

Objectives

Q. The reading technique which provides support to the less fluent readers in group is called

Slow reading Paired reading Extensive reading Fluent reading

Q. A good reading exercise focuses on .

Direct learner's attention Items All the given option Strategies

Q. Which of the following is not true about comprehensive questions?

Artificial Thoughtful Time taking Deep

Q. According to Stein and Glen (1979) the story grammar categories are in number.

6 7 5 4

Q. Fast reading is the result of .

Authentic material Grammatical analysis Decoding Encoding

Q. Which of the following is not the part of semantic mapping?

Simple vocabulary items Pictorial image Strategy Diagram

Q. Which of the following is true about reading skills?

It is conscious and unconscious thinking process. Reader reconstruct of meaning of a text.

All of the given It is done by comparing text with prior knowledge.

Q. Which is not model verb?

a. be b. Would c. Could d. Can

Q. Pronunciation refers to

a. Orthographic model b. Syntax model
c. Morphological d. Non verbal models

Q. Decoding is process of

Reading a message

Use of wide range words

Meaning of words

Playing with rhymes

Q. There are Reading components according to Tupper Hoover

3

4

1

2

Q. A correct word which is placed on natural English

The fast food.

A fast meal

A fast shower

The quick train

Q. Which strategy is not true about metacognitive

Purpose oriented strategy

Affective and social strategy

Q. According to I.S.P national book of teaching of ESL/EFL a good reading speed is around----.

250

400

350

500

Q. which of the following is NOT grammatical feature of language

Gender

suffix

prefix

morpheme

Q. concept of sharing and imparting is associated with

reading

passive skills

speaking

listing

Q. Which is not part of comprehension?

a. Understanding

b. Cognition

c. Discernment

d. Misinterpretation

Q. Spelling create problem in (reading).

Q. Who conduct the oriented strategy? (Janzen and Stoller)

Q. Out of class reading (Extensive reading)

Q. Who is founder of CORI concept oriented reading....! (Guthrie OR Gerty Cori)

Subjective

(3) Q. difference between receptive and productive skill. (Topic_02)

When native-speaking children start to learn to read, they already have a large vocabulary of several thousand words which includes most of the words they will meet in early reading. They also have good control of the grammar of the language, have a lot of knowledge about books and reading conventions, and have had many many stories read to them. They are very keen to learn how to read. They begin formal schooling at the age of about five or six. The teacher and learners work with books that are interesting, are well illustrated, use language that is close to spoken language, and are not too long. The texts contain a lot of repetition, and are often very predictable but in an interesting way. The techniques used to teach reading are largely meaning-focused. That is, they give primary attention to understanding and enjoying the story. They include shared reading, guided reading and independent reading. A small amount of attention may be given to phonological awareness and phonics but this is in the context of enjoying the story and only takes a very small amount of time.

(3) Q. what is reading and which factors do play a role in it? (Topic_4)

It is a commonplace of teacher education that teachers tend to teach by the methods which were used by the teachers who taught them. In no area of language teaching is this more true than in that of reading. . It is probably for this reason that the procedure of reading round the class has been perpetuated, though anyone who considers it seriously, even briefly, in terms of what it contributes to new learning, or of pupil participation, or of communicative function, realises very quickly that it is a singularly profitless exercise.

Reading speed, for example, probably depends to a considerable extent on the development of the first; reading aloud would seem to depend at least to some extent on the second. A third skill which is involved in the total skill of reading is essentially an intellectual skill; this is the ability to correlate the black marks on the paper by way of the formal elements of language, let us say the words as sound, with the meanings which those words symbolize.

(3) Q. Phonemic awareness (Topic_13)

Phonemic awareness is the knowledge that spoken words are made up of sounds that can be separated, that is, that /kæt/ (cat) is made up of the sounds /k æ t/. If the learner can already read in their first language, and the writing system of the first language is alphabetic, the learner will already have phonemic awareness.

(3) Q. incidental learning and deliberate learning OR (3) Q. How incidental learning is more focuses than deliberate learning. (Topic_17)

Some argue that incidental learning is what really matters and that at best deliberate learning can only play an indirect secondary role. In vocabulary learning, however, there is considerable evidence supporting the deliberate learning of vocabulary as part of a well-balanced programme (Elgort, 2007). First language research on the learning of spelling also supports having both deliberate and incidental learning. Although most learning of the many sound spelling

correspondences is picked up incidentally and good readers are usually good spellers, deliberate analytic learning can speed up learning and can help with learning difficulties.

