

Lesson No. 1

Teaching of Literacy Skills**Topic 1: Concept of Literacy**

What is literacy?

The term literacy refers:

1. often mainly to reading,
2. sometimes to reading and writing,
3. and rarely, to reading, writing, speaking and listening

The activities of reading, writing, speaking and listening in a learning environment are included in literacy.

- ***Literacy** is the ability to read and write, but also includes skills like critical thinking, listening, speaking, viewing and presenting.*
- ***Numeracy** is being at home with numbers, and knowing the smartest way to solve mathematical problems.*

Topic 2: What is Meant by Literacy Skills?

Literacy skills are those which help in:

- developing literacy, and
- improving literacy

Topic 3: Different Types of Literacy Skills

There are different types of literacy skills:, e.g.:

- **Reading:** even if you read a sentence, it is literacy skill because you had that level of literacy which enabled you to read the sentence. Reading a book, newspaper or thesis etc. is all included in literacy skills.
- Many sub-skills are involved in the reading skill, like **reading the words, understanding the words, connecting the words, connecting the meaning of those words,** and then collectively **understand the message.**

Topic 4: Learning Literacy Skills

Literacy skills help students gain knowledge through reading as well as using media and technology. These skills also help students create knowledge through writing as well as developing media and technology.

There are two ends to the concept of learning literacy skills.

1. Students' concern is to learn these skills
2. Teachers must ensure that their students learn all the main and the allied sub-skills included in literacy skills.

Literacy is the **ability to read, view, write, design, speak and listen** in a way that allows you to **communicate effectively**

Topic 5: Significance of Literacy Skills

Figure 1 presents a very basic level of literacy – some alphabets, a musical note, some pictures – it is, most likely, connected with very young children who are starting to learn. For them, nevertheless, these are the literacy skills that they have to learn, and proceed to improve forward.

Figure 1

A much more complicated situation is presented by Figure 2.

It is a highly developed and advanced model of literacy. For instance, computer literacy will require knowledge of technology, writing, typing, reading, how to download

Figure 2

information from web, how to search, save, how to put/ retrieve information in/ from mail, etc.

Literacy skills provide the basics to proceed for learning and gaining, and creating knowledge in any discipline. The level of these skills may be different according to the level of learners.

Topic 6: Literacy Skills in Classrooms

Literacy skills are also strongly connected to classroom learning, which again ultimately contributes to the country's development and growth.

Figure 3

Figure 3 presents a picture of a classroom that is not using any technology, which is a very important helping factor of the modern classroom. While Figure 4 shows a modern classroom, where each student is using technology and is learning in an interactive manner. Notice that there are no heavy bags in Figure 4.

Figure 4

Classrooms help to a great extent in improving literacy skills that provide the base for the development of a country. For instance:

- Literacy rate in **Pakistan** – 58%
- Literacy rate in **USA** – 90-95%

As such, the literacy skills being used or developed in the classroom connect with the development of the country at the **macro level**.

Lesson No. 2

Levels of LanguageTopic 7: What is Language?

The connection between language and literacy is powerful. Some language and literacy learning happens naturally during play and everyday experiences, and some depends on clear instructions from observant and sensitive adults. Language and literacy are connected from infancy onward. Speaking, listening, reading, and writing develop concurrently (*together*) rather than sequentially (*one after the other*).

- Language is a system of communication using **sounds** or **symbols** that enables us to express our feelings, thoughts, ideas and experiences.
- Language is the **key to communication**.
- The **basic purpose** of the system of language is **communication**. It means whenever we have to communicate with others, we have to use language in one or other way.
- Purposes, modes or styles of communication can be different, e.g. chit-chat with a friend, talking with teacher, reading a philosophy book, writing a story, etc. Nevertheless, in each case, a system of language is used.

Topic 8: Different Levels of Language

- 1) The **first level** of language is **Phonology** which is related with **sound**.
- 2) Next, **Morphology** is the level of **words and forms** in language. It is what one normally understands by **grammar** (along with **syntax**).
- 3) **Syntax** comes next and is related with **clauses, phrases, and sentences**. It involves differences in meaning that occur by changes in word order
- 4) **Semantics** is the area of **meaning**.
- 5) **Pragmatics** is the **last** and is related with use of **language**
 - All languages are known as systems of **communication**.
 - The systems of languages may be different from each other but they follow the same levels that start from the **basic one (phonology)** and go up to **use of language (pragmatics)**.
 - When we study language scientifically in stages like above, it is known as “linguistics”

Extra Reading – Short Note

*Linguistics is the **scientific** study of language. There are three aspects to this study: language **form**, language **meaning**, and language in **context***

Topic 9: Phonology

Phonology is the study of **how sounds** are **organized** and used in natural languages. It is a branch of linguistics concerned with the **systematic organization of sounds** in languages. The phonological system of a language includes a **list of sounds** and their **features**, and **rules** which specify how sounds interact with each other.

Sounds are represented by **signs or symbols** in a language, as in this chart which represents sounds in English language. It is called the “**International Phonemic Chart of English**”. There are **26** alphabets in English and **44** sounds related with those alphabets. These sounds help us to know the exact pronunciation of particular alphabets.

Phonology, therefore, is the study of **sounds**, and the **combination of sounds**, that is, how are these sounds **organized**.

- **Sounds** are known as “**phonemes**”

Topic 10: Morphology

Morphology is a sub-discipline of linguistics in which **forms and structure** of **words** in a language are studied. In easier words, one can say that **sounds** combine to form **words**, and that is **Morphology**.

Morphology is the study of how things are put **together**, like the make-up of animals and plants, or the branch of linguistics that studies the structure of words.

In morphology, the word part **morph-** means "**form**" and **-ology** means "**the study of.**" So, those who study how something is made or formed are engaged in morphology. In biology, the morphology of **fish** might investigate how the **gills** work as part of the respiratory system. In language **morphology**, you might study how **prefixes** and **suffixes** added to a word change its meaning.

- Words in a language consist of one element, or elements, of meaning which are known as "**morphemes**"
- Number of "**phonemes**" (sounds) **combines** to give a "**morpheme**" (word).

Topic 11: Syntax

Syntax is the **sequence** in which **words** are put **together** to form **sentences**. In English, the usual sequence is subject, verb, and object. (Note: Syntactic languages, such as English, use word order to indicate word relationships).

- "**Syntax**" is a **Greek** word, which means "**order**" قرینے سے لگا ہوا ترتیب وار
- If **words** are not put **together** in certain order in sentence, they will just be **morphemes** and will not form a proper sentence to convey any meaningful message
- To **understand** a sentence, a proper order, or sequence of words is necessary. This **order** or **sequence** is called **Syntax**.
- Word arrangement is essential to communicate properly

Topic 12: Semantics and Pragmatics

- Whenever we enter the sphere of “**meaning**”, we are talking about “**semantics**” and “**pragmatics**”.
- “**Meaning**” is what we use the language for—to communicate with each other, to convey 'what we mean' effectively.
- Both **semantics** and **pragmatics** have to do with the **meaning of language**, and **link** language to the **world**.

The branch of linguistics and logic concerned with **meaning**. It is concerned with the **meaning** of a **word**, **phrase** or **text**. Similarly, analysis of word meanings and relations between them is also studied here.

SEMANTICS VERSUS PRAGMATICS

SEMANTICS	PRAGMATICS
Study of words and their meanings in a language	Study of words and their meaning in a language with concern to their context
Focuses mainly on the significance of the meaning of words in a literal sense	Additionally focuses on the meaning of words according to the context and their inferred meanings as well
Studies the literal meaning	Studies the intended or the inferred meaning as well
	Visit www.PEDIAA.com

Image added by @Alpha

Extra Reading**SEMANTICS**

The most general definition of semantics is that it is "the study of linguistic meaning", or "the study of the meaning of words and sentences"

PRAGMATICS

Pragmatics is the study of "how to do things with words", or "the study of the contribution of context to meaning".

@Alpha

Lesson No. 3

Certain Terms

(related to language and language learning, and literacy)

Topic 13: Acquisition and Learning

Language **acquisition** is the process by which children **acquire** the capacity to perceive and comprehend language, as well as to produce and use words and sentences to communicate in a natural way and not consciously.

