideas in any of these fields can have a direct impact on how semanticists think about language, both in a general way and in studying a particular feature of the language. Formal semantics has also connections to the other three areas of intellectual inquiry. i.e logic, computer science, and cognitive science. The fundamental goal of logic is to characterize valid patterns of reasoning, steps of inference which will lead from true premises to true conclusion. As human language is ambiguous and vague, logicians have developed artificial and ‘logical’ language. Formal semantics is linked with computer science for both intellectual and practical reasons. Cognitive Science focuses on the understanding of the human mind. The most important component disciplines of cognitive science are linguistics, psychology, neuroscience, philosophy, and computer science.

Q. Idea or meaning theory (5)

This theory explains the patterns in how language express meaning in terms of the nature of concepts – ultimately, the way the brain is structured. There are some challenges faced by the Idea Theory to come up with a sound psychological theory of what concepts or ideas are. Secondly, it needs to provide a concept for every meaningful piece of language. If idea theory is to work, ideas will have to have a language-like nature – grammar.

Ideas act as a language of thought. According to Portner concepts are formed by the experiences of people – experiences may vary from person to person. These arguments weaken idea theory.

Q. Differentiate between Predicate knowledge and Propositional logic (imp) Or “Differentiate between argument or semantic roles”

Argument	Semantic roles	Predicate Logic	Propositional Logic
Thematic roles can be defined as: the roles that referents of the arguments of a verb play in the event or as the state	A semantic role is the underlying relationship that a participant has with the main verb in a clause. Grammatical	The study of the truth behavior of sentences with quantifiers e.g. ‘all, every, each, some, one’ gave rise to	The term ‘propositional logic’ is also known as as ‘propositional calculus’ and ‘sentential calculus’.

that the verb denotes.	relations (subject, object, etc.) are morphosyntactic, whereas semantic roles (agent, patient, instrument...) are conceptual notions. Semantic roles do not correspond directly to grammatical relations	predicate logic. For this we need 'predicate logic' or 'predicate calculus', but as we need to deal with relations between sentences, predicate logic is not wholly distinct from propositional logic, but includes it.	Here, we are concerned with the relations that hold between sentences, involving complex sentences, irrespective of the internal structure of the sentences themselves. The propositional logic cannot account for inferences that depend upon relations within sentences and cannot deal with an example such as 'All men are mortal', 'Socrates is a man', 'and therefore, Socrates is mortal'
------------------------	--	--	--

Q. Deborah Tannen's view about H.Paul Grice maxim of CP 5 marks

Tannen (1986) claims that Grice's maxims of cooperative discourse can't apply to __real conversations__. In conversation, —we wouldn't want to simply blurt out what we mean, because we're judging the needs for involvement and independence (Tannen, 1986). He assumes that Grice's maxims are prescriptions that conversations must follow strictly in order to be considered cooperative. Another problem with the cooperative principle is that there is often an overlap between the four maxims. It can be difficult to say which one is operating or there are two or more operating at once. Another major objection to Grice's model is different cultures, counties and communities have their own ways of observing and expressing maxims for particular situations.

Q. Explain voilating the maxims.

Maxim violation is unostentatiously, quiet deceiving. Violating the maxim Quantity –Husband: How much did that new dress cost? Wife: Less than the last one. Here, the wife covers up the price of the dress by not saying how much; thus, not giving the required information to the husband and violating maxim of quantity. Violating the maxim Quality – Considering the same example, the wife when asked 'How much did that new dress cost?' It could have violated the maxim of quality by not being sincere and giving him the wrong information i.e. thirty-five hundred rupees'. Violating the maxim relation – Similarly, in answer to 'How much did that new dress cost?' the wife tries to distract him and change the topic saying: I know, let's go out tonight. Now, where would you like to go? This shows the violation of the maxim of relation. Violating the maxim manner – In answer to 'How much did that new dress cost?', if she said that 'a tiny fraction of my salary, though probably a bigger fraction of the salary of the women that sold it to me', Hoping that it could be taken as an answer and the matter could be dropped. It is, thus, like the wife answers the question in a way that could be said to be violating the maxim of manner, in that she says everything except what the husband wants to know.

