

Lesson No: 23

SENTENCE DEVELOPMENT IN LANGUAGE -1**Topic 107****Declarative Sentence Form:-****What are Declarative sentences form?**

Declarative sentences typically follow a subject-verb-object word order, although this word order can be modified for emphasis or clarity. The subject of a declarative sentence is usually placed before the verb. e.g., “The cat sat on the mat” follows the subject-verb-object word order. A declarative sentence tells something and gives some information. The verb of a declarative sentence agrees with the subject in number and person. e.g., “She walks to work (3rd person singular) while “They walk to work” uses the plural form of the subject. Here, you can see that in the third person singular, we use a form of the verb with an "s". However, in the second sentence, when the subject is in the plural form, we use only the base form of the verb. This shows the agreement between a subject and its verb. Simple declarative sentences consist of one independent clause.

While complex declarative sentences consist of two or more clauses. These sentences can be affirmative or negative. Depending on whether they express a positive or negative statement. For example, “I like ice cream” is a positive affirmative declarative sentence. While “I don’t like pumpkins” is a negative declarative sentence. Additionally, the explanation and various aspects of declarative sentences are detailed in the attached picture.

These sentences also can be used to convey a wide range of information, opinions, thoughts, and ideas. Declarative sentences are essential for clear and effective communication in English. By mastering the rules of sentence structure and verb agreement, speakers and writers can create clear communication. The example is provided below in the form of an image.

**Topic 108****Interrogative Sentence:-**

An interrogative is a type of sentence that asks a question or seeks information. It is used to find out a response or engage in conversation. These sentences often begin with a question word (such as, “Who” “what”, “where”, “why”, or “how”) or an auxiliary verb.

For example, "What is your name?" or "Can you swim?" Here, you can clearly see that both sentences are in question form. The simple forms of these two sentences are: "You can swim" and "Your name is."

The subject-verb order in these sentences is typically inverted. This means that the verb comes before the subject. For example, instead of saying "You are going", an interrogative sentence would be "Are you going?" Here, "are" is considered an auxiliary verb and is used in question form.

There are two main types of interrogative sentences:

- Yes-no questions and wh-questions. Yes-no questions can be answered with a simple "yes" or "no", while wh-questions (where, what when, etc) require more detailed answers. In yes-no questions, the helping verb is usually placed before the subject. E.g, "Did you see the movie?" or "Are they coming to the party?" Another example is mentioned in the image:
- Wh-questions use question words in the start of the sentence to ask for specific information e.g., "Where did you go on vacation?", "Why are you upset?". Interrogative sentences often end with a question mark to indicate that they are questions. And question marks should be placed at the end of the sentence; otherwise, it will be considered incorrect. Moreover, the explanation of using verbs in the interrogative form is provided in the attached picture.

To Be Used To - Interrogative

To be + subject + used to + [verb + ing] / pronoun/noun phrase + ...?

To Be	Subject	Used To	Gerund	Question mark
Am	I	used to	working	...?
Are	you	used to	working	...?
Is	he	used to	working	...?
Is	she	used to	working	...?
Is	it	used to	working	...?
Are	you	used to	working	...?
Are	we	used to	working	...?
Are	they	used to	working	...?

Understanding the form of these sentences is important for asking questions, seeking information, for communicating. By using suitable question words, word order, and intonation, speakers and writers can find the desired information. Or engage in meaningful conversations with others. This concludes the discussion on the different types of interrogative sentences, how they are constructed, their styles, and how we combine phrases to form interrogative sentences.

Topic 109

Imperative-Sentence Form: -

What are imperative sentences, and what sense do they convey?

Imperative sentences convey four types of senses: request, order, advice, and instruction.

You can see examples and more details of these four senses in the attached picture.

An imperative is a type of sentence that gives a command, makes a request, or provides instructions.

It is used to express a direct and authoritative tone. Each type of sentence has its tone and nature of giving instructions and information.

Imperative sentences often lack a subject, which is usually implied to be “you” (the person or group is addressed). For example, “Close the door” (it can be individual) or “Please sit down” (or it may be class, or a group, which we are asking them) are imperative sentences. The verb in an imperative sentence is typically in its base form (infinitive form) without any subject-verb agreement. For example, “Run”, “Eat your vegetables” or “Be quiet” are all imperative sentences. The details of imperative functions and examples are provided below, in the image.

IMPERATIVES	
Function	Example
Imperative to use giving a direct/order/command	Wake up now!
Imperative to use giving a warning/prohibition	Watch out! Don't touch me!
Imperative to use giving a advice	Don't be panic Don't eat too much
Imperative to use giving a instruction	Go straight ahead then turn left Take the pill after a meal!
Imperative to use giving a request	Please don't go Please reconsider Let me alone, please

Imperative sentences can be affirmative or negative. Affirmative imperatives simply state what action should be taken. While negative imperatives include a negating word such as “don’t” For example, “Don’t touch that” or “Please don’t interrupt”. Furthermore, examples are provided below:

Negative Imperatives		
Verb (infinitive without to) + ...		
Infinitive		Positive imperative
To eat	-	Don't eat!
To dance	-	Don't dance!
To run	-	Don't run!
To sleep	-	Don't sleep!
To work	-	Don't work!

Imperative sentences often use strong, direct language and can be punctuated with an exclamation mark for added emphasis. For example, “Stop!” or “Do it now”. These sentences can also include adverbs, adjectives, or other words to modify or qualify the command or request. E.g., “Kindly lower your voice”.

The following image explain the features of Imperative sentences:

Imperative Features	
Imperative sentences have the following features:	
Verb position	The finite verb comes first.
Verb form	The finite verb is in the imperative.
Intonation	The voice falls at the end of the sentence.
Punctuation mark	Exclamation mark

Understanding the form of these sentences is important for giving clear and concise commands, making requests, or providing instructions in all types of communication. By using appropriate tone and language, speakers and writers can effectively convey their intentions and guide the actions of others. Hence, imperatives can trigger interest in language and prove highly effective for listeners actively engaging in the language process. Examples are provided in the attached picture:

Imperative Sentences	
Sit down! Don't be late! Orders	Watch out! Look out! Warnings
Don't drink alcohol! Don't eat heavy meals! Advice	Please help me. Don't speak, please. Request
Open the packet and take out the device! Then put it in a flat place. Instructions	Shall I come? Shall we go out? Question

To conclude, these are various dimensions, words, and lyrics we use to give orders, warnings, advice, requests, instructions, and even ask questions.

Topic 110

Negative – Sentence Form:-

What are Negative Sentences and how they are developed?

A negative is a type of sentence that expresses negation. It is often used to express the opposite of a positive statement. Negative sentences typically include a negating word such as “not”, “no”, “never”, or “neither”. For example, “I am not going to the party” or “There is no milk in the fridge”. To form a negative sentence, we typically add "not" after the auxiliary verb or use the negative form of the main verb. See the explanation provided in the image below.

- In the image, I eat lunch every day is an example of a Positive sentence.
- And I don't eat lunch in the morning is an example of a Negative sentence.

The placement of the negating word or phrase within the sentence can affect its meaning and emphasis. For example, “I do not like chocolate” emphasizes the dislike the chocolate, but not today emphasizes the temporal aspect of the negation. Temporal refers to time. Some other examples of negative sentences are stated in the attached picture. The image also clarifies that when transforming a positive sentence into a negative one, we utilize a helping verb along with "not" based on the tense of the sentence.

Negative sentences can be formed in several different ways, depending on the type of sentence and the negating word used. For example, negative declarative sentences use “not” to negate the verb, while negative interrogative sentences use “not” to form a negative question. Additional examples are provided in the green box.

Negative sentences can be used to express a variety of negative concepts, including denial, prohibition, lack, and refusal. For example, “I cannot go to the party” expresses a lack of ability, while “Do not touch the stove” expresses a prohibition. Understanding the forms of negative sentences is essential for clear and effective communication in English. By mastering the rules of sentence structure and negation, speakers and writers can convey negative concepts clearly and concisely. The Full and Short forms of negation are explained here:

NEGATIVE SENTENCES

Examples:

- I **am not** Portuguese. I am Brazilian.
- She **isn't** 43. She is 46.
- The CDs **aren't** under the table.
- My parents **are not** in town.
- The weather **is not** nice. Let's stay at home.
- Peter and James **aren't** friends.
- She **isn't** at school. She's on holiday.

FULL FORM

I am not
He is not
She is not
It is not
You are not
We are not

SHORT FORM

I'm not
He isn't
She isn't
It isn't
You aren't
We aren't

Lesson No: 24

SENTENCE DEVELOPMENT IN LANGUAGE – 2

Topic 111**Subordinate Clause Development:-**

Subordinate clause is a type of clause that depends on a main clause to form a complete sentence. They typically function as noun clauses, adjective clauses, or adverb clauses. Wren & Martin suggest that children begin to produce simple subordinate clauses at around 5-6 years of age. These early subordinate clauses may be introduced with subordinating conjunctions, like "because," "if," or "when," and often have a subject and a verb. As children's language skills progress, they produce more complex subordinate clauses. For example.

As you can see in the sentences, subordinate clauses join with the independent clause to

convey a complete sense or meaning, and each clause contributes its significance.

They use "although," "while" or "since." They may also learn to manipulate the word order in subordinate clauses to convey different meanings. According to Wren & Martin, the development of subordinate clauses, syntax, and sentence structure is closely related. Because clauses are dependent on each other both two combine and then give complete meaning. Children must learn to combine clauses in different ways to produce sentences with different meanings and functions.

Subordinating conjunctions: Children recognize and use subordinating conjunctions to introduce subordinate clauses. "because," "if," "when," "although," and "since." An example is written in the image.

Hence, the subordinate clause alone doesn't make complete sense; it needs the main clause for that. Similarly, the overall meaning won't be complete without both clauses.

Word order: The placement of words within a subordinate clause can impact its meaning. For example, "I saw the dog that was running" and "I saw the running dog". As, you can see that, the first sentence is complete with the use of that.

Syntactic complexity: As children's syntactic skills progress, they produce more complex sentences with multiple subordinate clauses.

Here are a few examples of subordinate and relative clauses.

Exposure to language models: Children exposed to more sentence structures and language use develop quickly skills using subordinate clauses.

Contextual factors: Factors that influence subordinate clause development. Like the purpose of communication, the listener's knowledge, and the speaker's intent.

Subordinate clauses	
Relative clauses	Relative clauses
Nominal clauses	Indirect questions
	Indirect commands
	Complement clauses
Adverbial clauses	Adversative and concessive clauses
	Conditional clauses
	Temporal clauses
	Clauses of manner
	Clauses of purpose
	Clauses of result
	Causal clauses

Source: Kantzou

Topic 112

Compound Sentence Development:-

What is a compound sentence?

A compound sentence is a type of sentence that consists of two or more independent clauses, which are complete thoughts that can stand alone as separate sentences. Independent clauses in a compound sentence are typically joined together by coordinating conjunctions, such as "and," "but," "or," "nor," "for," "so," or "yet." For example, "I went to the store, and I bought some groceries."

The coordinating conjunctions used to join the independent clauses in a compound sentence can add different meanings or relationships between the clauses. For example, "I studied hard, so I passed the exam" shows a cause-and-effect relationship, while "She is tired, but she keeps working" shows a contrast. Further, one more example is mentioned below:

In the example above, both clauses are connected using the word "But".

A comma is usually placed before the coordinating conjunction when joining two independent clauses to form a compound sentence. For example, "I finished my work, and then I went home." Compound sentences can also be formed by using semicolons (;) instead of coordinating conjunctions. This is common when the two independent clauses are closely related. For example, "She loves to read; her favourite genre is mystery." Here, both two sentences are joined together with the use of semicolon.

Understanding compound sentence development allows for more varied and sophisticated writing. By incorporating compound sentences, writers can connect related thoughts, express contrasting ideas, or show cause-and-effect relationships, leading to clearer and more engaging communication. Further, examples are mentioned in the picture. It is important to use appropriate punctuation and conjunctions when developing compound sentences to ensure clarity and coherence in writing. Examples are stated in the image. Thus, these compound sentences are linked together using different coordinating conjunctions, as shown above in the picture.

Compound Sentences

A **compound sentence** consists of **two main clauses** of equal importance, joined together with a **conjunction**.

I like coffee **and** I like tea.
 Peter was late **but** Chris waited for him.
 I can walk home **or** I can take a taxi.

Compound Sentences

A compound sentence consists of two independent clauses, joined together by a comma and a coordinating conjunction.

The coordinating conjunctions are:

For, And, Nor, But, Or, Yet, So

FANBOYS

Examples:

He was tired, **for** he went to bed early.
 I cooked dinner, **and** he washed the dishes.
 Jane has a red car, **but** Jill has a blue car.

Topic 113

Phonemic Development:-

Phonemic development refers to the acquisition and mastery of phonemes, which are the smallest units of sound that can differentiate meaning in a language. As, phonemes are the minimal unit of sounds, and combine and make words in a language. During early childhood, children gradually develop the ability to distinguish and produce the different phonemes used in their native language. When we study language development, this process starts with the child of birth, and language starts with the sounds, and then phonemes. Phonemes are also called syllables. The explanation of the phonological awareness is provided below:

Phonemic development begins in infancy and continues throughout early childhood. Infants start making cooing and babbling sounds. Keep progressing to produce recognizable words and sentences. And all these developments will start after the age of 1 year. As children grow and develop, they perceive and produce the specific phonemes of their native language. Language acquisition and development are closely linked with the native language of any individual.

Therefore, as the child grows, sounds, develops, then phonemes and afterward, he will be able to join the words. This process is influenced by exposure to spoken language and

interaction with caregivers and peers. The attached picture explains at what age a child will be able to what type of sounds.

Children's phonemic development is shaped by the specific phonetic characteristics of their native language. Phonemic awareness involves recognizing and manipulating individual phonemes in spoken words. As words are the combination of phonemes. Every word has its number of phonemes. So, they use it as a spoken word and afterward, they change or manipulate it and create different meanings and words. It is an important aspect of phonemic development. It helps children develop strong reading and spelling skills.

Phonemic development plays a role in language acquisition and literacy development. It provides the foundation for learning and differentiating sounds recognizing and producing words. It helps to understand the relationships between sounds and letters in reading and writing.

Educators and caregivers can support phonemic development through activities that promote phonemic awareness, such as rhyming games, sound segmentation exercises, and letter-sound correspondence activities. For example (use of the ai sound in different words). Educators and caregivers should understand to support children's language and literacy development. By providing suitable experiences, they can help children develop strong phonemic skills, for becoming proficient readers and communicators.

Topic 114

Phonological Development:-

During the early school years, a child completes the phonetic inventory. By age 8-produce all English speech sounds competently. Sounds in longer words or blends may still be difficult. The acquisition of sounds, however, is only one aspect of a child's phonological competence. In the image below, the phonological developmental stages according to age are indicated.

- By age 5-identify syllables (few 4-year-olds can)
- A 4-year-old can decide if a sound sequence confirms or matches to the phonological rules of English. He or she will repeat words that contain possible sequences, even when words are not real, but will modify impermissible sequences when repeating them to produce sequences more like English.
- A 7-year-old-replace meaningless words with actual words. These changes reflect the child's increasing metalinguistic skills.

Phonological processes have different parts, which are shown in the tree picture. These stages help children learn language. As they grow, they might replace or add consonants and vowels to say words correctly and make sense of their meanings. The table below summarizes the School-age child's development of language form.

TABLE 10.7 Summary of School-Age Child's Development of Language Form

AGE IN YEARS	SYNTAX/MORPHOLOGY	PHONOLOGY
5	Produces short passives with <i>lost</i>, <i>left</i>, and <i>broken</i>	
6	- Comprehends parallel embedding, imperative commands, <i>-man</i> and <i>-er</i> suffix - Uses many plural nouns	- Identifies syllables - Masters rule for /s/, /z/, and /əz/ pluralization - Is able to manipulate sound units to rhyme and produce stems
7	- Comprehends <i>because</i> - Follows adult ordering of adjectives	Recognizes unacceptable sound sequences
8	- Uses full passives (80% of children) - Uses <i>-er</i> suffix to mark initiator of an action (<i>teacher</i>) - Is able to judge grammatical correctness separate from semantics	Is able to produce all American English sounds and blends

Morphonemic Development: - Morphophonemic changes are phonological or sound modifications that result when morphemes are placed together. For example, the final /k/ in *electric* changes to a /s/ in *electricity*. Several rules for these changes are learned gradually throughout elementary school. Different elements of phonological development are shown in the picture below. Children learn these elements as they develop their language skills at the elementary level.

One rule, first grade, pertains to the regular plural -s. The 5- to 6-year-old has learned the rule for /s/ and /z/ but not for /əz/ in all cases. For example, *pleasure* is a plural sound, and this is difficult for the children. Even in third grade nouns ending in -sk and -st clusters may be difficult for some students to pluralize. Is the plural of *desk* /desks/ or /deskəz/? Double sounds are particularly difficult for children to pronounce. The

different parts of speech are shown below, and all of these are involved in our speech and conversation when we communicate with each other.

During the school years, a child also learns the rules for vowel shifting. For example, the /aI/ sound in divine changes to an /I/ in divinity. Other examples are as follows:

- /aI/—/I/, divine—divinity
- /eI/—/æ/, explain—explanation
- /i/—/d/, obscene—obscurity

So, all these changes affect on Morphophonemic development.

Identifying Morphemes:-

So, we can analysis the words and combine the words to complete the sentence and provide a meaning or information about something.

Lesson No. 25

**THE DEVELOPMENT OF LANGUAGE AT PRESCHOOL AND
KINDERGARTEN LEVEL****Topic 115****Speech Sound Acquisition:-**

Speech sound acquisition is a process by which children learn to produce and perceive the sounds of their native language. A child first learns sounds, and then develops speech. We will also examine the stages of speech sound acquisition, including how a child begins, and the steps involved. During early infancy, babies produce primarily automatic and nonsexual sounds, such as crying, cooing, and babbling. At three months, a child begins making crying sounds. Then, the cooing stage starts, followed by the babbling stage at six to nine months. These early vocalizations serve as the building blocks or foundation for speech development.

Around 6 to 12 months of age, infants begin to produce undoubted babbling. At this age, their language is not fine and they are not able to produce undoubted babbling which involves repeating consonant-vowel syllables (e.g., "ba-ba-ba" or "ma-ma-ma"). This stage is important for developing control over the vocal articulators (such as lips, mouth, nose, dental, etc.) and exploring different sound combinations. As children approach their first birthday, they start to produce their first meaningful words. Initially, these words may only approximate the adult forms, with simplifications or substitutions of sounds (e.g., "wawa" for "water"). Initially, a child's words are not clear, and they pronounce them as sounds.

By 14 months, they can pronounce words completely. These words are often names of things, and the child uses them to communicate.

By the age of 2, children typically produce a range of consonant sounds, including p, b, m, t, d, n, k, g, and h. The child produces and develops all these consonant sounds. However, their speech may still contain some phonological processes, such as final consonant deletion or cluster reduction.

Between the ages of 3 and 4, children refine their production of speech sounds. They acquire more complex sounds, such as s, z, sh, and ch. When a child can form two and three-word sentences, they start reducing the syllables, consonants, and vowels in words to pronounce them correctly.

By around 5 years of age, most children have acquired most speech sounds in their native language. However, mastery of more challenging sounds like r, th, and l may continue to develop into the school-age years. These sounds are complex and challenging to articulate,

and they typically develop in the years ahead. If a child's speech sound development significantly lags, their peers show persistent errors that affect intelligibility, it may indicate a speech sound disorder. In such cases, speech therapy or intervention may be beneficial to support the child's speech development.

Look at the picture where you can see various types of sounds associated with specific ages and months of the child. Word development progresses as the child grows older, and by the age of three, children can pronounce sentences with three or more words. Understanding speech sound acquisition helps educators, speech-language pathologists, and caregivers identify typical milestones and provide appropriate support to children as they acquire and refine their speech sounds. In this context, various articulators such as lips, teeth, and tongue assist in producing different sounds. These articulators can be used individually or in combination during sound production.

Topic 116

Phonologic Processes:-

Phonological processes are the ways that young children change or simplify the sounds in words as they learn to talk. These processes are a normal part of language development and help children produce speech sounds that are easier for them to say. Because they are at the age of language acquisition and can produce correct sounds at their particular age.

For example,

- A child may simplify the word “stop” to “top” by dropping the “s” sound or replacing the “th” sound in “think” with the “f” sound, producing “fink.”
- These changes are temporary and typically disappear as children get older and their speech becomes clearer.

Phonological Processes fall under three categories

1. Syllable structure
2. Substitution
3. Assimilation

Syllable structure: Basically, they are morphemes, and I will explain their structure and how they are formed. Sound changes that cause sounds or syllables to be reduced, omitted, or repeated

- **Cluster Reduction:** The child simplifies a cluster of consonant sounds into a single or manageable combination of sounds. e.g. “poon” for “spoon”, and “tuck” for “truck”. This phonological process should resolve by the time a child is 4 for words without /S/ and by age 5 for words with /S/.
- **Final Consonant Deletion:** Deletion of a final consonant sound in a word (e.g. “cuh” for “cup”, and “dah” for “dog”). Sounds pattern to resolve by the age of 3.
- **Initial Consonant Deletion:** It also observed that some children also delete initial consonants from the word. Deletion of the initial consonant sound in a word (e.g. “up” for “cup”, “un” for “sun”). As you can see, the letters “c” and “s” are removed from these two words. This is an unusual pattern that typically indicates the presence of a phonological delay-recommend speech-language pathologist.
- **Weak Syllable Deletion:** Deletion of a weak syllable (e.g. “nana” for “banana”, “puter” for “computer”). They are resolved at the age of 4.

Substitution:- When one sound is substituted for another.

- Backing e.g. “gog” for “dog”
- Fronting e.g. “tey” for “key”) resolves by 3.5 age.
- Gliding is the substitution of a glide (w, y) sound for a liquid (l, r) sound (e.g. “yike” for “like”, “wug” for “rug”). Gliding resolves by the age of 6. This activity is challenging and takes some time to resolve, typically by the age of 6 years.

Assimilation: When children change the sounds in words so that they are more similar to each other. When a consonant sound starts to sound like another sound in the word e.g. “bub” for “bus”. Resolve after the age of 3. Other activities of Assimilation are mentioned below:-

- **Denasalization:-** when a nasal sound like “m” or “n” changes to a non-nasal sound “b” or “d” .e.g. “dore” for “more”. Resolve after 2.5 years.
- **Reduplication:-** when a complete or incomplete syllable is repeated e.g. “baba” for “bottle”. No longer present by the age of 3.

The summary of Phonological processes is provided below in a comprehensive format, including substitution, definition, and relevant examples.

SUBSTITUTION	Definition	Example	Should be resolved by...
<i>When one sound is substituted for another</i>			
Backing	When a sound that is supposed to be produced in the front of mouth (T,D) is produced in the back of the mouth.	" <i>cap</i> " for " <i>tap</i> "	Age 4
Fronting	When a sound that is supposed to be produced in the back of the mouth (k,g) is produced in the front of mouth.	" <i>fat</i> " for " <i>cat</i> "	Age 4
Gliding	When the R sound is substituted for a W sound and/or the L sound is substituted for W or Y.	" <i>wed</i> " for " <i>red</i> " or " <i>yearn</i> " for " <i>learn</i> "	Age 6
Stopping	When a fricative (S,F) or affricative (CH,J) is replaced with a stop consonant (G, D, T, K, B, P).	" <i>tee</i> " for " <i>see</i> "	F,S: Age 3 Z,V: Age 4 SH, CH, J, TH: Age 5
Vowelization	When the ER of L sound is replaced with a vowel.	" <i>appo</i> " for " <i>apple</i> "	Age 6
Affrication	When a non-affricate is replaced by an affricate.	" <i>joor</i> " for " <i>door</i> "	Age 3
Deaffrication	When an affricate is replaced by a fricative	" <i>ship</i> " for " <i>chip</i> "	Age 4
Alveolarization	When a non-alveolar sound is replaced by an alveolar sound	" <i>tea</i> " for " <i>she</i> "	Age 5
Depalatalization	When a palatal sound is replaced with a non-palatal sound	" <i>jit</i> " for " <i>fish</i> "	Age 5
Labialization	When a non-labial sound is replaced with a labial sound	" <i>poe</i> " for " <i>toe</i> "	Age 6

Below is a comprehensive summary of phonological processes, focusing on assimilation, along with its definition and relevant examples.

ASSIMILATION	Definition	Example	Should be resolved by...
Consonant Harmony	One sound becomes the same as another sound in the word		
Velar Assimilation	When a consonant sounds like another sound in the word.	" <i>guck</i> " for " <i>duck</i> "	Age 3
Nasal Assimilation	When a non-nasal sound changes to a nasal sound due to a sound in the word.	" <i>nanny</i> " for " <i>candy</i> "	Age 3 nasal
Coalescence	When characteristics of two features from two adjacent consonants are combined so that one sound replaces two sounds.	" <i>file</i> " for " <i>smile</i> "	Age 6

Here is a comprehensive summary of phonological processes, specifically focusing on syllable structure, including its definition and relevant examples.

SYLLABLE STRUCTURE	Definition	Example	Should be resolved by...
<i>Changes that affect the syllable structure of a word</i>			
Cluster Reduction	When a consonant cluster is simplified into a single consonant.	" <i>known</i> " for " <i>down</i> "	With S: Age 5 Without S: Age 4
Final Consonant Deletion	When a the final consonant in word is deleted.	" <i>bu</i> " for " <i>book</i> "	Age 3

Weak Deletion	Syllable	When an unstressed syllable in a word is deleted.	" <i>tato</i> " for " <i>potato</i> "	Age 4
----------------------	-----------------	---	---------------------------------------	-------

Topic 117

The Development of Language at Preschool and Kindergarten Level:-

Language development starts from birth when a baby produces sounds to realize its existence through crying. During 0-3 months: Children reflect their emotions, anger, and happiness with sounds and smiles. 4-6 months: Child show reactions by yes or no and produce babbling sounds. The stages of language development are shown in the picture.

- 7-12 months: Age of fun and babbling of children changes.
- 1-2 years: focus on pictures, indicate body parts, increase in learning of words, and express his/her language.
- 2-3 years: Comprehension of compound words develops and the child can differentiate different ideas. He/she also develops the capacity to have words for nearly everything.

The stages of speech and language development are depicted in the image. It begins with observing things in the environment, followed by learning from parents, caregivers, and friends. Next, the child learns words, then sounds, and eventually begins to speak and convey words. This cycle represents the process of human language development, starting with sounds and culminating in words and sentences.

- 3-4 years: children listen more clearly, the structure of uttering sentences extends.
- 4-5 years: answer questions, appreciate stories, talk more clearly and more easily.

These all stages belong to the Preschool and Kindergarten level.

The milestones in speech and language development in children are detailed in the image. It covers ages from 6 months to 4 years, highlighting specific characteristics for each age group.

Topic 118**The Development of Language at Preschool Level:-**

Preschool children are not little automatons, each following in exact lockstep stages of development. Instead, each child is listening to the language of his or her environment, and caregivers and trying to figure out how to say what he or she wants to say. As, language development starts from listening skills. Still, there are some patterns that are now becoming clear.

These are as follows (Tomasello, 2006):

Most children below age 3 in both production and comprehension do not fully understand the subject-verb-object word order. Many sentence types used after age 3 are learned with specific verbs and only generalize to language rules later in development.

As shown in the picture, the stages of language development start with the Pre-Production stage, which is before the child begins making sounds and words. After this, the other stages follow. These stages occur from birth to around 5 years old, or when the child starts school, and by then, the child becomes proficient in their native language. In other words, rules may be learned one word at a time. Children gradually begin to form abstract utterance-level constructions by creating analogies among utterances. During speech, sentence structure, word choice, and their combinations progress from simple to complex, and from easy to difficult, especially in the context of teaching. In learning, we start with easier concepts before moving on to more difficult ones.

Children try to categorize whole utterances and linguistic constructions on the basis of the functional interrelations among the components. This includes sounds, phonemes, and words, followed by semantics, syntax, and pragmatics. It means that language learning is a gradual process, with a child learning abstract concepts progressively.

Robert E. Owens, Jr. stated the development of language in children aged 3 to 5 years:

- **Vocabulary Growth:** Preschoolers continue to expand their vocabulary at a rapid pace, with some children learning several hundred new words each year. Typically, a child learns 5 words daily, and by the age of 6, they know around 6,000 words. As a child grows, their ability to learn words and language also develops.
- **Grammatical Development:** After the age of 3, as preschoolers grow, they start

- producing single and double-word sentences, move on to the telegraphic stage, and eventually reach the three-word stage. So, preschoolers begin to use more complex
- sentence structures, like conjunctions to connect ideas and clauses and can learn and know about grammatical development and rules.
- **Pragmatic Development:** Pragmatic refers to the language in use. Preschoolers develop the ability to use language in social Contexts. They learn to take turns in conversations, use polite language, and adjust their language style in different situations. For example, the language style used when communicating with parents and friends is different from the language style used in the classroom or at lunchtime.
- **Narrative Skills:** The meaning of narrative is to tell a story. Therefore, preschoolers develop the ability to tell stories. They learn to sequence events and use descriptive language in stories.
- **Metalinguistic Awareness:** Preschoolers develop the ability to think about language and understand its properties. They begin to understand that language is made up of sounds, words, and sentences, and they can reflect on their own use of language.

As shown in the triangular shape, the stages of language development are illustrated. The pattern of development progresses from simple to complex, starting at the bottom. It clearly explains that language development begins with sounds, followed by the production of speech. Speech is made up of words, sentences, and clauses, which a child learns over time.

Lesson No. 26

FOUNDATIONS OF LANGUAGE ACQUISITION: FROM PRAGMATIC TO SEMANTIC MASTERY

Topic 119

Pragmatic Development:

What is Pragmatics?

It is the study of the relationships between linguistic forms and the users of those forms.

