

9 Causes of EA (Error Analysis)?

- 1) mother tongue interface
- 2) Carelessness
- 3) Translation
- 4) loan words.
- 5) Inherent difficulties of target language.

10 Define Overgeneralization?

It is the application of the grammatical rules in cases where it does not apply.

This term is most often used in connection with language acquisition by children.

For Example:-

A young child may say "foots" instead of "feet".

11 phases of Overgeneralization?

Three phases

phase 1: The child uses correct past tense of go

phase 2: The child constructs a rule for forming the past tense and begins to overgeneralize the rule to irregular forms such as go resulting in forms such as goed.

phase 3: The child learns that there are many exceptions to this rule and acquires the ability to apply this rule selectively.

#7) Classification of Errors into four grammatical categories?

Omission:- Leaving out an item that is required for correct grammatical construction.

Addition:- Addition of unnecessary elements

Substitution Use of one element in the place of another or wrong form of morpheme.

Mis-information or mis-ordering:- Incorrect placement of a morpheme or group of morphemes in an utterances.

Q#8 = Three types of Errors? According to systematicity?

- 1) **Pre-systematic**:- Errors occur when the learner is unaware of the existence of the particular rule in the target language.
- 2) **Systematic**: Errors occur when the learner has discovered a rule but it is wrong one.
- 3) **Post-systematic**:- Errors occurs when the learner know the correct target language rule but uses it inconsistently: Example: Make a mistake.

Q#2:

Objects of Error Analysis?

According to Corder (1974) error Analysis has two objects:

- **Theoretical objects:** deals with what and how a learner when he studies a second language.
- **Applied object:** enables the learner to learn more efficiently by manipulating knowledge of his vernacular for academic purposes.

Q#3, Why is Error Analysis (EA) done?

Explain three purposes?

- 1) Firstly, to find out the level of language proficiency the learner has reached.

Q#4 Stages of EA (Error Analysis)?

According to Corder (1974) five stages of EA.

1. Collection of data
2. Identification of errors
3. Description of Errors
4. Explanation of Errors
5. Evaluation of Errors

Q#5 Broad types of Error Analysis?

A Massive sample involves collecting ~~some~~ several samples of language use from a large number of learner.

A Specific sample consist of one sample of language use collected from a limited number of learner.

An Incidental sample involves only one sample of language use produced by single learner.

Q#6 Identification of errors depends on four crucial questions?

- 1) The first question is to set up what target language should be used as point of evaluation.
- 2) The second is related to difference between errors, mistakes or slips.
- 3) Third question about interpretation.
- 4) Fourth question focus on deviation.

#2 Richard two types of Errors

- (1) Interlingual are caused by mother tongue interference.
- (2) Intralingual errors are occurred during the learning process of SL at the stage when learners have not acquired a knowledge.

13 Explain Error Sources?

Taylor (1986), point out the Error Sources:

psycholinguistic Sources: Concern the nature of the L2 knowledge system and the difficulties learners have in using it in production.

Sociolinguistic Sources: Involves such matters as the learners ability to adjust their language in accordance with the Social Context.

Discourse Sources: Involves problems in the organization of information into a Coherent 'text'.