Q. Linguistics relativity by the reference by Sapir whorf hypothesis 5 marks

The notion of linguistic relativity, associated with Edward Sapir and Benjamin Lee Whorf, is an idea that has spread far outside the fields of anthropology and linguistics, where it began. One reason perhaps is that it provides an explanation for a common experience when dealing with different languages. Writers translating between languages

have often remarked on the lack of fit between words in two languages, e.g. color words might not have exactly the same range in different languages. The fact that language mirrors cultural differences followed to the work of Franz Boas, an anthropologist. Sapir (1949) proposed that the particular language we speak conditions our conceptualization. Similarly, Whorf (1956) strengthened the idea of the link between language and thought into the notion he called linguistic relativity. Its basic premise is that the way we think about the world is determined by our culture and linguistic background.

Q. Difference between Necessary and sufficient conditioning.

Necessary conditioning	Sufficient conditioning
A necessary condition on the sense of a predicate is a condition which a thing must meet in order to qualify as being correctly described by that predicate	A sufficient condition on a sense of a predicate is a set of condition which, if they are met by a thing, are enough in themselves to Guarantee that the predicate correctly describes that thing
Its expressed by conclusion	Expressed by Hypothesis
Example: If Tina goes to University, Her friends will come too.	
Her friends will come too	Tina goes to University

Q. Difference b/w coherence or cohesion

Coherence	Cohesion
Coherence is a quality of a piece of text that makes it meaningful in the minds of readers.	the links that stick different sentences and make the text meaningful can be thought of as cohesion in the text
Coherence is a property decided by the reader whereas	cohesion is a property of the text achieved by the writer making use of different tools like synonyms, verb tenses, time references etc.
Measuring coherence is rather difficult.	Cohesion can be measured and verified through rules of grammar and semantics

Q. Enlist the 10 widely accepted thematic roles. (VU'S FAVRT. IT can be any of the names or three or five or any type of question related to it.)

1. Agent is the initiator of some action, capable of acting with volition. For example, Rashid cooked the meat.
2. Patient is the entity/person undergoing the effect of the main action of a verb or undergoing some change in state, for example, John cut down these bushes.
3. Theme is the entity (person or thing) which is changed or moved by an action of a verb, or whose location is described by verb. For example, the book is in the library.
4. Experiencer is the entity which is aware of the action or state described by the predicate but which is not in control of the action or state. For example, Kamran heard the door shut.
5. Beneficiary is the entity for whose benefit the action was performed. For example, they baked me a cake.
6. Instrument is the means by which an action is performed or something comes about. For example, I write a letter with the pen.
7. Location is the place where something is situated or has taken place. For example, the baby was hiding behind the curtain.
8. Goal is the entity towards which something is moved, either literally or metaphorically. For example, the driver handed his license to the policeman.
9. Source is the entity from which something moves, either literally or metaphorically. For example, I took the pen from the drawer.
10. Stimulus is the entity causing an effect (usually psychological) during an experience. For example: The noise of the horn frightened the passengers.

Q. Phatic..directv and aesthetic 5 marks

Directive Function; we aim to influence the behavior or attitudes of others, e.g. commands and requests.

Aesthetic Function is for poetic expressions - the use of language for the sake of the linguistic artefact itself, and for no ulterior purpose, e.g. the message is often conceptual as with effective meaning. In aesthetic function, both the poet and the reader bring a heightened sensitivity to bear on the act of communication.

Phatic Function is a function which keeps communication lines open, and keeps social relationships in good repair, e.g. _to show that intentions in communication are sincere and friendly, e.g. greetings, farewells, and routine polite questions.

Q. Differentiate b/w Derivation and Inflection

Derivation	Inflection
It is one of the processes of "Word formation" in which one lexeme is created from another lexeme. • It changes the lexical meanings and word class.	Inflections in English grammar include the genitive 's; the plural -s; the third-person singular -s; the past tense -d, -ed, or -t; the negative particle 'nt; -ing forms of verbs; the comparative -er; and the superlative -est
For example making agent nouns from the verbs. Teach(V) + -er = Teacher (N).	For example, the inflection -s at the end of dogs shows that the noun is plural. The same inflection -s at the end of runs shows that the subject is in the third-person singular (s/he runs). The inflection -ed is often used to indicate the past tense, changing walk to walked and listen to listened.