It means we also talk about the social context of the users.

- Study of human actions, thoughts, and linguistic signs, (words and sentences) in real situations.
- Pragmatics refers to the ways the members of a community use the language.
- The way they speak to their parents is not the same way we speak with our fellow children.

The language used in a formal conversation may have less resemblance to what we could hear at lunch with our fellow children. So, in pragmatics, we also talk about language styles and real situations. Pragmatics deals with knowing the difference between the two styles and when to use which style.

Specific examples of pragmatic development in preschoolers:

- **Turn-Taking:** Preschoolers learn to take turns in conversation, waiting for others to finish speaking before they respond. They also learn to use nonverbal cues, such as eye contact and gestures, to signal that they are ready to speak.
- **Politeness:** As the child's language matures, he/she also develops polite language, such as saying "please" and "thank you," and using polite forms of address, such as "Mr." and "Mrs."
- **Topic Maintenance:** Preschoolers learn to maintain the topic of conversation, staying on track and avoiding tangents. If they get distracted from the topic, they may use various strategies to get back on track with the conversation.
- **Repair Strategies:** Preschoolers begin to use repair strategies when communication breaks down, such as repeating or rephrasing what they said, or asking for clarification.
- **Register:** Preschoolers develop an understanding of different language registers, or styles of language appropriate for different social situations.

In the picture, you can see three **stages of how language develops in communication**. Each stage is explained clearly. For example, they may use different language with friends than they would with adults. These pragmatic skills are important for social interaction and communication and lay the foundation for more complex language use in later years.

The **components of social communication** are described in the image. They include Social Interaction, Social Cognition, Pragmatics, and Language Processing. These components help us improve and develop our language skills.

AGE 4-6		
☐ Uses indirect requests ☐ Correctly uses this, that, here, there ☐ Uses twice as many effective utterances as 3-year old to discuss emotions and feelings ☐ Narrative development characterized by unfocused chains; stories have sequence of events but no central character or theme ☐ Tells a story by looking at pictures ☐ Describes functions of objects ☐ Communicates cause-and-effect relationships	☐ Uses contingent queries to maintain a conversation ☐ Creates interest in a listener by indirect references ☐ Communicates knowledge about the world to peers and adults ☐ Tells 2 familiar stories without pictures for help; includes all important parts ☐ States a problem ☐ Sustains a topic for 4 turns ☐ Provides information that is relevant to the listener	☐ Responds appropriately to questions involving time concepts ☐ Will answer/ask "where", "when", "why", "how many", "what do you do?", "why do we?" ☐ Extends topic ☐ Asks permission to use other's belongings ☐ Uses such terms as, "thank you", "please", and "you're welcome" appropriately ☐ Recognizes another's need for help and provides assistance

The various stages of pragmatic development and examples are depicted in the image.

Topic 120

Narrative:-

Oral narratives or stories are an uninterrupted stream of language modified by the speaker to capture and hold the listener's interest. Unlike a conversation, the narrator maintains a social monolog throughout producing language relevant to the overall narrative while presupposing the information needed by the listener. Also, in the narrative, communication is one-way.

Narratives include:

- self-generated stories
- telling of familiar tales
- retelling of books, movies, or television shows
- and recounting or describing personal experiences (Wiley, Rose, Burger, & Miller, 1998)
- Conversation and narratives share a sense of purpose and relevant information.

Ways in which preschoolers develop their narrative skills:

- **Sequence Events:** Preschoolers learn to sequence events in a logical order, understanding that stories have a beginning, middle, and end. In storytelling, the sequence of events is vital. It can be chronological and plays a vital role in understanding the story. They also learn to use temporal words, such as "first," "then," and "finally," to help organize their stories.
- **Use Descriptive Language:** The narrator uses only descriptive language. He /she adds detail and richness to their stories.
- They may use adjectives to describe characters or settings.
- Or use sensory language to describe how things look, sound, feel, or smell.
- **Develop Characters:** No story is complete without the characters and there are lots of character types present in it such as; good and bad. Moreover, it portrays the conflict between characters. Preschoolers develop characters in stories, giving them personalities, motivations, and emotions. They may also give characters dialogue, using direct speech to show what the characters are saying.
- **Story Retelling:** retell stories they have heard or read, using their own words and adding their own details and discussions. This helps them to understand the structure and elements of stories and builds their narrative skills.
- **Use Imagination:** In narration, stories, novels, and prose are different types of narratives. They create various scenes and rely heavily on imagination to complete them. So, preschoolers use their imagination to create their own stories, drawing on their own experiences and interests. They may create stories about their daily lives or makeup stories about imaginary worlds and characters. Further, Narratives can be based on real-life events or supernatural elements. They develop the story based on the setting and the audience's interests.

Flowchart (Parts of the Story):-

- **Introduction:-** The introduction of the story introduces what the story is about, who the characters are, how they interact, how they communicate with each other, and why.
- **Body of work:-** (It explains the context of the story and its themes and topics.
- **Ending:-** (It also includes an important part of the story where it concludes the entire narrative, showing the relationships between characters. The ending of the

story varies; some have happy endings, some impart lessons, and others may be sorrowful.

The Writing Process:-

- **Prewriting:** This is the initial stage of the writing process. During this stage, the writer considers the story plot, characters, language, and all other aspects.
- **Drafting:** Then, the writer creates a draft of the story by combining the plot and characters, employing literary devices, and connecting them.
- **Revising:** Afterward, the writer revises the draft of the story.
- **Editing:** Next comes the editing stage, where the writer adds necessary information and removes irrelevant details from the story.
- **Publishing:** This is the final stage of the story, known as publishing. At this stage, the story is finished and ready to be shared. Publishing allows us to communicate our ideas and information to others, helping to expand our language skills.

Topic 121

Conversational Abilities:-

Conversational abilities in preschoolers refer to their ability to participate in conversations with others. When initiating conversations with peers, preschool children mention a person—most often the listener—over 70% of the time with a particular interest in mental states (think, feel, remember). The conversation ability starts or develops after the age of 3 years. 3-year-old becomes more aware of the social aspects of discourse. He/she acknowledges the partner's turn with fillers, such as yeah and uh-huh. Preschool children learning languages follow maternal linguistic cues to turn-taking, such as questions, rather than paralinguistic or phonetic cues (Miura, 1993).

Different tactics that a child used regarding the conversation developments, which are mentioned below: -

- **Turn-taking:** Preschoolers learn to take turns in conversation, waiting for others to finish speaking before they respond. They also learn to use nonverbal cues, such as eye contact and gestures, to signal that they are ready to speak.
- **Listening skills:** These skills are also very important for conversational skills. So, preschoolers develop their listening skills, learning to pay attention and respond appropriately. They ask questions to clarify information or show interest in what others are saying.

- **Topic maintenance:** Conversation is a dialogue, not a monologue. So, the focus of the speaker is to maintain the topic of conversation, staying on track and avoiding tangents. They introduce new topics or ask questions to keep the conversation going.
- **Understanding humor and ridicule :** Preschoolers begin to understand humor and sarcasm and may use these devices in their own conversations.
- **Register:** Preschoolers develop an understanding of different language registers, or styles of language suitable for different social situations. For example, they use different language with friends than they would with adults and parents.

Perspective-taking:

It means to understand that others may have different thoughts, feelings, and perspectives than their own. So, when developing conversation skills, it's important to understand others' perspectives and feelings. This helps them to develop empathy and to participate in conversations in a socially appropriate way. Empathy means feeling what others feel and putting yourself in their shoes. When you understand others' perspectives, you can participate more effectively in conversations. These are the strategies we discussed for developing conversational abilities in preschoolers.

The steps of conversation are shown in the pictures, and we follow them during our conversations as well.

Topic 122

Semantic Development:-

Semantic Development refers to the acquisition and expansion of their vocabulary and understanding of word meanings. The preschool period is one of rapid lexical and concept acquisition. It is estimated that a child adds approximately five words to his or her lexicon or personal dictionary every day between the ages of 1.5 and 6 years. Word meanings are inferred without direct teaching by adults. (Gertner, Rice, & Hadley, 1994).

He or she might proceed through the following steps to differentiate the meaning:

1. Assume that Mommy is trying to communicate with me.
2. Unknown word used about trays as a descriptor.

3. The only observable difference between the trays is color through their environment and surroundings.

In this regard, they have also used some strategies which are mentioned below:

- **Fast mapping:** Preschoolers use fast mapping, a process of quickly learning the meaning of a new word after hearing it just a few times, to acquire new words.
- **Semantic networks:** a web of related words and concepts, to help them understand and remember new words, and also combine words that are similar to each other.
- **Categories:** This is a psychological association theory: a child relates new information to what they already know, categorizing it. They combine similar sounds and meanings, organizing them accordingly. They understand and use categories, such as animals, vehicles, and food, to organize and group related words.
- **Word learning strategies:** Preschoolers learn by asking for clarification, using context, and background clues, and using trial and error, to learn the meanings of new words.
- **Multiple meanings:** understand that words can have multiple meanings, as "bark" referring to a tree or a dog's sound. A child also needs guidance to understand these types of meanings. Additionally, they learn them through context.
- **Figurative language:** Preschoolers begin to understand figurative languages, such as idioms and metaphors, and can use them in their language and refine it.
- **Syntax:** Preschoolers begin to understand the syntax rules, or word order, of their language and how it affects meaning. Afterward, they can construct correct sentences and gradually pronounce complex words. This is the benefit they gain from semantic development, where children learn new words and their meanings in their language.

Lesson No. 27

**LANGUAGE DEVELOPMENT: VOCABULARY, CONCEPTS,
AND COGNITION****Topic 123****Vocabulary Growth:**

Vocabulary growth in preschoolers is a key aspect of their language development.

Here are some ways and strategies in which preschoolers develop their vocabulary:

1. **Fast mapping:** Preschoolers use a process of quickly learning the meaning of a new word after hearing it just a few times, to acquire new words. They also seek clarification of these words from parents, peers, or others around them.
2. **Exposure to rich language:** This is another strategy, in which preschoolers who are exposed to rich language environments, including being read to, engaging in conversations with adults and peers, and watching educational media, tend to have larger vocabularies.
3. **Receptive vocabulary:** Preschoolers' receptive vocabulary grows faster than their expressive vocabulary, or the words they use.
4. **Semantic networks:** Preschoolers develop a web of related words and concepts, to help them understand and remember new words. The network of words and concepts is based on their similarities.
5. **Multiple exposures:** Preschoolers need multiple exposures to a word in different contexts to fully understand its meaning and be able to use it. Because Meanings can vary in different contexts.
6. **Word learning strategies:** Preschoolers use word learning strategies, such as
 - asking for clarification
 - using context clues
 - and using trial and error to learn the meanings of new words.
7. **Categorical organization:** This is also another important strategy, in which preschoolers begin to categorize words by their similarities, such as grouping animals (vertebrate groups), and groups of similar word meanings together.
8. **Novel word extension:** Preschoolers can extend their understanding of a known word to new, related words that they have not yet encountered. This way, children develop their word extensions and learn new vocabulary through the mentioned techniques.

Topic 124**Conceptual Change:-**

Adults organize language, especially object concepts, in various ways. In this regard, they primarily use two strategies: Taxonomies and Schemes. Taxonomies are categories of objects that share a common essence, such as trees or tools. Therefore, taxonomies refer to categories or groups where similar things and objects are divided into groups.

Although objects in a category likely share similar perceptual features, mature taxonomic knowledge includes other aspects such as functional use or biological essence (Carey, 1988, 1991). Objects related by themes are bound by an event. For example, gifts, a birthday cake, and party hats are part of a birthday party scheme. All the mentioned items are associated with the birthday party. Similarly, schemes also develop categories, such as how Eid events are associated with sweets, new dresses, and other things. As a result, children's concepts gradually change.

Although mature definitions contain both taxonomic and thematic information, taxonomic knowledge is more readily accessible for both children and adults (Whitmore, Shore, & Hull Smith, 2004). It appears that both thematic and taxonomic relations are present from an early age and over time, as children develop, their language skills are enhanced. They gain an understanding of themes and categories through comprehension of sounds, words, and sentences. By age 6, children organize concepts in ways similar to adults, and this organization is based on more than physical similarity. Within two years, categorical relations seem to be the preferred method of organization. Over time and with more encounters with words, thematic knowledge gradually increases.

In this process, children used some strategies which are mentioned below:-

- **Revising misconceptions:** revise misconceptions or intuitive ideas they have about the world that are not accurate, such as understanding that the moon is not made of cheese or that the earth is not flat.
- **Understanding cause and effect:** develop a better understanding of cause-and-effect relationships, such as learning that more water in the cup will cause overflow. Through these processes, children refine their concepts and learn more about various things and ideas.
- **Understanding spatial relationships:** Preschoolers may develop a better understanding of spatial relationships, such as learning the difference between above and below or in front of and behind.

- **Developing more complex theories:** As preschoolers' ideas mature, they become capable of developing more complex theories about themes, categories, and understanding how the world works. For example, they grasp concepts like the sun providing energy to the earth and all living things.

These strategies facilitate conceptual change, which is a significant developmental milestone in preschoolers. This process continues as they grow, notably through sentence production and into the ages of 7 to 8 years.

Topic 125

Related Cognitive Processing:-

During the school years, there appears to be a change in cognitive processing, storage, and retrieval that reflects a shift in categorization. This means that cognitive processes improve as children mature, leading to an enhanced understanding of language and concepts. The initial change occurs in elementary school, with a shift from concrete to abstract during adolescence. Abstract things refer to those that cannot be seen but can be observed and felt by an individual. The increasing reliance allows children to process greater amounts of linguistic information.

Several factors affect vocabulary acquisition.

- **First, both children and adults use a strategy of “chunking” semantically related information into categories for remembering.** Chunking involves grouping small gestures, words, or cues together to help in remembering them. Thus, seventh-graders rely more on chunking for recall than first-graders. Because their language development is not fully developed and improved.
- **Second, the use of semantic relations resolves word ambiguities.** For example, there, their, and they sound very similar and could be confused, except for the very different semantic relations they represent. This concept develops only as the child matures.
- **Third, categorical structures are stored hierarchically.** It means that words' categories and taxonomies are organized in a sequential form and then stored.
- **Fourth, facilitative neural networks connect related word-concept structures.** It means children connect similar word meanings, combine them, and then categorize them.
- **Thus, new vocabulary acquisitions are associated with previous knowledge.** This is an important theory in psychology called Association. According to this

theory, humans learn new knowledge by using their previous and existing knowledge.

- **Individuals may use several levels of linguistic processing simultaneously.**

For example:

- **Surface—syntactic rules** (Grammatical Rules) and phonetic strings
- **Deep (Cognitive Process)** —semantic categories and relations
- **Contextual (Background)** —situation or image

The processing shift may also reflect a child's increasing ability to integrate situational nonlinguistic information with linguistic information.

Following is a sequence of processing strategies:

1. Segment the message into the underlying sentences.
2. Mark the relations between the underlying sentences.
3. Determine the semantic relations of the lexical items. This means that dictionaries define the meanings of words and their relationships, considering that words can function as nouns, verbs, and adjectives, and can change with suffixes. All these aspects are clarified through the dictionary.
4. Determine the semantic probabilities of co-occurrence.
5. Label the functions and properties of specific lexical items.
6. Children may start using these strategies as early as age 5 to enhance their language and cognitive development. These strategies help improve and refine their mental abilities related to language.

Topic 126

Figurative Language:-

Figurative language means using words in a way that goes beyond their literal meaning. A school-age child develops figurative language, which enables the use of language in a truly creative way. Figurative language is words used in an imaginative sense, rather than a literal one, to create an imaginative or emotional impression. It enriches our communication and is used to convey information that is inexpressible-less and effectively expressed in literal language.

Use is indicative of higher language functions and correlates with adolescent literacy skills. Conversation, classroom teaching, and reading use figurative expressions frequently. The primary types of figurative language include idioms, metonyms, metaphors, similes, and proverbs. For example, "Once in a blue moon" is a proverb used to describe someone or

something rare to meet you. It doesn't mean someone has turned blue or that the moon has changed color. Instead, it adds beauty to communication by poetically expressing rarity. So, metaphorically transparent idioms are easier for children and adults to interpret than metaphorically opaque ones. Metaphoric transparency, or the extent of the literal–figurative relationship, directly affects the ease of interpretation. The image below displays some common American English idioms. These idioms and phrases have distinct meanings. When used figuratively and imaginatively in language, they convey different interpretations.

TABLE 10.6 *Common American English Idioms*

strike a bargain	jump the gun	superior to (better than)
hit the road	break a date	in search of (search for)
take a cab	hop a plane	throw a party
robbed blind	do lunch	off the wall
in the pink	on a lark	

Ways in which early school-age children develop their use of figurative language:-

- **Increased exposure to figurative language** engages with books, stories, and poetry, they will be exposed to figurative or literary language in a variety of contexts, which helps to develop a deeper understanding of figurative language. Studying literature helps improve language skills, which you can use in writing, speaking, and communication.
- **Understanding metaphor and simile:** understand the difference between metaphor and simile.
- **Able to identify examples of these types of figurative language in stories and poems.** In stories and poems, words often share similar sounds but carry different meanings. For example, in the repetition of words like "Twinkle Twinkle Little Star," the words sound alike but convey different ideas. This repetition adds beauty to the language.
- **Developing their figurative language:** they may begin to use it themselves in their writing, conversations, and other different strategies.
- **Understanding idioms and proverbs:** begin to understand idioms and proverbs, which are common expressions that have a figurative meaning.
- **Understanding humor:** begin to understand humor that relies on figurative language, such as puns, jokes, and riddles.

Lesson No: 28

SYNTAX AND MORPHOLOGY DEVELOPMENT**Topic 127****Syntactic and Morphological Development:-**

Among school-age children, Language productivity and syntactic complexity are strongly influenced by the type of speaking task and familiarity with the topic (Nippold, 2009). Language productivity refers to the ability to produce language, while syntactic complexity relates to understanding grammar rules and sentence structures.

Language development consists of a simultaneous expansion of existing syntactic forms and the acquisition of new forms. This includes the development of vocabulary, combining words into sentences, learning complex grammar rules, as well as understanding new sentences using parts of speech, idioms, phrases, and figurative language to enhance language skills. A child continues with internal sentence expansion by elaborating the noun and verb phrases. Conjoining and embedding functions also expand. Additional structures include the passive form. This involves transforming sentences from active voice to passive voice, which is part of syntactic and morphological development.

During the school-age years, syntactic development is characterized by gradual increases in the length and complexity of utterances produced in spoken and written communication. During the conversation, syntactic complexity is greater when they talk about an area of expertise. Although a child has achieved basic sentence competence by age 5, fewer than 50% of first-graders can produce correct pronouns, “cause” clauses, and gerunds. Fewer than 20% can produce if and so clauses and participles. Because language productivity and acquisition are complex processes, children do not develop at the same speed.

Gerunds are verbs to which –ing has been added to produce a form that fulfills a noun function. E.g., He enjoys fishing. Here fishing is a Gerund. In participles, the same form fills an adjectival role, as in We bought fishing equipment. Participial phrases also contain other adjectives ending in -ed (bearded scholar), -t (unkept house), and -en (broken arrow). Adding suffixes can change the dimensions and meanings of words. This is part of how language becomes more complex through its structure and development.

The below table provides a summary of language development milestones for school-age children, detailing characteristics from ages 5 to 9 years.

TABLE 10.7 Summary of School-Age Child's Development of Language Form

AGE IN YEARS	SYNTAX/MORPHOLOGY	PHONOLOGY
5	Produces short passives with <i>lost</i>, <i>left</i>, and <i>broken</i>	
6	- Comprehends parallel embedding, imperative commands, <i>-man</i> and <i>-er</i> suffix - Uses many plural nouns	- Identifies syllables - Masters rule for /s/, /z/, and /ʒ/ pluralization - Is able to manipulate sound units to rhyme and produce stems
7	- Comprehends <i>because</i> - Follows adult ordering of adjectives	Recognizes unacceptable sound sequences
8	- Uses full passives (80% of children) - Uses <i>-er</i> suffix to mark initiator of an action (<i>teacher</i>) - Is able to judge grammatical correctness separate from semantics	Is able to produce all American English sounds and blends
9	Comprehends and uses <i>tell</i> and <i>promise</i>	

Topic 128

Morphologic Development:

Learning to use a morphological rule begins with the hypothesis that a small set of words are treated in a certain way grammatically. The first use of a morphological marker is probably the result of memorization acquired one word at a time. This is followed by morphological overviews about phonological marking (/d, t/) and what are the meanings in (the past tense).

Gradually, a child forms a rule with individual variation. i.e., although 6-year-old children from low- and middle Social Economic Status (SES) speakers of African American English have patterns for marking past tense differ from non-African American English (AAE) -speaking children. It means that context also affects language development. So, these patterns do not conform to those found in children with language impairment (Oetting & Pruitt, 2009). Because these children have learning disabilities, which makes them different from others.

While some **inflectional suffixes** are refined during the school-age years. Inflectional suffixes are added to words before or after the base word. For example, in "uncomfortable," "comfort" is the base word, and "un-" and "-able" are prefixes and suffixes. Also, this is a challenging skill that children typically do not master at a young age; they learn it later on. The main developments occur in the addition of inflectional prefixes (un-, dis-, non-, ir-) and derivational suffixes. The development of inflectional prefixes is very gradual and protracted, continuing into adulthood. Practice and exercises are necessary for the development of complex language skills in children.

I, for one, know that flammable written on a truck means to keep your distance, but I'm easily confused by inflammable. So, through suffixes, we can compare these to appropriate and inappropriate language.

- **Derivational suffixes**—those that change word classes—are a much larger set of word parts, such as the verb to noun, noun to adjective, etc. They are usually used to change part of the speech of the base word.
- **Derivational suffixes** are first learned orally, although reading strengthens learning. Difficulty in learning is related to morphophonemic processes, and to semantic distinctions. **For example,** The -er suffix has several semantic uses and is initially acquired to mark the initiator of some action, such as painter for the person who paints.

Although this suffix may appear in late preschool with some specific words. Children are not able to use it generatively to create words until age 8. A second -er used to mark the instrument for accomplishing some action is acquired even later, around age 11. Examples include cleaning the shower with a cleaner.

Again, **early learning is on a word-by-word basis.** Late development of the instrumental -er is explained by the child's use of other more common words in place of the "verb er" form, such as the more appropriate stove for cooker and shovel for digger. Other words have no non-er equivalent.

A third type of -er ending is used in the comparative, as in taller. In adjectives, different levels or degrees are identified, comparative is one of them. Young elementary school children show no preference for either the adjective -er (bigger) or the more adjective (more big) form of the comparative, using each indiscriminately. Finally, by adulthood, English speakers follow more rule-based usage.

The picture below shows additional examples of morphology, specifically comparative and superlative adjective degrees.

Examples of Morphology	
Comparative and Superlative	
59 months	He might think of something funner.
62 months	This is a biggest one here.
73 months	I don't like school, 'cause it's more fun at home.

Topic 129

Noun and Verb Phrase Development:-

Noun Phrase Development: Children of 5 to 7 years use most elements of noun and verb phrases but frequently omit these elements, even when they are required. Even at age 7, they may omit some elements such as; (. . . some of cake), but expand others unwantedly for example, (Nico, who is more bigger than you . . .). The rhythm of a sentence seems to be more salient, and children often miss small, calm functor words. In addition, they still

have difficulty with prepositions, verb tensing, modality, and plurals. Unique instances or rule exceptions, such as irregular past and plural, are particularly difficult.

Within the noun phrase, development continues with additional modifiers and mastery of the pronoun system. At 5 years, children add the Adjective element descriptor in which a noun serves as a modifier, for example, the penguin school, the pumpkin patch.

This element is in addition to:

- articles (e.g., the, a),
- possessive pronouns (e.g., his, her, my),
- and adjectives (e.g., big, little),
- quantifiers (e.g., many, some),
- demonstratives (e.g., this, that),
- and post-noun prepositional
- phrases (e.g., at school) (Allen et al., 2010).

Noun phrase development occurs as children mature and gain the ability to understand complex language and its rules. Here are some examples of noun phrases explained below. Noun phrases are formed by combining articles, adjectives, descriptors, and adverbs. Typically, children develop these skills between the ages of 5 and 6 years, corresponding to 60 months (5 years) and 72 months (6 years) of age.

60 months	Article + Adjective + Noun	a little daughter, a good cat
	Article + Descriptor + Noun	a bear workshop, the party stuff, the good sound, the brake station
	Article + Noun + Prepositional phrase	a picture of Damien, the bottom of it
72 months	Article + Adjective + Adjective + Noun	a little furry spot
	Article + Adjective + Descriptor + Noun	a big kid room, the little baby chicks
	Article + Adjective + Noun + Prepositional phrase	a big cloud of dust, a red mark on his sto
	Article + Adjective + Noun + Embedded clause	the new one I like
	Article + Adjective + Noun + Adverb	a little heart right here

Source: Information from Allen et al. (2010)

Verb phrase Development: Verbs appear to offer greater difficulty for school-age children than nouns. Because verbs are action words. These difficulties may be related to varied syntactic marking. **For example, verb action can be reversed in three ways:**

1. **Use of the prefix un-:** “She is tying her shoe. She is untying her shoe.” (Here meaning of the sentence is changed due to the prefix)
2. **Use of a particle following the verb:** “Pull on your boots. Pull off your boots.” (Here also the meanings of the verbs changed due to the prefix)
3. **Use of separate lexical items:** “She opened the door. She closed the door.” Here opened and closed are opposite words but they are verbs with past tense.

A child’s resultant confusion produces sentences such as these (Bowerman, 1981):

- I had to untake the sewing. (take out the stitches)
- I’ll get it after it’s plugged out. (unplugged)

The difficulty of learning how to state underlying verb relationships may account for the greater amount of time needed for the acquisition of verbs compared to common nouns.

During the school years, a child adds verb tenses,

- such as the perfect [have be verb(en/ed) as in has been eaten,
- or have verb(en/ed) has finished, additional irregular past-tense verbs.

Tense changes involve using helping verbs and main verbs, such as shifting from present to past or from past to present perfect tense. Modals express a semantic notion of possibility, duty, permission, intention, validity, truth, and functionality. Some modal auxiliaries appear in preschool. In addition, school-age children and adults also express the notion of modality in;

- adverbs (possibly, maybe)
- adjectives (possible, likely)
- Nouns (possibility, likelihood)

These are examples of adverb phrases that demonstrate changes in adverbs, adjectives, and nouns. The table below explains the development of irregular verbs in school-age children.

TABLE 10.8 School-Age Development of Irregular Verbs

AGE	VERBS
5-0 to 5-5	<i>took, fell, broke, found</i>
5-6 to 5-11	<i>came, made, threw, sat</i>
6-0 to 6-5	<i>ran, flew, wore, wrote, cut, fed, drove, bit</i>
6-6 to 6-11	<i>blew, read, shot, rode</i>
7-0 to 7-5	<i>drank</i>
7-6 to 7-11	<i>hid, rang, slept, drew, dug, swam</i>
8-0 to 8-5	<i>left, caught, slid, hung</i>
8-6 to 8-11	<i>sent, shook, built</i>

As children grow older, they progress from simple to more complex verb phrases.

Topic 130**Sentence Types:-**

In general, comprehension of linguistic relationships expressed in sentences improves throughout the school years and it is a complex process. The comparative relationship, as in as big as, smaller than, and more fun than, is the easiest one for young school-age children to interpret such as the addition of adjective concept is not easy for the children to understand it. The cognitive skills needed for comparative relationships develop during preschool

Children find it easier to understand sentences in active voice, such as "Ali writes a letter," rather than in passive voice, such as "A letter written by Ali." Therefore, preschoolers may have difficulty comprehending sentences in the passive voice.

Sentence production continues to expand during school-age through adult years across individuals at all socioeconomic levels and of all racial/ethnic groups. However, consistent practice and support from teachers and parents are essential for children to develop their

sentence production and language skills. Additionally, socioeconomic status, background, and environmental context play crucial roles in language development, influencing how language is acquired and developed based on exposure and living environment. In addition to the basic sentence types, early school-age children may also begin to develop an understanding of more complex sentence structures such as passive sentences, embedding, and conjoining.

Passive sentences: a sentence in which the subject of the sentence is the recipient of the action, rather than the doer of the action. For example, "The ball was kicked by the boy." In this sentence, the subject (the ball) is not performing the action (kicked), but is instead being acted upon. Early school-age children may begin to learn how to recognize and use passive sentences in their writing and speech.

Embedding: Embedding refers to the process of including one clause or phrase inside another. For example, "The cat, which is black, is sleeping on the couch." In this sentence, the phrase "which is black" is embedded inside the sentence. Through the use of embedding, the sentence becomes complex. Early school-age children may begin to learn how to use embedding to add more information to their sentences.

Conjoining: Conjoining refers to the process of joining two or more sentences together using conjunctions such as "and," "but," and "or." For example, "I went to the store and bought some bread." In the sentence "and" is the conjunction word, also these two sentences provide complete meaning in their self. Early school-age children may begin to learn how to use conjoining to create longer, more complex sentences that convey more information. The table below provides examples showing how children's ability to conjoin and embed sentences with their developing age. As children grow older, their proficiency in creating conjoined and embedded sentences develops and strengthens.

