

Question # 7 of 10 (Start time: 08:33:21 PM, 15 May 2024)

Which of the following is not a form of language mixing?

Select the correct option

☐	Phonetic	
☐	Syntactic	
☐	Semantic	
☒	Pragmatic	

Click to Save An

is generally true, it would argue against an interpretation of mixing in terms of linguistic confusion.

There have been reported examples of syntactic mixing, semantic mixing and pragmatic mixing also. Nevertheless, it is possible that children mix because they have heard mixing by their parents or other speakers in the environment. This makes it necessary to study the language models to which bilingual children are exposed in order to understand all possible sources of mixing. Rates of mixing vary from study to study and from case to case. Mixed utterances are reportedly more frequent in early stages of bilingual development and diminish with age.

Challenges: Reported rates of mixing are difficult to interpret or compare across studies owing to:

1. Differential exposure to the languages in question
2. The possibility of unequal or inequitable sampling of the child's language use in different language contexts and/or with different interlocutors
3. The lack of an acceptable metric of language development with which to identify children at comparable stages
4. Different operational definitions of mixing

**Question # 8 of 10 (Start time: 08:05:18 PM, 16 May 2024)**

The understanding of _____ is important to know the situation and then the event.

Select the correct option

You

the understanding of is important to know the situation and then the event. 1- setting 2- language 3- dialect 4- time choose the correct answer.

Copilot

The understanding of the **setting** is important to know the situation and then the event. The setting provides the context in which the event takes place, including the time and place. It 

Grammar processing in bilingual children is _____ than the monolingual children.

Select the correct option

☐	better
☐	none
☐	later
☐	earlier

unitary system argument. In fact, children's mixing may be related to mixed input by parents. Genesee calls for more serious research on the possible role of parental input in the form of mixed utterances.

Jürgen M. Meisel addresses the 'one system or two' question by focusing on the syntactic and morphological development of bilingual children however, instead of simply providing further evidence in support of the separate development argument, Meisel raises the theoretically more interesting question of whether the human language making capacity could allow the bilingual individual to separate the two simultaneously acquired grammatical systems from early on, without going through a phase of confusion. Through a longitudinal study of simultaneous French-German bilingual children, he argues that grammatical processing is in fact possible much earlier than is usually assumed on the basis of analyses of monolingual child language. He further speculates that this development of grammatical processing ability could be explained by the fact that the task of acquiring two language systems simultaneously requires more attention to problems of form, rather than relying on semantic-pragmatic strategies alone.

Types of Mixing

By far the most frequent type of mixing to be reported involves whole lexical items, both content and function words. Some investigators have found that content words, and especially nouns, are the most frequently mixed lexical items. Others have reported specifically that adverbs, articles, pronouns, prepositions and conjunctions occurred in mixed utterances in descending order of frequency. Mixing at the level of the phrase has also been found. It is also reported when phrasal mixing occurred, the structural consistency of the utterances was maintained so that there were no lexical redundancies or syntactic errors. To the extent that this

Lesson-13

OTHER SOURCES OF VARIANCE AND DOMAIN CONFIGURATION

Topic No. 066-070**Introduction; Sources of Variation; Domain Configuration; Domain analysis-Contribution; Domain Analysis Challenges**

Variance in language behaviour in multilingual settings is likely to be **exceedingly** complex. For highlighting patterns of language choice in multilingual settings, it would seem appropriate to distinguish at least between the following sources of variance:

1. Media variance: writing, reading and speaking: Degree of mother tongue maintenance or displacement may be quite different in each of these very different media. Where literacy has been attained *prior* to interaction with an “other tongue” **reading and writing use of the mother tongue may resist displacement longer than speaking usage.**

2. Role variance: Degree of maintenance or shift may be quite different in conjunction with *inner speech* (the language of thought, of talking to one's self.), *comprehension* (decoding, for self), and *production* (encoding, for others). **There is some evidence that language shift is most resistant to inner speech.**

3. Situational variance: Degree of maintenance or shift may be quite different in conjunction with *more*

Who mix languages more often?