(5) Q. Five writing conventions? (Topic_17)

- (1) Writing goes from left to right (cf. Arabic—right to left, Japanese—top to bottom).
- (2) The lines of writing come one under the other starting from the top of the page (cf. Japanese).
- (3) The pages go from front to back (cf. Japanese—back to front).
- (4) Words are separated by spaces (cf. Thai—no spaces between words).
- (5) Sentences begin with a capital letter and end with a full stop, question mark, or exclamation mark.

(3) Q. contrastive analysis. (Topic_19)

The contrastive analysis hypothesis argued that second language learning can be strongly affected by first language knowledge.

Where there are similarities between languages, second language learning will be easier. Where there are differences, second language learning will be more difficult. Complications in the hypothesis arise from the ways in which a second language is learned, and in the nature of the similarities and differences between the two languages.

(3) Q. learning second language which factors affected from first language (Topic_19)

In its simplest form, the contrastive analysis hypothesis argued that second language learning can be strongly affected by first language knowledge.

Where there are similarities between languages, second language learning will be easier. Where there are differences, second language learning will be more difficult. Complications in the hypothesis arise from the ways in which a second language is learned, and in the nature of the similarities and differences between the two languages.

There is evidence of positive and negative effects of the first language on the second at the levels of pronunciation, vocabulary, grammar, and discourse. Spelling is no exception, and there is plenty of evidence of first language spellings having both positive and negative effects according to the degrees of similarity and difference between the language items and rules.

(5) Q. 5 activities in intensive classroom. (Topic_22)

1. Keep learners motivated Praise success
2. Make learning fun Use attractive aids Have amusing competitions
3. Encourage thoughtful processing
4. Plan for repetition and revision

5. Provide training
6. Organise the items to learn in helpful ways

(3) Q. intensive reading (Topic_23)

Intensive study of reading texts can be a means of increasing learners' knowledge of language features and their control of reading strategies. It can also improve their comprehension skill. It fits into the language focused learning strand of a course. The classic procedure for intensive reading is the grammar-translation approach where the teacher works with the learners, using the first language to explain the meaning of a text, sentence by sentence. Used on suitable texts and following useful principles, this can be a very useful procedure as long as it is only a part of the reading programme and is complemented by other language-focused learning and by extensive reading for language development and extensive reading for fluency development.

(3) Q. GTM method for intensive reading (Topic_23)

The classic procedure for intensive reading is the grammar-translation approach where the teacher works with the learners, using the first language to explain the meaning of a text, sentence by sentence. Used on suitable texts and following useful principles, this can be a very useful procedure as long as it is only a part of the reading programme and is complemented by other language-focused learning and by extensive reading for language development and extensive reading for fluency development.

At its worst, intensive reading focuses on comprehension of a particular text with no thought being given to whether the features studied in this text will be useful when reading other texts. Such intensive reading usually involves translation and thus comprehension of the text. So, one goal of intensive reading may be comprehension of the text. The use of translation makes sure that learners understand, and when the learners do some of the translation themselves, it allows the teacher to check whether they understand.

(3) Q. Three features of intensive reading? (Topic_25)

1. A good reading exercise directs the learners' attention to features of the text that can be found in almost any text, or to strategies for dealing with any text, with the aim "to develop in the language learner the ability to comprehend texts, not to guide him to comprehension of a text" (Davies and Widdowson, 1974: 172).
2. A good reading exercise directs the learners' attention to the reading text. That is, the learners need to read the text or at least part of it in order to do the exercise. It is also important that some reading exercises require the learners to consider parts of the text in relation to their wider context, that is, other parts of the text, and information from outside the text.
3. A good reading exercise provides the teacher and the learners with useful information about the learners' performance on the exercise. If the learners were not successful on

some parts of the exercise, then they should be aware of what they have to learn in order to do the exercise successfully with another text.