Q. Differentiate between Hyponymy and Meronymy with examples Or "Q. Differentiate between Homonym and Polysemy with examples" (imp)

Hyponym	Meronymy	Polysemy	Homonym
Hyponymy is a relation of inclusion. It includes the meaning of a more general word. When the meaning of one form is included in the meaning of another, the relationship is described as hyponymy.	Meronymy is a term used to describe a part-whole relationship between lexical items,	Polysemy is identified using the criteria of —relatedness!; when the senses are judged to be related under the same lexical entry.	Homonyms are unrelated senses of the same phonological words. Different types of homonyms can be distinguished by their syntactic behaviors and spellings, for instance: lexemes of the same syntactic category with same spellings.
Examples:			
1. dog and cat are hyponyms of _animal', 1. sister and mother are hyponyms of _woman'.	Meronyms vary in three ways: 1. First, how necessary the part is to the whole. e.g. nose as a meronym of the face. 2. Others are usual but not obligatory, e.g. collar as a meronym of the shirt. 3. Third are optional, e.g. cellar for the house.	1. a piece of material, usually metal, curved or bent and used to suspend, catch, hold, or pull something. 2. short for fish-hook	1. lap - _circuit of a course' and lap - _part of the body when sitting down! 2. lexemes of the same syntactic category with different spellings e.g. the verb _ring' and _wring'

Q. Evidentially...5 marks

Evidentiality is a semantic category which allows a speaker to communicate his/her attitude to the source of his/her information. It further allows the speaker to say whether the statement relies on personal first-hand knowledge, or was acquired from another source. There are different types of evidentiality:

1. **Witness Evidentiality:** when an information source is obtained from the direct observation, e.g. I saw him breaking the window'. It is usually visual information (Eyewitness)
2. **Sensory Evidentiality:** indicates that the speaker's evidence for truth is derived from the speaker's own sensory experience.
3. **Inferential Evidentiality:** Indicates that the speaker makes his/her statement based on a deduction from facts and not on a direct observation of the action itself.

Q. Entailment with example

Entailment is defined by truth. A sentence p entails a sentence q when the truth of the first (p) guarantees the truth of the second (q), and the falsity of the second (q) guarantees the falsity of the first (p). Let's take an example of the sentences below, where a is said to entail b:

a. The rebels assassinated the emperor.

b. The emperor died.

Assuming as usual that the same individual is denoted by the emperor' here, there are a number of ways of informally describing this relationship. If somebody tells us a' and we believe it, then we know b' without being told any more. Or it is impossible for somebody to assert a' but deny b'. What such definition have to try to capture is that entailment is not an inference in the normal sense: we do not have to reason to get from a' to b', we just know it instantaneously because of our knowledge of English.

Q. Write approaches to presupposition

In the first approach, sentences are viewed as external objects. We do not worry too much about the process of producing them, or the individuality of the speaker or writer and their audience. Meaning is seen as an quality of sentences rather than something constructed by the participants. For Example Sana just gave shower to her baby (p). Here we can presuppose Sana has a baby (q) In second approach views sentences as the utterances of individuals engaged in a communication act. The aim is to develop the strategies that speakers & hearers use to communicate with one another. Thus, we might look at communication from the speaker's viewpoint. Presupposition is 1 of a number of inferences that the listener might make on the basis of what the speaker has just said. The 1st approach is essentially semantic and the 2nd pragmatic

Q. MaximS

Maxim of quantity – says that speaker should be as informative as is required. They should give neither too little information nor too much.

Maxim of Quality – information provided in conversation to be genuine and justified.

Maxim of relation – says that speakers are assumed to be saying something that is relevant to what has been said before.

Maxim of manner – says that we should be brief and orderly, and avoid obscurity and ambiguity. How cognitive theory relates to relevance theory? In cognitively oriented work, including relevance theory, there has been interest in the structure of the mind and in how pragmatic inference is performed. Work in psychology on mind reading (or

_theory of mind'), the ability humans have to infer other's mental states from observation of their actions, has direct relevance to pragmatics.

Q. Define Explicit and the Implicit meanings(IMP)

Explicit concern obvious meaning and Implicit concern unobvious meaning. So if something was explicit in a text, it means that the information is clearly stated for you. E.g. Josh was wearing a blue, woolly hat yesterday morning. The colour of his hat is explicit information that we have learnt. However, implicit information is what we are not told but we can guess. E.g. Josh was wearing a blue, woolly hat yesterday morning. We could guess that it was cold yesterday morning because Josh is wearing a blue, woolly hat. The sentence doesn't tell us this information directly, but we know that when it's cold, people often wear warm, woolly hats. So explicit is something we KNOW, implicit is something that is SUGGESTED. Pragmatists are interested in cases where what the speaker intends to convey is different from the words one chooses literally mean. The former is generally known as the implicit meaning and the latter as the explicit meaning.