Examples of Embedding and Conjoining	
61 months	I think <i>I don't know what this is.</i> (Multiple embedded clauses) The frog could just gulp you up you know cause look how big it is. (Clausal conjoining and embedding)
64 months	Nicky said it wasn't real but mommy said it was because she tried to hit it and she broke it. (Embedded and conjoined clauses)
72 months	I got hit <i>in the eye with a baseball bat from the gym.</i> (Multiple prepositional phrases embedded)
73 months	The people <i>across the street</i> are going too. (Post-noun modifier)

Lesson No. 29

PHONOLOGICAL AND MORPHOPHONEMIC DEVELOPMENT

Topic 131

Phonological Development:-

Phonological development is the process by which children learn to understand and use the sounds of their language. This includes both the ability to produce speech sounds which are called phonetics and the ability to recognize and manipulate individual sounds in spoken language which is phonology. Phonological development is an important aspect of children's language development because this is the foundation of their language. Phonological development is a gradual process that starts in infancy and continues through childhood. During early childhood, children may exhibit and express common phonological processes such as deletion (deletion of vowels and consonants), substitution, and assimilation, which are a normal part of speech development. **For example,**

- a child may say "wabbit" instead of "rabbit,"
- or may delete the final consonant in words (e.g. "ca" for "cat"). These processes typically disappear as children's speech becomes more mature, and their language is refined.

During the early school years, a child completes the phonetic inventory. By age 8 he/she can produce all English speech sounds competently in both girls' and boys' genders. Sounds in longer words or blends may still be difficult. The acquisition of sounds, however, is only one aspect of a child's phonological competence. But will modify unlawful sequences when repeating them to produce sequences more like English. It means they can better the syntactic rules and word sequence in their language. 7-year replace meaningless words with actual words. These changes most likely reflect the child's increasing metalinguistic skills. Language is a complex process where many activities happen simultaneously. As children develop, their language skills also improve, enhancing their overall language competency.

Phonological Development further contains two concepts;

- Morphophonemic Development
- Speech Production

This topic focuses on how children's speech sounds develop as they grow older. It explores the developmental milestones at different ages, detailing how their pronunciation improves. It also examines which words or sentences become clearer and how certain consonant and vowel sounds are changed, replaced, or blended during this process.

Topic 132

Morphophonemic Development:-

Morphophonemic changes are phonological or sound modifications that are changed in children with the passage of time and these changes are placed through the change and replace the morphemes. For example, the final /k/ in electric changes to a /s/ in electricity. **Several rules for morphophonemic change are learned gradually throughout elementary school.**

- One rule, usually learned by first grade, pertains to the regular plural -s.
- The 5- to 6-year-old has learned the rule for /s/ and /z/ but not for /əz/ in all cases. It means children can change singular to plural sounds.
- Even in third grade nouns ending in -sk and -st clusters may be difficult for some students to pluralize. Is the plural of desk /desks/ or /deskəz/? Still, the production of plural sounds is not easy for children to pronounce, but these difficulties are only produced at an early age, after that they learn all sounds very well.

Stress, or emphasis, is also learned during the school years. The stress placed on certain syllables or words reflects the grammatical function of that unit. In English, stress varies with the relationship between two words and with the word's use as a noun or verb. For example, two words may form a phrase, such as green house, or a compound word, such as a greenhouse. If you repeat the two, you will find that you stress house in the phrase and green in the compound word.

Here are some other examples:

Phrase	Compound Word
• red head	redhead
• black board	blackboard
• high chair	highchair

Therefore, compound phrases and words are developed through the combination of noun and verb phrases. Noun–verb pairs also differ. In the noun record, emphasis is on the first syllable, whereas the verb record is pronounced with stress on the last. **For examples:**

- Noun - Present (as a gift), Conduct (personal behavior or act)
- Verb – Present, (present in a particular place) Conduct (to organize an activity)

Initially acquired on isolated words, pitch curves are gradually integrated into larger units. The period from age 3 to 5 is important in several languages for the acquisition of stress patterns. It is not until age 12, however, that the full adult stress and accent system is acquired (Ingram, 1986). It means children have learned Morphophonemic development and changes. This topic explains the morphophonemic development in children across various stages and levels. It also describes how children learn and integrate noun and verb phrases, as well as how they develop compound words.

Topic 133

Speech Production:-

In speech production, increased sentence length and complexity require increased speech motor planning. Although there is a protracted course of speech motor development that lasts well into adolescence, around age 9 years, children begin to use adult-like pre-speech processes to plan the timing of sentence phrases (Sadagopan & Smith, 2008). Younger children vary considerably in their movement, such as lip-rounding, to produce sounds or use different sound articulators. These movements may affect and extend across an entire utterance. For both young children and adults, broad chunks of speech have been planned by the time they initiate the production of a sentence.

Children also used some strategies for the production of the sentences such as:

- say the following sentence as both a statement and a declarative
- and as a question or interrogative
- but do not change the word order, as sometimes the action words explain that the sentences are placed in the question form. For example; John's going to the party.
- Note the different rhythmic or prosodic patterns in each and the different tones.

Though children as young as age 4 can modify their lip and jaw movement to mark this declarative–interrogative contrast. Refinement of these movements will continue throughout childhood (Grigos & Patel, 2007).

Topic 134

Metalinguistic abilities:-

Metalinguistic abilities enable a language user to think about language independently of comprehension and production abilities. These abilities allow individuals to compare

languages and enhance their language production. They involve various aspects such as producing different sounds and acquiring language, which are closely interconnected. As such, a child focuses on and reflects on language as a decontextualized object, when he/she becomes mature. And these “linguistic intuitions” let us make decisions about the grammatical suitability of an utterance (word).

Thus, a child treats language as an object of analysis and observation, using language to describe language. This metalinguistic ability develops only gradually throughout the school years.

- Metalinguistic abilities appear in the preschool years, full awareness is not found until **ages 7 to 8 years**. Before this age, children view language primarily as a means of communication, rather than focusing on the way it is conveyed.
- **After age 7 or 8**, the development of de-centration enables a child to concentrate on and process simultaneously two aspects of language: message meaning and linguistic correctness. Before the ages, these types of abilities are not developed among children. Thus, a child is able to judge grammatical correctness without being influenced by semantics. In the early stages, the primary focus is on helping children learn to produce sounds and words correctly.
- **Preschool children** tend to make judgments of utterance acceptability based on the content rather than on the grammatical structure. Thus, a **4-year-old** might judge “Daddy painted the fence” as unacceptable since, in the child’s realm of experience, “Daddies don’t paint fences, they paint houses.”
- **By kindergarten**, a child is just beginning to separate what is said from how it is said, to separate referents from words, and to notice structure. Even so, school-age children may still judge correctness more on semantic intent or meaning than on grammatical form. Through these ways, metalinguistic abilities are developed among children.

Lesson No. 30**IMPORTANCE OF LANGUAGE DEVELOPMENT AT
DIFFERENT LEVELS OF PRESCHOOL KINDERGARTEN****Topic 135****Language Difference:-**

Language differences mean bilingual and non-majority dialectal speakers may or may not experience difficulty developing American English. Children who learn two languages simultaneously should experience no difficulty by school age and may be at an actual advantage in school. Therefore, if a child learns any language during their childhood, it will assist them in learning a second language such as English. Children who are learning English successive to having begun learning a first language may experience some difficulty in school depending on when they begin to learn English. It shows how the context and environment in which a child studies can influence them.

Two specific issues may be developed in this regard:

- code-switching among bilingual children. It refers to when a child switches from one language to another while communicating, it is known as code-switching.
- and the prejudice some speakers of African American English (AAE) may face.

Code-Switching Development: Bilingual speakers often exhibit code-switching or shifting from one language to another. For example, many people in Leicester who are Indian Gujarati often switch between English and their native language when they talk. This switching between languages can be challenging for people who know two languages. Especially when both languages are used in the environment, as in the southwestern United States, in Quebec, or in sections of many major U.S. cities. Similarly, in places like France and Canada, where both English and French are spoken, and in America, where various languages are used. So, the issue of code-switching is produced in such situations.

African American English Speakers and Society: For an individual child, the main effects of using the dialect called African American English (AAE) are social and educational. To the extent that AAE is defamed within our multidialectal society, a child may also be defamed. To conclude, this is all about language differences and how an individual faces language differences in their environment.

Topic 136**Code Switching Development:-**

First of all, we need to learn about what is the code-switching development.

It is the ability to switch between two or more languages or dialects in a single conversation or interaction. Code-switching development is the process by which children learn to use and switch between different languages or dialects in different contexts or backgrounds.

Code-switching is a common phenomenon among bilingual children and those who grow up in multilingual communities. Code-switching can serve a variety of functions, such as to accommodate the language needs of different speakers or to express cultural identity. Moreover, being able to know and speak two languages can enhance an individual's personality, allowing them to communicate effectively in different language contexts simultaneously.

Factors Influencing Code-Switching Development:-

- Language exposure and use in the child's environment. It means when two languages are used in his environment, he will be able to know them.
- Attitudes and beliefs surrounding language use
- **Social and cultural factors**, such as the need to accommodate different speakers or express cultural identity.
- **Cognitive factors**, such as the ability to distinguish between different languages or dialects. It means when the child able to understand two languages, his maturity is increased and more enhanced to comprehend them.

Code Switching Development in Bilingual and Multilingual Children:- Differences in code-switching development depend on the child's language background. Common patterns of code-switching in different communities.

Functions of Code Switching in Different Contexts:- Contexts in which code-switching might occur (e.g. at home, at school, with peers). This point relates to Pragmatic development means the context of language and a child learns about the language in use. Functions of code-switching in different contexts (e.g. to establish rapport, to express cultural identity, to negotiate meaning)

Modeling and Supporting Code Switching Development:- Creating a rich language environment that exposes children to multiple languages and dialects. Provide opportunities for children to practice code-switching in different contexts. Work with families and communities to support children's language development.

Implications for Language Learning and Education:-The importance of understanding to support children's language development. Implications for language teaching and assessment in multilingual contexts. The potential benefits for language learning and cultural understanding. As, language is the big source to communicate culture, so language is not only about communication.

Topic 137

Language Development at Different Levels Preschool Kindergarten ECE:-

Preschool Language Development:-

At the preschool level, Language development is characterized by the emergence of basic grammar and syntax and increased vocabulary. During this stage, children typically increase approximately 5 words to their vocabulary. This phase of vocabulary development is critical as it corresponds with the development of conversational skills, signifying the emergence of language during this period. Children at this age can express themselves more effectively. They are also able to make basic requests and follow simple instructions. They also begin to understand the use of language for social interaction, including turn-taking and polite language, for example, "Mr." and "Sir" are used. Turn-taking involves waiting for your turn to speak and finishing the first person's speech in a conversation.

Teachers can support preschoolers' language development through various strategies. A few are mentioned below:

- Providing a rich language environment. It involves giving children spoken activities. It appears that in government schools, children's spoken language skills are not as strong as those in private schools. This is because private school students practice oral communication and related activities regularly.
- modeling good language use and using a range of language stimulation techniques, such as storytelling and singing.

Kindergarten Language Development:-

In kindergarten, children's language development progresses further, with an emphasis on developing early literacy skills such as phonemic awareness, phonics, and comprehension. According to research, children who develop literacy skills before starting school perform better in their first-grade classes. Children at this age can express themselves more fully and understand and use more complex grammar structures.

At the kindergarten level, further activities are also involved such as:

- begin to read and write simple texts, for example, students write short essays and paragraphs on any topic
- Teachers can support their development by providing opportunities for language-rich activities such as shared reading, writing, and word games. Also, they provide feedback to children for their guidance.

At the **ECE level**, language development is characterized by the acquisition of more advanced language skills such as: storytelling, persuasion and problem-solving

- Children can use language to communicate ideas and thoughts in a range of contexts, including social, academic, and emotional.
- Teachers can support ECE students' language development by providing a range of language-rich activities such as drama, debate, and inquiry-based learning.

Topic 138

Importance of Language development at different levels Preschool, Kindergarten, ECE:-

Preschool Language Development:-

Early language skills are critical for success in school and in life. It has been observed that children who learn language skills early in life are more proficient and perform well in their academic learning.

Children who have strong language skills are better able to:

- communicate their needs effectively
- form positive relationships with others
- participate effectively in class activities

Language development in preschool lays the foundation for more advanced language skills in later years. Children who are exposed to rich language environments in preschool are more likely to develop strong literacy skills and perform better academically in later years. Early intervention helps identify and address language delays or disorders. As a result, teachers can utilize diverse strategies to enhance children's language skills, which continue to improve in later years. Also, teachers who are trained to identify and support children with language difficulties can help ensure that these children receive the early intervention they need to succeed. There is a distinction between language difficulty and disability. Language difficulties can improve over time with guidance from elders and teachers. However, language disabilities, which are present from birth, cannot be improved.

Kindergarten Language Development:- Strong early literacy skills are essential for success in school and beyond. Children who enter kindergarten with strong language skills are better prepared to learn to read and write, which sets them up and prepares them for success throughout their academic careers. Language development at this stage helps children learn to express themselves more effectively. This skill is important for social and emotional development, as well as for academic success. Teachers' focus in kindergarten can help identify and address any language difficulties that children may be experiencing, which can help prevent these difficulties in later years.

Early Childhood Education (ECE) Language Development (LD):- Children are able to communicate effectively, express their ideas, and think critically and are more likely to succeed in school and in life. Language development (LE) in ECE can help children develop the critical thinking and problem-solving skills they need to succeed. Children exposed to a range of language-rich activities, such as drama and debate, are more likely to develop these important skills. Teachers who are trained to identify and address language delays or disorders can help ensure that children receive the support they need to reach their full potential. Teachers may also assign students homework or other activities to increase their language development process.

Lecture No: 31**Language Development in Early Childhood: Roles and Scope****Topic 139****Scope of Language Learning in Early Childhood Education:-**

- Early childhood is a critical period for language development and children who are exposed to multiple languages at an early age have a better chance of becoming proficient in those languages later on regarding their practical life as well as their academic career.
- Language learning can be integrated into early childhood education programs. For example, child learns multiple languages simultaneously, such as English at school, Urdu at home, and another language spoken in their local community.
- It can be used to promote cognitive development, social-emotional development, and cultural awareness.
- The scope of language learning in early childhood education is broad and includes a range of language skills and competencies. Every language encompasses four fundamental skills: listening, speaking, reading, and writing, all of which are crucial for language development. Moreover, these skills are integral parts of the curriculum.

Some of the key areas of focus include:

- **Vocabulary development:** it is a critical component of language learning in early childhood. Young children must build a strong vocabulary to comprehend and communicate effectively. Without vocabulary, a child cannot grasp language.
- **Grammar and syntax:** As children progress in their language development, at this level teach students about the words, parts of speech, and sentence constructions. Moreover, they begin to understand and use more complex grammatical structures and syntax.
- **Phonological awareness:** ability to recognize and manipulate the sounds in language. This is also another important strategy for developing it is essential for reading and writing skills.
- **Pragmatics:** Pragmatics refers to the social use of language. It involves not only the usage but also the style of languages, determining which style to use in a

particular context. Young children need to develop pragmatic skills to understand the social and cultural norms of language use.

Topic 140

Importance of Symbolization in the Early Childhood Curriculum:-

Symbolization refers to the use of symbols, such as pictures and written words, to represent ideas, objects, and actions. In the digital age, computers effectively use symbols for word formation and learning the alphabet.

Here are some key points regarding the importance of symbolization in the early childhood curriculum:

The curriculum comprises organized activities, both within and outside the school, designed to achieve specific goals. It serves as a structured plan to impart behaviors, skills, and competencies to students.

Symbolization as a Foundation for Literacy: It is a foundational skill for literacy as it allows children to understand and use written language. Children who have a strong foundation in symbolization are more likely to develop strong reading and writing skills. Keep in mind that writing skills are a complex activity, so it is important to introduce children to learning activities before focusing on writing skills. Therefore, it is important to introduce symbolization in the early childhood curriculum to provide children with a strong foundation for literacy. Literacy involves reading, writing, mathematics, and computer skills.

Symbolization as a Multimodal Approach: It allows children to communicate ideas, objects, actions, thoughts, and concepts in a variety of ways, including through pictures, diagrams, and written words.

This multimodal approach to communication allows children:

- to express themselves in a variety of ways
- to develop a deeper understanding of language and communication.

Symbolization as a Tool for Cognitive Development: Plays an important role in cognitive development. As it allows children to develop abstract thinking skills. Through it, children learn to represent complex ideas and concepts, which helps to improve their cognitive skills and prepare them for complex learning tasks.

Symbolization as a Tool for Social and Emotional Development: By using symbols to communicate children can express their thoughts and feelings in a safe and non-threatening way. This can help to build self-confidence and promote social and emotional development.

Symbolization in the Early Childhood Curriculum: To support symbolization in the early childhood curriculum. It is important to provide children with a variety of experiences with symbols, including opportunities to use and create their symbols. This approach is constructivist, allowing children to express their language through pictures, symbols, words, and signs. This can include activities such as drawing, writing, and storytelling. Provide children with a print-rich environment including a variety of written materials such as monograms, play cards, books, signs, and labels. All these are very important and their use for the Early Childhood Curriculum.

Topic 141

Role of Teacher in Language Development:-

A Teacher should play various roles such as

- Learners
- Facilitator (facilitate the students according to their queries and confusion)
- Assessor, (means evaluating the students' skills, and behavior)
- Manager, (means managing the activities for students)
- and Evaluator. All these roles are played by the teacher for teaching the language. Early childhood teachers play a key role as children develop literacy.

While this cluster does not cover the basics of reading instruction, it offers classroom-tested ways to make common practices like reading. Language teachers provide instruction to help students master the fundamentals of a specific language. They generally start with the core elements of basic grammar and formatted and then progress to more complex aspects, ultimately aiming to achieve proficiency in conversational dialogue. The teacher acts as both a facilitator and an observer, guiding both the topic of the lesson and the student's learning process. The details of the strategies are mentioned below:

Creating a Supportive Learning Environment:

The teacher plays a key role in creating a supportive learning environment that fosters (inculcates) language development. This includes: creating a safe and welcoming classroom environment, providing opportunities for interaction and communication, and offering support and encouragement to students. As shown in the picture, teachers fulfill various roles including Controller, Organizer, Practitioner, Assessor, Prompter, Resource, and Tutor. These roles are essential for developing students' language skills.

Planning and Delivering Effective Lessons:

Effective lesson planning and delivery are essential for language development. Lesson planning is crucial for effective teaching, and its execution is referred to as delivery. Teachers should plan lessons that are:

- engaging and challenging
- also taking into account the needs-abilities of individual students. It is the teacher's responsibility to create activities tailored to the specific needs of each child, rather than generic activities.
- provide clear instructions and feedback to help students understand and improve their language skills.

Using a Communicative Approach:- A communicative approach emphasizes the importance of meaningful communication and interaction in language development.

Teachers provide opportunities for students to:

- use language in a variety of contexts, and backgrounds
- including through pair and group work, role-plays, and discussions.

Encouraging Language Development Outside the Classroom:- This can include providing opportunities for students to practice their language skills outside of class,

- such as through language clubs or cultural events,

- also encouraging students to engage with authentic language materials, such as films, dramas, and television shows. To conclude, by using these various strategies, teachers can significantly contribute to language development.

Topic 142

Role of Parents, Siblings, and Peers in the Development of Language:-

Parents, siblings, and peers play an important role in the development of language in children. They interact, talk, guide, and play with each other, all of these aspects are crucial for their language development. As the child grows up, siblings start to interact more with him while parents and other family members remain involved in caring for him. Interaction with others is the most important way that children learn a language. As you can see the role of Parents and their speeches in the attached image. Parents can help their children develop language by talking to them about:

- what they are seeing,
- what they are doing,
- and how things feel.
- By talking with their children and interacting with them, parents build language and social skills.

Studies suggest that older siblings may have a significant impact on both the language environment and language development of young bilingual children. Peers also play an important role in the development of language in children. Children learn from their peers by listening to them and imitating them such as, how to communicate, and joke with each other. and by playing with them and engaging in social activities such as birthday parties, games, and other social gatherings.

The details of the roles are mentioned below:-

Role of Parents: Parents play a crucial role in the development of their child's language skills. They are first-language models for their children. Providing exposure to the sounds, words, and grammar of their native language.

As depicted in the picture, various concepts and ideas reflect parents' perspectives. When fostering language development in children, parents should observe their habits, interests, and behaviors closely to plan appropriate guidance.

Further, the mother plays a crucial role in this process.

Parents can support language development by talking and reading to their children, such as reading short stories,

responding to their language attempts, and creating a

language-rich environment at home. For example, communicating with your child using polite words and manners, and consistently demonstrating good behavior in front of them is important. Children often look up to their parents and see them as role models to copy. The following pictures explain the concept of “How you can support your child’s education?”

1. **Conducive Environment:** Establish a nurturing and healthy environment for your children.
2. **Non-Academic Interests:** Encourage learning through games and play.
3. **Regular Communication with Teachers:** In some countries, parents are involved in associations like Mothers and Teachers Associations, maintaining regular contact with teachers. They monitor their children's progress and behavior through daily interactions with teachers.
4. **Encourage Questioning:** Asking questions is essential for learning. When a child asks questions, it indicates active learning.
5. **Setting a Positive Example:** Parents can influence their children positively by using kind words and displaying good manners.

Role of Siblings:- Older siblings can serve as language models and provide exposure to more complex language structures and vocabulary. Siblings may also engage in language play and conversation, which can help younger siblings develop their language skills. For instance, organize competitions among students to foster language development and arrange related activities. Various Sibling roles are mentioned below in the picture.

Role of Peers:- Interacting with peers provides children with opportunities to practice and refine their language skills. Children engage in:

- cooperative play (There is a difference between cooperation and collaboration: in cooperation, you may take responsibility for others' learning, whereas in collaboration, you simply assist each other in tasks.)
- conversations,
- and negotiations which all contribute to the development of language skills.

Lesson No. 32**DESIGNING EFFECTIVE LANGUAGE LEARNING
CURRICULUM IN EARLY CHILDHOOD EDUCATION****Topic 143****Instructional Material for Language Learning:-**

Instructional materials are crucial for effective language learning. Instructional materials are required for the teachers and important for them. They can provide exposure to new vocabulary, grammar, and language functions. The teacher plays a crucial role in using teaching materials such as activity materials, workbooks, and other resources during the teaching process. Additionally, the feedback provided by the teacher on assignments and tasks helps students enhance their learning. As well as opportunities for language practice and feedback carefully selected and designed to meet the needs of learners. The picture shows examples of words with three morphemes. Teachers can create their teaching resources for practicing double-, triple-, and fourth morpheme syllables, or they can utilize resources available in the market.

**Types of Instructional Materials:**

There are various types of instructional materials that can be used for language learning, including:-

- textbooks, workbooks
- audio and video recordings
- language games such as word puzzles, make words by combining alphabets
- and real-life materials such as newspapers and magazines

The choice of materials is based on the learners' level of proficiency, learning style, and interests, and also needs to consider the individual differences of the child. The image contains several questions aimed at fostering curiosity among students. These questions encourage children to share their perceptions about various objects. Teachers can enhance student interaction and engagement in classroom activities by using additional materials.

Selection Criteria: When selecting instructional materials, it is important to consider the following criteria:

- **Authenticity:** When we teach students who cannot read or write, they may find it difficult to know what is right and what is wrong. Therefore, the materials should be authentic and relevant to the learners' needs and interests.
- **Appropriateness:** The materials should be appropriate for the learners' level of proficiency and learning goals. This means the teaching materials should match the child's mental and cognitive abilities. The teacher should also keep the learning goals in mind. These goals include listening, speaking, reading, and writing, and the teacher should create instructional materials that address each goal appropriately.
- **Clarity:** The materials should be clear and easy to understand.
- **Relevance:** The materials should be relevant to the learners' cultural background and context. This is a crucial criterion for selecting instructional materials. For instance, during the COVID-19 pandemic, teaching a different topic unrelated to the situation outside the classroom may not be appropriate. Instructional materials should be adapted to meet the needs, cultural backgrounds, and environments of the learners. When a teacher designs these materials, she also needs to consider all these standards.

As shown in the attached picture from Speech-Language Therapy, there is a list of animals and foods. Teachers can use this to teach students by categorizing them based on their specific characteristics. They can also show pictures to students and ask them questions about each item.

Designing Instructional Materials:- Instructional materials designed to enhance language learning. They can be designed to provide opportunities for interactive learning. We can also observe through experiments that children's learning cannot improve without student interaction. A teacher cannot rely solely on lectures for young children; preschoolers learn best through games and other interactive activities such as group work and role-play, to facilitate language practice and feedback. Although, this is a very challenging task to guide the students, as well as the physical look and space of the

classroom are also changed in student-centered learning. Instructional materials are also designed to incorporate technology, such as mobile, multimedia materials, tape recorders, and online resources. Here is another example of an online resource explained through an image.

Using Instructional Materials: Used in a variety of ways to support language learning. They can be used in the classroom as well as outside the classroom with the involvement of the parents, such as through homework assignments, and independent study. For example, a teacher can give math homework where students measure tables at home or mark the size of their room with their parents' help. These practical activities help students learn by doing, which is effective and stays with them longer. Instructional materials are used in combination with other language learning strategies, such as language games and real-life materials. Real-life materials are important because we can easily connect them to our concepts and understand ideas more effectively.

Topic 144

Language Development through ECE Curriculum:-

Early Childhood Education (ECE) curriculum is designed to promote the holistic development of children in various domains, including language and communication skills, as well as the mental development, emotional, and social development of the child. Language development is a crucial aspect of the ECE curriculum as it lays the foundation for the future academic and social success of children. As ECE period is the time of language acquisition and it continues till the age of 4 to 5 years. Different developmental stages are stated in the picture, you can see them.

Language-rich environment: The ECE curriculum provides a language-rich environment that includes various materials, resources, and activities that promote language development. For example, world-building competitions (sounds to sentences), or other activities related to language development. Children are encouraged to participate in activities such as storytelling, singing, role-playing, and discussions that enhance their language skills. For example, a Chinese teacher

conducts a storytelling activity in class where each student shares a story. Afterward, the teacher asks the students to vote for the best story and awards the title of "King of Storytellers" to the winner. This activity introduces the concept of storytelling to the students. The building language skills from the birth-related image is mentioned below, all details are explained in it.

Language-rich environment: Teachers provide a positive and encouraging environment that supports children's language development by using different resources such as cartoons, games, and videos and facilitates their communication with peers and adults. Moreover, teachers can organize activities where children interact with their peers, engage in dialogues, and collaborate on group tasks. They can also incorporate printed materials in the classroom such as cartoons and cards to facilitate student development. Additionally, ready-made resources can be displayed on blackboards and bulletin boards to enhance language skills.

Language development goals: In this regard, the development of goals is very important. The ECE curriculum identifies goals that children should achieve at different stages (milestones) of their development. These goals include and what age they will develop among students:

- developing phonemic awareness
- vocabulary, grammar
- and comprehension skills (reading with understanding)
- Teachers use various teaching techniques to help children achieve goals, like shared reading, writing activities, and other competitions in the classroom.

Play-based learning: This is one of the most important strategies of the ECE curriculum. The ECE curriculum emphasizes play-based learning as a critical component of language development. Children learn through exploration, experimentation, and interaction with the environment and their peers, for example, using blocks or engaging students in observational activities in the classroom. Play-based learning is essential in early childhood education (ECE) curricula. Play-based activities provide opportunities for children to use language in meaningful ways and to develop communication skills such as learning through play, learning through games, word making, or other activities a teacher may involve in the classroom.

Integrated curriculum: Another important strategy involves a global shift over the past 2000 years from content-based education to competency-based education at the primary level. This shift has led to updated curricula, where subjects are interconnected and integrated. Pakistan's 1979 policy also introduced an integrated curriculum approach. The ECE curriculum is designed to integrate language development with other domains of learning, such as

- cognitive
- social-emotional (affective)
- and physical development (psychomotor)

Bloom's Taxonomy categorizes learning into three domains: cognitive, affective, and psychomotor. The cognitive domain focuses on thinking processes, the affective domain on emotions and attitudes, and the psychomotor domain on physical skills and movements. For example, children can develop language skills through various activities such as art, science experiments, and physical play. Nowadays, teachers also use videos effectively to teach students about different concepts.

Inclusive approach: An inclusive approach involves having both typical students and students with special needs or disabilities present in the classroom. The ECE curriculum promotes an inclusive approach to language development, recognizing that children have different language backgrounds, abilities, and needs. Teachers provide support and individualized instruction to ensure that all children can participate and achieve their language development goals. The image describes steps for developing inclusive practices:

1. Creating an inclusive culture involves establishing values that respect preferences and honor the values of others.
2. Evolving inclusive practices entails fostering interest in language development processes.
3. Implementing inclusive policies is crucial for shaping the curriculum, providing essential guidelines, and directing actions. For example, Leicester Primary School hosts 72 students from various nations who are learning English, showing cultural

diversity. The school supports their language development without disregarding their native languages and contributing to a successful language learning process.

Benefits of Inclusive Approach:

- Brand and Reputation
- Quality
- Increased teaching and learning
- Cost and Time Efficiency
- Assurance and Accountability
- Improved recruitment and retention
- Better professional development
- Staff and student satisfaction

Topic 145**ECE Curriculum:****What is Curriculum?**

The curriculum incorporates all organized and planned activities by schools, whether conducted inside the school or outside the school, to achieve predetermined goals. It is often referred to as subject matter, known as Minhaj in Arabic and as it ranway in Greek, therefore, it has different definitions. As early childhood education is starting from the beginning stage. So, its curriculum should be planned very carefully and rigorously.

ECE Curriculum:- Early Childhood Education (ECE) Curriculum refers to the educational program that is designed for young children, usually from birth to eight years of age. It aims to promote holistic development, including physical, cognitive, social, and emotional development by providing developmentally appropriate learning experiences.

ECE curriculum is based on the philosophy that young children learn best through play and hands-on experiences, and they learn at their own pace and in their unique ways. For example, fostering competitions, engaging in drawing activities, and involving children in concrete ideas and activities help them transition from concrete to abstract concepts at this developmental stage. Therefore, the curriculum is designed to be child-centered and the role of the teacher is the facilitator. Further, and to accommodate individual differences among children.

Children learn at different speeds; some are quick, some take more time, and others are average. They also have different ways of understanding things such as some grasp concepts easily, while others rely on rote memorization. Teachers must accommodate

these differences by considering the diverse learning styles of their students. Unfortunately, in Pakistan's Government schools, insufficient attention to students' learning styles contributes to the lower quality of education.