(3) Q. what is comprehension question? (Topic_26)

Comprehension questions in one form or other are one of the language teaching techniques most frequently used to train learners in reading. They can take many forms, namely pronominal questions, yes/no questions, true/false statements, multiple-choice items and blank-filling or completion exercises. However, although comprehension questions may have a role to play in practicing reading, the various forms of reading comprehension questions are not so effective for teaching learners to read. In order to show this, let us look at comprehension questions according to the four features of a good reading exercise. After that, a variety of other reading exercises are described which may also be used in intensive reading.

(3) Q. why comprehensive questions is difficult (Topic_27)

It is difficult to make good comprehension questions. It takes considerable skill, time, and effort. Thus most teachers who wish to use such exercises will be forced to rely on often unsuitable published material.

(5) Q. Two types of question with example. (Topic_28)

1. **Pronominal questions** are questions beginning with who, what, when, how, why, etc.

What is a saccade? How long does a fixation take?

These questions often test writing ability as well as reading ability because the learners must write the answers. The questions can ask for one-word answers, or ask the learners to copy the answers directly from the passage. This makes them easier to mark. The learners can also answer questions using their first language. Instead of questions, commands may be used.

Explain the three kinds of eye actions.

Describe a fixation.

2. **Yes/no questions** and alternative questions only need short answers so the learners do not need to have a high level of writing skill.

Does a fixation take a longer time than a jump?

Do some words get more than one fixation?

Does every word get a fixation?

(3) Q. concept of CORI (Topic_32)

Concept-oriented reading instruction (CORI) is an integrated strategy approach to reading comprehension (Guthrie, 2003). It involves systematic explicit instruction in the six strategies of activating background knowledge, questioning, searching for information, summarising, organising graphically, and structuring stories. The strategy instruction involves working through the sequence of modelling, scaffolding, and guided practice. Strategy practice should involve a minimum of 30 minutes per day.

(5) Q. difference between high frequency and low frequency (Topic_33)

HIGH FREQUENCY VOCABULARY	LOW FREQUENCY VOCABULARY
✚ Pre-teach a small amount of vocabulary from the passage before reading the passage. Such teaching must involve a reasonable amount of time on each word, focusing on several aspects of its form, meaning and use, such as its pronunciation, its word parts, its meaning, different senses of the word, common collocations, its grammar and any restrictions on its use, such as being technical, colloquial, impolite, etc. ✚ Put the word in an exercise after the text. Such exercises can include completing word family tables, matching words and meanings, classifying collocational patterns, and working out core meanings. ✚ Spend time on a word during the reading looking at several aspects of its form, meaning and use	✚ Ignore the word. ✚ Quickly give the meaning of the word by using a translation, picture, diagram, demonstration, or L2 definition. ✚ Replace the word in the text with a more useful high frequency word before the learners work on the text. Simplifying the text aims to reduce the density of unknown words so that the text is more accessible for the learners.

(3) Q. Difference b/w high and low frequency grammar. (Topic_34)

high frequency grammar	low frequency grammar
High frequency grammar items deserve sustained attention. In general, such items tend to be formally simple. That is, the shorter a grammatical feature, the more frequent it is likely to be. Although frequency information about grammatical features has been around for a long time (George, 1963), it is only recently that grammar descriptions have included such information (Biber, Johansson, Leech, Conrad and Finegan, 1999).	Low frequency grammatical features are best given attention as part of strategies for dealing with complicated grammatical features such as subordinate clauses, coordination, and complicated noun groups. All of the following activities in this section on grammar are strategy based.

(3) Q. Parts of speech reorganization values (Topic_34)

- ✚ First, when trying to guess the meaning of a word from the context, knowing the part of speech of the word will make sure that the meaning guessed is the same part of speech.
- ✚ Second, it makes looking up the word in a dictionary much easier because the meanings of words are usually classified according to the part of speech of the word.
- ✚ Third, if a sentence is difficult to understand, it might be because the learners are applying the wrong meaning or function to one or more of the words in the sentence. By checking the part of speech of the words the learners may be able to understand the sentence.

