Subject: BIO101

Quiz Completed: 15/05/2026, 23:44:27
Total Questions: 10

Question 1:

_____ is formation of a form of mRNA from DNA

A. Transition

B. Transcription

C. Translation

D. Transversion

Selected Answer: B

Question 2:

Pyrimidine bases include the bases called Thymine and Cytosine that have _____ structure

A. Single ringed

B. Double ringed

C. One single and two double ring

D. No rings

Selected Answer: A

Question 3:

Translation, is formation of a protein or peptide by mRNA with the help of another organelle called _____

A. Mitochondria

B. Nucleus

C. Ribosome

D. Golgi apparatus

Selected Answer: C

Question 4:

In prokaryotes, region in the cell containing this genetic material is called a _____

A. Nucleoside

B. Nucleoid.

C. Nucleotide

D. Nucleosome

Selected Answer: B

Question 5:

_____ is a length of DNA that codes for a peptide or protein. So that gene is a part or length of DNA

A. Proteins

B. Gene

C. Chromosomes

D. DNA

Selected Answer: B

Question 6:

The simplest level of protein structure is called _____

A. Simplest structure

B. Tertiary Structure

C. Primary Structure

D. Secondary Structure

Selected Answer: C

Question 7:

Purines include which of the two bases

A. Thymine and Cytosine

B. Thymine and Guanine

C. Adenine and Guanine

D. Adenine and Cytosine

Selected Answer: C

Question 8:

The smallest unit of DNA is called a

A. Nucleosome

B. None of the mentioned option

C. Nucleotide

D. Nucleoside

Selected Answer: C

Question 9:

A _____ is a length of DNA coiled around a set of proteins

A. Nucleic acid

B. Nucleosome

C. Nucleopores

D. Nucleotide

Selected Answer: B

Question 10:

Codon is a _____ nucleotide set of DNA molecule that codes for a protein.

A. 3

B. 4

C. 2

D. 1

Selected Answer: A