The curriculum for ECE is designed to promote language development through various activities and experiences. It includes opportunities for children to listen, As listening is the first objective of language development, and responds to stories, rhymes, and songs. to engage in conversations with peers and adults, and to use language to express their thoughts and feelings. For example, when teaching counting to a child, using poems and other creative resources can spark their interest and foster a positive attitude toward learning.

The Early Childhood Curriculum Models, as shown in the attached image, follow five steps. The

first step involves setting up materials and arranging the classroom, the second is implementing teaching practices, and the third is applying theories such as cognitivism. This theory emphasizes that children

develop knowledge through their own experiences, learning through trial and error. The fourth step defines the teaching philosophy and lastly guides organizing instructions.

The ECE curriculum also provides opportunities for children to develop their language skills through meaningful and purposeful activities like dramatic play (the teacher needs to define roles in the drama-based activity) block building, and art to encourage children's use of language to communicate and collaborate with others, and to develop their vocabulary and understanding of concepts. This topic focuses entirely on the curriculum and explores the activities and elements that are involved in it.

Topic 146

Curriculum Creating and Construction:-

Curriculum creation and construction involve a systematic and purposeful process of designing and developing a curriculum. It's important to remember that the curriculum consists of four elements: objectives, content (learning experiences), teaching methods, and evaluation. These elements guide the development of the curriculum. This process is essential to ensure that the curriculum meets the needs and goals of the learners and that the

TYPES OF CURRICULUM DESIGNS:-

educational institution's curriculum is built upon various foundations, including philosophical and psychological perspectives, as well as considerations of societal and economic needs. These aspects are crucial to address when designing the Early Childhood Education (ECE) curriculum, especially as it focuses on teaching language and life skills from the early stages of development. The image below illustrates different types of curriculum designs. In Pakistan, the curriculum design used is subject-centered.

Subject Centered design:

- a. **Subject Design:** Each level is structured around distinct subjects, teaching them accordingly.
- b. **Discipline Design:** Focuses on organizing content within specific disciplines.
- c. **Broad Field Design:** Addresses curriculum at a broader, more comprehensive level.
- d. **Correlational Design:** Concerns the interrelationship between different subjects.
- e. **Process Design:** Emphasizes procedural and process-based learning approaches.

Learner-Centered Design:

- a. **Child-Centered Design:** Focuses on the needs and interests of the child.
- b. **Experiential-Centered Design:** Learning is based on the experiences of the children.
- c. **Romantic (Radical) Design:** Involves rapid and significant changes in students' actions or behaviors.
- d. **Humanistic Design:** Emphasizes students' needs, interests, and human behavior in the curriculum.

Problem-Centered Design:

- a. **Life Situation Design:** Focuses on teaching students life skills through practical situations.
- b. **Core Design:** Essential and fundamental in nature.
- c. **Social Problems and Reconstructionist Design:** It is an American theory and philosophy of John Dewey's philosophy, who believed that education is a social need and function. In problem-centered learning, students engage in reflective and problem-based learning approaches within the curriculum.

Needs assessment: The first step while developing the curriculum is Need assessment. The following are the steps involved in curriculum creation and construction:

The first step in curriculum creation is to assess the needs of the learners according to their age, or the milestones of their growth and the educational institution. This involves gathering information about learners, their backgrounds (such as urban, or rural), interests, learning styles, and objectives of educational institutions. The basic components of the curriculum are mentioned below, and they are interlinked with each other, and they all are very systematic.

Setting learning objectives: The next step is to establish learning objectives that are aligned with the needs of the learners and the educational institution. These objectives should be SMART-specific, measurable, achievable, relevant, and time-bound, also these five are considered as the characteristics of objectives, and they are always related to the content and subject matter.

Designing the curriculum: The curriculum is designed based on the learning objectives. This involves selecting appropriate content, instructional strategies, and assessment methods that are consistent with the learning objectives and the needs of the learners. Keep in mind that assessment methods are always developed and generated according to the subject and content. If we are developing any assessment of a language-based course, then 4 objectives (listening, speaking, reading, and writing) will be considered. On the other hand, assessments for subjects like chemistry and physics are designed according to their specific learning objectives.

Implementation of curriculum: In curriculum implementation, the school and the teacher are responsible for putting it into practice in the classroom. The curriculum is implemented through teaching and learning activities. The instructional strategies and assessment methods selected in the design phase. These are used to facilitate learning and evaluate the learners' progress as well as whether the content is related to the objectives have teachers use correct strategies for teaching the concepts and have completed all objectives of the lesson.

Evaluation of the curriculum: Evaluation is an ongoing process that involves assessing the effectiveness of the curriculum in achieving the learning objectives, and what is the output and what are the learning outcomes we have achieved. This involves collecting and analyzing data on the learners' performance, the instructional strategies used, and the

assessment methods employed. During evaluation, various aspects are assessed, including content, teaching methods, students' learning levels, and other elements of the learning process. The evaluation process utilizes different tools, methods, and tests to measure these aspects.

Curriculum Revision: Curriculum revision is one of the most important components of the curriculum. A curriculum that is not updated regularly does not help students learn well and is not good for the country or society. Based on the evaluation results, the curriculum is revised to

improve its effectiveness and better meet the needs of the learners and the educational institution. The model of the curriculum creation and construction is mentioned below. The curriculum creation model has several phases. First, objectives are developed based on what students need to learn, with input from everyone involved, including educational experts. Second, content is created by specialists for different school levels like primary, secondary, and elementary. This ensures that the material meets the needs of each level. Then, the next phase is the selection of the teaching methods, and the last phase is the evaluation. All these steps are important for designing a curriculum.

Topic 147

Curriculum Organization:

The meaning of curriculum organization is how we set the sequence of the curriculum. **So**, Curriculum organization in early childhood education (ECE) refers to the arrangement and planning of various components of a curriculum that is developmentally appropriate and relevant for young children and according to their needs. **The diagram illustrates the systematic organization of the vocabulary-based curriculum.**

This process involves creating an environment that is conducive to learning, selecting appropriate teaching strategies, and designing learning experiences that meet the needs of each child. There are various approaches to curriculum organization in ECE, including the following: **The curriculum organization is mentioned in the image.**

Lecture No. 33

FOUNDATIONS OF EARLY CHILDHOOD EDUCATION: CURRICULUM, RESOURCES, AND CLASSROOM DESIGN

Topic 148

Themes:

Themes refer to the overarching or related topics or ideas that guide or play of role learning in a curriculum. In early childhood education (ECE), themes are often used as an organizing principle for curriculum development. A theme can be a broad concept, such as the seasons or the environment, or a more specific topic, such as insects or transportation. Using themes in ECE has several benefits, including. The image explains the simultaneous development of cognitive, social, personality, emotional, and language skills. It also portrays the experiences crucial for fostering these developmental areas. This concept organizes themes around which topics are structured, in the same way, the curriculum is also developed.

Purpose and Benefits of Themes:-

- **Enhancing Learning:** Basically, themes enhance the knowledge of the students and get familiar with the concepts about the same thing which has similar characteristics and properties like a domain. Themes also give the concept of networks to the children. Themes provide a framework for organizing learning experiences and help children make connections between different concepts and ideas.
- **Engaging Children:** Themes are often chosen based on children's interests, which can increase their motivation and engagement in learning.
- **Promoting Cross-Curricular Learning:** Themes can incorporate multiple subject areas, and the collection of need-based concepts such as math, science, and literacy, which promote cross-curricular learning.
- **Encouraging Collaboration:** Themes can be used to facilitate group projects and encourage children to work together. The diagram shows play-based learning through thematic units like

Dinosaurs and 30 Days of Flags. So, in the classroom teachers can adapt existing units or create their own to guide students through various themes.

Examples of themes in ECE:-

- **Animals:** This theme can incorporate learning about different animals, their habitats, and their characteristics.
- **Community Helpers:** This theme can involve learning about different jobs and the people who perform them, such as doctors, firefighters, farmers, engineers, and police officers. Moreover, the themes listed below can also be used for organizing and developing a curriculum.
- **Seasons:** This theme can include learning about the weather, changes in nature, and seasonal activities. The details of the seasons such as heat, cold, air, and others can also be described in the seasonal-based relevant themes.
- **Transportation:** This theme can involve learning about different types of transportation, how they work, and their uses. For example, railways, buses, and ships, are various forms of transportation.

Topic 149

Instructions/Guidelines for Curriculum Content:-

Instructions and guidelines for curriculum content in early childhood education (ECE) vary depending on the specific country, region, or organization that is responsible for establishing them. However, some general principles are commonly followed to ensure effective curriculum content in ECE. **The details of the instructions and guidelines are mentioned below:-**

- **Age-appropriateness:** This is one of the most important principles of the curriculum content. The curriculum content must be developmentally appropriate for the age group being targeted. For example, the content for preschoolers would be different from that for toddlers. The content would be based on the description of the body parts, movements the sounds of words, etc.
- **Holistic development:** The curriculum should aim to support the holistic development of children, including their social, emotional, cognitive, and physical development.

- **Child-centered approach:** The curriculum should be designed around the interests and needs of the children, considering their cultural background and experiences. The curriculum should not be teacher centered.
- **Play-based learning:** The curriculum should incorporate play-based learning experiences, as play is the primary mode of learning for young children.
- **Multidisciplinary content:** The curriculum should incorporate a range of content areas, such as literacy, math, numeracy, science, social studies, and the arts.
- **Learning outcomes:** The curriculum should clearly define the learning outcomes that are expected of the children, including what they should know and be able to do by the end of the program. In the integrated approach, there are various levels of learning outcomes, and their connection is linked to behavior and the doing of actions, So they are not only linked to understanding but also connected with demonstration and expression.
- **Assessment and evaluation:** The curriculum should include mechanisms for evaluating children's learning achievements, as well as the effectiveness of the curriculum itself. Further, the assessment of all basic 4 skills (Listening, speaking, reading, and writing) should be included in the language-based subjects.
- **Continuous improvement:** The curriculum should be flexible, and there should be continuous improvement in it. The curriculum should be reviewed and updated periodically to ensure it remains relevant and effective, based on new research and changing societal needs. As, in foreign countries, teachers are autonomous and can make changes in the content with the help of files. While Pakistan's education system is highly centralized, and limited implementation of flexible concepts. It reflects the static nature of content and curriculum. **The checklist for the Writing Curriculum is mentioned below in the image:**

educational software, and online resources, and there are lots of audio master's available online, offering a variety of accents including British and American for the pronunciation of the words and alphabets. Other

examples of Visual Aids are listed below. Models, Graphs, charts, posters, etc. fall into the category of Non-projected Aids.

- **Language Laboratories:** Language laboratories provide a space for students to practice listening and speaking skills in a controlled environment. Language labs typically have individual soundproof booths with audio equipment and headsets. Therefore, when selecting teaching aids, the age, language proficiency, and learning styles of the students should be considered. Teaching aids should be appropriate for the level of instruction integrating into lesson plans in a meaningful way. Effective use of teaching aids can enhance the quality of instruction, increase student engagement, and retention, and improve learning outcomes, as well as the provision of self-learning or independent learning of the students.

Topic 151

Physical Environment of the ECE classroom:-

Physical environment plays a vital role in facilitating children's learning and development.

It provides children with a safe and comfortable space to explore, learn, and interact with their peers and educators. In the picture, you can observe the layout of an Early Childhood Education (ECE) classroom. The children are learning together in groups, while the teacher serves as both instructor and guide.

- **Space Planning:-** The teacher's role is very important in the planning of space. The physical environment of the ECE classroom should be designed in a way that optimizes space utilization while ensuring the safety and security of children. So, the child can move in the classroom freely and the traffic would not disturb. The furniture and equipment should be appropriately sized and arranged to provide ample space for children to move around and engage in different activities. The attached picture also portrays the space of the classroom.

- **Classroom Layout:-** The layout of the ECE classroom should be planned carefully, keeping in mind the different learning areas and activities. The classroom should be divided into different learning zones such as the reading corner, block corner, art and craft area, and sensory play area. This allows children to explore and learn in a structured and controlled environment. Further, the seating arrangement should be changed, as it creates interest among students. Look at the classroom layout shown in the picture. Each activity area (like arts, tables, teacher's desk, etc.) is carefully planned and organized systematically.

- **Lighting and Ventilation:-** This is another important component of the classroom environment. The ECE classroom should have sufficient natural and artificial lighting to provide a bright and stimulating learning environment (which means different colors and paints are used). The classroom should also have proper ventilation to ensure a healthy and hygienic atmosphere. It means rooms should not be provided a suffocation environment and designed according to each weather's demand. As you can see in the picture, the classroom's lighting and ventilation are depicted. The walls and tables are arranged with colors that correspond to the study scheme.

- **Classroom Materials and Resources:-** The ECE classroom should be equipped with age-appropriate and stimulating materials and resources that facilitate children's learning and development. The materials should be organized and displayed in an attractive and accessible manner to encourage children to explore and learn. For example, in Japan, students clean the school environment before class, and the teacher uses this activity to teach them about cleanliness.

- **Safety Measures:** The physical environment of the ECE classroom should be designed in a way that ensures the safety and well-being of children. For example, a teacher can guide them through the demonstration and any activity-based method. Safety measures such as safety locks, safety gates, and fire extinguishers should be installed in the classroom. The furniture and equipment should be designed to minimize the risk of accidents and injuries.

Topic 152

Lesson Plans:

Lesson Plans are an essential component of effective teaching, without lesson plans teaching is incomplete. A lesson plan is a detailed outline of the content and activities that a teacher intends to cover in a particular class period. The purpose of a lesson plan is to provide a structured framework for the teacher to deliver content in a logical and organized manner through its detailed components. A sample of the lesson plan is explained in the image.

Lesson: English Question Puzzles		5 th grade : classes 5, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6
(Friday) : February 2 nd , 2016		(30 min)
Ms. _____ s. Ms. _____		
Students will... - Read and work on the information sentences. - Discuss with classmates and use the feedback to check their work. - Write sentences. - Ask the questions to the J.E. - Remember and tell the answer sentence to their group.		Grammar & Vocabulary Lesson 7 and Lesson 8 - C) and A) Skills Reading, Writing, Speaking, Listening Problem Solving, Information, Team Work
Readers Activity	Important Points	Materials
Introduce Read Material	- Explain the Activity. - Give students the Activity Outlines. Tell students the new rules. Tell about new jobs. JFE supports the instructions and acts out the sentences with J.E.	- Activity Outlines - Outlines - Students Cards - Writing Paper
Guided Practice (or) Formative Assessment (or) Meaning Activity	- Choose 4 students to model the activity for the class. - JFE directs each group in the process while students are doing the example. - JFE tells students their groups. Students choose their desks to make a group. - JFE gives groups members their rotation sheets. JFE gives the writing paper to Member A. Students start the activity. - JFE gives and receives envelopes with the dialogues: "Here you are," and "Thank you." - JFE listens to the finished groups ask the questions. J.E. answers the questions.	Answer Sheet
Close	- Collect the envelopes and writing papers. - Give positive feedback.	

Components of a Lesson Plan:

Various components make up a lesson plan from start to ending point, including the

- Objectives:** Keep in mind that, there are two types of objectives; specific and general objectives. The general objectives belong to the whole subject, while the specific objectives are relevant to the chapter, subject, and the particular topic.). Further, the objectives can be measured through these five characteristics SMART (Specific, Measurable, Attainable, Relevant, and Timebound.
- Instructional materials:** This can include audiovisual aids, worksheets, charts, and any other resources that are appropriate to the specific subject or topic.
- Teaching strategies:** Teaching strategies are not the same as teaching methods. Methods stay the same, but strategies can change based on the situation and new ideas. For instance, if students are noisy when a teacher enters the classroom, the teacher might use a method like shouting to get them to be quiet. On the other hand, a strategy could be using strong body language to make students feel respected and behave better. Therefore, there are different strategies that we can use them time to time.
- Assessment methods:** Assessment methods are part of the lesson plan, detailing how the teacher will evaluate students' learning progress and **evaluation** of the lesson plan.
- Objectives:** The objectives are what the teacher intends to achieve in the lesson. The objectives should be aligned with the learning outcomes of the curriculum. Objectives fall into two categories: achievable goals and those categorized under Bloom's Taxonomy, which includes Cognitive, Affective, and Psychomotor

domains. Therefore, the objectives revolve around these domains as well as the content.

- **Content:** The content of the lesson plan refers to what the teacher will teach in the lesson. It should be organized in a logical sequence and aligned with the learning objectives. The content should be appropriate for the level of the students and the context of the lesson.
- **Procedures:** The procedures are the steps that the teacher will take to teach the content and achieve the objectives. For example; a teacher uses the lecture method, student-centered teaching method, or other, they have designed before. They should be clearly outlined and organized in a logical sequence. The procedures should include activities, exercises, and assessments. **Further, one more sample of the lesson plan is attached image.**

TIME	SUBJECT	TUTOR	STUDENT
09:30-09:45	INTRODUCTION 1. Introduce myself 2. Delegate introduction 3. Housekeeping Rules 4. State Aims & Objectives 5. Course Outline	Building File Objectives Principles Health Care Assessing Procedures	Introduction Signature
09:45-10:00	Five Multiple Choice Questionnaire paper	Observe	Participation
10:00-11:00	Adult CPR demonstration using the 4 stage approach 1. Start run throughout time 2. Run through with candidate 3. Candidate to run through 4. Candidates to practice	Demonstration	Practice
11:00-11:15	COFFEE BREAK		
11:15-12:00	Individual assessments	Assess	Demonstrate with scenario
12:00-12:10	Demonstration of Management of choking patient		Practice
12:10-12:20	Recovery position	Demonstration	Practice
12:20-12:30	Post MCQ paper	Observe	Participation
12:30-END	Recap Objectives & Learning Outcomes Evaluation Summary Feedback		

The introduction phase of a lesson typically begins with various activities, question-answer techniques, and a review of the previous lesson. Following this, the teacher demonstrates how to teach the content. For example, in a language class, they might model reading and have students practice it. Afterward, there is a break. Then, the teacher assesses individual student understanding through questions or quizzes. The lesson continues with a recap of key points. Finally, the teacher concludes the lesson in a way that reinforces learning and helps students remember the content.

- **Materials and resources:** They are very important for the students learning and can make permanent to their learning, also they are decided with the help of the lesson plan. The materials and resources refer to the materials that the teacher will use to teach the lesson. They should be appropriate for the level of the students and the context of the lesson. The materials and resources can include textbooks, worksheets, audiovisual aids, and other teaching aids.
- **Assessment and evaluation:** This is also a very important component of the lesson plan which reflects what and how you have taught the students. The assessment and evaluation refer to how the teacher will assess the learning outcomes of the students. It should be aligned with the learning objectives and the content of the lesson. The assessment and evaluation can include tests, quizzes, homework, and other assignments.

- Reflection and feedback:** Reflection and feedback refer to how the teacher will reflect on the lesson and provide feedback to the students. The teacher needs to reflect on the lesson to identify improvement areas and provide feedback to the students to help them improve their learning outcomes. For example, when teaching language, the first skill introduced is "listening," followed by "speaking," and then proceeding through the hierarchy. Afterward, the teacher provides feedback on these specific areas of focus.

The template of the lesson plan is mentioned below and includes various activities related to teaching: deciding on teaching strategies, engaging students in class, choosing appropriate teaching methods for specific topics, evaluating and assessing student learning, and designing creative and well-thought-out homework assignments to enhance understanding.

Template			
The title of your lesson, Unit, Day, Week #, and Day #	Unit 1 Rounding Week 1 Day 1 STORY: THE TURTLE		The standards this lesson will cover
Vocabulary terms	Vocabulary: Rounding, the hundred, hundred, hundred, ten.	Objective: To identify the term "100" and understand its value.	The specific, measurable objective for the day
Materials needed for the lesson	Materials: Base ten blocks, a hundred chart, a number line, a place value chart.	Questions: What is the value of 100? How many tens are in 100? How many ones are in 100?	Questions to ask students during the lesson, or questions you'd like students to be able to answer
The steps for teaching the lesson	Lesson: 1. Introduce the concept of rounding by showing a number line from 0 to 100. 2. Have students round the number 45 to the nearest ten. 3. Have students round the number 78 to the nearest ten. 4. Have students round the number 123 to the nearest hundred. 5. Have students round the number 456 to the nearest hundred. 6. Have students round the number 789 to the nearest hundred. 7. Have students round the number 101 to the nearest hundred. 8. Have students round the number 202 to the nearest hundred. 9. Have students round the number 303 to the nearest hundred. 10. Have students round the number 404 to the nearest hundred. 11. Have students round the number 505 to the nearest hundred. 12. Have students round the number 606 to the nearest hundred. 13. Have students round the number 707 to the nearest hundred. 14. Have students round the number 808 to the nearest hundred. 15. Have students round the number 909 to the nearest hundred. 16. Have students round the number 100 to the nearest hundred. 17. Have students round the number 200 to the nearest hundred. 18. Have students round the number 300 to the nearest hundred. 19. Have students round the number 400 to the nearest hundred. 20. Have students round the number 500 to the nearest hundred. 21. Have students round the number 600 to the nearest hundred. 22. Have students round the number 700 to the nearest hundred. 23. Have students round the number 800 to the nearest hundred. 24. Have students round the number 900 to the nearest hundred. 25. Have students round the number 1000 to the nearest hundred.		
Ways to support struggling students	Ways to enrich learning for students	Other resources to pull for the unit (links, centers, etc.)	

Lesson No. 34

ENHANCING LANGUAGE LEARNING IN EARLY CHILDHOOD EDUCATION: PRINCIPLES, DEVELOPMENT, AND ACTIVITIES

Topic 153

Language Material:-

Language Material: Language materials are essential in language teaching, as they are the tools that teachers use to present and practice language concepts. For example, these tools can be charts, clips, handouts, and other resources. Language materials may have two categories:

1. Authentic
2. Created

Authentic materials are produced for native speakers of the target language, i.e. newspapers, books, magazines, and films. These materials are developed by professionals and specialists, and published materials are also included in them. As you can see that there are various materials and resources present, that a teacher can use in the classroom.

They are often used to expose learners to the language for use in real-life situations. Created materials are specifically designed for language learners, and they can be developed by the teacher and another institute may also develop. These are structured to guide learners through the language learning process and to reinforce language concepts by practice. Include textbooks, workbooks,

handouts, and audio and visual aids. As you can see in the picture the parts of speech are described through their names and particular shapes, this is an example of a visual aid.

In this regard, teachers should,

- **Understanding learners' needs:** Before developing language material, Language teachers must consider the learners' level, interests, and learning style, and also consider the levels of the students such as; a child's sound production level, word production level, etc.

- Defining the objectives:** Language teachers should specify what they want their learners to achieve through the material. As, objectives play the role of a navigator. They work in the same way and guide the teacher like a pilot or driver to know about the direction of the route. The objectives should be clear, measurable, and achievable.
- Selecting and adapting the material:** Language teachers need to select and adapt the material that meets the objectives and learners' needs. They can use authentic materials, published materials, or create their own material. Teachers should ensure that the material is relevant, engaging, and appropriate for the learners' level. As you can see different Teaching Aids in the diagram. They are very important to develop interest among students.
- Sequencing the material:** The material should be sequenced in a logical and coherent way. The language teachers should decide the order of the activities and the content. The sequencing of the material should take into consideration the learners' level, their interests, and the language skills (Listening, speaking, reading, and writing) they need to develop. The sequence of language skills is first, teach students how to listen. Next, teach them how to speak. After that, teach reading and writing skills to children.
- Creating activities and tasks:** Language teachers need to create activities that are interesting, relevant, and challenging. Activities and tasks should also reflect the objectives and the learners' needs.
- Providing support:** Language teachers should provide clear instructions and explanations and offer feedback and guidance.
- Evaluation and feedback:** Language teachers should evaluate the language material and the learners' progress. They should provide feedback on the learners' strengths and weaknesses and suggest ways to improve. The evaluation and feedback should be ongoing and should help the learners to develop their language skills.

Topic 154

Material Development for Language Learning:-

Material development involves creating or adapting resources that can support learners in achieving their language learning goals. Material development should be based on sound

principles of language learning and should be aligned with the needs and goals of the learners.

Needs analysis: The first step in material development is to conduct a needs analysis to identify the needs and goals of the learners. There are various methods available to explore a child's interests, including questionnaires, surveys, and observational techniques. This involves identifying the language skills and knowledge that the learners need to acquire to achieve their goals. The development of language skills: listening, speaking, reading, and writing, involves a progression from simple to complex, which should be carefully considered when creating materials and activities. It is identifying learners' learning preferences, cultural background, and previous language learning experiences through surveys. These methods help teachers improve their teaching strategies. If they want to change it, they should do so gradually.

- **Setting learning objectives:** Based on the needs analysis, learning objectives should be set. Learning objectives are specific, measurable, achievable, relevant, and time-bound (SMART) statements. Learning objectives should be aligned with the needs and goals of the learners.
- **Selection of materials:** After objectives have been set, suitable materials should be selected or developed. Materials ie textbooks, worksheets, audiovisual resources, online resources, and authentic materials such as newspapers, TV programs, and magazines. Materials according to the level, age, and cultural background of the learners. Language teachers have a range of materials to choose from, such as labs for improving listening and speaking skills. Books, notebooks, and other written resources are used for enhancing reading and writing skills.
- **Adapting and supplementing materials:** Materials need to be adapted to meet the specific needs of the learners. Adaptation involves modifying the language, adding or removing content, or changing the format of the materials. Supplementing involves adding materials to address gaps in the existing materials or to provide additional practice.
- **Incorporating technology:** Technology can be a useful tool in material development. It can enhance the effectiveness and efficiency of materials by providing interactive and multimedia features. Technology can also provide access to authentic materials and language learning resources that may not be available in traditional materials. For example, when teaching about flowers, a teacher can bring real flowers into the classroom and explain their different parts.

- **Incorporating authentic materials:** Authentic materials are materials that are produced for native speakers of the language and are not specifically designed for language learners. The native language, or first language, for Pakistanis is Urdu, while English serves as our second language. They can provide learners with exposure to real-life language use and help them develop their language proficiency. Authentic materials can include movies, TV programs, songs, and websites.
- **Piloting and evaluating materials:** Before using materials with learners, they should be piloted to ensure that they are effective and appropriate. Through the piloting, the mistakes and errors can be omitted in the material. Piloting is testing the materials with a small group of learners and gathering feedback on their effectiveness. The materials may need to be revised or adapted and evaluate the effectiveness in achieving the learning objectives.
- **Continuous improvement:** Material development is an ongoing process. Materials should be continuously evaluated to improve, to ensure that they remain effective and relevant. Feedback from learners and teachers should be taken. and materials should be updated to reflect changes in language use and learning needs.

Topic 155

Principles of Material for Language Learning:-

Principles of materials for language learning are guidelines for creating effective and appropriate materials for language learners. These principles ensure materials are relevant, engaging, and meet the needs of the learners. The following are the main principles of material development for language learning:

- **Learner-centeredness:** In the 20th century, there is a significant shift from teacher- centered to student-centered methods in the teaching and learning processes. The materials should be designed with the learners in mind, taking into consideration their needs, interests, and backgrounds. The materials should be relevant to their lives and experiences.
- **Authenticity:** This is one of the most important characteristics of the selection of the material. As, the material contains all resources and tools such as textbooks, notebooks, etc. Therefore, the materials should reflect real-life situations and be authentic in terms of language, culture, and content. They should provide learners with exposure to natural language use and enable them to develop communicative competence.

- **Appropriateness:** The materials should be appropriate for the level, age, and cultural background of the learners. They should also be aligned with the learning objectives and the curriculum.
- **Clarity:** The materials should be clear and easy to understand. They should use language and concepts that are accessible to the learners and avoid confusion or ambiguous language.
- **Relevance:** The materials should be relevant to the learners' needs and interests. For example, while teaching a language subject, the content and materials should align closely with specific concepts and relevance. Materials should be able to motivate and engage learners, making them interested in learning the language, and the teacher can also design various activities for the student's engagement in the classroom.
- **Flexibility:** Another crucial principle in selecting materials is flexibility, which allows teachers to modify and adapt them. Lack of flexibility can also create economic challenges in the society. The materials should be flexible enough to be adapted to the specific needs and interests of the learners. They should also allow for different teaching approaches and styles.
- **Interactivity:** The materials should encourage learner participation and interaction. The interaction can be placed between the teacher and students, question answers, groups, peers, etc. The material should provide opportunities for learners to practice using language in meaningful ways.
- **Multimodality:** The materials should incorporate a range of media and modes of communication, such as text, audio, video, and visuals. This can help to cater to different learning styles and preferences.

Topic 156

Language Environment in Early Childhood Education:-

Language environment refers to the surroundings or setting in which language learning takes place. The environment consists of two components: the physical aspect, which relates to the classroom infrastructure, and the instructional aspect, which includes teaching strategies, methods, and related elements of the learning process. In an early childhood education setting, the language environment includes the physical environment, social interactions (teachers to students, and students to students), and instructional materials used to support language development.

Importance of a Rich Language Environment:

A rich language environment is crucial for children's language development as it provides opportunities for them to listen to and use language in meaningful ways. A language-rich environment can help children develop vocabulary, grammar, syntax, and other language skills necessary for effective communication.