(3) Q. Cohesive Device or (3) Q. Term cohesion? (Topic_36)

The classic text on cohesion is Halliday and Hasan (1976) *Cohesion in English*. Their categorisation of the major cohesive devices is the model for the following activities. The arguments for focusing on cohesive devices are that they occur in every text so the learning from one text should readily transfer to the reading of another text, and that they focus learners' attention on the message of the text at a level beyond the sentence level. Cohesion involves the devices of reference words, substitution and ellipsis, comparison, conjunction relationships, and lexical cohesion. Exercises focusing on cohesive devices are easy to make and the discussion of the answers can lead to useful insights into language use that can have positive effects on both reading and writing.

(3) Q. What is extensive reading (Topic_40)

Extensive reading fits into the meaning-focused input and fluency development strands of a course, depending on the level of the books that the learners read. When the books contain only a few unknown vocabulary and grammar items, extensive reading provides the conditions for meaning focused input. Where the books are very easy ones with virtually no unknown items, extensive reading provides the conditions for fluency development.

(3) Q. What is inductive guessing? (Topic_45)

An inductive guessing procedure involves looking at the available clues—the part of speech of the unknown word, its immediate context, and the relationship between the clause with the unknown word and the adjoining clauses (for a detailed description, see Nation, 2001; Nation, 2008). It is worth spending small amounts of time over several weeks or months on practicing guessing because it is a very powerful and useful strategy.

(3) Q. Graded reading (Topic_46)

1. Learners should read at least one graded reader every week, no matter what level they are reading at. This rate of reading allows unknown vocabulary to be repeated before the immediately previous occurrence is forgotten.

2. Learners should read at least five books at a level (say Level 2) before moving to books at the next level (Level 3). This number of books provides a chance for most of the vocabulary introduced at that level to occur.
3. Learners should read more books at the later levels than the earlier. This is because the vocabulary of the earlier levels occurs very frequently in the books at the later levels. Books at the later levels thus provide good conditions for learning all the vocabulary of the graded reader series.

(3) Q. Glossing with reference to dictionary usage? (Topic_48)

Glossing involves providing the meanings of words in L1 or in a simple L2 definition in the margin next to the line containing an unknown word. Some glossaries come at the end of a text, but learners prefer glosses near the unknown word, probably because these do not disrupt reading too much. In Japan, some English texts are printed with translations in a lighter type above the low frequency word in the text. Glosses may contribute to vocabulary learning and may improve comprehension of the text, although the research on this is not conclusive. Glosses are an alternative to dictionary use and are generally less disruptive than dictionaries. Using dictionaries while reading usually adds considerably to the time taken to complete reading the text. There is renewed interest in research on glossing as a result of the growth in computer-assisted reading

(3) Q. how does elaboration help in reading a text (Topic_48)

Elaboration involves the rewriting of texts but it involves adding to the original text rather than removing or replacing what is there. The unknown words in the text are, in effect, glossed in the text itself. Here is an example of a piece of elaborated text from the novel Lord Jim. I have put the elaborations in italics and the words outside the 2,000 word level in bold, but in the text they would not be marked in any way. Note that appalled is not elaborated as the text provides enough elaboration for this word.

(3) Q. characteristics of reading material (Topic_51)

Reading materials vary in terms of topic and genre

Students should be exposed to different types of materials so that they become familiar with different kinds of genre and accustomed to reading for different purposes and in different ways. Although younger learners may prefer fiction, they should gradually be introduced to nonfiction. Although a good selection of fiction often can be found, there is a relative scarcity of nonfiction materials for less proficient readers. Even scarcer are materials for adult learners who want to read simplified materials on such topics as law, business, technology, and medicine.

(3) Q. concept reading material (Topic_51)

Unlike in intensive reading, where the materials is typically above students' linguistic level. In ER the material should be near or even below their current level. To use second language Acquisition (SLA) jargon, students should be reading texts at an $i+1$, I , or $i-1$ level, with 'i' being their current proficiency level. The rule of thumb here is that to get students started in the program, it is better that they read easier texts than more challenging ones. For students who have had minimal exposure to contextualized language and who lack confidence in their reading, even $i-2$ material may be appropriate, at least at the initial stage of ER program.

(3) Q. Three symptoms of slow reading (Topic_56)

- (1) fixating on units smaller than a word (word parts, letters, parts of letters), thus making several fixations per word;
- (2) spending a long time on each fixation or on some fixations; and
- (3) making many regressions to look back at what has already been read. Increasing speed will result in a change in these symptoms.

