Very Important Topics with Question.

1. Define byte.
2. Ascii stand for.
3. Explain Base + index.
4. RET and Call instruction.
5. Program registers offset error.
6. Enlist basic operations of stack.
7. ASCCI syntax was given prove.
8. How MOVS instructions works?
9. Working of linear memory model?
10. Stacks behave like LIFO and SHL.
11. Similarity or difference of CMP and SUB.
12. Write Three name of assembly logical part.
13. Background and foreground colors attributes.
14. Stack data structure using direct call segment?
15. Selective bit inversion on lowest nibble 100110b.
16. Which two registers are associated with SS by default.
17. Write a program for multiplication of 2 4 bits number.

18. MOV [AX+BX+30] which physical design strategy use.
19. Identify the operation and operands from the given codes.
20. Write subroutine for add two numbers stored in Ax and Dx.
21. Write assembly Language code for adding two 32-bit numbers.
22. What information is expressed by each byte in video memory?
23. Difference between shift logical right and shift arithmetic right?
24. What will be the effect of REPE &repine instruction on zero flag.
25. Why we use the REP prefix with the block processing instruction.
26. How are local variables created and accessed in assembly language?
27. Name the registers which have higher and lower halves. Only names.
28. Values of Ip register is same and update when call instruction is extract.