GLOSSARY

- **Acquisition:** Gaining, Attainment, Acquirement
- **Perceive:** Notice, Identify, Make out, Sense, Become aware of
- **Comprehend:** Understand, Know, Grasp

Children **acquire** language through a **subconscious** process during which they are **unaware** of grammatical **rules**. They get a feel for what is and what is not correct. In order to acquire language, the learner needs a source of natural communication. The **emphasis** is on the **text** of the communication and **not on the form**. Young students who are in the process of acquiring English get plenty of “on the job” practice. They eagerly acquire the language to communicate with classmates.

Language **learning**, on the other hand, is the result of direct instructions in the rules of language. It certainly is not an age-appropriate activity for your young learners. In language learning, students have conscious knowledge of the new language and can talk about that knowledge. They can fill in the blanks on a grammar page. Research has shown, however, that knowing **grammar rules** does **not** necessarily result in **good speaking** or **writing**. A student who has memorized the rules of the language may be able to succeed on a standardized test of English language but may **not** be able to **speak** or **write** correctly.

Topic 14: Difference between Acquisition and Learning

- **Acquisition** is **implicit**, but **learning** is **explicit**.
- Acquisition is **age-related**, but learning is **not**.
- Acquisition is **not** effort related, but learning **is**.

Therefore, teaching literacy comes under the heading of learning.

GLOSSARY

- **Explicit:** Clear, Obvious, Precise, Unequivocal
- **Implicit:** Hidden, Implied, Understood, Tacit

Acquiring language is said to be a **subconscious** process. It's the act of **internalizing** language to which you have been exposed **without** the deliberate memorization of a word and its definition. With acquisition, you don't need to be aware of the learning process. Acquisition of language occurs from your **environment** where your **surroundings** provide the **input** and language acquisition just happens magically with repeated exposure to the target language.

Learning is a **conscious activity**. It's what we do when we look a word up in the dictionary. It's also what happens when we learn rules about how language works or purposefully study lists of vocabulary and grammar forms. Enrolling in a language class involves deliberate learning. Here, the language will be learned through memorization and direct study.

Topic 15: Native Language

- It is the language that a person acquires in early childhood because it is spoken in the family and/or it is the language of the region where the child lives.
- Also known as mother tongue, **first** language, **arterial** language, or **L1**.
- Native language is the one that the child learns from their parents in home environment.

- Children growing in **bilingual** homes can have more than **one mother tongue** or **native language**
- Child acquires the words, sentences, rules of the language, etc, of L1 **automatically** from immediate family and the surrounding environment.

Topic 16: Second Language

- It is the language **other than** the **mother tongue** that a person or community uses for public communication, especially in trade, higher education, and administration.
- It is a language **learned** by a person **after** his or her native language, esp. as a resident of an area where it is in general use.
- A person's second language (or L2) is a language that is **not** the **native** language of the speaker, but that is used in the locale (setting, area, locality) of that person.
- It is **next** to native language
- The user of the second language (L2) often has the same or almost the same competency in this language as in their native language (L1).

Topic 17: Foreign Language

- A foreign language is a language originating from **another country**.
- It is also a language **not** spoken very commonly in the **native** country of the person.
- For instance, Italian or French language in Pakistan.
- Teaching foreign language should start from the **very basics**

MOST-STUDIED LANGUAGES ON U.S. COLLEGE CAMPUSES, FALL 2009:

LANGUAGE	ENROLLMENTS	CHANGE SINCE 2006
1. Spanish	864,986	+ 5.1%
2. French	216,419	+ 4.8%
3. German	96,349	+ 2.2%
4. ASL American Sign Language	91,763	+ 16.4%
5. Italian	80,752	+ 3%
6. Japanese	73,434	+ 10.3%
7. Chinese	60,976	+ 18.2%
8. Arabic	35,083	+ 46.3%
9. Latin	32,606	+ 1.3%
10. Russian	26,883	+ 8.2%
11. Ancient Greek	20,695	- 9.4%
12. Biblical Hebrew	13,807	- 2.4%
13. Portuguese	11,371	+ 10.8%
14. Korean	8,511	+ 19.1%
15. Modern Hebrew	8,245	- 14.2%

Source: *mla.org*

Topic 18: Regional Language

- A **regional language** is a language spoken in an area of a **sovereign** (independent, self-governing) state, whether it is a small area, a federal state or province, or some wider area.
- A regional language is a language spoken in an area that is **part of a larger nation state**.
- For instance, **Punjabi, Sindhi, Hindko, and Sareiki** are regional languages of Pakistan among many others.
- Regional language becomes the native language (L1) of the people in that particular region. For instance, Punjabi, Sindhi, Pashto or Balochi are the native languages of the people of their respective areas because these languages are spoken and understood in those particular areas only.
- A **dialect** is a variety of a language which has **different pronunciation, grammar** or **vocabulary** than the **standard language** of the region. For example, **Shahpuri** dialect (also known as **Sargodha** dialect), or **Utradi**, a form of Sindhi language regarded as a dialect of Sindh; spoken mainly in Upper Sindh.

Lesson No. 4

Stages of Language DevelopmentTopic 19: First Stage*Introduction*

Language development is the process by which children come to understand and communicate language during early childhood.

- From **birth** up to the age of **five**, children develop language at a very **rapid** pace. The stages of language development are **universal** (common) among humans.
- However, the age and the **speed** at which a child reaches each highpoint of language development **differ** greatly among children.
- Thus, language development in an individual child must be compared with **norms** (standards) rather than with other **individual** children. **In general girls develop language at a faster rate than boys.**
- Language development reflects the growth and maturation of the brain. After the **age** of **five** it becomes much more **difficult** for most children to learn language.
- There are six stages of language development.

First Stage

Sounds: Infants, from **birth**, make and respond to many sounds. **Crying, gurgling, and cooing** are important first steps in the language-development process.

- This period is also known as **Pre-Linguistic** Language Development stage
- The child is learning to control the sounds they can produce and to string these sounds together in vocal play. In this stage, the child is **not** yet able to **manipulate** these sounds into **proper words**.
- The foundation of L1 is created during this stage.

Topic 20: Second Stage

Babbling: All of the **sounds** found in all languages are encompassed in children's first babbling. Gradually, **babbling** becomes more **specific** with native language syllables being consistently practiced.

- This period is also included in the Pre-Linguistic Language Development stage
- At this time, the child starts 'babbling'.
- Sounds are given intonations (pitches, tones) learned from the family.
- The child begins to produce a series of **consonant-vowel** syllables and may develop utterances, but has **yet to** produce proper words.
- Babbling continues during the first **year** of the birth and then normally **finishes**.

Topic 21: Third Stage

Holophrases: The first word evolves to many single words or syllables that stand for a variety of meaningful sentences or phrases in different situations. "Car" said while looking out the window may mean, "Look at the car outside".

- **Holophrases** are related with **nouns**
- They are **context related**, because child has a **specific** meaning in their mind
- They may be having only **one word**, but for the child they express a complete sense.
- This stage starts from **10 – 13 months**.

Topic 22: Fourth Stage

Two-Word Sentences: Two-word sentences appear between **eighteen and twenty months** of age and express ideas concerning relationships: e.g.

- "Mommy-sock" (possessor-possession) – my mother owns these socks
- "Cat-sleeping" (actor-action)

- “Drink-milk” (action-object)
- A vocabulary of about **300** words is typical.

At this stage, the child has **not** attained competency in rules of grammar. The child has simply attained capability in putting two words together in some logical relationship.

Topic 23: Fifth Stage

Telegraphic Sentences: Simple **three or more** word sentences usually comprising at least one noun and verb that stick to the grammatical standards of the culture's language.

- At least **50** different words
- **No function** words (is, are, am) and grammatical morphemes – e.g. “Mommy juice”, “baby fall down”
- Reflecting the order of the language (maintaining sequence of the language) – e.g. “kiss baby”, “baby kiss”
(SVO^{ENG} – SOV^{URDU})
- Creatively combining words – e.g. “more outside”, “all gone cookie”.

Telegraphic sentences are **short** and **simple**. Similar to **telegram**, they **omit** function words and endings that contribute little to meaning. For example: “Where Daddy go?”, “Me push truck”.