(5) Q. 5 technique of reading (Topic_59)

1. **Reading aloud** has not been looked on very favourably in the second language reading class, mainly because of the misuse of the technique of reading aloud around the class.
2. **Repeated reading.**

A strength of this technique is that it can be used with material that has some difficulties for the reader. By repetition these difficulties are overcome and in the later repetitions the activity can thus meet the conditions needed for fluency development.

3. **Paired reading** is a form of assisted reading. In this activity, the learner is paired with a more proficient reader. They sit side by side and read the same text aloud together with the more proficient reader keeping at the same speed as the less proficient reader.
4. **4/3/2 reading** is an adaptation of the 4/3/2 speaking activity (Nation, 1989) for reading aloud. Each learner has a text to read.
5. **The read-and-look-up activity** does not meet many of the conditions for a fluency activity but it is one that encourages learners to work with a larger basic unit. Michael West (1960: 12–13) devised this technique as a way of helping learners to learn from written dialogues and to help them put expression into the dialogues. West regarded the physical aspects of read-and-look-up as being very important for using the technique properly. The learners work in pairs facing each other. One is the reader, the other is the listener.

(3) Q. Tips to easy extensive reading (Topic_60)

Easy extensive reading is another very effective way of increasing reading speed by asking learners to read graded readers at a level which is much easier than the level they would

normally read to gain meaning-focused input. Learners should be encouraged to do large quantities of such reading and to re-read books that they have really enjoyed. It is important to remember that there need to be two types of extensive reading involving graded readers. One type, reading for meaning-focused input, involves learners reading at a level where about one word in 50 is unknown. These words can be guessed from context and add to the readers' vocabulary knowledge. The second type of extensive reading, reading for fluency development, should involve texts where there are virtually no unknown words. Such texts should be read quickly for enjoyment, and large numbers of them should be read.

(3) Q. issue logs (3) (Topic_60)

Issue logs are a very effective way of involving learners. At the beginning of a language course the learners each decide on a topic that they will research each week. Each learner should have a different topic. The topics can include pollution, global warming, oil, traffic accidents, the stock market, etc. Each week the learners find newspaper reports, magazine articles, academic texts, information from the internet, television reports, and so on, on their topic and write a brief summary. As they are reading lots of material on the same topic, they will soon be in control of the relevant vocabulary and will bring a lot of background knowledge to what they read (Watson, 2004).

(3) Q. Write disciplines that influence on reading skill. (Topic_63)

1. linguistics,
2. psycholinguistics,
3. cognitive psychology and
4. sociolinguistics.

(5) Q. Innate approach (Topic_65)

This approach to reading was reinforced by Smith (1971), who stated that reading was not something one was taught but rather something one learned to do by reading. Smith believed that the act of learning to read should be considered as any other natural comprehensible aspect of existence. The hypothesis advanced by Goodman and Smith that people learn to read by reading was later confirmed by Krashen (1988) in his research on the relationship between the amount of free voluntary reading and reading ability. As a result of such a view of reading, learners were taught to become active readers (Reid 1993), that is, to derive meaning from the text by predicting and guessing its meaning by using both their knowledge of language and their background knowledge. Most important, errors were no longer considered negative aspects that should be prevented. Instead, they were viewed as a way to better understand the reading process (Pearson and Stephens 1994).

(5) Q. what is story grammar? (Topic_66)

A story grammar is a structural account of narrative stories that readers develop, based on acquisition of knowledge about human interactions and repeated exposure to stories. Story grammarians (Rumelhart 1975; Thorndyke 1977; Stein and Glenn 1979) started looking at the organization of narrative episodes and claimed that certain categories appear to be universal in well-formed stories, regardless of the language in which they were written. For instance, the story grammar categories for Stein and Glenn (1979) were:

- 1) setting, which consists of characters and surroundings;
- 2) initiating event, which marks a change in the story environment;
- 3) internal response, which represents the goal;
- 4) attempt, which is the effort to achieve the goal;
- 5) consequence, the attainment or non-attainment of the goal, and
- 6) reaction, which is the outcome of the consequence.