- **Creating a Language-Rich Environment:** To create a language-rich environment, early childhood educators should provide opportunities for children to engage in conversation and play with their peers, read books (story books, etc.), and interact with a variety of materials and resources that promote language learning. The physical environment should be arranged in a way that supports language development, with language-rich materials easily accessible to children. For example, a teacher needs a sound system to improve listening skills and needs speakers and microphones for the development of speaking skills.
- **Using Visual Supports:** Visual supports such as posters, charts, and pictures can enhance language learning by providing children with visual cues and aids to understand new vocabulary and concepts. Early childhood educators should incorporate visual support into the language environment to support language development.
- **Fostering Social Interaction:** In the picture, students are working in groups. They are engaged in interactive activities like jigsaw puzzles, collaborative group work, and peer learning, in these activities' students' learning depends on each other's participation and interaction. Social interaction plays a critical role in language learning. Early childhood educators should provide opportunities for children to interact with each other and with adults in a positive and supportive environment. Educators suggest that to learn a new language, particularly speaking skills, individuals should start by communicating with children and then gradually engage with peers for interaction. This is achieved through group activities, games, and discussions that promote language use and communication.
- **Encouraging Language Use:** Early childhood educators should encourage children to use language in meaningful and authentic ways by providing different activities such as dialogue, group tasks, and the usage of authentic material, etc. Teachers

can also provide opportunities for children to express their thoughts and feelings, ask questions, and engage in discussions. Educators model appropriate language use and provide feedback to children to support their language development.

- **Using Technology:-** Technology can be a valuable tool for promoting language development in early childhood education. Educators can use digital resources, such as educational software and multimedia materials, to supplement traditional teaching methods and enhance language learning opportunities

through the addition of multiple activities such as multimedia usage, demonstration activities, etc. Various types of teaching aids shown in the picture enable us to teach language to students in a tangible and concrete manner.

- **Monitoring Progress:** Without monitoring the learning, there is a chance of detracting from the learning process of the students. Finally, early childhood educators should monitor children's language development and adjust the language environment accordingly. Regular assessment and evaluation of language skills can help educators identify areas for improvement and modify the language environment to better support children's language learning needs, such as formative assessment (assessment for learning) is used during the teaching to find out the deficiencies and errors in the students' learning.

Topic 157

Language Activities at ECE Level:-

Language development is a critical aspect of early childhood education (ECE). ECE programs must provide a variety of language activities that are age-appropriate and developmentally appropriate to enhance children's language and literacy skills. Here are some examples of language activities at the ECE level. The diagram explains an activity planner that aligns with specific learning outcomes. It identifies different learning outcomes alongside corresponding activities and their scheduled completion dates.

Learning Outcome	Activities	Date Completed
1.1 Children feel safe, secure and supported		
1.2 Children develop their emerging literacy, oral language, and social and sense of agency		
1.3 Children develop language and literacy skills		
1.4 Children learn to understand and respond to their world, identity and needs		
Reflection		

The details of the different activities are mentioned below:

- **Storytelling:** Storytelling is an engaging way to develop children's language skills. Teachers can read stories to children, use props and visual aids to support the story,

and ask questions to encourage discussion and comprehension. Further, a teacher can improve the students' learning by guiding them through motivational speeches and relevant stories.

- **Rhyming:** Rhyming is an enjoyable and effective way to teach children about language patterns and sounds. Teachers can use rhyming songs, games, and books to help children recognize rhyming words and patterns. For example, in the rhyme "Twinkle Twinkle Little Star," there is a pattern of words that students find interesting in rhymes and activities like this.
- **Vocabulary building:** This is another important strategy and activity, and it is also enhanced with the advancement of technology. Various activities are included in the vocabulary-building process. Building vocabulary is crucial for children's language development. Teachers can introduce new words in a variety of ways, including using flashcards, picture books, and games. Teachers can also encourage children to use new words in conversation. In the picture, characteristics of effective learning are listed, such as engagement and motivation. Additionally, puzzle activities are beneficial for building vocabulary. In these activities, students arrange words and write them based on provided pictures or clues.
- **Dramatic play:** Dramatic play provides an excellent opportunity for children to use language in a meaningful context. In the drama, different characters depict the story's plot, creating interest among students. Each character plays a specific role, which helps solidify students' learning through this activity. Teachers can set up a pretend play area, such as a restaurant, court, or doctor's office, and encourage children to engage in conversation and role-playing.
- **Poetry:** Poetry is a great way to promote language development in young children. Poem is a type of poetry, in which different stanzas are present. Poetry gives a whole concept
- or topic through words and small phrases in a very effective manner. Teachers can introduce poetry through songs, nursery rhymes, and books. Children can also create their own poems, which can be shared with the class.

- **Conversations:** Conversations are essential for children's language development. Teachers can encourage children to talk about their experiences, ask questions, and express their opinions. Teachers can also model appropriate conversational skills, such as active listening and turn-taking. In the attached picture, there is a conversation activity where a teacher is speaking with the children, and they are listening attentively.
- **Phonics:** Phonics instruction helps children learn the sounds and letters of the alphabet such as which are consonants and vowel sounds. Further, this activity is used at the beginning level or age of the children. Teachers can use a variety of resources, such as alphabet books, songs, and games, to teach phonics skills.

Lesson No. 35

EXPLORING LANGUAGE DEVELOPMENT THROUGH POETRY, STORYTELLING, DRAMATIC PLAY, FINGER PLAY, AND EFFECTIVE ACTIVITY MANAGEMENT

Topic 158**Poetry:-**

Poetry is the pure essence of any language that reflects the strength and beauty of that language to highlight the importance of literature in general and poetry in particular in developing and enhancing students' language. Here is an example of the poem "All About Me" presented in the image. This poem uses rhyming words to create its beauty. In Urdu, these rhyming words are known as "Radeef" and "Qafiyah," which are words that sound similar.

**What is a poem?**

A poem is a set of carefully selected words put together in a musical frame to serve certain purposes-delivering a message. It is full of images, emotions and. It could be a painting drawn with words. Therefore, a poem is a piece of writing in which words are chosen for their beauty and sound and are carefully arranged, often in short lines that rhyme.

Poetic language: Poetic language, in which poems are processed, is the most significant, stylish, and dignified use of a language. Poetic Language is the totality of the characteristics of language as an instrument of artistic expression and an object of artistic perception. In addition to this, "Poetic language" is sometimes applied to verse speech that is, to literary language that follows the rules of verse next previous.

Importance of teaching poetry: Poetry promotes language acquisition, poetic concepts, and cultural assumptions that are usually too difficult for learners to employ. In writing classes, poetry can provide an effective and collaborative means of language learning and of personal expression and their environments, etc. Numerous historical poems explore aspects of history, such as "The Rise and Fall of Islam" and "Shahnama" by Hafeez and Jalandhari. Additionally, poems in genres like romantic and fantasy are also significant sources for language development. It gives students a framework for expressing ideas that are meaningful to them, without the constraints of grammatical accuracy. It offers ways of

making English a means of personal expression, creativity, and development (as poetry refers to the creativity of the writer) and serves to reduce affective barriers in a nonthreatening learning environment.

Five reasons to teach poetry:-

1. Poetry helps us know each other and build a friendly classroom community that shares something precious interesting and educational at the same time
2. When students read poetry aloud, they will be able to feel the rhythm, musical sounds and beats of the poem
3. Poetry improves students' speaking and listening skills and also widens their imaginations since poetry contains many.
4. Poetry develops a deep sense of language because it challenges the traditional teaching methodology that focuses mainly on grammar or translation and breaks their monotony. In poetry, each stanza conveys consistent meanings and concepts. On the other hand, in Ghazal, each stanza presents a different meaning. Hence, teachers should adapt their teaching strategies according to the content or topic.
5. Poetry can be interpreted in so many different ways which gives students a chance to surf poems and express their thoughts freely.
6. This will help enhance their self-reliance and develop their character emotionally.

How to teach poetry:

Teaching poetry requires creative, dedicated, and well-educated teachers who are convinced of the unlimited impact of poetry on their students' language acquisition.

Here are some ways to teach poetry successfully:

1. Choose poems that are connected or close to the environment or subject you intend to teach. In the attached image, teachers can utilize these cards for teaching poems in the classroom.
2. Practice reciting the poem, feel the music the rhyme, and the rhythm before presenting it to your students.
3. Ask your students individually to recite the poem since repetition enables weak students to comprehend the poem and feel its music.
4. Make your students repeat the poem over and over.

Poetry Job Card 1 Write down in sentences how the poem made you feel. Remember capital letters and full stops.	Poetry Job Card 2 Write down 5 sets of rhyming words from the poem. When you are done think of 1 more rhyming word for each set.
Poetry Job Card 4 Draw a picture to match the poem. Label the picture with words	Poetry Job Card 5 Pick 3 interesting words look up the definition. Copy the definition into your journal.

5. After you make sure that most if not all your students interact with the poem, present the poem on the board and ask your students to underline the words that they don't know their meanings.
6. You might rap the poem or even sing it or you can ask some of your students to do so.
7. Ask your students about the images that the poem has and whether they can paint them.
8. For example, ask the students to draw an image of the poem "Arzoo" by Allama Iqbal, and "Porani Motor" by Zameer Jhafari, etc.
9. Make your students repeat the poem as a group. Every time they hear the language, they will be able to distinguish it.

Topic 159

Story Telling:-

Storytelling is an important teaching tool in Early Childhood Education (ECE). It helps in developing children's imagination and creativity, while also enhancing their language skills.

Here are some of the ways in which storytelling can be used as a teaching tool in ECE:

- **Introducing new vocabulary:** Storytelling is an effective way of introducing new vocabulary to children. By exposing children to a range of different words and phrases, they can begin to expand their understanding of the world around them. Some examples of vocabulary are listed in the attached image.
- **Building listening and comprehension skills:** When children listen to stories, they develop their listening and comprehension skills. They learn to follow a sequence of events, understand characters and their motivations, and make connections between different elements and the plot of the story.
- **Developing empathy and emotional intelligence:** Stories can help children develop empathy and emotional intelligence by introducing them to different perspectives and emotions. Through storytelling, children can learn to identify and understand their own feelings, as well as those of others.

- **Encouraging creativity and imagination:** Storytelling encourages creativity and imagination by giving children the opportunity to explore new worlds and ideas. By using their imagination to picture characters, settings, and events, children can expand their understanding of what is possible.
- **Fostering a love of reading:** Storytelling can also help to foster a love of reading in children, and this activity also develops habits among students regarding reading. By exposing them to stories and encouraging them to engage with the characters and plot (which belong to the sequence of events in a story), children can develop a lifelong love of reading.

Some of the techniques used in storytelling for ECE include using puppets, music and movement, props, and repetition. Teachers can also use stories to introduce new concepts, reinforce learning, and encourage discussion and critical thinking. Storytelling can be done in a group setting, with teachers reading aloud to the class, or in a one-on-one setting, where teachers can tailor the story to the child's interests and abilities.

Topic 160

Dramatics Play:

Dramatic play, also known as pretend play or imaginative play, is an important part of early childhood education. Children learn better when they encounter things and ideas in concrete forms. Therefore, dramas and films are particularly effective and suitable teaching methods. It refers to the act of children playing and engaging in make-believe scenarios, using their imagination to create different situations, plots, themes, and characters. The dramas also develop communicative, and collaborative abilities among children. Dramatic play is considered a vital part of children's learning and development and develops a range of skills and knowledge.

Promotes Social and Emotional Development: Here are some key points about the importance of dramatic play in early childhood education: Dramatic play provides opportunities for children to interact with their peers and develop their social and emotional skills. Through role-playing, children learn to understand different perspectives, communicate with others, and develop empathy.

Develops Imagination and Creativity: Dramatic play encourages children to use their imagination and be creative. It allows them to explore different ideas, scenarios, and emotions in a safe and supportive environment. In the attached image, you'll find a pretend play bundle. It includes multiple dramas where a teacher can instruct students on portraying different characters according to the story and play.

Enhances Language and Communication Skills: Dramatic play helps children to develop their language and communication skills by encouraging them to use language in different contexts and for different purposes. Through role-playing and dialogue, children learn new words, sentence structures, and social cues.

Improves Cognitive Skills: Dramatic play involves problem-solving, decision-making, and critical thinking, which helps to improve children's cognitive skills. They learn to make decisions based on their own ideas and interpretations, as well as those of their peers.

Develops Physical Skills: Dramatic play involves movement and physical activity, which helps to develop children's gross and fine motor skills (psychomotor domain). They learn to use their bodies in different ways and develop coordination and balance. This is all about dramatic play and its role in language teaching. In this activity, the role of the teacher is to guide students to be active and interact with each other using multiple language skills.

Topic 161

Finger Play:-

It involves activities that require fine motor skills, such as manipulating small objects and using the hands and Fingers in precise movements. This is essential for the development of fine motor skills and important everyday activities like writing, drawing, and using utensils.

Finger Play in ECE:

In early childhood education, Finger play can be incorporated into the curriculum through activities such as:

- Finger painting
- drawing with small utensils like pencils or markers
- using beads or blocks to create designs
- and manipulating small objects like buttons or hooks

Finger Play Benefits: Through Finger play activities, children can develop hand-eye coordination skill and fine motor skills, for their academic and personal lives. Provide chances for creativity, and self-expression using colored pencils, or brushes. It also helps in developing problem-solving abilities, as they experiment with materials to create their own designs & artworks.

Activities for Fingerplay: There are many activities that teachers can include in their curriculum to promote Finger play. For example, teachers can provide children with play dosh and encourage them to mold and shape it into different forms and shapes such as cubes, triangles, animals, and others. They can also give them crayons, markers, paint, and paper to make creative things through art.

Conducive environment for Fingerplay: A conducive environment can be achieved by providing children with suitable materials and tools and ensuring that they have sufficient space to work in the form of peers, group, and individual-based tasks of the children. Teachers can also create a comfortable and stimulating atmosphere by playing music or including sensory materials like sand and water.

Integrating Finger play into the curriculum: Teachers can include activities that promote Finger play in various subject areas such as math, science, and language arts. Sign language is used for special children and it has also particular meanings, and this language is also

communicated through the fingers. For example, children can use small blocks to create patterns or use play dosh to represent different concepts in science.

Assessment of Finger Play: Assessing Finger Play is essential to ensure that children are developing the necessary skills. Teachers can assess Finger play through various tools and resources such as:

- observation,
- using checklists or rubrics (rubrics refer to the standards and range of measuring the points)
- and by keeping portfolios of children's work.

Topic 162**Managing & Planning Learning Activities for developing language:-**

Language planning involves the development of a language program based on the results of a language audit. Therefore, any program or activity is developed through some steps such as: firstly, complete planning, the development according to the needs of the context or children, and they are based on the audit. The plan includes:

1. Language Training Policy
2. Language Program

The process of planning language teaching, as shown in the attached picture, is explained step by step. First, there is a language audit to identify the needs and characteristics of the learners. Then, language strategies are decided upon, means choosing which teaching methods to use. The language training policy sets out the basic rules, regulations, and patterns for teaching. After that, a needs analysis evaluates what students who are learning the language require. Based on these findings, language planning is done. Then, a language program is developed and put into practice practically. Finally, there is an evaluation and feedback stage where students' suggestions are used to revise and update the teaching methods for the next cycle.

The language training policy is based on the strategies of the company and will remain the same over a period, until the organizational strategy changes. A language program is the annual implementation of language training, which is bound to change regularly (often annually). Therefore, the language programs are flexible, and they are changed according to the feedback from the students and teachers.

Needs analyses: Needs analyses are practical tools, used in language planning, for finding out the current level and profile of a person's language skills using the questionnaire, and other interactive sessions for identifying the need analysis of the students. And investigate the child's general language background in which the language acquisition process is

accomplished. As, you can see the table which is attached below, which explains the concept of Describing and Evaluating language teaching in the educational sector.

<i>Describing and evaluating language teaching in the educational sector</i>	
<i>Resources and organization</i>	How are resources for language training decided on? Is this the best method for? How are language resources suited to the goals of (e.g. engineering) education? How are the resources in balance with the need in the students' future workplace? What other skills do students learn in language courses besides language? How is information given about language training visible and understandable in the organization? Are contents in language courses linked with skills required at the workplace? How does language teaching take into consideration students' background in languages and differences in ability?
<i>Development of language training</i>	How is language training currently being developed? Which parties should be involved in the development process? How have the reforms suggested by instructors/ students progressed in the organization? How is auditing information collected? How are feedback systems developed?

<i>Language trainers' competence development</i>	How are new language instructors helped to enter the profession? How does language instructors' workload allow for developing quality teaching? To what extent is the trainers' special expertise utilized? How are language instructors' professional development and training supported by the institutions? What are their training needs?
<i>Implementation of language teaching</i>	How do the contents of language courses compare with the curriculum? How is the timing suitable for studying the language of the students' specialist field? How are the methods suitable for the skills required at work? Is there space for improvements? What kind? How satisfactory is the evaluation of students' performance? Are both oral and written performance evaluated? How? Is this satisfactory? Can assessment be characterized as neutral? How well do students prepare for classes? How does

As you can see in the table below, explain how language teaching is described and evaluated in education. The first aspect focuses on defining and evaluating learning resources and how things are organized. Each heading and aspect has several questions to consider. After that, there is an evaluation of how language training is developing. The third level is about developing the skills of language trainers, and the last level is about the implementation of language teaching. All of these aspects are important for describing and evaluating activities that help develop language skills.

Lesson No. 36

INTEGRATING ONLINE RESOURCES FOR LANGUAGE DEVELOPMENT

Topic 163

Use of Online Resources in the Language Development:-

The use of online resources has become increasingly popular in language development. Due to the presence of Multimedia, social media, internet, there is a great advancement in the education system and learning language platforms. Online resources provide a wide range of materials that can be accessed easily and quickly, making it a valuable tool for language learners.

Types of Online Resources for Language Development:

- Websites
- Documentaries
- Video Clips
- Films
- Online Courses
- Language Learning Apps
- Social Media

These all are new methods and sources for language learning. The language learning resources are explained in the attached image and each resource provides thorough explanations.

Language learning resources								
Resourcing and materials (Scarino & Liddicoat, 2009)								
1. The purpose	2. Selection	3. Authenticity						
D. Input, scaffolding, reflection // Multiplicity in uses // Critical users.	E. Theories of language learning and culture // matching resources and learning goals.	F. Actual contemporary us // Enlarge understanding of language & culture.						
4. Adaptability	5. Contemporary	6. Critical use						
I. Maximises value for particular learner // Personalization to connect resources to learners.	H. Dynamic language & culture // Contemporary relevance for Ss.	G. Effective teachers // Partial pic of language and culture.						
7. Relationship/Connection	8. Learners	9. Resources bank						
C. Resources do not exist in isolation in a learning program.	B. Interpretations, expressions, and perspectives.	A. A range of engaging and learning experiences.						

Benefits of Using Online Resources in Language Development:-

Some benefits of using online resources in language development are mentioned below:

- **Accessibility:** Access to language learning resources from anywhere. Since the world functions as a global village, online language learning apps and software are accessible worldwide, including international libraries and other resources.
- **Cost-effectiveness:** Lower costs compared to traditional classroom learning. Due to the Internet and online learning, the world has become a global classroom. Online resources have revolutionized traditional teaching by providing extensive guidance and information to a large number of students. This approach is also cost-effective.

- **Flexibility:** Self-paced learning opportunities, and students acquire knowledge according to their interests, pace, and speed through online resources.
- **Variety of Learning Materials:** A wide range of resources available for different learning needs.
- **Interactive Learning:** Engaging and interactive learning experiences. Interaction plays a crucial role in the learning process. For example, when teaching speaking and listening skills, teachers can foster interaction through activities and collaborative techniques.

Challenges of Using Online Resources:

The following challenges are associated with using online resources mentioned below:

- **Technical Issues:** Limited access to technology or internet connectivity issues.
- **Self-Discipline:** Requires self-discipline and motivation to stay focused.
- **Lack of Human Interaction:** Limited opportunities for face-to-face interaction with teachers and peers. This is the lack of technology that cannot support human feelings, thoughts, and emotions.

Strategies for Effective Use of Online Resources:-

Here are a few strategies for making effective use of online resources:

- **Goal Setting:** Setting clear language learning goals
- **Time Management:** Planning and managing time effectively. This strategy also enhances the efficiency and effectiveness of a particular program.
- **Active Learning:** Engaging in it through online resources
- **Peer Learning:** Connecting with peers through online forums. The connection with peers may be started from your nearby friends in a country or globally as well.
- **Seeking Feedback:** Receiving feedback from teachers to improve language skills. Also, the teacher's role is irreplaceable, and their feedback is crucial for student learning.

Topic 164

Documentaries:

Documentaries are non-fictional films that present factual information about a specific topic or subject. As the non-fictional films or movies belong to the real incidents portrayed to the viewers. They can be educational, informative, and entertaining, and are often

used as a teaching tool to promote language development. **Documentaries can be found on various online platforms such as:**

- YouTube,
- Netflix,
- Vimeo
- Streaming services
- Documentary websites and archives
- Educational platforms and resources. Therefore, these documentaries can be used for educational purposes and for language development as well

Types of Documentaries:

There are some types of documentaries, which are stated below:

- Educational documentaries
- Current events and news documentaries
- Historical documentaries
- Biographical documentaries
- Nature and science documentaries

Benefits of Using Documentaries in Language Learning:

- Authenticity of language: Documentaries provide relevant and authentic information based on reality, which enhances and improves language authenticity.
- Exposure to diverse accents and dialects
- Cultural knowledge and awareness
- Engaging, interactive, and entertaining
- Documentaries can provide learners with an opportunity to develop their listening and comprehension skills as well as expand their vocabulary and knowledge about different topics.
- They can also serve as a starting point for discussions and debates.
- And inspire learners to conduct further research on the subject matter.
- Documentaries can be adapted to suit the language level and needs of the learners.
- They can be combined by subtitles or transcripts to aid learners' comprehension and can be used as a source for language tasks and activities such as summarizing, note-taking, assignments, and writing.

Strategies for using Documentaries in Language Learning:-

- **Pre-viewing activities:** As the teacher guides the students through a documentary, she shares additional information about it and informs them about an upcoming observation activity.
- **During-viewing activities:** It refers to taking notes and observing during the activity.
- **Post-viewing activities:** They are related to the activities scheduled after the completion of the current task, and the teacher should proceed to the next task.
- **Integrating documentaries into lesson plans**

Topic 165**Video Clips:-**

Video clips refer to short videos that are usually a few minutes long and are used for a variety of purposes; such as entertainment, education, marketing, and promotion. Video clips are valuable resources to provide learners with visual and auditory input, that enhance their comprehension and retention of the language. Video clips can be sourced from various online platforms such as:

- **YouTube,** (There is a wide range of information available on the internet, including various materials related to language development, which can be found on YouTube in the form of short videos, clips, and more)
- **Vimeo**
- **Educational websites that offer video resources.** Such as Khan Academy or various channels in Pakistan, India, and other countries provide different educational websites and pages.

**Benefits of using video clips in language learning:-**

- Enhance comprehension and retention, and the learning of the students becomes permanent.
- Provide visual and auditory input
- Foster cultural understanding
- Engage learners
- Offer real-life language use (pragmatic use of the language)

- Support differentiated instruction (means teaching students using differentiated methods)

Types of video clips:-

- **Authentic materials:** movies: TV shows, news programs, documentaries. Additionally, in Pakistan, the Allama Iqbal Open University and Virtual University utilize online resources and provide authentic materials to the students.
- **Educational videos:** language learning videos, grammar tutorials, pronunciation guides, vocabulary lessons
- **User-generated content:** vlogs, social media clips, YouTube channels regarding the different concepts of the language.

Strategies for using video clips:

In this context, the following strategies are used for incorporating video clips:

- **Pre-viewing activities:** setting the background, context, activating prior knowledge, predicting content
- **While-viewing activities:** focused listening, note-taking, and comprehension checks, these activities will be considered.
- **Post-viewing activities:** reflection, discussion, extension tasks

Criteria for selecting video clips:-

The criteria for selecting video clips is mentioned below:

- The first step is to appropriate language level and content
- After that, consider the Cultural relevance and authenticity
- Appropriate length and pace
- Clear and audible audio
- Engaging and visually appealing

Challenges and considerations when using video clips in language learning:-

- Technical issues and access to technology. In developing countries, electricity issues can disrupt online learning and teaching.
- Copyright and fair use
- Appropriateness and relevance to learners

- Time management and integration with the curriculum
- Overreliance on passive learning. So, it should be interactive using activities and other teaching techniques.

Topic 166

Films:-

The use of films in language development involves utilizing films as a teaching tool to enhance language learning. Films can provide language learners with a range of authentic, engaging, and contextualized input, which can aid their language comprehension, vocabulary development, and grammar skills. Further, the concept and characteristics of Film are explained in the following image.

Films can expose learners to different accents and dialects, cultural tones, and various registers (language styles) of language, which can help them develop their listening and speaking skills. **The activities of Film are explained below when they are included as a source in the teaching methodology.**

1. **Pre-viewing activities:** These activities can help students prepare for the film by introducing them to the theme, vocabulary, and context of the film. Pre-viewing activities may include:
 - Brainstorming, (such as question/answer section, etc.)
 - Predicting
 - Discussing or researching relevant background information. Therefore, it is different from a traditional classroom, and teaching is done collaboratively, as shown in the image.
2. **During viewing activities:-** These activities can help students stay focused and engaged during the film by giving them specific tasks to complete while watching. These tasks may be provided in the group or individual students. During viewing activities include:
 - Note-taking
 - Summarizing
 - Identifying key themes or characters
 - Analyzing the film's use of language

3. **Post-viewing activities:** These activities can help students reflect on the film and consolidate their learning. Post-viewing activities may include:

- Discussion
- Debate
- Role-playing and Writing activities, such as extracting themes, summaries, essays, short paragraphs, etc.

4. **Language-focused activities:-** These activities help students develop specific language skills and knowledge related to film. Language-focused activities may include:-

- vocabulary exercises
- grammar activities
- pronunciation drills

5. **Cultural activities:** These activities can help students learn about the cultural context of the film and the language (such as English, Urdu, and others) being used. Cultural activities may include:

- researching the country or region where the film is set
- exploring cultural differences between our culture and the area
- comparing cultural practices

When using films for language development, It is important to select appropriate films that are relevant to the language level and interests of the students. Teachers should provide scaffolding and support for students to help them understand the film and engage with the language being used.

Topic 167

Use of Computer:-

The use of computers in language development has become increasingly popular due to the widespread availability of computers and the Internet. Computer-based language learning (CBLL) offers numerous benefits such as; self-paced learning, personalized instruction according to the individual differences of the child, and immediate feedback.

The historical summary of how technology has been used in teaching languages is shown in an image. Pablo Freire played a key role in developing the adult literacy learning cycle using videos and other visual aids. Further, the detail of each technological advancement is provided below.

- **Use of Computer:** Some of the ways computers can be used for language development include:
- **Language learning software:** There are many languages learning software available that offer interactive lessons, exercises, and assessments. Examples include: Rosetta Stone, Duolingo, and Babbel.
- **Online resources:** There are many online resources available for language learners, such as language learning websites, online courses, and educational videos. Some examples include:
- **BBC Languages**
- **Linguasorb and Coursera** (They offer a variety of courses that require proper certification and licensing for access. Each course provides comprehensive knowledge on its respective subject matter.) Further, the attached image explains the sources of digital innovations in the primary school.

Language exchange programs:-

Some language exchange programs are mentioned below:

- **Tandem and Hello-Talk,** provide learners with the opportunity to practice their language skills with native speakers through online chat or video calls. The native language is the first language a child learns. Various online tools and programs are available to guide individuals in learning languages that are not native to them, such as English in Pakistan.
- **Virtual reality:** Virtual reality can provide an immersive language learning experience. It can be used to simulate real-world situations and provide learners with a safe space to practice their language skills.
- **Language learning games:-** Word Mover and Hagman, can be a fun way to practice vocabulary, grammar, and word buildings etc.
- **Speech recognition software:-** Google Voice Typing (available in mobile phones, laptops etc.) and Dragon Naturally Speaking, which can be used to improve pronunciation and speaking skills.

Lesson No. 37

**FOUNDATIONS AND STRATEGIES FOR EARLY CHILDHOOD
LITERACY DEVELOPMENT****Topic 168****Other Online Resources:**

Language-learning Apps: There are many language-learning apps available for free or for a small fee (on YouTube and other apps) that can help individuals improve their language skills. Some popular apps include Duolingo, Babbel, and Rosetta Stone.

- **Podcasts:** Podcasts are a great resource for language learners as they provide an opportunity to listen to authentic language use and improve listening. Comprehension skills. Some popular language-learning podcasts include Coffee Break Spanish and FrenchPod101
- **Online Language Exchange Programs:** Online language exchange programs connect language learners with native speakers of the target language for conversation practice. For example: iTalki and Tandem.
- **Social Media:** Social media platforms can be used to improve language skills through following pages or groups that post content in the target language, interacting with native speakers of the target language, and practicing writing skills through posts and comments.
- **Online Language Resources:** There are many websites and online resources that provide free language learning materials such as; grammar explanations vocabulary lists, exercises, and some popular online resources including BBC Languages and Quizlet.

It is important to note that while online resources can be useful tools for language development, they should not be the only method used. A well-rounded language-learning approach should also include in-person conversations, reading physical books, and other activities that allow for a variety of language input and output. Therefore, it is important to consider alternative resources as they can be helpful when encountering difficulties or errors with online resources.

Topic 169**Process of Reading in Early Childhood Education:**

The process of reading in early childhood education is to develop reading skills and the promotion of love for reading in young children. It involves many activities and strategies that help children to become proficient readers and develop a deep understanding of language. Reading always comes with by comprehension, not just speaking skills. It involves understanding the concept, which is crucial for language development and acquiring essential literacy skills that form the foundation for future learning.

The table below explains the process of reading development, detailing stages and behavioral objectives. It includes four levels: Early Emergent, Emergent, Early, and Transitional.