Q. Grammar category note on gender: (IMP)

Grammar is not restricted to the study of form or function words. It is concerned, more widely, with categories such as tense, gender, number and with syntactic functions such as subject and object, e.g. _Ali' (Noun/Subject, etc.). These categories can be on _phrasal level' as well, e.g. _Ali the son of John' is a noun phrase. According to Palmer, there are two familiar grammatical categories, _Gender' and _Number' but English has strictly no grammatical gender at all. It has, of course, pronouns he, she, it but, these are essentially the markers of sex. The category of person (first person I, we, second person you, and the third person he, she, it, they) is often closely associated with the number and with gender in the verbal forms of languages. The first person relates to a speaker while, the second person relates to the hearer.

Q. Grammatical Errors: [N. imp]

Grammatical categories of the verb, tense, aspect, phase and voice are linked with each other and a small alteration in the order of these categories completely changes the meaning of a sentence. For example, _John plays the piano' can be transformed into _the piano is played by John'. Transformation is where the grammatical categories not only affect one element (verb), but also affect the whole sentence. **For example**, _He ate food' is changed into _Food was eaten by him,' (Passive). Subject and objects are marked by position, the subject precedes the verb e.g. _She laughed.' and the object follows the verb e.g. _She -killed a snake.'

Q. Borderline between semantics and pragmatics:

Both semantics and pragmatics involve studying meaning, but they are generally seen as different fields. Semantics is the study of the contribution made to meaning by the meanings of linguistic items and the way they are combined. Lexical semantics deals with word meaning, and compositional semantics deals with the way the meanings of lexical items combine to give phrase and sentence meaning. On this view of semantics, pragmatics takes up where semantics leaves off. Whereas, pragmatics is concerned with what is conveyed by a particular utterance of a phrase, by a speaker, in a context. The borderline can be seen as falling at the division between encoded and inferred aspects of meaning, between truth-conditional and non-truth-conditional aspects of meaning, or between sentence meaning and speaker meaning

Q. Current and recent history of pragmatics

The current state and recent history of pragmatics are too diverse and complex to describe briefly; A few areas of interest may be picked out. Early in the modern period, disagreement on the principles that govern communication led to fragmentation of the field into Griceans, neoGriceans and relevance theorists. There are also pragmatic

theorists who work primarily on speech acts. From the 1970s, many theorists have been interested in developing formal accounts of phenomena, particularly scalar implicature, presupposition, and conventional implicature. This work is now known as formal pragmatics and has close links to dynamic approaches to semantics such as Discourse Representation Theory.

Q. Radical linguists' perspective of semantics and pragmatics:

There are three different schools of thoughts on the distinction between semantics and pragmatics. One group of linguists says that only three fields of linguistics are pure linguistics i.e. semantics, morphology, and syntax. They do not include pragmatics in pure linguistics as it does not rely on logic and ignore it by saying that anyone can interpret language according to his own desire. This school of thought is known as semanticism. While other group, of linguists holds that semantics is only a study of conceptual meaning but real conversation takes place within pragmatics. Without pragmatics, everything is useless because without it meaning will be partial and incomplete. This school of thought is called pragmatism. While the third and most recent school of thought is of the view that both semantics and pragmatics are important.

Q. Reference and Referential Expression. (5Marks)

Among other reasons, speakers mark a noun phrase as 'definite' when they assume that the addressee can identify its referent. Otherwise, the noun phrase is marked as indefinite. For instance, Andrea: Who's at the door? Bundy: It's the neighbor. In this example, the definite noun phrase 'the neighbor' in Bundy's answer presupposes that Andrea can determine which neighbor Bundy is talking about. Bundy's answer is appropriate if she and Andrea have only one neighbor or have reason to expect a particular neighbor at the door. If they have several neighbors and Bundy cannot assume that Andrea will be able to identify which neighbor is at the door, the answer to Andrea's question would be indefinite: It's a neighbor. Proper nouns and pronouns are generally definite. Pronouns such as 'you' and 'we' usually refer to individuals who are identifiable in the discourse context. Definiteness in English is marked by the choice of articles (definite the versus indefinite a) or by demonstratives (this and that, both definite). Indefinite noun phrases in English are marked by a or an (a furnace, an apartment building) or by the absence of any article (oil, fire, apartment buildings).