Topic 24: Sixth Stage

Joined Sentences: As language development proceeds, children learn to join related sentences logically and express ideas concerning time and spatial relationships. They come to understand social expectations for language use.

- At this stage, child learns to **complete** the sentences with the so far missing elements (**functions, endings**)
- Child learns to use language as is done by their **adults**
- Child acquires all these skills **unconsciously** and **naturally**
- The vocabulary extends to about **1,000 words**
- Child also learns the rules, forms and norms for using these words as is required by the language

FLASH

- | | | |
|-------------------|------------------------------|---|
| 1 st . | Sounds | Infants , from birth |
| 2 nd | Babbling | All of the sounds found in all languages are encompassed in children's first babbling, Continues during the first year and then finishes . |
| 3 rd | Holophrases | The first word evolves to many single words or syllables "Car" said while looking out the window may mean, "Look at the car outside", related with noun, context related , and starts from 10 – 13 months . |
| 4 th | Two-Word Sentences | Eighteen and twenty months of age, about 300 words |
| 5 th | Telegraphic Sentences | Simple three or more , least one noun and verb , 50 different words, No function words (is, are, am), short and simple . Similar to telegram , |
| 6 th | Joined Sentences | complete the sentences with the so far missing elements (functions, endings), vocabulary of about 1,000 words , acquired unconsciously and naturally |

GLOSSARY

*A **spatial relation** specifies how some object is located in space in **relation** to some reference object. In the beginning of language development, early spatial concepts include: in front of, behind, top, etc.*

Lesson No. 5

Some GuidelinesTopic 25: Need for Guidelines

- **Guideline** is a **general rule, principle, previous example, or piece of advice**; a line by which one is guided.
- Guidelines always help us to determine a **course of action** especially when we are **planning** or **designing something**.
- By discussing different examples, we will try to focus on certain guidelines for teaching literacy skills.

Topic 26: Language Development

- There are different stages starting from sounds, and going to babbling, Holophrases, two word sentences, telegraphic sentences, and finally joint sentences.
- It can be observed that language starts with **simple sounds** which develop into **understandable** conversations.
- During the language development process, the child moves from the **simple** to **complex**, and **broken sentences** or incomplete sentences to **complete sentences** (**this is the guideline**).
- The acquisition of language is one of the more remarkable achievements of early childhood. By **age 5**, children essentially **master the sound** system and **grammar** of their language and acquire a vocabulary of thousands of words.
- **Literacy skills** are related to **language development** – so the same **guidelines** apply.

Topic 27: Language Model

- Sounds develop into forms and words, which mature into clauses and sentences, followed by meanings and proper use of language.

- Both models follow the same pattern of "from **simple to complex**", "from incomplete to complete".
- Guideline: start with the **basics** and move on to the **complex**.

Topic 28: Literacy Models**Basic Model****Complex Model**

Literacy is fundamental for learning in school. It has an impact on an individual's ability to participate in society and to understand **important** public issues. And it provides the foundation upon which skills needed in the labour market are built.

- It is possible that an individual fails to reach the level of the complex model; but anyone who has reached the level of the complex model must have passed through the level of the basic model.
- Guideline: we should start from the basics when teaching literacy skills

Topic 29: Literacy Classroom

- In literacy classroom, we teach all of the skills needed for **reading** and **writing**.
- They include such things as awareness of the sounds of language, awareness of print and the relationship between letters and sound.
- When we say somebody is **literate**, we mean that s/he is able to **read, write, speak** and **understand** the subject matter – all these skills contain within themselves several other skills.
- Literacy classroom is a combination of several skills and corresponding sub-skills

Topic 30: Starting from Basics

- The models discussed previously guide us that we should start from the basics when teaching literacy skills – start with the simple and move to the difficult from there onwards – step-by-step

- Alphabets
- Sounds
- Words
- Pronunciation
- Order of words
- Sentences
- Reading
- Writing, etc.

Sequence to follow for attaining any of the major literacy skills like reading, writing, speaking, listening.

Above is based on the **guideline** for a **literacy classroom**: from easy to difficult.

Lesson No. 6

What Should Literacy Do?Topic 31: What is a Code?

Code is the message conveyed through **communication** (read, view, listen) and **encode** (write, speak, present) – uses alphabet, sounds, spelling conventions, sentence structure, etc.

- In communications and information processing, **code** is a system of rules to **convert information**—such as a letter, word, sound, image, or gesture—into another form or representation, sometimes shortened or secret, for communication through a channel or storage in a medium.
- Literacy is connected to certain codes – in the effort to attain literacy, you are trying to achieve a competency to deliver your code effectively.
- The **basic purpose** of language is **communication** – the more refined the literacy skills, the more effective the communication is.

Topic 32: Code Breaker

Code breaking ability is the ability to **decode** (read, view, listen) and encode (write, speak, present) – uses alphabet, sounds, spelling conventions, sentence structure, etc.

- When you are making or delivering a message, you are encoding; when you are trying to understand a message, you are decoding
- The encoding of a message is the production of the message. It is a system of coded meanings, and in order to create that, the sender needs to understand how the world is comprehensible to the members of the audience.
- The decoding of a message is how an audience member is able to understand, and interpret the message.
- **Literacy skills** refine a person's ability to **encode** and **decode**

Communication Model

**Topic 33: Meaning Making**

(One of the most important objectives to be achieved by literacy)

The ability to draw on prior knowledge, interpret and make meaning of texts and inferred meaning

- Meaning making is a **lengthy process**, involving different stages
- Depends upon individual's level of knowledge, and how refined it is
- Because of difference in the levels of knowledge in various people, the same message may be understood differently by different people.
- Making meaning out of a message is a very important target of literacy

Topic 34: Using Text

Ability to draw on **prior knowledge** (mental storage, back-up, schemata), interpret and make meaning of texts and use them for different purposes. This is another important target of literacy skills.

- If a student is given an assignment and has to add information from a particular reference, but is unable to do so, it means that s/he is not literate enough to use that text.
- Texts have different purposes, for instance, letter to a friend, application to a higher authority, trying to answer a question in a question sheet, etc. have different objectives and different audiences.
- Literacy skills teach you to make proper codes for using **text efficiently**

Topic 35: Analyzing Text

Analyzing involves **digging deeper** into the **meaning** of the **text**. It goes beyond memorizing facts, dates, and names. It requires more than main ideas and details. Analyzing means forming an educated opinion about what you have read.

- Understand and act upon the knowledge that texts are not neutral but position and influence the audience through various means.
- For instance, a joke may be funny and may make the audience laugh, but if it humiliates a certain part of the community it is not in good taste. We reach to this conclusion after analyzing the text of the joke. We are using our background knowledge for this purpose.
- Texts are not neutral – they have different purposes, and influence different persons differently.
- For example: text in a philosophy book or in a story book – both have different purposes and different effects on the readers. Similarly, a news in a Newspaper will have different effect on different people.
- You cannot understand a text properly without **analyzing** it.
- **Literacy skills** help you learn to **analyze** text competently

Topic 36: Examples

- Following processes are involved when you read:
 - **Coding**
 - **Decoding**
 - **Using text**
 - **Interpreting meaning**
 - **Analyzing text**
- The same processes are used when you write, except for “decoding” where you “encode” the text instead.
- Eliminating one process (or literacy skill) will have drastic effects on coding and communication.
- Literacy skills target all these areas.

Lesson No. 7

Literacy ClassroomTopic 37: Student-centered

Student-centered learning is focused on each **student's interests, abilities, and learning styles**, placing the teacher as a **facilitator** of **learning**.

- While teachers are an authority figure in this model, teachers and students play an equally active role in the learning process. The teacher's primary role is to coach and facilitate student learning and overall comprehension of material. Student learning is measured through both **formal** and **informal** forms of **assessment**, including **group projects**, **student portfolios**, and **class participation**. Teaching and assessment are connected; student learning is continuously measured during teacher instruction.
 - In **student-centered** classrooms, students are **directly involved** and **encouraged** in the **discovery** of their **own knowledge**. Through **collaboration** and **cooperation** with others, students engage in experiential learning that is authentic, holistic, and challenging. Students are **empowered** to use **prior knowledge** to construct **new learning**
 - This classroom teaching method acknowledges **student voice** as **central** to the **learning** experience for every learner, and differs from many other learning methodologies (e.g. teacher-centered)
 - Target of teaching: **every** student must advance towards achieving learning goals – facilitate **every** student to learn.