READING DEVELOPMENT			
Early Emergent Levels A-B	Emergent Levels C-D	Early Levels E-F	Transitional Levels G-H
The students will be able to: - Search the pictures in order to talk about the text - Retell to and discuss what has been read - Understand the story - Use the pictures to problem solve unknown words - Locate where to begin and end the reading - Locate and talk about the title - Read word after word in sequence but in right - Follow return sweep - Recognize a pattern - Differentiate between a letter and a word - Match one to one using finger - Locate and frame known and unknown words - Use known initial letters to figure out words	The students will be able to: - Demonstrate use of strategies from previous levels - Monitor their reading for what makes sense, sounds right, and looks right - Use pictures to predict and confirm reading - Recognize and use repetitive patterns in text - Notice when what they read does not match the text (e.g. stops, pauses, rereads) - Reread to regain meaning, structure, and accuracy - Retell and discuss the story - Retell information from informational text - Read fluently on repeated reads - Use their increasing bank of high frequency words when they read - Identify high frequency words in a variety of contexts - Use letters (initial and final) to figure out words	The students will be able to: - Demonstrate use of strategies from previous levels - Use the text as well as the pictures to recall and predict the story - Monitor their reading for what makes sense - Confirm by checking the pictures and meaning - Read on as well as rereading to maintain meaning - Read with fluency and phrasing by attending to simple punctuation - Retell and discuss aspects of story - Discuss characters' actions and feelings - Retell and discuss information from informational texts - Decode words by looking through the word - Use root words to figure out words with inflectional endings	The students will be able to: - Demonstrate use of strategies from previous levels - Independently reread the text to confirm predictions and clarify meaning - Integrate meaning, structure, and visual information - Use meaning, structure, and visual information fluently and accurately - Self-correct when the reading does not make sense, sound right or look right - Read fluently and with phrasing - Retell the story in logical sequence - Discuss relationships between characters - Use visual supports when reading informational texts - Support thinking by referring to evidence in the text - Use their knowledge of punctuation to read fluently and meaningfully - Search for and use chunks in words

The process of reading in early childhood education typically involves the following key components:

Phonemic (Sound) Awareness: This refers to the ability to identify and manipulate the individual sounds in words. It involves developing skills such as rhyming, segmenting, and blending sounds, which are essential for learning to read.

- **Vocabulary development:** This involves the introduction and reinforcement of new words, which helps children build their comprehension skills and expand their knowledge of the world.
- **Fluency:** This refers to the ability to read with speed, accuracy, and expression. It comes after practice. It involves developing skills such as sight recognition, decoding, and automaticity, which help children to read with ease and confidence.
- **Comprehension:** This refers to the ability to understand and make meaning from what is read. It involves developing skills such as predicting, summarizing, and making connections, which help children engage with text and develop critical thinking skills.

Strategies and techniques to support the process of reading in ECE:

There are some strategies and techniques that can be used to support the process of reading in ECE, which are mentioned below:

- **Shared reading:** This involves reading a book together as a group, with the teacher modeling reading behaviors and facilitating discussions about the text.
- **Guided reading:** This involves working in small groups to read and discuss texts at the appropriate level for each child's reading ability.
- **Independent reading:** If the teacher believes that children are capable of reading on their own, independent reading may begin in the classroom. This involves allowing children to read on their own, with the teacher providing support and guidance as needed.
- **Literacy-rich environment:** This is the responsibility of the teacher to provide a literacy-rich environment in the classroom. This involves creating a classroom environment that is rich in print, with colorful books, labels, and other print materials readily available and accessible to children. Also, a short library should be placed in the classroom.

Topic 170

Process of Writing in Early Childhood Education:

The process of writing in early childhood education is to develop the skills and abilities required to express ideas and thoughts in written form. As, writing is a complex activity, and this is the last objective of language development. It includes learning how to form: letters and words, and organizing. Further, the image explains six stages of emergent writing: Drawing, Random Scribbling, Controlled Scribbling, Letter-like Forms, Random Letters, and Patterned Letters. Each stage represents a step in a child's writing development, showing increasing motor control and understanding of letter structures.

Process of Writing in Early Childhood Education:

Writing in early childhood education often starts with basic exercises such as racing letters and shapes (As the tracing of the alphabet) and progresses to more complex activities such as writing short sentences and stories. Here are some of the key steps involved in the process of writing in early childhood education:

1. **Developing fine motor skills:** In this step, the skills are developed through the finger and fine motor. Children need to develop the physical ability to hold a pencil or crayon and control its movements in order to write, or color through paints.
2. **Learning letter formation:** Children begin by learning how to form letters, both in isolation and in the context of words.
3. **Building vocabulary:** This is the next stage after learning the words. After that, in order to express their thoughts and ideas in writing, children need to develop a broad vocabulary. Further, the stages of children's writing are also stated in the image. As, this development move towards the lower to above (scribble writing to story writing)

4. **Understanding sentence structure:** When a child at the age of 7 years, he learns to make sentences. As children progress in their writing abilities, they learn about the different elements of a sentence and how to use them to communicate effectively.
5. **Developing spelling and grammar skills:** As children begin to write more complex sentences and stories, they need to learn about spelling and grammar rules to ensure their writing is clear and understandable. As children start writing more complex sentences and stories, they need to learn spelling and grammar rules to ensure their writing is clear and understandable.
6. **Revising and editing:** Children also learn about the importance of revising and editing their writing to improve its clarity and effectiveness. The role of the teacher is very important in this context, and they can also use sign language for the student's learning

Topic 171**Reading Readiness:**

Reading Readiness: Reading readiness is the state of being developmentally prepared to begin learning how to read. It refers to the range of skills, knowledge, and abilities that children need to acquire before they can read effectively. Reading readiness involves the development of a variety of foundational skills that enable children to comprehend and use written language. These skills include: Six skills are required for ready-to-read.

The attached image explains these skills that are required for reading readiness.

- **Phonological Awareness:** the ability to hear and identify individual sounds in words, such as rhyming words and syllables such as; rhyming words.
- **Vocabulary Development:** This skill is also very important for reading readiness. Learning new words and understanding how they are used in different contexts.
- **Print Awareness:** understanding that printed words convey meaning recognizing letters and knowing the sounds they represent. When planning and presenting print materials, the teacher should ensure they provide clear and comprehensive meaning, avoiding any confusion for the children.
- **Comprehension:** it refers to the ability to connect ideas, understand cause and effect, and draw conclusions from what is read.
- **Oral Language Skills:** using correct grammar and sentence structure, having a good vocabulary, and being able to communicate effectively.
- **Cognitive Development:** it belongs to the ability to think, reason, and problem-solve ability to make connections, understand concepts, and remember information.

Reading readiness is an ongoing process that begins in early childhood and continues through the primary grades. Parents and educators can help children develop these skills by providing a language-rich environment (an environment in which speaking and listening skills are enhanced and students and teachers can communicate effectively), engaging in meaningful conversations, reading aloud to them, and encouraging them to ask questions. Through all these activities, parents and teachers can prepare their children for reading.

The image shows the reading readiness curriculum, featuring workbooks from the Canadian Curriculum Press. Like in foreign countries, students receive short books to help them get ready for reading, which caregivers use to practice with them.

The picture shows three books: *Kindergarten Math Readiness*, *Kindergarten Writing Readiness*, and *Kindergarten Learning Essentials: Math, Reading, Writing*. More details about these books are provided in the image.

Topic 172

Observing Reading Material:

Observing reading material is an essential aspect and component of early childhood education, as it helps teachers to determine whether a particular text is appropriate for their student's level of reading ability and comprehension. **Here are some of the main points to consider when observing reading material:**

1. **Level of difficulty:** This is one of the most important points and levels when observing material. Teachers need to assess whether the reading material is appropriate for their students' reading level. They should consider the vocabulary used, the length of sentences and paragraphs, and the overall structure of the text (such as printing, illustration, etc).
2. **Content:** In any subject, the role of the content is very important. Teachers should ensure that the content of the reading material is age-appropriate and relevant to their student's interests and experiences. As shown in the attached image, there are various topics like "My Dog" and "My Cat" based on short sentences. For example, an essay on "My Dog" would include details about its color, shape, and other body parts. These short essays and sentences are introduced at the beginning level to help children learn effectively.

3. **Illustrations:** The illustrations in the reading material should be engaging and support the text by adding activities for the children. They should also be culturally sensitive and diverse.
4. **Text features:** Teachers should observe whether the reading material has helpful text features such as headings, subheadings, captions, and glossaries (list of word meanings at the end of the book).
5. **Text type:** Teachers should consider the type of text, such as fiction, non-fiction, or poetry, and how it may impact their students' comprehension and engagement. By carefully observing reading material, teachers can ensure that their students are exposed to appropriate and engaging texts that support their literacy development and skills.

Lesson No. 38

RELATION BETWEEN READING AND WRITING SKILLS**Topic 173****Relation between Reading and Writing Skills**

In the image, you'll see the concept of emergent literacy. It highlights how children, their homes, schools, and surroundings all play important roles. There are also more detailed explanations and divisions provided.

Emergent literacy refers to the early stage of learning to read and write, which starts from birth and continues through preschool and kindergarten years. During this stage, children develop the foundational skills and knowledge that they will use later for reading and writing. Some of the skills related to emergent literacy are:

Personal and Social Development: These outcomes focus on children's learning how to work, play, co-operate with others, and function in groups beyond the family. They cover important aspects of personal, social, moral, and spiritual development of personal values which should be agreed by the adults in the community, including the parents (means related to the community and society).

Language and Literacy: These cover important aspects of language development and provide the foundation for literacy. At the start, the language used in the programmes for all six areas of development could be in the mother tongue, based on local culture and it can then progressively be further developed to acquire competence in English or Urdu.

Basic Mathematical Concepts: These cover aspects of mathematics understanding and numeracy. They focus on achievement and application through practical activities and on using and understanding mathematical language.

The World Around Us: It focuses on the understanding of the environment, other people, and features of the natural and "man" world. Further, Life skills refer to the environment that exposes children to observations through education, textbooks, and other methods of guidance. They provide a foundation for historical, geographical, scientific, and technological learning.

Health, Hygiene, and Safety: Focus on children's development of physical control, mobility awareness of space, and manipulation skills in indoor (inside the school) and outdoor environments (outside the school). These include establishing positive attitudes towards a healthy and active way of life, and the purpose of Education is to provide positive attitudes among children.

Creative Arts: It focuses on the development of children's imagination and their ability to communicate and express ideas, feelings, observations, and experiences in creative ways. Also, all aspects are included in the curriculum. They include encouraging children to think about new and innovative ideas which can be expressed through varied media such as the use of computers and other online resources.

Topic 174

Schema Theory:-

Long-term memory has been compared with a library of books. Our memory stores information as the library stores books. The way students retrieve information is said to be like the process they use to locate and check out a book. The process of retrieving information from long-term memory, however, is not as precise as the library. **The Schema Theory is shown in the image, It demonstrates a child's schema related to the animal "Dog" and how this process begins in the human mind.**

Schema theory is a psychological theory that explains how people process and understand new information by relating it to their existing knowledge and experiences. Schemas are information segments and parts. These schemas are formed through an individual's prior experiences, cultural background, and social interactions. The long-term memory system is further divided into two categories: Declarative (explicit: open) and Non-declarative (Implicit: hidden). Further, declarative memory is further divided into two types: Episodic and Semantic memory.

The characteristics of Episodic and Semantic Memory are explained below in the form of a table.

Characteristic	Episodic Memory	Semantic Memory
Units	Events, episodes	Facts, ideas, concepts
Organization	Time	Concepts
Emotion	More important	Less important
Retrieval process	Deliberate (effortful)	Automatic
Retrieval report	"I remember"	"I know"
Education	Irrelevant	Relevant
Intelligence	Irrelevant	Relevant
Legal testimony	Admissible in court	Inadmissible in court

FIGURE 8.9 SOME DIFFERENCES BETWEEN EPISODIC AND SEMANTIC MEMORY

Theories are based on the premise that when we construct information, we fit it into information that already exists in our minds. Further, there are some types of Schemas such as Person, Social, Self, and Event schemas. Their details are mentioned in the attached image.

Some of the key concepts and terms associated with schema theory include:

Schema: Information, concepts, knowledge, and information about events that already exist in a person's mind.

Assimilation: This is one of the most important principles of psychology. This process refers to fitting new information into an existing schema.

Accommodation: the process of modifying an existing schema or creating a new one to accommodate new information.

Further, more detail of the schemas is stated in the image.

Activation: The process of bringing a schema to mind and using it to process new information.

Script: It refers to something writing material. Therefore, Script is a type of schema that represents a sequence of events or actions that are typically associated with a particular

activity or situation. Assimilation, Accommodation, and Equilibrium are three major components of the Schema Theory. Their details are explained below:

Schematic Development Process: When individuals encounter new information, they draw on their existing schemas to make sense of it. If the information fits into their existing schema, they can easily integrate it into their understanding. If not fit, they may need to modify their schema or create a new one to accommodate the new information. In addition to this, the Schema development process is explained in the pictorial form.

Implications of Schema theory in Education: In order for new information to be effectively learned, it is presented by aligning with the learner's existing schemas. Teachers can facilitate by helping learners connect new information to already known ones and by providing opportunities (or planned different activities) for learners to practice applying the new information in meaningful contexts.

Topic 175

Relation between Reading and Writing:

Relation between Reading and Writing: Reading and writing are interrelated skills and are often taught together in language development programs. **Here are some of the ways in which reading and writing are related:**

- **Comprehension:** Reading and writing both involve comprehension of language. Reading comes before writing. When a student has both skills, he/she can relate the ideas. When a person reads a text, they comprehend the meaning of the words and sentences. Similarly, when a person writes a text, they must have a clear understanding of the language and the message they want to convey.
- **Vocabulary:** Reading helps to build vocabulary, which in turn enhances writing skills. The more a person reads, the more words they are exposed to and the better their writing skills become.
- **Grammar and syntax:** Reading and writing both require knowledge of grammar and syntax (sentence structure). When a person reads, they are exposed to correct grammar and sentence structures, which they can then use in their own writing.

Benefits of the Reading and Writing are explained in the attached table.

BENEFITS OF READING	BENEFITS OF WRITING
• Exposes readers to accurate spelling • Exposes readers to accurate forms of writing • Shows readers how to write more complex sentences • Invites readers to be more experimental in their own writing • Provides readers with motivation to engage with the text through their own writing • Allows readers to hear the thoughts of others	• Allows writers to voice their thoughts • Provides writers with a vehicle to use their imaginations • Gives writers a chance to engage in a conversation with other writers • Aids writers in reading critically of other works • Motivates writers to engage with the texts they are reading

- **Spelling:** Reading helps to improve spelling skills, as a person becomes familiar with the correct spelling of words through exposure to written text.
- **Writing practice:** Reading provides models of good writing, which can be used to improve a person's own writing. Similarly, writing practice can help to reinforce reading skills, as a person reads what they have written and makes corrections as necessary. The attached image explains the link /relationship between reading and writing. Reading and writing move in parallel, and it is a cyclic process as, students who read, will write better, and students who write, will read more.

Topic 176

Relationship between Listening and Speaking Skills:

Listening skills play a crucial role in the development of overall language proficiency. The relationship between listening and other language skills, such as reading, writing, speaking, and listening skills, is intertwined and mutually reinforcing, connected, and interviewing.

Listening and Speaking Skills: Listening forms the foundation for effective communication and oral language development. Active listening promotes understanding, comprehension, and meaningful responses during conversations. Through attentive listening, individuals acquire vocabulary, sentence structures, and pronunciation patterns that contribute to fluent and accurate speaking skills.

Listening and Reading Skills: Listening abilities lay the groundwork for reading comprehension. Phonemic awareness and auditory processing skills, developed through listening, facilitate recognition and understanding of written words. Listening exposes learners to varied intonations, rhythms, and language patterns

Listening and Writing Skills: Listening serves as a valuable source of language input for writing. Active listening helps learners gather ideas, information, and inspiration for written expression. Effective listening enhances language proficiency, enabling individuals to produce well-structured and coherent written texts.

Lesson No. 39

ENHANCING LISTENING AND SPEAKING SKILLS IN EARLY EDUCATION**Topic 177****Speaking Skills:**

There are four speaking skills: Fluency, Vocabulary, Grammar, and Pronunciation.

Speaking skills refer to the ability to communicate effectively and express thoughts, ideas, and information verbally or orally. **It involves using language and various vocal elements (articulatory parts) to convey meaning, engage with others, and participate in social interactions.**

- **Fluency:** A good speech is always smooth and effortless delivery. Development through practice and exposure. Further, various techniques are used to improve fluency.
- **Pronunciation:** The production process needs listening activities. Accurate and clear production of speech sounds. Understanding phonemes, stress, intonation, and rhythm. Strategies for improving fluency such as students coordinating with each other in the form of collaborative activities like dialogue, self-expression, speeches, etc., and taking proper guidance from the parents, teachers, peers, and mentors regarding their speech errors.
- **Vocabulary and Grammar:** Building a wide-ranging vocabulary. Application of grammar rules for coherent speech. Multiple strategies may be used for expanding vocabulary and enhancing grammatical accuracy such as; writing notes, and speech on a particular topic.
- **Verbal Communication:** Communication skills in conversations, presentation skills, etc are learned. Developing clarity, coherence, and organization in speech. Techniques for active listening and appropriate responses.

The following image describes the 7 steps on how to improve speaking skills.

- **Nonverbal Communication:** It is also referred to as Sign language. Importance of body language and facial expressions. Enhancing message delivery and comprehension through nonverbal cues. There are also signs on the road, and different symbols and signs are depicted in the book, which show the concept of Nonverbal communication.
- **Practice and Feedback:** Regular practice for improving speaking skills such as dialogues, debates, speeches, and other speaking skills activities. Seeking feedback from peers, mentors, or instructors and utilizing feedback to identify areas for improvement.

Topic 178

Listening:

Listening is a fundamental language skill that plays a crucial role in language learning and communication. It allows learners to comprehend spoken language, develop language proficiency, and effectively communicate in real-life contexts.

Importance of Listening: Listening is the foundation of language acquisition and effective communication. It is through listening that learners are exposed to spoken language, which helps them develop vocabulary, grammar, and an understanding of how language is used in real-life contexts.

Listening Skills Development: Developing listening skills involves practice and exposure to a wide range of listening materials. Learners should be exposed to authentic audio sources, such

as conversations, lectures, and interviews, to develop their listening abilities. The IELTS test is based on these four skills reading, writing, speaking, and listening, and also follows their hierarchy. By regular practice, learners enhance their ability to understand different accents and levels of formality. The definition of listening skills is mentioned in the attached image:

Strategies for Effective Listening:

- **Predicting:** Anticipating the content or context of the listening material before listening.
- **Notetaking:** Making brief notes to capture key information or main ideas during the listening process.

- **Summarizing:** Condensing and paraphrasing the main points or key details of what was heard.
- **Asking for Clarification:** Seeking clarification when encountering unfamiliar words or unclear information.
- **Reflecting:** Analyzing and reflecting on the content and meaning of what was heard after listening.
- **Integrating Listening into Language Instruction:** Listening is integrated into various activities to promote the development of listening skills. These activities may include listening to dialogues, watching videos, and engaging in conversations. Incorporating listening tasks that reflect real-life situations and topics relevant to learners' interests and needs can enhance their motivation and engagement

Topic 179

Types of Listening:

Here are the characteristics of Active Listening explained in the attached image.

There are five major types of listening: Discriminative, Comprehensive, Empathic, Analytical, and Appreciative listening.

- **Discriminative Listening:** Discriminative listening focuses on distinguishing and recognizing different sounds and patterns of spoken language. It involves developing the ability to perceive and differentiate between various sounds, accents, intonations, and rhythms. It is important for acquiring phonemic awareness and improving pronunciation.
- **Informative Listening:** Aims to gather information and comprehend main ideas or specific details conveyed in spoken message. Commonly used in academic settings, lectures, news reports, and informational speeches. Informative listening involves extracting important information, identifying key points, and understanding the overall meaning of the message.
- **Evaluative Listening:** Evaluation is a scientific process of collecting information for making judgments and decisions. This is also a matching process, in which we need to match and meet the said criteria and standards. It involves critically analyzing and assessing the content and validity of the spoken message. It requires

listeners to evaluate the credibility, reliability, and effectiveness of the information presented. Evaluative listening is often used in situations where listeners need to form opinions, make judgments, or engage in debates. Further, other types of listening and their sub-types are mentioned in the image.

- **Appreciative Listening:** Focuses on enjoying and appreciating the aesthetic or entertainment value of the spoken message. Used when listening to music, poetry, storytelling, or other forms of creative expression. Appreciative listening involves immersing oneself in the emotional and sensory aspects of the communication to derive pleasure or enjoyment.
- **Empathetic Listening:** Emphasizes understanding and empathizing with the speaker's emotions, feelings, and perspectives. It involves actively listening to others to provide emotional support, build relationships, or help. Empathetic listening requires sensitivity, empathy, and the ability to reflect the speaker's emotions back to them.
- **Critical Listening:** Critical listening entails analyzing, evaluating, and interpreting the speaker's message thoughtfully and objectively. It involves listening carefully to identify logical flaws and biases, in the speaker's arguments or reasoning. Critical listening is often used in academic or professional contexts, where analytical thinking and problem-solving skills are required.

Topic 180

Factors Affecting Listening:

There are several factors that can influence and affect listening abilities. Some factors that affect listening are mentioned in the image.

Here are the key factors affecting listening:

- **Language Proficiency:** Level of language proficiency or knowledge of language can significantly impact listening. Learners with limited vocabulary, poor grammar understanding, and struggle to comprehend language.

- **Background Knowledge:** Background knowledge refers to the information, experiences, and cultural context that individuals bring to the listening situation. Prior knowledge on a topic can aid in understanding and comprehension. Lack of familiarity with subject matter or cultural references can hinder effective listening.
- **Attention and Concentration:** The ability to pay attention and maintain concentration is crucial for effective listening. Factors such as distractions, fatigue, or lack of interest can negatively impact listening skills. Active engagement and focus are necessary to process and comprehend spoken messages accurately.
- **Listening Strategies:** Effective use of listening strategies can enhance comprehension. Strategies such as predicting, summarizing and note-taking can help learners extract meaning, identify key points, and retain information while listening. Utilizing appropriate strategies can compensate for any language or content-related difficulties.
- **Anxiety and Emotional Factors:** Feelings of anxiety, stress, or nervousness can hinder listening comprehension. Negative emotions can interfere with concentration, retention, and overall listening performance. Creating a supportive and relaxed learning environment can help alleviate these emotional barriers.
- **Cultural and Sociocultural Factors:** Variations in accents, dialects, or speech patterns may pose challenges for learners from different language backgrounds. Cultural differences in communication styles, turn-taking, or nonverbal cues can also affect understanding.

Topic 181

Listening instruction Aids:

Listening aids refer to various tools, materials, and techniques that are used to support and enhance the teaching and learning of listening skills. These aids are designed to provide learners with opportunities to practice and develop their listening abilities in a structured and engaging manner.

Here are some common listening instruction aids:

Audio Materials:

- **Audio recordings:** These can include dialogues, interviews, lectures, podcasts, and other spoken materials that learners can listen to and engage with.

- **Audiovisual materials:** Videos or multimedia resources that incorporate audio components to provide a visual and auditory learning experience.

Authentic Materials:

- **Real-life listening materials:** These can be recordings of authentic conversations, news broadcasts, songs, movies, or TV shows that expose learners to natural, unscripted language use.
- **Authentic texts with audio support:** Texts such as books, articles, or stories that come with accompanying audio recordings to aid in comprehension.

Listening Comprehension Exercises: for these types of exercises, different assessment methods are used, some are mentioned below:

- **Multiple-choice questions:** Assessing comprehension by providing a set of options to choose from based on what is heard.
- **Gap-fill exercises:** Filling in missing words or phrases in a transcript or dialogue based on what is heard.
- **True/false or matching activities:** Verifying understanding by matching statements with corresponding information or determining the accuracy of given statements.

Visual Aids:

- **Pictures, images, or charts:** Visual aids that support the listening task by providing context or illustrating key concepts.
- **Graphic organizers:** Organizational tools that help learners visually organize and understand the information they hear.

Technology-Based Aids:

- **Language learning apps:** Mobile applications that offer listening exercises, interactive activities, and audio resources.
- **Online platforms:** Websites or online platforms that provide listening materials, interactive exercises, and opportunities for practice and assessment.

Role-plays and Simulations:

- **Role-play activities:** Engaging learners in scenarios where they take on different roles and interact through listening and speaking.
- **Simulations:** Creating real-life situations or scenarios that require learners to listen, respond, and make decisions based on what they hear.

Peer Interaction and Group Work:

- **Pair or group activities:** Collaborative tasks that involve listening and responding to peers, such as information gaps or problem-solving activities.
- **Discussions and debates:** Engaging learners in conversations or debates that require active listening and responding to different viewpoints.

**Teacher-led Activities:**

- **Guided listening activities:** The teacher provides explicit instructions, cues, or questions to guide learners' understanding and focus during listening tasks.
- **Think-pair-share:** Learners listen individually, discuss with a partner, and then share their thoughts with the whole class.

Lesson No. 40

UNDERSTANDING AND ASSESSING CHILDREN'S SPEECH DEVELOPMENT

Topic 182

Speaking:

Speaking is a fundamental language skill that involves the production and delivery of spoken language to express thoughts, ideas, opinions, and emotions. It is a crucial aspect of communication, allowing individuals to interact, convey information, and engage in social interactions.

Here are some key points about speaking:

Oral Expression: Speaking involves the ability to articulate words, phrases, and sentences to convey meaning effectively. It requires the coordination of various speech organs, such as the lips, tongue, vocal cords, and breath control, to produce sounds and form coherent speech.

Fluency: Fluency refers to the smooth and natural flow of speech. Fluent speakers demonstrate ease in producing speech, maintain a consistent pace, and minimize interruptions or hesitations.

Vocabulary and Grammar: Speaking proficiency relies on a strong vocabulary base and knowledge of grammatical structures. Speakers need a wide range of words and phrases to express their ideas accurately and appropriately.

Pronunciation and Intelligibility: Clear pronunciation ensures that words and sounds are produced accurately and are easily understood by others. Intelligibility refers to the degree to which a speaker's pronunciation allows others to comprehend their speech.

Conversation and Discourse Skills: Speaking involves participating in conversations, discussions, presentations, and other communicative activities. It requires the ability to engage in turn-taking, maintain topic coherence, and express opinions.

Nonverbal Communication: Nonverbal cues, such as facial expressions, gestures, body language, and eye contact, play a significant role in speaking.

Audience Awareness: Skilled speakers are conscious of their audience and adapt their speaking style and language to suit the needs and expectations of their listeners.

Speaking Strategies: Effective speakers employ various strategies to enhance their speaking skills. These include planning and organizing their thoughts and using appropriate vocabulary and idiomatic expressions.

Developing speaking skills requires practice, exposure to authentic language input, and opportunities for meaningful interaction. Through regular practice and feedback, learners can improve their pronunciation, fluency, vocabulary, and overall ability to express themselves orally.

Topic 183

Development of speaking skills among children:

The development of speaking skills among children is a dynamic and gradual process that occurs over time. As children grow and interact with their environment, they acquire and refine their ability to express themselves verbally. Here are some key aspects of the development of speaking skills in children:

Pre-linguistic Stage: Before children begin producing words, they go through a pre-linguistic stage characterized by nonverbal communication. During this stage, infants use gestures, facial expressions, and vocalizations to convey their needs and interact with caregivers. They engage in babbling, experimenting with different sounds and rhythms, laying the foundation for language development.

First Words: Around 10 to 14 months of age, children typically start producing their first words. These words are usually simple and represent familiar objects, people, or actions in their immediate environment. Initially, their pronunciation may be imprecise, but caregivers can understand their intended meanings based on context and familiarity.

Vocabulary Expansion: As children continue to develop their speaking skills, their vocabulary expands. They learn new words at a rapid pace, acquiring nouns, verbs, adjectives, and other word categories. They gradually gain the ability to label objects, describe actions, express emotions, and make requests using a growing repertoire of words.

Sentence Formation: As children acquire more words, they begin to combine them to form simple sentences. Initially, their sentences may consist of a single-word or two-word combination, known as telegraphic speech. With time, they

develop the ability to construct more complex and grammatically correct sentences, using appropriate word order and basic grammatical structures.

Language Use and Pragmatics: Speaking skills involve not only linguistic competence but also an understanding of pragmatics, which refers to the social and cultural aspects of language use. Children learn how to adapt their language based on the communication context, the listener's knowledge, and the purpose of the interaction. They acquire turn-taking skills, the ability to ask and answer questions, and the awareness of appropriate language use in different situations.

Narrative Skills: As children develop their speaking skills, they gain the ability to construct narratives or tell stories. They learn to sequence events, describe characters, and provide details about a given topic. Narrative skills are important for developing coherence, organization, and the ability to engage listeners in a meaningful way.

Topic 184

Barriers and challenges during Speech development:

Here are some common barriers and challenges:

- **Articulation and Pronunciation Difficulties:** Some children may experience challenges in producing speech sounds accurately, leading to articulation or phonological disorders. They may substitute, omit, or distort sounds, making their speech difficult to understand.
- **Language Delay or Disorder:** Language delays or disorders can impact speech development. Children may struggle with vocabulary acquisition, sentence formation, grammar, or understanding and expressing complex ideas.
- **Stuttering:** Stuttering is a speech fluency disorder characterized by disruptions in the flow of speech, such as repetitions, prolongations, or blocks. Children who stutter face challenges in expressing themselves fluently, which can impact their confidence and communication.
- **Apraxia of Speech:** Apraxia of speech is a motor speech disorder that affects the coordination and planning of the muscle movements involved in speech production. Children with apraxia have difficulty initiating and executing the precise movements necessary for speech sounds and syllables.
- **Hearing Impairment:** Children with hearing impairments have difficulty perceiving and producing speech sounds accurately, affecting their ability to develop clear and intelligible speech.