Select the correct option

☐	New born
☐	Old
☒	Adults
☐	Matured

Linguistic Variation and Age

Adult bilinguals:

- Mix languages
- Code-mixing sophisticated and rule governed

Language usage value varies with _____

Select the correct option

language variation

dialect

social background

occupation

Click to Save Answer

Contextual Constraints

We discussed:

- Linguistic alternates symbolize differing identities assumed
 - No one to one relationship between speech variety and identity
- Language usage values vary with social background

Question # 9 of 10 (Start time: 08:01:23 PM, 16 May 2024)

For practical reasons social networks are generally _____ to individuals.

Select the correct option

☐	insecure
☐	anchored
☐	detached
☐	unbound

Social Networks and Code Switching

Social Networks

- Individual networks of relationships and support
- Individuals as anchors
- Significant role in language shift and maintenance

What are conventionalized exchanges?

Select the correct option

Non frequent exchanges

Unknown phonological patterns

Interaction with a sense of script

Routine exchanges without any script

Indexicality

Indexicality:

- Theory applicable universally to conventionalized exchanges
- Exchanges with a sense of script - jobs, consultation etc

Question # 3 of 10 (Start time: 08:08:04 PM, 16 May 2024)

Code switching

Negotiation principle:

- Directs the speaker to choose forms that symbolize a set of desirable implication of rights and obligations
- Between speakers
- Within a given context

Language is strongly related to _____

Select the correct option

☐

variance

☐

correlation

☐

social networks

☐

solidarity

Code switching

Topics:

- Conventions –marked and unmarked speech
- Social networks, language use

Question # 5 of 10 (Start time: 08:02:41 PM, 16 May 2024)

Identify the word from the given definition,
"Alternate social definition of the situation depending on the object of interaction."

Select the correct option

☐	Setting
☐	Event
☐	Language variation
☐	Dialect

Click to Save Answer & Move to Next Question

Time, Setting, Situation & Event

Event:

- Alternate social definition of the situation depending on the object of interaction
- Stereotypical-routine opening and closing

Question # 9 of 10 (Start time: 09:49:45 PM, 15 May 2024)

There exists a _____ between regional background of the person and reference group.

Select the correct option

☐	regularity
☐	solidarity
☐	inverse relation
☐	correlation

Regularity in Social Meanings

Socio-ecological system:

- If meanings attached to dialect are regular then so is the pattern of social ties

Correlation between:

- Regional background
- Reference group
- Niche occupied in the system

The study of domain analysis facilitates our understating of _____ and language choice

Select the correct option

☐	acculturation
☐	language variation
☒	bilingualism
☐	communication

Domain Analysis: Challenges

Domain analysis has facilitated:

- Understanding of bilingualism and language choice
- Organizing data related to language shift and maintenance-across domains and variance in habitual choice

4. Domain variance: Degree of maintenance or shift may be quite different in each of several distinguishable domains of language behaviour.

Dominance Configuration

A description and analysis of the simultaneous, cumulative effect of all of the above-mentioned sources of variance in language choice provides a dominance configuration (Weinrich, 1953). Dominance configurations summarize data on the language choice behaviour. Repeated dominance configurations for the same population, studied over time, may be used to represent evidence of language maintenance or shift in a

Question # 4 of 10 (Start time: 08:07:25 PM, 16 May 2024)

The form of language that people speak in a specific part of country is known as _____

Select the correct option

☐

acculturation

☐

communication

☒

dialect

☐

bilingualism

Copilot

The form of language that people speak in a specific part of a country is known as a **dialect**. So, the correct answer is **1- dialect**. A dialect can include distinct vocabulary, grammar, and pronunciation characteristics that are influenced by a region's culture and geography. The other options, communication, bilingualism, and acculturation, are related to language but do not specifically refer to regional variations in language.