Q. Distinction between Lexicon and Grammar. (5Marks)

It is irrelevant for semantics whether a grammatical category is indicated by a form of the word, by a morpheme or the order of the words. For example, Past tense is marked by the past tense morpheme (-ed) but there is no similar morpheme to indicate the future; future is marked by 'shall, will, or be going to'. The distinction between 'Grammar and Lexicon' can be posed in terms of the distinction between 'grammatically unacceptable sentence' and 'those that are excluded on lexical grounds'. *The boys are in the room. is incorrect but the meaning is not vague. Chomsky invented the sentence Colorless green ideas sleep furiously, which seems faultless grammatically, yet is completely unacceptable lexically. Therefore, if a sentence conforms to grammar, but be completely deviant lexically, it would seem that grammar and lexicon are distinct.

Q. Input relevance

Any external stimulus or internal representation which provides an input to cognitive processes may be relevant to an individual at some time. Utterances raise expectations of relevance, not because speakers are expected to obey a cooperative Principle and maxims, but because the search for relevance is a basic feature of human cognition. Communicative Principle of Relevance is an attempt to work out one of Grice's central claims that an essential feature of most human communication, both verbal and non-verbal, is the expression and recognition of intentions. We keep on producing stimuli which gain other people's attention and thus lay the ground for communication. It is

the tendency to maximize relevance that makes it possible to predict and manipulate the mental states of others knowing your tendency to pick out the most relevant inputs.

Q. Syntagmatic reffernce with lexical relation Or Q. Syntagmatic or horizontal axis of combination

Syntagmatic relations hold between two or more words co-present in a sequence. Combinations based on sequential relations are called syntagms. The notion of a syntagm applies among others to a group of words and to complex units of every size and kind, for example, phrases, sentences. For instance, in a ‘red car’ and ‘green car’, ‘red’ and ‘green’ are in syntagmatic relation with ‘car’. Syntagm is a linguistic term designating any combination of units which are arranged in a significant sequence. A sentence is a syntagm of words. For instance, both the sentences —I write what I know and —I know what I write consist of the same units, —I, —write, —what, and, —know. However, the meanings of these two sentences are different because the units that compose the sentences are arranged differently based on the syntagmatic system - the ‘horizontal’ axis

Q. Prototype

There is a model of concepts which views them as structured so that there are central or typical members of a category, such as BIRD or FURNITURE, but then shading off into less typical or peripheral members. This approach seems to have been supported by Rosch’s experimental evidence: speakers tend to agree more readily on typical members than on less typical members. These members come to mind more quickly. —What kind of bird are you, if you cannot fly, said the little bird to the duck. —What kind of bird are you, if you cannot swim, said the duck and dived (Prokofiev, Peter Wolf). This quote is the essence of the prototypical conception of the structures of categories.

The experiments show that prototype theory involves a psycholinguistic notion that aids human categorization. Prototypes provide some insight into the way we conceive of certain ideas/objects. Prototypes may help children learn the meanings of new words. Culturally and socially dependent prototypes can vary across populations. Many words have no clear mental images such as ‘forget, things, without, concept’

Q. Why is an idiom a rigid word combination to which no generalities apply? 5 marks

An idiom is a rigid word combination to which no generalities apply; neither can its meaning be determined from the meaning of its parts; nor can it participate in the usual word-order variations. Idioms involve collocation of a special kind, for instance, ‘kick the bucket’, ‘fly off the handle’ and ‘red herring’.

Q. Five types of Antonym OR any one of them

1. **Simple Antonyms** - the negative of one implies the positive of the other - complementary pairs or binary pairs.
2. **Gradable Antonyms** - this is a relationship between opposites where the positive of one term does not necessarily imply the negative of the other.
3. **Taxonomy Sisters** -antonym sometimes describe words which are at the same level in taxonomy. Taxonomies are classification systems e.g. the color adjectives in English (i.e. red, orange, yellow, green, blue, purple, brown).
4. **Reverses** - shows reverse relation in between terms describing movements, where one term describes movement in one direction, and the other the same movement in the opposite direction, e.g. push/pull, come/go, up/down, in/out, right/left.
5. **Converses** - describe a relation between two entities from alternate viewpoints, e.g. own/belong to, above/below, employer/ employee.