Topic 38: Teacher-centered

Teacher-centered learning is focused on **teacher's interests, abilities, and learning styles**, **placing** the teacher as the center of classroom.

- Teachers are the **main authority** figure in this model. Students are viewed as “**empty vessels**” whose primary role is to passively **receive information** (via **lectures** and **direct instruction**) with an end goal of testing and assessment. It is the **primary role** of teachers to pass knowledge and information onto their students. In this model, teaching and assessment are viewed as two separate entities. Student learning is measured through objectively scored tests and assessments.
 - Teacher's **interest** and **learning style** are important here; i.e. the teacher makes students learn in the same style as she used to learn, for instance, if the teacher was an audio-learner the students will be required to learn through lectures. Visual-learners may not be able to follow the teacher properly.
 - This classroom teaching method acknowledges **teacher voice** as **central** to the learning experience for every learner.

Teacher-Centered	Learner-Centered
• Focus is on instructor	• Focus is on both students and instructor
• Instructor talks; students listen	• Instructor models; students interact with instructor and one another
• Students work alone	• Students work in pairs, in groups, or alone depending on the purpose of the activity
• Instructor monitors and corrects every student utterance	• Students talk without constant instructor monitoring
• Instructor chooses topics	• Students have some choice of topics
• Instructor answers student's questions about language	• Students answer each other's questions, using instructor as an information resource
• Classroom is quite	• Classroom is often noisy and busy
• Instructor evaluates student learning	• Students evaluate their own learning; instructor

Topic 39: Roles of Teacher

A teacher can adapt **different** roles in a classroom. These roles decide not only the dimensions a classroom can take, but also the quality of teaching and learning.

- The role of a teacher is not eliminated even from the modern classrooms which use a significant amount of technology.
- A teacher decides through different roles in a classroom that class is **teacher-centered** or **student-centered**. For instance, if the teacher keeps **controlling** the class, it becomes **teacher centered**.

Topic 40: Details of Teacher's Roles

Teachers assume a wide range of roles to support school and student success. Whether these roles are assigned formally or shared informally, they build the entire school's capacity to improve. Because teachers can lead in a variety of ways, many teachers can also serve as leaders among their peers.

roles	functions
Controller	the pace / everyone has an equal chance/ make sure Ss use certain target language items/time
Assessor	correcting mistakes (be gentle) organizing feedback (Don't be critical)
Organizer	design and organize tasks (give clear, concise instructions) While Ss are doing the activity, the teacher should walk around the classroom and monitor what the Ss are saying.
Prompter	When students are not sure how to start an activity, or what to do next, or what to say next, the teacher should give appropriate prompts.
Participant	participate in students' activities
Resource-provider	a good and convenient resource for the students.

Among the **most important** roles a teacher may assume is that of **learner**. Learners exemplify continual improvement, demonstrate lifelong learning, and use what they learn to help all students achieve.

- Jeremy Harmer
<https://www.google.com.pk/#q=jeremy+harmer+practice+of+english+language+teaching+pdf>
(this is a continuous string – no breaks)

Topic 41: Activity Based

Where teaching and learning are based on different activities related to the topic; for instance, **sequencing, sorting, measuring, predicting, testing, acting out, role playing, observing/ comparing, memorizing, dancing/ singing/ chanting/ making music, mixing, joining, tracing/ painting**, etc. – all these activities can be conducted in a literacy classroom.

- **Activity Based Learning (ABL)** is a methodology where children of **different ages** are grouped **together** in one class and learn at their **own** pace through **teacher-facilitated** exercises.
- It is a **student-centered** classroom.
- Activities are related to the **topic**, learning target and **objectives**.

Topic 42: Conclusion

The principle behind the activity based approach is that children are “**doers**” and learn the language because they have encountered and used it in a **realistic situation**.

- Children learn best from **experience**.
- Children learn by **doing**, using their **senses**, exploring their **environment** of **people, things, places** and **events**.
- They learn from **first-hand** and **concrete experiences** as well as “**vicarious**” (second-hand) forms of experiences, (e.g., storytelling, listening to **another person**, reading a book and looking at pictures, watching television or listening to the radio).
- Children do not learn as **effectively** when they are **passive**. Active engagement with things and ideas promotes mental activity that helps students retain new learning and integrate it with what they already know.
- If it is not possible to always provide **concrete, first-hand** experiences for the student, efforts must always be exerted so that the student will be able to understand the concept in a clear and **concrete** way.

A teacher in literacy classroom:

- a) encourages **student–faculty** contact
- b) encourages **cooperation** among students
- c) encourages **active** learning
- d) gives **prompt feedback**
- e) emphasizes **time** on task
- f) communicates high **expectations**
- g) **respects diverse** talents and ways of learning

(Chickering & Gamson, 1999, p.76)

Lesson No. 8

Teaching AlphabetsTopic 43: Alphabetic Principle

The **alphabetic principle** is composed of **two** parts:

i. **Alphabetic Understanding**

Words are composed of letters that represent sounds.

- Alphabets are **letters**, and letters are **sounds**; e.g. CAT has three letters that represent three different sounds.

ii. **Phonological Recording**

Using systematic **relationships** between **letters** and **phonemes** (letter-sound correspondence), to retrieve the pronunciation of an unknown printed string or to **spell** words.

- **Phonological recording** is the **utilization** of **reading** abilities to transform written symbols into **noises** and **words**. It is a necessary component to understanding symbolic imagery.

Topic 44: Introducing Alphabets

A **new alphabet** is introduced to a child.

- Normally, this stage of teaching alphabets is related to **pre-schoolers** or **toddlers**
- For us this is just an alphabet, but it is a whole **new** concept for a pre-schooler or toddler – if drawn on the whiteboard, these are new shapes for the young children.
- Whenever introducing a new letter, always **relate** it to a **picture** of an **object** which the child is already familiar with – it creates a context for the child and makes learning easy. The picture will make the letter stick to the mind of the child.

Three terms for teaching alphabets stage:

- **Pre-school:** stage **before** the school stage
- **Toddlers:** **3-4 years** (have just started walking)
- **Kindergarten:** **nursery** stage (classroom is just like a playroom for the children, they learn while playing)

Topic 45: Alphabetic Order

- Introduce in a particular **order**
- Plan from easy to complex – incomplete to complete (easy concepts provide base for the next level)

ABCDE
FGHIJK
LMNOP
QRSTU
VWXYZ

B, M, F, D, S, P, V, T, L, Z, N, W, J,
K, H, C, G, Y, R, A, O, I, U, E, Q, X

The first picture above represents the **natural order** of English alphabets, but the second picture starts with **easier sounds** and proceeds to the difficult ones. ‘A’ and ‘C’ have more than one sound, while ‘B’ has only one sound, and so forth.

Extra Reading:

- *Alphabetical order is a system whereby strings of characters are placed in order based on the position of the characters in the conventional ordering of an alphabet.*
- *To determine which of **two strings** comes first in alphabetical order, their first letters are compared. If they differ, then the string whose first letter comes earlier in the alphabet is the one which comes first in alphabetical order. If the first letters are the same, then the second letters are compared, and so on. If a position is reached where one string has no more letters to compare while the other does, then the first (shorter) string is deemed to come first in alphabetical order.*

Topic 46: Relate with Sound

- When **introducing** your child to the 26 letters and each letter's (sounds), **do not** simply begin with the alphabet 'A'.
- Working in alphabetical order is **not** the most effective way for a child to learn the sounds made by each letter.
- Always **relate** a letter with a **sound** which is familiar to the child so that the child gets a clear concept.

Extra Reading

Phonics is a method for teaching **reading** and **writing** of the English language by developing learners' **phonemic** awareness—the ability to hear, identify, and manipulate phonemes—in order to teach the correspondence (association, correlation) between these sounds and the **spelling patterns (graphemes)** that represent them.

