Subject: BIO101

Quiz Completed: 13/05/2026, 20:20:39
Total Questions: 10

Question 1:

In prokaryotes, region in the cell containing this genetic material is called a _____

A. Nucleoside

B. Nucleotide

C. Nucleoid.

D. Nucleosome

Selected Answer: C

Question 2:

The smallest unit of DNA is called a

A. Nucleotide

B. Nucleoside

C. Nucleosome

D. None of the mentioned option

Selected Answer: A

Question 3:

Translation, is formation of a protein or peptide by mRNA with the help of another organelle called _____

A. Nucleus

B. Mitochondria

C. Ribosome

D. Golgi apparatus

Selected Answer: C

Question 4:

Codon is a _____ nucleotide set of DNA molecule that codes for a protein.

A. 3

B. 1

C. 4

D. 2

Selected Answer: A

Question 5:

_____ is a length of DNA that codes for a peptide or protein. So that gene is a part or length of DNA

A. Gene

B. Proteins

C. Chromosomes

D. DNA

Selected Answer: A

Question 6:

The simplest level of protein structure is called _____

A. Tertiary Structure

B. Simplest structure

C. Primary Structure

D. Secondary Structure

Selected Answer: C

Question 7:

A _____ is a length of DNA coiled around a set of proteins

A. Nucleic acid

B. Nucleosome

C. Nucleopores

D. Nucleotide

Selected Answer: B

Question 8:

Pyrimidine bases include the bases called Thymine and Cytosine that have _____ structure

A. One single and two double ring

B. Single ringed

C. Double ringed

D. No rings

Selected Answer: B

Question 9:

_____ is formation of a form of mRNA from DNA

A. Transition

B. Transcription

C. Translation

D. Transversion

Selected Answer: B

Question 10:

Purines include which of the two bases

A. Adenine and Cytosine

B. Thymine and Cytosine

C. Thymine and Guanine

D. Adenine and Guanine

Selected Answer: D