- **Language and Cultural Differences:** Children from diverse linguistic and cultural backgrounds may face challenges when learning a new language. Differences in phonetic and phonological systems, syntax, or cultural norms of communication can affect their speech development and intelligibility.
- **Shyness or Social Anxiety:** Some children may experience shyness or social anxiety, which can hinder their willingness to speak and participate in conversations.
- **Environmental Factors:** Environmental factors, such as limited exposure to language, and lack of language stimulation, can impact speech development. Insufficient opportunities for language-rich interactions and limited access to quality language models can pose barriers to optimal speech development.
- **Emotional and Behavioral Factors:** Emotional and behavioral factors, such as stress, anxiety, or attention difficulties, can influence speech development. Emotional states can affect attention, concentration, and the ability to process and produce speech.
- **Motor Coordination Issues:** Some children may experience challenges in coordinating the movements of their speech muscles, known as dyspraxia or oral-motor coordination difficulties. These challenges can impact the clarity and coordination of their speech production. Early intervention programs, speech therapy, and creating a supportive and stimulating language environment can help children overcome these barriers and promote their speech development.

Topic 185

Assessment of language:

Assessment of language refers to the process of systematically evaluating an individual's language skills and abilities. It involves gathering information about various aspects of language, such as comprehension, production, vocabulary, grammar, and pragmatics. Language assessments are conducted to determine a person's language strengths, weaknesses, and overall proficiency level.

Definition of Assessment: Assessment refers to the systematic process of gathering and evaluating information to make informed judgments or decisions about an individual, group, or situation. It involves collecting data, analyzing it, and drawing conclusions based on the evidence obtained. Assessment can be conducted in various domains, such as

education, healthcare, psychology, and business, with the specific purpose of assessing knowledge, skills, abilities, performance, or characteristics.

Purpose of Language Assessment: Language assessments serve multiple purposes, including identifying language delays or disorders, determining language proficiency, guiding intervention planning, monitoring progress, making educational or clinical decisions, and researching language development.

Assessment Methods: Language assessments can utilize various methods and tools to gather information about an individual's language abilities. These methods include standardized tests, informal observations, language samples, parent or teacher reports, interviews, checklists, and rating scales.

Language Domains Assessed: Language assessments typically evaluate different language domains, including receptive language (comprehension of spoken or written language), expressive language (production of spoken or written language), vocabulary, grammar, pragmatics (social language skills), phonological awareness

Language assessments should be conducted by qualified professionals, such as speech-language pathologists or psychologists, who have expertise in language assessment and interpretation. These professionals consider the specific assessment goals, the individual's age, cultural background, and specific language concerns to ensure accurate and meaningful assessment outcomes

Topic 186

Types of assessment:

Types of assessment can vary depending on the context and purpose of the assessment.

Here are some common types of assessment:

1. Formative Assessment
2. Summative Assessment

Further, other types of assessments are mentioned in the image.

Types of Assessments		
Diagnostic Assessment Evaluates what students know <i>before</i> introducing new knowledge/skills.	Interim Assessment Evaluates student acquisition of skills/knowledge being taught at <i>periodic intervals</i> .	Summative Assessment Evaluates student performance of specific skills/knowledge at the <i>end</i> of an instructional period.
Useful For: - Identifying students' strengths and weaknesses. - Establishing a baseline data to track a student's growth.	Useful For: - Identifying areas for remediation. - Identifying areas of proficiency. - Identifying specific students and skills to reteach.	Useful For: - Identifying areas for spiral review. - Confirming with students about skills. - Confirming overall student growth.
Formative Data Tells teachers how students are performing <i>during</i> an instructional period. Examples: - Informal assessments - Exit tickets - Exit tickets during instruction - Student work evaluation - Self-reflection responses - Student exit tickets/surveys	Norm-Referenced Data Tells us how a student's performance compares to <i>national norms by grade</i> . Often reported in percentiles. Examples: - National Assessment of Educational Progress (NAEP)	Criterion-Referenced Data Tells us how a student's performance compares to <i>established learning standards</i> or cut scores. Examples: - ISCAP - NCAS - NCAS

Diagnostic Assessment: Diagnostic assessment is conducted to identify students' prior knowledge, skills, strengths, and weaknesses before instruction begins. Helps to understand students' readiness and tailor instruction accordingly. Diagnostic assessments can include pre-tests, interviews, or observations.

Criterion-Referenced Assessment: It measures a student's performance against specific criteria or learning standards. Determine whether a student has achieved certain learning objectives.

Norm-Referenced Assessment: It compares a student's performance to the performance of a normative group.

Inform how a student's performance ranks relative to their peers. Standardized tests, such as college entrance exams, are often norm-referenced.

Performance-Based Assessment: evaluates a student's ability to apply knowledge skills in real-world contexts. Involves tasks that require students to demonstrate their learning by practical application.

Authentic Assessment: It focuses on real-life, meaningful tasks that reflect the skills and knowledge students need in authentic settings. Examples include real-world problem-solving tasks, case studies, or fieldwork.

Portfolio Assessment: It collects and evaluates student work overtime. It provides a comprehensive view of a student's progress, skills, and achievements. Portfolios can include samples of student work, reflections, self-assessments, and feedback.

Self-Assessment: It involves students reflecting on their learning, progress, and strengths and weaknesses. Self-assessment can be incorporated through self-reflection exercises, self-evaluations, or goal-setting activities.

Peer Assessment: It involves students providing feedback and evaluating the work of their peers. It encourages collaboration, active engagement, and the development of critical thinking skills. Done by structured feedback forms, group discussions, and peer evaluations.

TYPES OF ASSESSMENT		
DIAGNOSTIC	FORMATIVE	SUMMATIVE
✓ Help us gain a baseline understanding ✓ Helps us determine goals for a unit ✓ First glance at how groups may form ✓ Can be formal or informal	✓ "On-the-go" assessments ✓ Helps us get information about readers in the process of learning ✓ Provide ongoing feedback ✓ Allow us to revise, alter and tailor instruction	✓ "End-of-learning" assessments ✓ Students' opportunity to demonstrate mastery of new learning ✓ Celebrate students' accomplishments

Lesson No. 41

CRAFTING AND PLANNING TESTS: OBJECTIVES, MULTIPLE CHOICE FORMATS, AND ASSESSMENT STRATEGIES

Topic 187

Formative Assessment:

Formative assessment is a type of assessment that is carried out during the learning process to provide ongoing feedback and support student learning. It is focused on monitoring student progress, identifying areas of strength and weakness, and informing instructional decisions. Formative assessment is often seen as an "assessment for learning" rather than an "assessment of learning." It emphasizes the role of assessment in supporting and enhancing the learning process.

Purpose: The primary purpose of formative assessment is to gather information about student understanding and progress to guide teaching and learning.

Continuous Feedback: Formative assessment involves providing regular and timely feedback to students. This feedback is specific, constructive, and focused on helping students understand their strengths and areas for improvement.

Informal Methods: Informal methods include questioning, classroom discussions, observations, exit tickets, or quick quizzes. **Formal Methods:** can include more structured assessments, such as pre-tests, concept maps, or diagnostic assessments, standardized, Norm, and Teacher made tests.

Ongoing Monitoring: It is an ongoing process that occurs throughout instruction. It involves regular monitoring of student progress to check for understanding and adjust instruction accordingly.

Differentiation and Individualization: Formative assessment allows teachers to differentiate instruction and tailor it to individual student needs, by understanding each student's strengths, weaknesses, and learning styles. Teachers can provide targeted interventions and resources to support their growth.

- **Teacher-Student Collaboration:** encourages a supportive and interactive learning environment where students feel comfortable seeking clarification, asking questions, and engaging in dialogue with their teacher.
- **Formative Assessment Strategies:** Various strategies can be used for formative assessment, including questioning techniques, short questions, think-pair-share activities, peer or self-assessment, or rubrics. These strategies can also be used as an assessment and in the teaching process. Further, the choice of strategy depends on learning objectives, content, and context.
- **Continuous Improvement:** contributes to continuous improvement in teaching and learning. The formative assessment helps teachers refine their instructional strategies, identify gaps in curriculum or materials, and make informed decisions about the next steps in the learning process.
- **Integration with Summative Assessment:** Formative assessment is often integrated with summative assessment, which evaluates learning at the end of a unit or course. Therefore, Mid Term Exams are an example of a formative assessment. The feedback and insights gained from formative assessment can inform the design and content of summative assessments, ensuring alignment and coherence.

Topic 188

Summative Assessment:

Summative assessment is a type of assessment that evaluates student learning and achievement at the end of a unit, course, or academic period. It focuses on measuring the overall outcomes or mastery of specific learning objectives.

Purpose: The primary purpose of summative assessment is to determine the extent to which students have achieved the intended learning outcomes or standards. It provides a snapshot of student performance and allows for making judgments about their level of proficiency.

- **End-of-Unit or End-of-Course Assessment:** typically administered at the end of a unit, course, or academic period. It is designed to measure cumulative learning and provide a comprehensive evaluation of student achievement. It means, in this assessment, all marks of the formative assessment other sessional marks, and the

FORMATIVE	SUMMATIVE
✓ "On-the-go" assessments	✓ "End-of-learning" assessments
✓ Helps us get information about readers in the process of learning	✓ Students' opportunity to demonstrate mastery of new learning
✓ Provide ongoing feedback	✓ Celebrate students' accomplishments
✓ Allow us to revise, alter and tailor instruction	

end of the semester's marks are added. The differences between Formative and Summative Assessments are mentioned in the attached picture.

- **Evaluation of Learning:** focuses on evaluating learning that has taken place. It assesses the knowledge, skills, and competencies students have acquired over some time. The results are often used to assign grades or determine proficiency levels. Therefore, to evaluate this type of learning by using the Standardized and Criterion Referenced Tests.
- **Standardized or Criterion-Referenced:** can be standardized, follow a uniform format, and are administered to all students consistently. Can be criterion-referenced, student performance measured against specific criteria or learning standards.
- **Assessing Higher-Order Thinking:** can go beyond simple recall of facts and assess higher-order thinking skills, such as analysis, synthesis, and evaluation. There are six levels of the Cognitive domain, The first three levels deal with the simple level of thinking, while the last three levels refer to the higher-order thinking levels. Thus, Higher-order thinking skills may include complex problem-solving tasks, essays, projects, or performance-based assessments.
- **Limited Feedback:** Unlike formative assessment, which provides ongoing feedback to support learning, summative assessment typically provides limited feedback. The focus is on evaluating student performance rather than guiding instruction. The below image also explains the difference between the Summative and Formative Assessment.
- **Accountability and Comparisons:** It plays a role in holding students, teachers, and educational institutions accountable for meeting learning objectives and standards. They provide a basis for comparing student performance across individuals, schools, or districts.
- **High-Stakes Assessments:** Some summative assessments, such as standardized tests or final exams, may have high stakes attached to them, including grades, promotions, graduation requirements, or college admissions.
- **Reliability and Validity:** Ensuring reliability and validity is crucial. Reliability refers to the consistency and stability of assessment results, validity refers to the extent to which an assessment measures what it intends to measure. These factors contribute to the accuracy and fairness of the assessment outcomes.

2 Types of Assessments	
Formative	Summative
Formative assessments measure student comprehension in the process of learning a skill or acquiring new knowledge. What has the child learned so far?	Summative assessments measure student comprehension at the end of a lesson or unit. What did the child learn overall?
<i>Example:</i> A teacher has just finished teaching a lesson on fractions. In order to see if his students were able to follow the lesson, he asks some of them to come up to the board and demonstrate the meanings of one half, one third, and one fourth on the board by shading parts of a circle.	<i>Example:</i> The teacher gives a paper test at the end of a two week unit on fractions. Students might be given a worksheet on which to shade in correct portions of circles, match numerical fractions to their shaded circle counterparts, and answer word problems using fractions. The teacher does not help much because he needs to see what levels of comprehension the children can demonstrate on their own.

- **Assessment Design and Rubrics:** carefully designed to align with the intended learning outcomes. Clear rubrics or scoring criteria are often used to ensure consistency in the evaluation.

Topic 189

Type of Test:

Test:

A test is a systematic and standardized method used to measure an individual's knowledge, skills, abilities, or other characteristics. It typically involves a set of questions, tasks, or exercises that are administered to assess the test-taker's performance or understanding in a specific domain. As, the Bloom's taxonomy has mentioned three domains, cognitive, psychomotor, and affective domain, and these three are used while constructing the Tests. Tests are commonly used in educational settings, employment selection, psychological assessments, and various other fields. Some types of tests are also mentioned in the image.

Types of test:

Types of tests can vary depending on their purpose, features, content, and the specific characteristics being assessed.

Here are some common types of tests:

1. **Achievement Tests:** they measure a person's knowledge or proficiency in a particular subject area. Ex. standardized tests like SAT or ACT.
2. **Aptitude Tests:** they are designed to evaluate a person's potential or suitability for specific skills or areas of work. Ex. tests that measure verbal, numerical reasoning, or spatial reasoning abilities.

Other tests are explained in the attached images.

3. **Intelligence Tests:** Intelligence tests aim to measure a person's cognitive abilities, including problem-solving, reasoning, and analytical skills. These tests provide an

estimate of a person's general intelligence or intellectual potential. For example, Alford tests, etc.

4. **Personality Tests:** they assess an individual's personality traits, characteristics, and behavioral tendencies. They help to understand a person's personality profile, preferences, and potential compatibility with certain roles or environments.

For example, whether a man is an introvert or an extrovert etc.

5. **Diagnostic Tests:** used to identify or diagnose specific conditions, disorders, or difficulties. These tests are often administered by professionals in fields such as psychology, medicine, or education to assess specific areas of concern.
6. **Language Proficiency Tests:** assess a person's ability to understand and use a particular language. They evaluate skills such as reading, writing, speaking, and listening in the target language. Examples include tests like the TOEFL or IELTS for English proficiency.
7. **Performance-based Tests:** they assess a person's ability to apply their knowledge skills in practical, real-world situations. These tests often involve demonstrations, simulations, or hands-on tasks that measure competency in specific areas.
8. **Screening Tests:** used to identify individuals who may require further assessment or intervention in a specific area. Typically, brief and provide an initial indication of potential issues or concerns that may need further investigation. These types of tests are mostly used for jobs, and to screen the participant's characteristics.
9. **Compliance Tests:** they assess an individual's adherence to specific rules, regulations, or requirements. They are often used in areas such as workplace safety, legal compliance, or ethics.

Topic 190

Planning for test:

Test Plan: It is a document describing the scope, approach, resources, and schedule of intended test activities. The following components are considered while planning the test.

- Test planning and control
- Test analysis and design
- Test Implementation and execution
- Test closure activities

Planning for a test involves careful preparation and organization to ensure the assessment effectively measures the intended objectives and provides meaningful results.

Here are key steps in planning for a test:

- **Define the Purpose:** Clarify the purpose of the test and identify the specific objectives or outcomes you want to measure. Determine whether the test is meant to evaluate knowledge, skills, aptitudes, or other characteristics.
- **Identify the Target Audience:** Determine the specific group or individuals taking the test. Consider their characteristics, such as age, educational background, or language proficiency, and ensure the test is appropriate for their level of understanding.
- **Determine Test Format:** Decide on the format and structure of the test that best suits the objectives and the content being assessed. Consider whether multiple-choice questions, essay questions, True/False, Subjective test, performance tasks, or a combination (add all types of tests in a single test).
- **Develop Test Specifications:** Create a detailed test blueprint or specifications that outline content areas, subtopics, and the weightage assigned to each. This helps ensure that the test adequately covers the intended content and assesses all relevant aspects.
- **Create Test Items:** Develop the test items, questions (such as MCQs, short/long questions, etc.), or tasks that align with the test specifications and create items according to each decided category. Ensure that items are clear and concise, and directly assess the intended objectives. Use a variety of item types to measure different levels of knowledge or skills.
- **Review and Validate Test Items:** Conduct a thorough review of the test items for clarity, accuracy, and appropriateness. Seek input from subject matter experts or colleagues to validate the items and ensure they align with the intended objectives.
- **Establish Scoring Rubrics or Criteria:** Determine the scoring rubrics or criteria for each item or task to ensure consistent and fair evaluation or unbiased. Clearly define the performance levels or expectations for each response or task.

- **Consider Test Administration Logistics:** This section deals with how to administer the test. Therefore, the time and location of the test, availability of necessary materials or resources, and any special accommodations or considerations for test-takers with specific needs, all are required for the administration of the tests or exams.
- **Pilot Test the Assessment:** Conduct a pilot test with a small group of individuals who are similar to the target audience to identify any issues or areas for improvement. It provides feedback to refine the test items, language, instructions, or scoring criteria.
- **Plan for Test Security:** Ensure the test materials are secure and protected to maintain the integrity, reliability, and credibility of the assessment. Consider protocols for handling and distributing test materials, preventing cheating, and maintaining confidentiality.
- **Communicate Test Details:** Provide clear instructions to test-takers regarding the purpose, format, and expectations of the test. These instructions may be provided on the question paper or answer sheet. Communicate any specific guidelines or instructions they need to follow during the test administration.
- **Establish a Timeline:** Create a timeline that outlines the key milestones and deadlines for test development, administration, and scoring.
- **Train Test Administrators:** If the test is administered by others, provide training to test administrators to ensure consistent administration and scoring procedures. Clarify their roles, responsibilities, and any guidelines they need to follow.
- **Analyze and Interpret Test Results:** Plan for the analysis and interpretation of test results. Determine how the scores will be calculated, reported, and used to inform decision-making, such as identifying areas for improvement or making educational interventions.

One Test Template is attached in the image below.

Topic 191**Objectives of Test:**

These refer to the specific goals or purposes that a test intends to achieve. These outline the outcomes and provide a clear direction for the test design, administration, and interpretation of results. The objectives of a test vary depending on its purpose, context/background, and audience. Defining goals is the first step of the test plan.

Types of Objectives:

The most common three types of objectives are explained below:

1. Instructional Objectives
2. Assessment Objectives
3. Diagnostic Objectives

Instructional Objectives: They Focus on learning outcomes, provide direction for teaching, and help the teachers in curriculum planning and design. For examples: Knowledge, skills, attitudes, and values

Assessment Objectives: They evaluate student performance, measure achievement, and mastery, and inform grading and reporting. For examples: Tests, quizzes, and exams. Further, the details of the Objective Evaluation are explained in the image.

Diagnostic Objectives: They focus on identifying strengths and weaknesses, provide feedback for instructional planning, and guide individualized instruction. For example: Pre-assessment, and diagnostic tests

Characteristics of Effective Objectives:

The details of SMART objectives are stated below:

- Clear and specific
- Measurable and observable
- Aligned with learning outcomes
- Relevant to the content and context
- Realistic and achievable

Benefits of Clear Objectives:

- Improved instruction and learning
- Improved assessment validity and reliability

- Targeted feedback for students
- Transparent grading and evaluation

Establishing Objectives of Test:

- Conduct a needs analysis
- Define desired learning outcomes
- Align objectives with instructional activities
- Consider different levels of learning

Levels of Educational Objectives	Learning/Test Objectives	Type of Objective Test to be used
Remember	The students must be able to define relative concepts in formulation of Objective Tests.	Enumeration Multiple Choice
Understand	The students must be able to determine the difference between the types of objective tests.	True-false Matching Type
Apply	The students must be able to apply the procedure for constructing objective test items.	Multiple Choice Alternate Response Type
Analyze	The students must be able to examine whether the objective test items satisfy the requirement for validity and reliability.	Multiple Choice True-False Interpretative Exercises
Evaluation	The students must be able to choose appropriate type of objective test to assess different levels of the hierarchy of educational objectives.	Matching Type
Create	Develop objective assessment tools for use in evaluating instructional effectiveness	

The attached image explains the Levels of Educational Objectives with the Learning/Test Objectives.

Lesson No. 42

EXPLORING TEST FORMATS: MULTIPLE CHOICE, ESSAYS, STANDARDIZED TESTS, AND PORTFOLIO ASSESSMENT

Topic 192

Multiple choice test:

This test is used to evaluate a person's knowledge, understanding, and decision-making skills. The first three levels and Lower order thinking (LOT) skills (Understanding, knowledge, comprehension) are mostly used in the MCQs type tests. In MCQS there is a question, and a set of options as potential answers. The test-taker must select the most appropriate or correct response from the given options.

Advantages of Multiple-Choice Tests:

Some advantages or pros of MCQ tests are stated below:

- Objective scoring
- Efficient administration and grading
- Wide applicability
- Ability to assess a large content area

You may also see examples of MCQs in the attached image.

Test Construction:

The following factors should be considered while constructing the test.

- Writing clear and concise stems
- Developing reasonable distractors (such as options of All of the above, none of the above, should not be added)
- Ensuring one correct answer
- Avoiding cues or hints (means avoiding adding two concepts in a single question)

Strategies for Answering

- Read the stem and all options carefully
- Eliminate obviously incorrect options
- Use context clues or reasoning

- Watch for qualifiers or absolute terms

Item Analysis:

Basically, the item analysis is used for pilot testing to improve the reliability and validity of the tests. Therefore, these are the steps of item analysis:

- Evaluating item difficulty
- Calculating item discrimination (difference in items)
- Identifying problematic items and rephrasing the items that are ambiguous and confusing etc.
- Improving the quality of items

Avoiding Common Pitfalls:

- Ambiguous or confusing language
- Biased or unfair options
- Overuse of "all of the above" or "none of the above"
- Inadequate representation of content

Enhancing Validity and Reliability:

The validity of the tests means “Test correctness”, and reliability means “Test consistency”. So, a teacher can improve and enhance both by considering these points:

- Aligning test content with learning objectives
- Sampling content adequately
- Balancing difficulty levels
- Establishing reliability through item analysis

Strategies for Test Preparation:

- Provide practice questions
- Review relevant content
- Explain the structure and format of the test
- Address test anxiety, its management

Ethical Considerations:

Ethical considerations need to be considered while conducting the test, they are also very crucial. So, a teacher needs to:

- Ensuring fairness and equity
- Minimizing bias in test items
- Addressing cultural and linguistic diversity
- Protection of test security

Topic 193

Essay test:

These tests require students to generate written responses to questions. It involves giving an extended, well-organized, and clear written response that presents knowledge, understanding, critical thinking, and analytical skills. It assesses a student's ability to express ideas and communicate effectively through a written answer

Purpose of Essay Tests:

The purposes of Essay Tests are stated below:

- Evaluate Understanding and Application
- Assess Higher-Order Thinking Skills
- Measure Writing Skills
- Encourage Critical Thinking and Creativity
- Provide Authentic Assessment
- Encourage Reflection and Self-Expression
- Foster Communication Skills

Characteristics of an Essay Test:

Major characteristics of Essay tests are mentioned under:

- Open-ended format
- Requires extended written responses
- Emphasizes critical thinking and expression of ideas
- Allows for individual creativity and unique perspectives

Types of Essay Questions:

There are two types of Essay questions:

- **Restricted Response:** Specific guidelines or parameters for the response.
Examples: Objective Types tests, short questions, etc.

- **Extended Response:** Broader prompts that allow for more in-depth exploration. Examples: Subjective Type Questions, long questions, etc. You may also see other advantages of essay-type questions listed in the picture.

Advantages of Essay Tests

Some advantages of Essay Tests are listed under:

- Assess higher-order thinking skills
- Evaluate understanding, analysis, synthesis, and evaluation
- Encourage critical thinking and problem-solving abilities
- Assess written communication skills

Test Construction:

A teacher needs to consider the following points for test construction:

- Clearly define the task and opportunities (with the help of the Table of Specification)
- Design prompts that stimulate critical thinking
- Provide clear instructions for organization and structure
- Consider time limits and manage expectations (hopes)

Scoring Criteria and Rubrics:

The following points should be followed while scoring criteria and rubrics of the tests:

- Develop clear and specific scoring criteria
- Create a rubric (marks limitation according to the answer) to guide the evaluation process
- Consider holistic or analytic scoring approaches
- Ensure fairness, consistency, and reliability in scoring

Feedback and Grading:

The following points should be followed while giving feedback and grading of the tests:

- Provide constructive feedback on strengths and areas for improvement
- Systematic approach for grading essays
- Objectivity and fairness in grading

Test Administration and Timing:

The mentioned aspects need to be fulfilled during the test administration and timing:

- Give clear instructions to students, and the test should be self-explanatory.
- Sufficient time for planning, drafting, and revising
- Consider time management strategies for answering questions

Training and Standardization:

Training is more important for the test checker and administrator as well. Therefore, there should be a standardization for the training, and it can be accomplished through the:

- Training on the scoring criteria/ rubrics (For example: the meeting of the head examiner in the Board of Intermediate regarding the scoring key and informing them about the exam standards)
- Promote consistency and inter-rater reliability (they can achieve through the Item analysis)
- Address potential biases and challenges in scoring

Test Security and Academic Integrity:

It is very important to secure the test for Academic Integrity, and these points may be followed in this regard:

- Address concerns to plagiarism and cheating
- Ensure test security
- Monitor and detect academic dishonesty
- Promote an ethical behavior

Topic 194**Standardized test:**

An assessment that is administered and scored consistently. It follows predetermined guidelines and procedures and is designed to measure a person's knowledge, skills, and abilities. They also provide a standardized, objective comparison of performance across individuals or groups. You may also see some other types of Standardized Tests in the image.

Purpose of Standardized test: The purposes of Standardized tests are stated in the following points:

- Comparison and Ranking

- College and University Admissions
- Curriculum/Program Evaluation
- Data-Driven Decision Making
- Standardized Placement and Certification
- Research and Validity Studies
- International Comparisons

Characteristics of Standardized Tests: Some major characteristics of Standardized Tests are mentioned below:

- Uniform test administration and scoring procedures
- Predetermined content and structure
- Standardized scoring and interpretation
- Statistical analysis and norm-referenced comparisons.

Test Development and Design: Keep in mind that, the development of the Test is not an easy job, they can develop only institutes. Teacher-made tests are not standardized, because standardized tests are piloted and constructed at a broader scale.

The following steps are included in the process of standardized test development and design:

- Establishing test objectives and content domains
- Item development and item analysis
- Standardization of administration procedures
- Pilot testing and refinement of the test

Test Administration and Scoring: The following points need to be considered while administering and scoring the Tests:

- Standardized test administration protocols
- Scoring methods: machine/ human scoring or combined (such as MCAT, SAT's scorings are based on the Machine)
- Ensuring reliability and validity in scoring
- Score interpretation and reporting

Standardized Testing and Educational Equity: Equity and Equality both are different concepts. As equity is based on the Needs of the individual, there is a range of standards that means the highest, lowest, and middle come under their category. So, it refers to the equity concept.

The following points need to be followed while maintaining educational equity in the Tests:

- Achievement gaps in standardized test performance
- Fairness and linguistic diversity in test design and administration

Standardization and Norm-Referenced Comparison: There is a difference between the Standardized and Norm-Referenced Tests. In the Norm-Referenced Tests, we establish a reference group and test norms. And consider the percentile ranks, stanines, and other norm-referenced scores. Consequently, the Interpretation of standardized scores.

Critiques and Limitations of Standardized Testing: The limitations and cons of Standardized Testing are listed below:

- Potential biases and cultural limitations
- Overemphasis on memorization and test-taking skills
- Limited assessment of complex skills and creativity (such as the presence of MCQ can not develop the creativity skills of the students)
- High-stakes nature and possible consequences

Future Trends and Innovations:

The standardized tests are:

- Adaptive and computer-based testing
- Performance-based assessments
- Balanced assessment approaches
- Personalized and competency-based assessment

Topic 195

Evaluating essay type test:

Evaluation is a very comprehensive term; it is done after the assessment and measurement process.

Importance of evaluating essay-type tests:

The mentioned statements explain the significance of Essay Type Tests.

- Develop/Assess Higher-order Thinking Skills

- Evaluating Subject Knowledge and Content Mastery
- Promoting Written Communication Skills
- Encouraging Critical Reflection/creativity
- Supporting In-depth Understanding
- Altering Instruction
- Comprehensive Picture of Student Performance

As you can see the Essay Evaluation form is in the attached image. As it explains it very comprehensively with the help of Criteria and Rubrics.

Essay Evaluation Form

Criteria	Excellent (4)	Good (3)	Fair (2)	Poor (1)	Score
Content Knowledge / Understanding	Excellent understanding of the topic, with accurate and detailed information.	Good understanding of the topic, with accurate information.	Fair understanding of the topic, with some accurate information.	Poor understanding of the topic, with little accurate information.	
Organization / Structure	Excellent organization and structure, with clear and logical flow.	Good organization and structure, with clear and logical flow.	Fair organization and structure, with some clear and logical flow.	Poor organization and structure, with little clear and logical flow.	
Writing Mechanics / Language	Excellent writing mechanics and language, with accurate grammar and spelling.	Good writing mechanics and language, with accurate grammar and spelling.	Fair writing mechanics and language, with some accurate grammar and spelling.	Poor writing mechanics and language, with little accurate grammar and spelling.	
Overall Quality	Excellent overall quality, with all criteria met.	Good overall quality, with most criteria met.	Fair overall quality, with some criteria met.	Poor overall quality, with little criteria met.	

Evaluation Criteria

1. **Clarity and Organization:** Assessing the clarity and logical organization of the response.
2. **Content Knowledge:** Evaluating the accuracy and depth of the content knowledge.
3. **Critical Thinking Skills:** Assessing the use of critical thinking skills and analysis.
4. **Coherence and Cohesion:** Evaluating soundness and order of response ideas or interconnectedness of information.
5. **Writing Mechanics:** Assessing grammar, spelling, and proper use of language.

CHECKLIST	
Reviewing Essay Questions	
No	Yes
1. Is this the most appropriate type of task to use?	_____
2. Are the questions designed to measure higher-level learning outcomes?	_____
3. Are the questions relevant to the intended learning outcomes?	_____
4. Does each question clearly indicate the response expected?	_____
5. Are students told the bases on which their answers will be evaluated?	_____
6. Are generous time limits provided for responding to the questions?	_____
7. Are students told the time limits and/or point values for each question?	_____
8. Are all students required to respond to the same questions?	_____
9. If revised, are the questions still relevant to the intended learning outcomes?	_____

Analytic Evaluation Approach: It breaks down the evaluation into specific criteria and assigns separate scores or grades for each criterion. It also provides detailed feedback on each criterion.