Phonics **instruction** helps children learn the **relationships** between the letters of **written** language and the **sounds** of spoken language. Children are taught, for example, that the letter **n** represents the sound /n/, and that it is the first letter in words such as nose, nice and new.

Phonics
ee ur ow
wh y au

Topic 47: Practice

- To practice is to do something again and again in order to become better at it.

- It requires repeated performance or systematic exercise for the purpose of acquiring skill or proficiency.
- It involves **action** rather than **thought** or **ideas**.

Alphabets for pre-schoolers are not easy. All alphabets are new to them.

Following three points are to be kept in mind when **teaching alphabets** to children:

- Components and definition of alphabetic principle**
- The phonemic awareness and decoding**
- Letter-sound correspondence to enhance word recognition**

Lesson No. 9

Activities with AlphabetsTopic 48: Letters on String

- Select the order of the alphabets you want to teach the sounds of (e.g. one of the two orders discussed in Topic 45 earlier).
- Cut out cardboard alphabets
- Hang them on a string according to the chosen order

Letters which have to be taught are hanging on the wire. In a way, they look like something real.

Topic 49: Large Letters

- Besides being almost as **tall** as the **child**, these letters can be **decorated** with pictures of objects beginning with that letter.
- **Any** material can be used for making these big letters.

Making these letters will involve several other activities, engaging all students and enabling active learning.

Topic 50: Alphabet Cookies

Letters in the form of **cookies** can also serve as an effective source of teaching letters.

**Topic 51: Letter Cards**

Print out the letter cards, and have the young student colour the letters with crayons or paint markers.

**Topic 52: Letter Boxes**

- Take small containers.
- Take letter stickers.
- Fix one letter yourself and tell the child to fix the same letter by picking from the sticker sheet

This creates a student-centered classroom involving all students in performing the required skill.

Topic 53: Letter Pounding

This activity also helps the students in **identifying** and **recognizing** the letters, and placing them as required.

- Take boards printed with letters (or paste a sheet printed with letters on the board)
- Take letter shapes
- Tell children to fix the letter shape on its place on the board.
- This is essentially a **matching activity**
- It is better to conduct this activity in **pairs** or **groups**.

**Alphabetic Principle****Topic 54: Lack of Alphabetic Understanding**

Children who lack alphabetic understanding cannot:

- understand that words are composed of letters
- associate (connect, relate) an alphabetic character (i.e. letter) with its corresponding phoneme or sound

When we go on reducing the bigger chunks of language and start moving towards the minimum part of the word, sentences are reduced in to words and words are reduced in to letters (letters have sounds). The problem with children who lack alphabetic understanding is that:

- they do not understand that words are made of letters,
- and that these letters represent sounds (which we call phonemes).

As a result, concepts get intermingled in their minds, confusing them, and they are unable to distinguish letters.

- They are also unable to identify a word based on a sequence of letter-sound correspondences (e.g. that “mat” is made up of three letter-sound correspondences: /m/ /a/ /t/).
- As a result, they cannot **blend letter-sound** correspondences to **identify** decidable words.
- Such children also cannot use knowledge of **letter-sound** correspondences to identify words in which letters represent their most common sound
- As such, they fail to identify and manipulate letter-sound correspondences within words.

Topic 55: Alphabetic Principle Skills

To develop alphabetic principle across **nursery/ kindergarten** to **grades K-3**, students need to learn two essential skills:

1. **Letter-sound correspondence**

Comprises initially of individual letter sounds, and progresses to more complex letter combinations.

2. **Word reading**

Comprises initially of reading **simple words**, and progresses to **compound words**, **multisyllabic** words, and **sight** words.

Extra Reading

Sight words are commonly used words that young children are encouraged to memorize as a whole by sight, so that they can automatically recognize these words in print without having to use any strategies to decode

**Topic 56: Kindergarten Skills****1. Letter-sound correspondence:**

d-o-g

identifies and produces the most common sound associated with individual letter (letters giving **more** than **one sound** are normally **not** used at this stage).

2. Decoding

blends the sounds of individual letters to read one-syllable words – when presented with the word “fan“, the student will say: “/fffaaannn/, fan“.

Topic 57: First Grade Skills**1. Letter-sound combination**

produces the sounds of the most common letter sounds and combinations (e.g. th, sh, ch, ing)

2. Decoding

sounds out and reads words with increasing automaticity, including words with consonant blends (e.g. mask, slip play), letter combinations (e.g. fish, chin, bath), monosyllabic words (e.g. cat, sun, moon), and common word parts (e.g. ing, all, ike).

3. Sight words

reads the most common sight words automatically (e.g. very, some, even, there)

Lesson No. 11

Lowercase Letters**Topic 58: Importance of Lowercases**

English alphabets have both upper and lower case forms. Both forms of each letter are considered to be the same letter; that is, they have the same name and the same pronunciation and they are treated (virtually) identically when sorting in alphabetical order.

Importance of Lowercases

Upper case (capital letter) is used only at the start of a sentence when the first word of the sentence is capitalized. We also capitalize the **pronoun**, and the **proper nouns** as well as most **adjectives** formed from proper noun. This is a very limited usage; lowercase (small letter) is used extensively.

- Lowercase is faster to write,
- **easier to read**,
- **Saves** space on the printing material.
- easier on the **eyes**,
- **Not burden** coding-decoding systems.
- provides **fluency** in writing.

The invention and application of lowercase letters have been highly beneficial to the reading and writing of text.

Topic 59: When to Teach Lowercase Letters

Uppercases first, for two reasons

1. Uppercase letters are easier to **visually distinguish** than lowercase letters – take for example the uppercase ‘B’ and ‘D’ versus. the lowercase ‘b’ and ‘d’.
2. Uppercase letters are easier for **beginning writers** (e.g. ‘E’ versus ‘e’). Even when instructed with lowercase letters, it is often noticed that young children naturally prefer uppercase.

It is important to expose young children to all kinds of letters, even different kinds of **fonts**.

So they should be introduced and exposed to small letters **soon after** the upper cases.

Topic 60: Letter Confusion

There are certain small letters which might create confusion for learners, e.g. 'b' and 'd'.

e m n
v w

It should be noted that some lowercase letters very **closely mimic** their capital letter partners, e.g. Cc, Kk, Oo, Vv, Ww.

So there should be more practice for the letters that might be confusing for learners.

This picture helps to clarify the confusion.
It relates the letters with a picture.

This picture is also helpful in clearing up the concept.

Teacher can use similar material.

Topic 61: Lowercase Letters - Some Activities

- Skill is activity based; it **develops** and improves with **practice**
- Teaching literacy skills should be **activity based**
- **Activity** provides **practice**
- Every **classroom** should be **activity based**
- Activities should be **interesting**
- Teacher should know which activity should be introduced at **what time** – timing is important

Lesson No. 12

Introducing SoundsTopic 62: Phonemic Code

The phonemic code is the specific print=sound **relationships** **written English** is based on. For instance: cat /c+a+t/. The English phonemic code of phonograms (distinct written letter or letters that represent specific sound(s)) is complex.

ɪ	I	ʊ	u:	ɪə	eɪ	ɪ	ʌ
e	ə	ɜ:	ɔ:	ʊə	ɔɪ	əʊ	
æ	ʌ	ɑ:	ɒ	eə	aɪ	aʊ	
p	b	t	d	tʃ	dʒ	k	g
f	v	θ	ð	s	z	ʃ	ʒ
m	n	ŋ	h	l	r	w	j

It is related to the **letters** and the **sounds** associated with **them**. A standardized set of **symbols** used in **phonetic** transcription.

Topic 63: Importance of Phonemic Code

Students need to learn the phonemic code because this phonemic code is the **basis** for **written** English and the **foundation** for **proficient reading**. The linguistic fact is English is a **phonetic based** system. Learnt and decoded if taught effectively.

Learning the **phonemic code** (sound the print represents) is an essential **sub skill** for developing these proficient **reader** pathways.

This knowledge provides essential building blocks for developing the foundation of proficient **phonologic processing**.

Topic 64: Problem with Phonemic Code

The English phonemic code of phonograms (distinct written letter or letters that represent specific sound(s)) is complex. Letters and sounds do not have a one-to-one correspondence. There are **26 letters** and **44 sounds**.

Some letters represent more than one sound. Many sounds are made from a combination of letters. For instance: the letter 'c' in 'car' and in 'cigar'.

Combination of letters: 'sh' or 'th'.

There is overlap where one sound can be written several ways: /k/ from 'k' for kite as well as from 'c' for car.

Although it is difficult, even then English language is learnt and decoded if taught effectively. Most patterns are predictable and decoded easily.

A common problem...

/ə/ or /ʌ/ ?
cup /kʌp/ but cover /kʌvə/

Topic 65: Keep in Mind

Assembling word parts - The **most** common type of reading strategy in **3rd grade**. The child **breaks** the word into small pieces. Often these are not real words and letters are used in several word parts. "plank" is read as "plan-ant" or "literature" is read as "lite-rat-ture" even

Common phonetic errors - These are **accurate** and phonetically correct **decoding** of irregularly spelled words. "honey" is read as 'hone-ee' or 'prank' is read as 'prahnk'

Limited code knowledge - The child has an **incomplete** knowledge of the spelling code. As a result, they will write the **correct** number of **sounds**, but the **incorrect spelling**. "made" is written as "mad" or "pout" is written as 'pot'

Letter naming - The child reads the word by **saying** the **letter names**. "punch" is read as "peeuhenseeaetch"

While teaching, one must keep these things in mind and must try to look for the effective solution to these issues.

So what happens when you have poor PA, so you hear the word spoken but can't hear the smaller parts ?

You are STUCK.
Completely and utterly stuck.

Lesson No. 13

Some TermsPhonology and Phonetics: Topic 66

Phonology is a branch of linguistics concerned with the **systematic** organization of **sounds** in languages. It is the **first** level of **language** also.

Phonology is about the **patterns of sounds**, especially different patterns of sounds in different languages (Arabic, Urdu, English), or within each language, different patterns of sounds in different **positions** in words etc.

n → ŋ / __ [+vel] (English)
 ç → x / [+back] __ (German)
 L → F / H __ (Yoruba)
 [+alv, +stop] → r / [+vow, +str] __ [+vow]
 (some English)
 θ → t / [+fric] __ (some English)

Phonetics

Phonetics deals with the **production** of **speech sounds** by humans, often **without** prior **knowledge** of the language being spoken. For instance, /k/ or /b/sound and different origins of these sounds.

Phonetics	Phonology
Phonetics is the branch of linguistics that deals with how to human speech sounds are made.	In contrast to phonetics, phonology is the study of significant speech sounds.
It describes how physical expressions of human speech sounds are produced.	On the other hand, phonology deals with the mental aspects of sounds in a language.
Phonetical units are called phones.	Phonological units are called phonemes.
It deals with a large number of speech sounds.	It deals with a limited number of speech sounds.
As we know that phonetic symbols are enclosed in square brackets	On the other hand, phonemic symbols are enclosed in the slashed bracket.
Phonological units are formed contrastively.	Whereas, phonetical units may not form contrastively.

www.englishfinders.com

Phonemes: Topic 67

Phonemes are the **smallest units** of **sounds** in a language. If a phoneme is changed, the word may change, e.g. change the l sound in 'lack' to a b and the word changes to 'back'.

<i>f</i>	/f/	[f], [v]
<i>s</i>	/s/	[s], [z]
<i>þ, ð</i>	/θ/	[θ], [ð]
<i>g</i>	/g/	[g], [j], [ɣ]
<i>c</i>	/k/	[k], [tʃ]

In English, the sound e in 'pet' and i in 'bit' are examples of **vowel phonemes**, the sounds j in 'judge' and sh in 'ship' are consonant phonemes.

Phonics; Topic 68

Phonics is a **method** for **teaching reading** and **writing** of the English language by developing learners' phonemic awareness—the ability to **hear**, **identifies**, and **manipulates** phonemes.

The purpose is to teach the correspondence between these sounds and the spelling patterns (graphemes) that represent them.

Importance of phonics

Learning **phonics** will help you to learn to **read** and **spell**. Written language can be compared to a code, so knowing the sounds of letters and letter combinations will help you to **decode** words as you **read**.

Phonemic Awareness: Topic 69

Phonemic awareness is the **ability** to **hear** and **manipulate** individual phonemes. Phonological awareness includes this ability, but it also includes the ability to hear and manipulate larger units of sound.

Conscious awareness that words is composed of separate sounds and the ability to **identify** and **manipulate** those **sounds**.

Phonemic awareness can be developed by:

1. **Recognizing beginning** and **ending** sounds
2. **Isolating** sounds
3. **Combining** sounds
4. **Breaking** or **segmenting** words into its **separate sounds**

@Alpha

Lesson No. 14

Consonant SoundsWhat are these? : Topic 70

A **consonant** is a letter that **represents** a **speech sound** produced by a **partial** or **complete obstruction** of the **air stream** by a constriction of the **speech organs**.

There are **21 consonant** letters in the written alphabet (B, C, D, F, G, H, J, K, L, M, N, P, Q, R, S, T, V, W, X, Y, Z), and there are **24 consonant sounds** in most English accents.

Consonant Phonemes: Topic 71

/p/	as in <u>p</u> ast
/b/	as in <u>b</u> oy
/t/	as in <u>t</u> est
/d/	as in <u>d</u> ay
/k/	as in <u>k</u> ite
/g/	as in <u>g</u> o
/tʃ/	as in <u>ch</u> est
/dʒ/	as in <u>j</u> oke
/f/	as in <u>f</u> ind
/v/	as in <u>v</u> isit
/l/	as in <u>l</u> ast
/r/	as in <u>r</u> un

/θ/	as in <u>th</u> ick
/ð/	as in <u>th</u> is
/s/	as in <u>s</u> ad
/z/	as in <u>z</u> oo
/ʃ/	as in <u>sh</u> oe
/ʒ/	as in ple <u>as</u> ure
/h/	as in <u>h</u> eavy
/m/	as in <u>m</u> any
/n/	as in <u>n</u> o
/ŋ/	as in ri <u>ng</u>
/j/	as in <u>y</u> esterday
/w/	as in <u>w</u> et

A **consonant** phoneme is a speech sound that is articulated with **complete** or **partial** closure of the **vocal track**.

Manner of Articulation: Topic 72

The **manner of articulation** is the **configuration** and **interaction** of the **articulators** (speech organs such as the **tongue**, **lips**, and **palate**) when making a **speech sound**.

One parameter of **manner** is that **how** much **air** passage is **blocked** while producing some sound. Different sounds are produced due to **different positions** of speech **organs**.

Lesson No. 15

Different Consonant SoundsDifferent Types : Topic 73

A consonant sound is produced by a **partial** or **complete obstruction** of the **air stream** by a constriction of the **speech organs**. This is related to manner of articulation also.

Manner of articulation	
▪ (oral) stop	▪ e.g. [p], [t], [k], [b], [d], [g]
▪ nasal (stop)	▪ e.g. [m], [n], [ŋ]
▪ fricative	▪ e.g. [f], [s], [ʃ], [x]
▪ affricate	▪ e.g. [tʃ], [dʒ]
▪ approximant	▪ e.g. [l], [r], [w], [j]

It means different positions of speech organs and the resultant air passage produce all these type of sounds. Example: flute

Stop: Topic 74

The definition of a **stop consonant** has **three** parts. First, either the **tongue** or the **lips** close off the air flow **entirely**. Second, this closure causes a **buildup** of **pressure**, and third, there is a **release** of this **built up air**.

There are **6** different stop consonants. /p/, /b/, where the pressure is built up by the **lips being closed**; /t/, /d/, where the pressure is built up by the **tongue raising and closing** off the air flow; and /k/, /g/, where the pressure is built up by the **back of the tongue** reaching up and touching the back of the throat, causing the pressure to build up there.

Nasals: Topic 75 *Nasals* are **consonants** that are formed by **blocking** the **oral passage** and allowing the **air** to escape through the **nose**. The examples of nasals are /m/, /n/ and /ŋ/. The air **stops** at the **lips** and **goes** through the **nose** instead.

Fricatives: Topic 76

A **fricative** is a **consonant** sound that is created by **constricting the vocal tract**, causing **friction** as the air passes through it. The examples of English fricative sounds (the **v** sound, **f** sound, **th** sound, **z** sound, **s** sound, **sh** sound, and **h** sound).