Holistic Evaluation Approach: This approach gives an overall impression of the response and considers the response. It is also assigning a single score, or grade based on the overall quality.

Developing Scoring Rubrics:

The following steps should be followed:

1. Defining the criteria/levels of performance for each criterion

2. Assigning weights or points to each criterion
3. Creating specific descriptors for each level of performance

Reliability and Consistency: The evaluation of reliability and consistency is very important. Ensuring consistency in scoring across multiple evaluators by using patterns and anchor papers to guide scoring.

Providing Constructive Feedback: In subjective-type questions, the provision of feedback is very important. Feedback helps in identifying strengths and weaknesses in the response and it also offers specific comments and suggestions for improvement. Keep in mind that, focusing on actionable feedback promotes growth

Addressing Bias and Fairness: The bias and fairness elements can be added by minimizing potential bias in the evaluation, ensuring fairness in scoring, and considering cultural and linguistic factors in the evaluation.

Fairness and Second Scoring: The bias and fairness elements can be added by seeking a second opinion from another evaluator, comparing scores, and resolving discrepancies and fairness and accuracy in the evaluation.

Balancing Subjectivity and Objectivity: The subjective nature of essay evaluation includes objective criteria/ standards and combining qualitative and quantitative approaches.

Topic 196

Assessment through portfolio:

What is a portfolio?

It is a method of evaluating student learning and progress systematically by collecting and analyzing a curated collection of student work, known as a portfolio. It is the collection of various objects, such as assignments, projects, essays, reflections, etc. that demonstrate students' knowledge, skills, and achievements over a specific period.

Definition of Portfolio:

A portfolio is a collection of objects or evidence that shows a person's skills: accomplishments, experiences, and growth in a particular area or field. It serves as a comprehensive picture of an individual's abilities, talents, and achievements, with their knowledge, skills, and competencies.

Purpose of Portfolio Assessment:

- It helps in Indicating student progress and growth over time
- It showcases student achievement and abilities
- It is promoting self-reflection and meta-cognitive skills
- It helps in encouraging student ownership of learning.

Types of Portfolios

1. **Working portfolios:** Ongoing collection of student work
2. **Display portfolios:** Selected pieces of student work for display
3. **Assessment portfolios:** Specifically compiled for assessment purposes

Portfolio Contents and Objects:

Examples of objects (e.g., essays, projects, artwork, videos). Including various types of evidence that align with learning goals

Assessment Criteria and Rubrics:

As the portfolio is qualitative its nature can be changed into an objective by developing the Rubrics and establishing clear assessment criteria and expectations. Developing rubrics to guide assessment and scoring. One example is also mentioned in the attached image.

Criteria	Unsatisfactory	Emerging	Proficient	Exemplary	Rating
Selection of Artifacts	The artifacts and work samples do not relate to the purpose of the eportfolio.	Some of the artifacts and work samples are related to the purpose of the eportfolio.	Most artifacts and work samples are related to the purpose of the eportfolio.	All artifacts and work samples are clearly and directly related to the purpose of the eportfolio. A wide variety of artifacts is included.	
Descriptive Text	No artifacts are accompanied by a caption that clearly explains the importance of the item including title, author, and date.	Some of the artifacts are accompanied by a caption that clearly explains the importance of the item including title, author, and date.	Most of the artifacts are accompanied by a caption that clearly explains the importance of the item including title, author, and date.	All artifacts are accompanied by a caption that clearly explains the importance of the item including title, author, and date.	
Reflective Commentary	The reflections do not explain growth or include goals for continued learning.	A few of the reflections explain growth and include goals for continued learning.	Most of the reflections explain growth and include goals for continued learning.	All reflections clearly explain how the artifact demonstrates your growth, competencies, accomplishments, and include goals for continued learning (long and short term).	

Process of Portfolio Assessment:

The following steps are included in the process of portfolio assessment:

- Collecting and organizing student work
- Reflecting on learning and growth
- Self-assessment and goal setting
- Peer and teacher feedback

Authenticity and Real-World Connections:

The portfolio should assess real-world skills and applications and promote authentic and meaningful learning experiences

Benefits of Portfolio Assessment:

The benefits of portfolio assessments are mentioned below:

- Holistic view of student learning progress
- Encourages self-reflection
- Supports student engagement and ownership of learning
- Shows a range of student abilities and talents

Challenges and Considerations:

The mentioned challenges and considerations are faced during the assessment through the portfolio.

- Time and effort required for portfolio development and assessment
- Ensuring fairness and consistency in assessment
- Balancing subjectivity and objectivity in scoring

Lesson No. 43

**COMPARATIVE PERSPECTIVES ON LANGUAGE
DEVELOPMENT: INSIGHTS FROM THE UK, USA, FINLAND,
AND AUSTRALIA****Topic 197****Language Development in International Perspective:**

It is a universal process that happens in all cultures and countries and is important to explain cultural and linguistic diversity. Language development includes both the understanding (receptive) and production/spoken (expressive languages) of all types of language.

Cultural Influences on Language Development: Culture affects language development through norms, values, and communication styles. Cultural practices and storytelling can impact language learning and Cultural diversity also enriches language acquisition, exposure to multiple cultures shapes a child's language and language experiences

Multilingualism and Language Development: The multilingualism concept refers to speaking more than one language at a time. Multilingualism has Cognitive, social, and cultural benefits, i.e. more problem-solving skills, and improved communication. Bilingual children face language mixing or temporary delays in language development. It also has better cognitive flexibility and metalinguistic awareness.

Language Milestones: At the time of language development, a child moves through various milestones such as Cooing, babbling, first words, two-word combinations, and more complex sentence structures. These provide guidelines, and changes in individual children's language development exist. Further, the cultural and linguistic variations impact the timing and specific milestones achieved by children in sound production or speech patterns.

Language Development Assessment: Commonly used assessments are the Picture Vocabulary Test (PPVT) or Preschool Language Scale (PLS), which measure different aspects of language skills. Therefore, a teacher needs to focus on cultural and linguistic factors when assessing language development. Also, he/she needs to consider culturally suitable assessments involving bilingual professionals.

Language Disorders and International Perspectives: The rate of language disorders globally affects children in all cultures and countries. Their rates (of lang dis) vary due to

cultural, and linguistic factors, cultural beliefs, practices, and language differences. They may also affect the diagnosis and treatment of language disorders.

Strategies to Support Language Development: Some strategies for how to support language development are stated below:

1. Making language-rich environments at home and in schools
2. Parents and teachers encourage children to read aloud
3. Develop language through play and interaction

Topic 198

Language Development in the UK:

Official and Regional Languages:

English is the official language in primary schools in the UK, spoken by the majority. Welsh, Scottish Gaelic, and Irish are also official languages in some regions. Scots, Ulster Scots, and Cornish are also regional languages in various parts of the UK. While Regional dialects within English, are Cockney, Geordie, and Scouse.

Early Language Development: Early interactions and language-rich environments are required in this regard. Therefore:

- The role of Libraries and schools is also important in shaping language skills.
- Parents and caregivers actively engage in language interactions with their children.

Language Education: The English language is a core subject in the national curriculum. English proficiency for social integration, education, and employment opportunities. Bilingual and multilingual education programs are available in the UK, providing students with diverse linguistic backgrounds.

Cultural and Linguistic Diversity: Immigrant communities create linguistic diversity in the UK by bringing a range of languages from different countries. These communities add to the language landscape of the UK. The efforts were made to promote regional languages, i.e. Welsh, Scottish Gaelic, and Irish to maintain cultural identities and linguistic heritage.

Language Support Programs, such as English as an Additional Language (EAL) support are available in the UK

Digital Tools and Language Development: The use of digital tools and technology in the UK is increasing. Interactive multimedia resources are used for language acquisition and literacy skills.

Language in Society: Regional dialects and language variations within the UK, such as Cockney, Geordie, and Scouse, and their influence on language development and identity.

Further, the Inclusive language policies and practices that value and respect linguistic diversity in the UK

Topic 199

Language Development in the USA:

Bilingualism in the USA

The USA is a country with a wide language spoken due to immigration such as English, Spanish, Chinese, Tagalog, French, Arabic, etc. Its Benefits are improved cognitive abilities, cultural and economic advantages promoted intercultural communication, and keeping connections with heritage and family. You can also see one research about the Main Languages spoken at Home by U.S. residents (2008 -2010), in the attached image.

- **Language Development in Early Childhood:** English is the primary language for most children. Children from various cultures face problems in learning English, such as vocabulary acquisition, grammar, and adjusting to a new cultural and educational environment.
- **Language Milestones and Education:** Language milestones for English-speaking children include Babbling, first words, combining words into phrases, and developing more complex sentence structures. Language Development is closely tied to educational success in the USA and Early language intervention and support ensure optimal language development
- **In Bilingual Education Programs:** Students study in both English and their native language.
- **Bilingual programs and their Benefits:** There are some benefits of the Bilingual programs:
 1. Dual-language involvement,
 2. Transitional bilingual education,
 3. Maintenance of bilingual education.
 4. promoting bilingualism, biliteracy,
 5. Cross-cultural understanding, and
 6. Improved academic outcomes.

- **English as a Second Language (ESL) Programs:** ESL programs are designed to support students who are learning English as a second language. These provide English language teaching and support to develop English proficiency in students, and the majority of classrooms in the USA often provide extra language support for English learners
- **Language Assessment and Support:** Language assessments, like WIDA (World-Class Instructional Design and Assessment) standards, Language proficiency tests, and other language development measures. While Support services for language development, Like ESL teachers and speech-language pathologists.
- **Cultural Concerns in Language Development:** Cultural factors can shape language development in the USA. Like cultural, norms, traditions, and speaking styles within different ethnic communities. Respect the Cultural practices in language development intrusions (interventions) and support the cultural identities and backgrounds of diverse learners.

Topic 200

Language Development in Finland:

Bilingualism in Finland

It is observed and considered that Finland provides the best Education system. The official languages of Finland are Finnish and Swedish. Finnish is the majority language, while Swedish is spoken in coastal areas and the independent region of Åland. Finland also provides opportunities for students to learn both Finnish and Swedish. Bilingual Education programs are available where students receive instruction in both languages. You may also see the research on Finland's Linguistic composition (2018) in the attached image.

Language Development in Early Childhood: Finnish is the primary language for most children and Swedish speaking are in the minority.

Language Milestones and Education: In Finnish-speaking children like babbling, first words, sentence formation, and expanding vocabulary. And then come towards the Swedish language education. Bilingual Education Programs provide instruction in both Finnish and Swedish.

Benefits of bilingual education:

1. Hello	1. Hei
2. Goodbye	2. Näkemiin
3. Good morning	3. Hyvää huhtia
4. Good afternoon	4. Hyvää iltapäivää
5. Good evening	5. Hyvää iltaa
6. Yes	6. Kyllä
7. No	7. Ei
8. Please (Formal)	8. Ollaa hyvä
9. Please (Informal)	9. Ole hyvä
10. Thanks	10. Kiitos
11. My name is...	11. Nimeni on...
12. What is your name? (Formal)	12. Mikä teidän nimenne on?
13. What is your name? (Informal)	13. Mikä sinun nimesi on?
14. How are you? (Formal)	14. Kuinka voit?
15. Fine, and you? (Formal)	15. Kiitos voik?
16. Fine, and you? (Informal)	16. Kiitos hyvin. Enä t?
17. Pleased to meet you	17. Kiitos hyvin. Enä sinä?

1. Improved language skills
2. Cultural understanding, and academic outcomes
3. Content and language integrated learning (CLIL), science or mathematics in a foreign language,
4. And to promote language development and content knowledge

Language Support and Resources: In Finland, support services are provided for students who need additional language support, Like:

- Finnish as a Second Language (FSL) teachers, speech-language pathologists, and multicultural resource centers.
- Availability of language resources, books, and learning materials in both Finnish and Swedish for language development and literacy skills.

Language Assessment and Support: Assessments are used to evaluate the language proficiency of bilingual students in Finland, including tests and proficiency scales for Finnish and Swedish. Individualized language support based on the unique needs of each student ensures that their language development progresses effectively.

Cultural Concerns in Language Development: Cultural factors, traditions, and norms affect language use and development in Finland. It is important to value the cultural identities and languages of diverse students. Therefore, the culturally responsive practices in Finnish schools support students from diverse cultures.

Topic 201

Language development in Australia:

Multilingualism in Australia:

Rich linguistic diversity in Australia due to its multicultural population, the presence of Native and Torres Strait Residents languages, and the wide range of languages spoken by immigrants. Further, the Australian language development also involves the Indigenous languages-preserving and uplifting Native and Torres Strait Residents' languages. You can also see one research about the Languages of Australia in the attached image.

Languages of Australia Charles Sturt University

Census year Language	2001	2006	2011	2016
English only spoken at home	80.0%	78.5%	76.8%	72.7%
Top 5 languages				
Mandarin	0.7%	1.1%	1.6%	2.5%
Arabic	1.1%	1.2%	1.3%	1.4%
Italian	1.9%	1.6%	1.4%	1.2%
Greek	1.4%	1.3%	1.2%	-
Cantonese	1.2%	1.2%	1.2%	1.2%
Vietnamese	-	-	-	1.2%

Australian Bureau of Statistics (2017). Census QuickStats.

English as the Primary Language: English is spoken by most Australians. English proficiency for social integration, education, and employment opportunities. Further, there

is also the existence of regional dialects, accents, and idioms within the Australian English language.

Language Development in Early Childhood: Language-rich environments for early language exposure and motivation in promoting language development in Australian children. Native language programs in early childhood schools to support language development and cultural preservation.

Language Milestones and Education: Typical language milestones in English-speaking children to promote Local language education to keep strong connections, and to indigenous cultures and languages.

Multilingual Education Programs: Language programs for immigrant communities-

- ESL programs and support services for children from immigrant backgrounds,
- Maintaining home languages alongside English proficiency.
- Community language schools provide opportunities for children to learn and maintain their traditional languages.

Language Assessment and Support: Language assessments for diverse learners need culturally sensitive and inclusive assessment practices, and the availability of language support services, Like ESL teachers, and educational support programs, to assist students in their language development.

Cultural Considerations in Language Development: Cultural factors, traditions, and societal norms influence language development in Australia. There is also the importance of recognizing and respecting the diverse cultural identities and languages of Australian children.

Lesson No. 44

DIVERSE CONTEXTS OF LANGUAGE DEVELOPMENT: PAKISTAN, INDIA, AND DIFFERENT SCHOOL ENVIRONMENTS

Topic 202**Language Development in a Pakistani Perspective:**

Linguistic Diversity with over 70 languages spoken across Pakistan. Major languages such as Urdu, Punjabi, Sindhi, Pashto, Balochi, and others. Regional languages in Pakistan, as they play a vital role in preserving cultural identities and fostering inclusive language development practices. You can also see the percentage/ratio of Native languages in Pakistan in the picture.

National Language and Language Policies: Urdu is the national language, and it is important as a unifying language for communication and administration. Language policies that promote Urdu as the medium of instruction in primary schools and the importance of providing education in regional languages.

Bilingualism and Multilingualism in Pakistan: Children in Pakistan grow up in bilingual or multilingual environments, where they are exposed to multiple languages (foundation of inclusive language) from an early age. Pakistani Children switch codes between languages. and mix languages during a conversation in Urdu, or Punjabi.

Language Development in Early Childhood: Early language development lays the foundation for literacy, communication skills, and cognitive development. Multilingualism in early childhood improved cognitive flexibility, cultural awareness, and bilingual proficiency. Early language development lays the foundation for literacy, communication skills, and cognitive development.

Medium of Instruction in Education: Urdu is the primary medium of instruction in most schools in Pakistan, but some challenges are faced by students from non-Urdu-speaking backgrounds, and they need inclusive language education practices. Further, there is also a significance of regional language instruction in schools' cultural preservation, identity, and effective language development.

English Language Education: Importance of English in Pakistan as an additional language, particularly for higher education, employment opportunities, and global communication. In Pakistan, the English Language is considered as an L2 language, because it is not our Native language. English language instruction in schools is to develop English proficiency among students.

Topic 203

Language development in India:

Linguistic diversity in India, with over 1,600 languages spoken across the country. Major languages-Hindi, Bengali, Tamil, Telugu, Marathi, Gujarati, and Urdu. Regional languages play a vital role in preserving cultural identities and fostering inclusive language development practices.

Bilingualism and Multilingualism in India: Multilingualism language refers to speaking two languages at a time, while bilingualism language refers to speaking more than two languages at a time. Children in India grow up in bilingual environments, where they are exposed to multiple languages from an early age. Code-switching and language mixing are common practices in India, children switch codes between languages when using a combination of languages.

Language Development in Early Childhood: The critical role of early language development in India, is that it lays the foundation for literacy, communication skills, and cognitive development. Exposing children to multiple languages in their early years enhanced cognitive flexibility, cultural awareness, and bilingual proficiency.

Regional Language Education: Regional language study in their mother tongue or regional language. It fosters effective language development. Government initiatives and educational policies are strengthening regional languages and promoting regional language textbooks, language programs, and cultural festivals.

English Language Education: Significance of English as an additional language in India, particularly for communication, higher education, and employment opportunities. English language teaching in schools develops English proficiency among students. The role of English language teachers and resources is to support English language development.

Language Assessment and Support: Standardized tests, language proficiency scales, and other evaluation methods. Language support programs, such as remedial classes, language intervention strategies, and inclusive education practices, cater to the diverse language needs of students.

Digital Tools and Language Development: Digital tools and technology in language development practices in India, using educational apps, online language learning platforms, and interactive multimedia resources for language acquisition and literacy skills. In this context, some challenges to the accessibility of digital tools are faced by all Indian children.

Topic 204

Language Development in Urban Public Schools:

There is a diverse student population in the Urban public schools. Students from various cultural and linguistic backgrounds have a richness of languages spoken, i.e. English, Urdu, Arabic, and more. Therefore, there are various challenges and opportunities for linguistic diversity of students, like language barriers, cultural exchange, and potential for language development among students.

English Language Learners (ELLs): Providing specialized support for English language learners (ELLs) in urban public schools to ensure their successful language development. Specific language acquisition strategies are used to support ELLs, like English as a Second Language (ESL) programs, comfortable instruction, and peer tutoring.

Cultural Responsiveness in Language Development: Cultural reflections valuing students' cultural backgrounds and experiences in an urban public school with a diverse student population. So, each student represents his/her culture in the language and

communication process. Teachers may include culturally relevant literature and resources in the curriculum, allowing students to develop their language in cultural identities.

Family and Community Engagement: In the language development process, the triangularity of family, school, and community is very important. Thus, there are many benefits of home language support, the language will develop early and mature also. A teacher may also involve community members as language resources, reading activities, and language-rich conversations.

Technology and Language Development: Technology integration as a tool for language development in schools is also very important. Educational apps, and language learning platforms, to enhance language skills. Teachers utilize interactive language learning apps that offer personalized language activities.

Professional Development for Teachers: Ongoing professional development to enhance their skills for language development. Because professional development is a continuous process. Teachers receive training on culturally responsive teaching practices, Language assessment strategies (because assessment of language is different from the other subjects, but it covers all four skills listening, speaking, reading, and writing), and Techniques for specific linguistic needs of their students.

Topic 205

Language Development in Rural Public Schools:

Unique Characteristics of Rural Public Schools: Smaller student populations compared to urban schools, more personalized attention, and individualized instruction. There are lots of challenges faced in the Rural School such as Limited resources due to budget constraints, technology, materials, and staff, and Geographic isolation-located in remote areas.

Language Diversity in Rural Communities: Regional dialects of Indigenous languages, add to the richness of linguistic diversity., Immigrant languages bring their native languages, creating a multicultural environment, because the students come from different backgrounds, and cultures which creates diversity in the schools.

Importance of Language Development in Rural Schools:

- Academic success
- Social integration
- Cultural preservation

Cultural and Community Context: Close-knit communities create opportunities for collaboration between schools, families, and community members. Also, the presence of Local culture and traditions into the curriculum enhance students' language development.

Resources and Support in Rural Schools: Maximizing limited resources by new ways utilizing community partnerships and community involvement provides additional support and resources. For example, In Pakistan, there is a non-governmental organization PRSP (Punjab Rural Support Program), is provides resources, and funds to rural schools.

Teacher Professional Development: Non-governmental organizations and teachers both play their roles in the teacher's professional development. Rural schools' teachers benefit from professional development programs and culture-based practices to engage rural students in language development.

Family and Community Engagement: Family involvement in language-rich activities collaborating with local organizations, Libraries, and cultural institutions provides additional language resources.

Technology and Distance Learning: This is the new trend of the role of Technology and Distance learning in language learning because the population is growing very rapidly it is very difficult for the government to provide funds. Therefore, overcoming geographic barriers by Technology, providing access to online resources, virtual classrooms, and distance learning programs, and Digital literacy skills in language development activities.

Assessment and Monitoring: Without assessment, the development of language cannot be assessed. There are various types of assessments such as Formative assessments, and portfolios to assess students' language development progress. Summative assessments at

the end of the session While. standardized tests for language proficiency levels and ongoing monitoring ensure timely intervention and support when needed.

Topic 206

Language Development in Posh Private Schools:

Posh private schools are famous for their good reputation, high tuition fees, and exclusive admissions criteria. They offer luxurious facilities and a wide range of resources to support students' education, including language development. For example, Beaconhouse, city schools, American, Choueifat, and other international posh private schools in Pakistan.

Language-rich Environment: The Posh private schools focus on creating a language-rich environment to foster language development. Students have access to various vocabulary, language models, laboratories, and opportunities for language practice.

Small Class Sizes and Individualized Attention: These schools enable teachers to provide individual attention to each student. Also, teachers modify their teaching for the language development needs of students.

Well-Qualified & Experienced Teachers: They have special training in language teaching and pedagogy, ensuring high-quality programs. In Pakistan, the British Council is working on the language development. Therefore, this organization is also helpful for the professional development of teachers.

Multilingual Programs: The Posh private schools also offer multilingual programs, providing students with opportunities to learn multiple languages. They help expose students to different cultures, enhance their cognitive abilities, and equip them with valuable communication skills.

Technological Integration: These schools emphasize including technology in language development programs and utilize educational software, digital resources, and interactive learning platforms to engage students in language learning activities.

Enrichment Activities and Experiences: The Posh private school plans activities and experiences to enhance students' language development such as drama, music, art, and international exchange programs. In this regard, they will provide opportunities for language practice, creativity, and cultural understanding to the students.

Parental Involvement: Parentals are involved and valued. They actively engage in language-related activities and provide support at home to reinforce language development efforts.

Assessment and Evaluation: Teachers and schools use comprehensive assessment and evaluation including formative and summative assessments, portfolio-based assessments, and standardized tests to track progress and identify areas for improvement.

Lesson No. 45

CHALLENGES AND TRENDS IN ENGLISH LANGUAGE DEVELOPMENT IN PAKISTAN

Topic 207

Problems in English Language Development in Pakistani schools

Lack of English Language Proficiency:

In Pakistan, many students face difficulties with speaking, reading, writing, and understanding English due to limited exposure and insufficient language instruction. Furthermore, teachers often lack the necessary skills to effectively teach the English language.

Limited Resources and Infrastructure: Pakistani schools particularly in rural areas lack the resources and infrastructure to support English language development, and limited access to textbooks, teaching materials, technology, and language learning resources hinders ineffective English language instruction.

Inadequate Teacher Training: Many English language teachers in Pakistani schools do not receive adequate training in language teaching methodologies. There is also a lack of professional development opportunities and limited exposure to effective language teaching approaches.

Traditional Teaching Methods: They focus on rote memorization and grammar rules, rather than communicative and interactive language learning. This approach hinders students' ability to use English effectively in real-life situations.

Lack of Speaking Opportunities: These schools provided limited opportunities to practice and develop their speaking skills in English. Especially, in Pakistani public schools, no English test, and practice is not conducted for students. There is also a lack of conversational activities, group discussions, and interactive language practice that prevents students' ability to gain fluency and confidence in spoken English.

Socio-cultural Factors: Societal attitudes towards English and socio-economic disparities can impact English language development in Pakistani schools. As a result, students in public schools from low-income families often lack the resources needed to practice and improve their English language skills. English is perceived as a language for the elite, leading to less emphasis on its importance in certain communities.

Examination-focused Approach: The examination focuses on rote memorization and test preparation over full language development, especially in public schools of Pakistan. It limits students' ability to develop critical thinking, creativity, and effective communication skills in English.

Limited Integration of Technology: These schools provide limited access to educational software, online resources, and digital language learning platforms, stopping students from engaging with interactive language learning tools.

Topic 208

Issue of Multilingualism in Pakistani schools:

Multilingual Landscape of Pakistan:

Pakistan is a linguistically diverse country with a rich multilingual landscape and numerous regional languages, including Punjabi, Sindhi, Pashto, Balochi, and others. In Pakistan, students often speak multiple languages simultaneously, including a provincial language at home, Urdu, and English at school. Therefore, regional languages are dominant in daily communication, and these serve as important markers of cultural identity.

Limited Exposure to English: Students in many areas may have limited exposure to English, which can impact their proficiency in the language. Differences in availability and quality of English language instruction across different types of schools such as private, urban, public, and rural.

Challenges in English Language Development: There are also various challenges in English language development such as limited exposure to English and disparities in language instruction. These affect students' ability to compete in a globalized world and access higher education or employment opportunities.

Awareness and Sensitization: We can overcome these challenges by raising awareness and sensitization among stakeholders, including teachers, parents, and policymakers, to promote positive attitudes towards different languages, creating an inclusive language

learning environment, as well as appreciate and value the linguistic diversity found in Pakistani schools.

Topic 209

Teacher training problems for language Development in Pakistan:

Effective teacher training is very important for promoting language development in schools. Well-trained teachers create supportive learning environments. Training programs in Pakistan lack a sufficient focus on language instruction and teachers fail to receive good training.

Insufficient Training on Language Teaching Methodologies: Teachers receive inadequate training on language teaching methodologies. They lack knowledge of proven approaches for teaching listening, speaking, reading, and writing skills effectively. Further, programs do not expose innovative language teaching approaches and limited ability to incorporate modern techniques

Inadequate Time and Resources for Training: Teachers face time and resource constraints for professional development, limited training opportunities, hindered ability to enhance language teaching skills, and not updated with current pedagogical practices.

Lack of Ongoing Professional Development: Teachers have a lack of access to ongoing professional development opportunities for continuous language instruction improvement and a deficiency of Language-specific Training. Although the Institute of Quaid Academy (Directorate of Staff), the British Council, and other non-governmental organizations significantly contribute to the professional development of teachers, there is still a need to expand and enhance the number of teacher training courses and programs.

Collaboration and Support Networks: Collaborative networks and support systems for language teachers are limited in Pakistan. They require platforms for sharing best practices, resources, and experiences that can enhance language instruction. The need for comprehensive policies that prioritize language instruction and teacher training is crucial adequate resources and support must be provided

Topic 210

Lack of Facilities for Language Development in Pakistani Schools:

Adequate facilities are important for language development. Well-equipped classrooms and resources increase language learning experiences. Overcrowded classrooms and lack

of space hinder language development and poor seating arrangements limit student activities.

Limited Access to Learning Materials: The Scarcity of textbooks, reading materials, and supplementary resources delays language learning, and more focus on the content as compared to the activities. Lacking access to libraries and resource centers, limited availability of language laboratories, and lack of audio-visual resources stop interactive language learning experiences.

Limited Technology Integration: Inadequate access to computers, interactive whiteboards, and language learning software limits technology-assisted language instruction. The lack of multimedia resources reduces the lack of Language-specific resources dictionaries and reference books, therefore, All these limitations in technology integration negatively affect both the language development and the overall learning and teaching process.

Insufficient Language Support Services: Limited support services for English as a Second Language (ESL) learners are as follows:

- Inadequate language intervention programs.
- Lack of professional development opportunities for using facilities.
- Deficient training for including technology

Funding Constraints: Funding constraints contribute to the lack of facilities for language development and impede infrastructure improvement and the acquisition of language learning materials. But the collaboration with local organizations and community members can provide resources

Topic 211

Trends in Language Development:

Language development is a dynamic field that constantly evolves to meet the changing needs and expectations of learners, educators, and society. These trends reflect progress in technology, research findings, pedagogical approaches, and societal shifts. As there is a worldwide change in the education system, the content has been changed into competence. This is an example of a societal shift.

Multilingualism: Growing emphasis on multilingualism as a trend in language development. The recognition of the benefits of being proficient in multiple languages for communication and cognitive skills.

Digital Language Learning: Increasing use of digital platforms and online resources for language learning. Technology to provide interactive and modified language learning experiences. As you can also see other 21st-century teaching methods in the image.

Communicative Language Teaching: Shifting towards a communicative language teaching approach is another trend. So, teach students about meaningful communication, real-life contexts, and authentic language use.

Culturally Responsive Language Instruction: Recognizing the importance of culture-based language instruction. The incorporation of diverse cultural beliefs, and content to promote inclusive language development.

Language for Specific Purposes: Growing emphasis on language instruction for specific purposes or domains. Language learning programs are designed for specific professions or industries to meet the learners' needs, and increase adoption of task-based language learning approaches and engagement in real-world tasks

Individualized Learning Paths: Shift towards individualized learning paths in language development. As each child's psychology and learning style are different from the other students. Therefore, it is essential to recognize the individual differences among children and offer adaptive learning platforms and personalized instruction to address each learner's unique needs and abilities. Additionally, integrating all language skills into the teaching process is crucial for effective language education.

Content and Language Integrated Learning (CLIL): Integrating language learning with other academic subjects fosters interdisciplinary learning and supports a shift toward formative assessment approaches. These assessment practices offer valuable feedback, monitor progress, and guide ongoing language development.