**Affricates: Topic 77**

A **complex** speech sound consisting of a **stop consonant** followed by a **fricative**; it is a **combination** of **stops and fricatives**. It is often difficult to decide if a stop and fricative form a **single phoneme** or a **consonant pair**. Examples: /tʃ/ (catch) and /dʒ/ (jury).

Approximant: Topic 78

An **approximant**, in phonetics, a **sound** that is produced by **bringing one articulator** in the vocal tract **close** to another without, however, causing audible friction. **Approximants** include **semivowels**, such as the **y** sound in “yes” or the **w** sound in “war.” /r/ and /l/ are also approximants.

Lesson No. 16

Points of Articulation**Topic 79: What Does It Mean?**

Sound is produced simply by expelling **air** from the **lungs**. However, to vary the sound quality in a way that can be useful for speaking, **two** speech organs normally need to come close to each other, so as to create an obstruction that shapes the air in a particular fashion.

The point of **maximum obstruction** is known as the **place of articulation**, and the **way** in which the obstruction is formed and released is known as the **manner of articulation**.

It means different points of speech organs and the resultant air passage produce different type of sounds.

Topic80: Different Points

Bilabial: Both lips are almost **closed**, as in *p*, *b* or *m*.

Labiodental: Lower lip contacts **upper teeth**, as in *f* or *v*.

Dental: Tongue tip (part just behind the tip) contacts **upper teeth**, as in the **two th** sounds (e.g. thin vs. this)

Alveolar: **Tongue tip** contacts the **alveolar ridge** (the **gums** just **behind** the **teeth**), as in t, d, n, or l; or tongue blade contacts the alveolar ridge, as in s or z.

Alveolar
d, t, s, z, n

Post alveolar: **Tongue blade** contacts the [post alveolar](#) region behind the **alveolar ridge**, as in *sh, ch, zh*, or *j*; or **tongue tip** contacts the **post alveolar** region as in *s*.

Palatal: **Middle of tongue** approaches or contacts the **hard palate**, as in *y*.

Velar: **Back of tongue** contacts the **soft palate** (or "velum"), as in k, g.

Glottal: No obstruction anywhere but in the [vocal cords](#) down in the **throat**, as in **h**.

At a Glance:

Different points because different types of obstructions and this way different sound are produced.

Module EDU 410: Teaching Literacy Skills

Topic: Teaching Consonant Sounds

Kindergarten:

When the child turns 4-5 years old. The child will go to **kindergarten** usually for **2** years that is when they are at age **5 and 6**, before they proceed to **primary school** at age of almost 7.

Introduction: Consonants produce **sounds** that are more **consistent** and **easier** to identify than **vowels**. Therefore, they make a good starting point for learning sounds.

Initially, work should be done on identifying beginning consonant sounds (ex: t-t-t tulip).

After that, activities can focus on identifying final consonant sounds (ex: cat ends with the t-t-t sound).

D		Q	
E		R	
F		S	
G		T	
H		U	
I		V	
J		W	
K		X	
L		Y	
M		Z	

Viewing the word in the context of a picture will help reinforce this skill.

Introduce only the **hard sounds** of *c*, /k/ (*cat*) and *g*, /g/ (*gum*) in **kindergarten**. The **soft sounds** of *c* (*cent*) and *g* (*gym*) should be introduced **later** in **grade 1**.

Presentation:

How we should present these consonant sounds to young learners? There are different approaches for this purpose. For instance:

Reliability: Some teachers like to deal with the letters based on their **reliability** (in other words, how many different sounds might that letter make... For example, although “c” is a common letter in the English language, it is not as **reliable** as the letter “v”.

Frequency: Another method some use is to introduce the **most common** sounds **first** (s, t and r). This allows the children to quickly begin forming words.

Points to Remember:

Identifying beginning consonant sounds

Distinguishing between two or more beginning consonants sounds.

Identifying ending consonant sounds.

Ending Consonants Worksheet (© Copyright Kallie, writingforbrain.com | www.kalliewritingforbrain.com)

Choosing words that have a particular beginning or ending consonant.

And above all! Practice:

Some Activities: worksheet

Beginning or Ending of

d

NAME: _____

Say the name of each picture. Listen for the sound of the letter d. Do you hear it at the beginning or ending? Write the letter d in the correct circle.

107

Ending Consonants

d

NAME: _____

Ending Consonants d, n
Say the name of the picture. Circle the word.

108

Ending Consonants

b, m

NAME: _____

Ending Consonants b, m
Write the ending letter of each word. Say the word.

109

Trace and print the letters:

Color the letter D

B	I	N	G	O
tap	hen	pot	pan	bus
map	lip	dot	fan	fin
sun	mop	Free Space	cub	bun
bed	pin	cup	pat	run
fun	nut	lid	fog	bat

EDU 410

Lecture # 18

Topic # 87 - Consonant Sounds at Higher Level

Higher level means that the **students are already familiar** with the concept of consonant sounds. They have learnt these sounds in their early classes. For instance, the students at secondary or higher secondary stage. The students at your stage are also considered as higher level students.

The Phonetics of Consonants

Place of articulation
means where the vocal tract is shut off or narrowed

Manner of Articulation
means how the vocal tract is shut off or narrowed

Voicing
means whether air is forced through the larynx or not

Teaching consonant sounds at higher level requires the **clarification** of the concepts like ‘**voiced**’, **articulation** etc. We are going to talk about them one by one.

Topic # 88 - Voiced & Voiceless

There are certain consonant sounds which are **articulated** from the **same** point. The **differences** between such two sounds are of **voicing**.

Voicing can refer to the **articulatory** process in which the **vocal cords vibrate**.

- See how the **lips** are pressed **together**
- Watch that the **vocal cords vibrate** for **/b/**

Put your hand on your throat and pronounce the sounds produced by f, s, p, and t. You shouldn't feel any vibration happening in your throat. Now try the same exercise, but pronounce the sounds produced by the letters v, z, b, and d. Did you feel the difference? You should feel vibration in your throat. The reason is that the first group of **sounds** is “**voiceless**” and the second group of sounds is “**voiced**”.

Unvoiced (no vibration)	Voiced (vibration)
[f] f at	[v] v at
[k] c ome	[g] g um
[p] p it	[b] b it
[s] s ip	[z] z ip
[t] t on	[d] d one
[tʃ] ch in	[dʒ] g in
[θ] th ick	[ð] th is
[ʃ] pr ess ure	[ʒ] plea s ure

©2008 abcteach.com

Tell your students to make this experiment on their own. They are already familiar with the sounds, but these concepts are to be taught to them.

Topic # 89 - Place of Articulation

Presentation

- Explain each of these places of articulation in detail.
- List the English **consonant** sounds that occur at each place of articulation, along with their IPA symbols.
- Provide audio examples for you to hear and contextualize these sounds.
- Practice

Topic # 90 - Manner of Articulation

Stop or Plosive, Affricate, Fricative, Nasal, Lateral, Approximant. Clarify the concept and tell them to make experiment on their own.

Give them the reason for different types of sounds produced due to different manners. For instance /m/, /n/ and /ŋ/.

Topic # 91 - Symbols and Chart

Consonants			
p	<u>p</u> ip	ʒ	mea <u>s</u> ure
b	<u>b</u> ib	h	<u>h</u> en
t	<u>t</u> en	tʃ	<u>ch</u> urch
d	<u>d</u> en	dʒ	j <u>u</u> dge
k	<u>c</u> at	m	<u>m</u> an
g	<u>g</u> et	n	<u>n</u> ow
f	<u>f</u> ish	ŋ	si <u>ng</u>
θ	<u>th</u> igh	l	<u>l</u> et
ð	<u>this</u>	r	<u>r</u> ide
s	<u>s</u> et	w	<u>w</u> et
z	<u>z</u> oo	j	<u>y</u> et
ʃ	<u>sh</u> ip		

Make the familiar with symbols related to consonant sounds. They should be able to pick these symbols and read them in dictionaries.

Table of English Consonants, DJPD16 p.x								
	bilabial	labio -dental	dental	alveolar	post -alveolar	palatal	velar	glottal
plosive	p b			t d			k g	
affricate					tʃ dʒ			
fricative		f v	θ ð	s z	ʃ ʒ		(x)	h
nasal	m			n			ŋ	
lateral approximant				l				
approximant	w				r	j		

Give them the understanding about the consonant chart showing the place and manner of articulation side by side. It will help them to differentiate between two different types of sounds.

And above all audio-video aids for sounds and practice for these sounds.

Lesson No. 19

Topic no 92**Vowel Sounds**

There are **21** consonants and **5** vowels in English. But as we know there are more than 21 consonant sounds in English, similarly vowel sounds are also more than 5. There are **five** vowels in English a, e, I, o, u the number of vowel sounds is subject to greater variation; there are **20** vowel phonemes in **British** English, **14-16** in general **American** and **20-21** in **Australian** English. This variation in vowel phonemes is due to difference of accent.

Five vowels make **19-21** sound sometimes in single place and sometimes there sounds get double sometimes there are and symbols to create different sounds, here is one important thing that these are sounds not letters they can be seen in the picture below:

Vowel and Sounds														
Monophthongs								Diphthongs						
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
i:	I	e	æ	ɜ:	ʌ	ɑ:	ɔ:	ɔɪ	əʊ	aʊ				
ə	ɜ:	ʌ	ɑ:	ɔ:	ɔɪ	əʊ	aʊ							
u:	ʊ	ɔ:	ɒ	ɪə	eə									

Single sounds and different **combinations** of sounds give us a **variety** of vowel sounds. Just like consonants number of sounds in vowels also **increases**.

Topic no 93**Vowel Sounds Pronunciation**

While producing vowel sounds your breath flows **freely** through the **mouth**, it means there is **no** obstruction while producing these sounds.

In **consonants** air passage is **blocked** at point of **articulation** with different manner of articulation but in vowel sounds there is **no blockage** at all and there is continuous flow of air and there is continuous shaping of sounds.

Vowel don't involve air blockage, but instead require a more continual sound flow and sound shaping. **Phoneticians** describe **vowel** production in term of **HAR**:

H: Height (whether the tongue is high mid or low in the mouth)

A: Advancement (how front or back the tongue)

R: Rounding (whether the lips are round, for sounds like “oo” of “boot”).

In following picture air passage and rounding while vowel sounds is shown.

Topic 94

Types of English vowel sounds

There are mainly three types of vowel sounds:

- 1) **Monophthongs**
- 2) **Diphthongs**
- 3) **Triphthongs**

Monophthongs: A vowel that has a **single** perceived auditory quality is called monophthong. A monophthong (Greek Monophthongs from **monos** “single” and **phthongs** “sound”) is a pure vowel sound, one whose articulation at both **beginning** and **end** is relatively **fixed**, and which does not glide up or down towards a new position of articulation. There is **no** alteration in position of **tongue**.

1 i:	2 I	3 e	4 æ
5 ɑ:	6 ɒ	7 ɔ:	8 ʊ
9 u:	10 ʌ	11 ɜ:	12 ə

Diphthongs: diphthongs are combination of **two** vowel sounds i.e. /ai /.

Triphthongs: Triphthongs are combination of **three** vowel sounds.

These three types of vowel sounds give us variety of sounds and this way number is also increased.

Topic No 95

Vowel Triangle

A triangular or a figure on which vowels are shown according to the position of the part of the tongue that is highest in their articulation. It shows the position of the tongue and jaw according to the vowel sound(s) required when speaking.

We can summarize this account of the vowel system by considering the relative **position** of each vowel in a **graphic** that abstractly represents its phonetic properties.

This triangular helps us in **teaching** and **explaining** different **positions** of **vowel sounds**.

Topic No 96

Short Vowels

A mono- phthong is a **pure** vowel sound, one whose articulation at both **beginning** and **end** is relatively **fixed**, A vowel that has a single perceived auditory quality and which does not glide up or down towards a new position of articulation. A **short vowel** is also a mono-phthong.

A short vowel sound in any word is that does not allow the vowel within it to generate that vowel's long sound and which does not glide up or down towards a new position of articulation.

Topic No 97

List of short Vowels

Please see the video lecture to understand this topic.

Topic No 98

Vowel Sounds

Schwa

The **most** frequently vowel in English is **schwa** and it is always associated with **weak syllables**. In quantity it is **mid** (half way between close and open) and **central** (half way between front and back). Most specialists describe the schwa sound as **lax**, **not** articulated with much energy.

For example, the schwa sound is found in the following words:

The a is schwa in **adopt**.

The e is schwa in **synthesis**.

The I is schwa in **decimal**.

The o is schwa in **harmony**.

The u is schwa in **medium**.

Topic No 99**Short Vowels****Short Vowels on Triangle**

This triangle helps to understand the position of a vowel sound in our oral cavity.

**Topic No 100****Long vowels**

Symbol of **long vowel** is /a:/, in short vowels there are two dots as part of symbol. Sound in short vowels is not stretched but in long vowel sound is stretched. **Long vowel** is **also** a **monophthong**. A long vowel sound in any word that generates that vowel's long sound and which does not glide up or down towards a new position of articulation. You can use it to understand the basic usage for the long vowel sound. These long vowel sounds are often used in larger words as well (installation) or even in two lettered words, like [car](#), [/ka:/](#).

Topic 101: Long Vowels**Long Vowels on Triangle**

Topic No 102

Long Vowels

Long Vowel Sounds

Look at the figures and note the difference in the position of oral cavity while producing these long vowels:

The next picture depicts how to produce sound e':

The next picture depicts how to produce the sound o’

For more clarity on this topic, please see the video lecture.

Topic No 103

Short and Long Vowels

Short & Long Vowels			
[i:] heed	i	(u) shoe	
[ɪ] hid	ɪ	U put	
[eɪ] bay	e	(O) boat [ou]	
	ago ə		
bed ɛ	bird ɜ	Λ (ɔ) cup saw	
had æ			
[aɪ] buy	a	ɑ (ɒ) hard pot	
English (RP)			

In this topic we have revised the long and short vowel sounds.

Topic no 104 Diphthongs

What Is a Diphthong?

/aɪ/

A sound formed by the combination of **two vowels** in a **single word**, in which the sound begins as one vowel and moves towards another (as in *coin*, *loud*, *side*).

It means: There are two vowels sound. There is a different beginning and different end. The position of tongue changes because it glides from one position to another position.

Vowels and diphthongs

i:	see	/si:/	ʌ	cup	/kʌp/
ɪ	happy	/'hæpi/	ɜ:	bird	/bɜ:d/
ɪ	sit	/sɪt/	ə	about	/ə'baʊt/
e	ten	/ten/	eɪ	say	/seɪ/
æ	cat	/kæt/	əʊ	go	/gəʊ/
ɑ:	father	/'fɑ:ðə(r)/	aɪ	five	/faɪv/
ɒ	got	/gɒt/	aʊ	now	/naʊ/
ɔ:	saw	/sɔ:/	ɔɪ	boy	/bɔɪ/
ʊ	put	/pʊt/	ɪə	near	/niə(r)/
u	actual	/'æktʃuəl/	eə	hair	/heə(r)/
u:	too	/tu:/	ʊə	pure	/pjʊə(r)/

To understand different diphthongs, these are divided into **three groups** depending on the **ending sound**.

Topic no 105

1st Group: Ending on Schwa

There are **three diphthongs** ending on **Schwa** sound.

Examples:

/iə/ as in here

/eə/ as in hair

/ʊə/ as in tour

Fig 3. RP centring diphthongs

Topic no 106

2nd Group: Ending on /I/Sound

There are **three diphthongs** ending on /I/ sound.

Examples:

/eɪ/ as in take

/ɔɪ/ as in toy

/aɪ/ as in tie

Topic no 107**3rd Group: Ending on /ʊ/ Sound**

There are **three (wrong in book, it should be two)** diphthongs ending on /ʊ/ sound.

Examples:

/əʊ/ as in show

/aʊ/ as in mouth

**Topic no 108****All in One Glance**

Iə here	eɪ wait	
ʊə tourist	ɔɪ boy	əʊ show
eə hair	aɪ my	aʊ cow