(3) Q.interactionist approach (Topic_66)

By the late 1970s researchers were attempting to identify comprehension skills. This significant change, though, grew out of the interactionist approach to language learning (see Usó-Juan and Martínez-Flor this volume) and, particularly, from the work carried out essentially in the disciplines of cognitive psychology and sociolinguistics.

In the cognitive psychology field, researchers started to conduct studies on basic processes in reading. They analyzed what happened during the reading act and they incorporated notions of how readers represented text in memory. A major development within this field was the emergence of story grammars. A story grammar is a structural account of narrative stories that readers develop, based on acquisition of knowledge about human interactions and repeated exposure to stories.

(5) Q. ENHANCING COMMUNICATIVE COMPETENCE THROUGH READING. Difference b/w any two can be asked. Or question can be describe language competence in reading. (Lesson-13)

Linguistic Competence	Pragmatic Competence	Intercultural Competence	Strategic Competence
Linguistic competence consists of the elements of the linguistic system such as grammar rules and knowledge of vocabulary. Moreover, the ability to read also involves	Pragmatic competence involves an understanding of the illocutionary force of an utterance by being aware of situational and participant variables within which the	Intercultural competence refers to the knowledge of how to interpret written texts appropriately within their sociocultural context. Therefore, it involves knowledge of the	Strategic competence has been added to all above-described competencies, since it has been regarded as crucial to the development of reading skills (Anderson

the mastery of the mechanics of the language, such as the alphabet and punctuation (Scarcella and Oxford 1992). All these features are set at the bottom level of the reading process and they are fundamental for the readers to be able to decode the written text. This competence is intrinsically related to discourse competence since deficiencies in linguistic competence may result, for instance, in a failure to identify the cohesive links and, therefore, cause problems in the interpretation of a written passage (Celce-Murcia and Olshtain 2000).	utterance takes place, as well as politeness issues. This competence has been regarded as essential to understanding spoken communication in which the social contextual factors are explicit (see Martínez-Flor and Usó-Juan this volume). However, this information is missing when interpreting the communicative intention of a given written text and, therefore, readers must rely on a set of graphic, syntactic and linguistic devices that may help them to interpret the writer's intended meaning. Kern (2000: 71-73), for example, characterizes the following features: 1) typographical issues such as the choice of capitalization, italic and bold font styles, underlining, the use of exclamation marks or punctuation, and layout of print, among many others; 2) syntactic issues such as cleft constructions to simulate spoken discourse; and 3) lexical issues such as the choice of verbs (i.e., command, ask)	cultural factors such as knowledge of the sociocultural background of the target language community, knowledge of dialects, and cross-cultural awareness (Celce-Murcia, Dörnyei, and Thurrell 1995). Thus, readers' background knowledge on the cultural factors involved in a given written text will help them to construct its meaning and will prevent possible misinterpretations. Williams (this volume), in fact, pays attention to the social perspective on reading and contends that the teaching of L2 reading should not be detached from the social context within which the text has been created.	1999). This competence refers to the possession of both communication and learning strategies (Scarcella and Oxford 1992). With reference to reading, the former refers to the ability to use reading strategies to make up for interpretation problems, whereas the latter refers to the ability to use reading strategies to enhance the communicative act between the writer and the reader. Thus, knowledge of different reading strategies, which have been categorized into metacognitive, cognitive, social and affective (see Ediger this volume), and the ability and disposition to use them effectively has received prime consideration in L2 reading. In fact, Grabe, Field and Ediger (this volume) regard strategic reading as an essential competence for successful comprehension. Grabe (this volume) highlights strategic reading development as an important research area within reading. Field (this
---	---	---	---

	or adverbs (i.e., sharply, soothingly) which in a way parallel the tone of voice of oral speech. Additionally, Kern (2000) points out that the physical situation of a given text also provides information about the possible communicative intent of the text.		volume) emphasizes the benefits of paying attention to reading strategies and metacognitive awareness in a reading program to develop fluency in reading and Ediger (this volume) gives a detailed explanation of key reading strategies, the use of which may result in improved comprehension.
--	--	--	--

(3) Q. write brief note on linguistic competence (Topic_68)

Linguistic competence consists of the elements of the linguistic system such as grammar rules and knowledge of vocabulary. Moreover, the ability to read also involves the mastery of the mechanics of the language, such as the alphabet and punctuation (Scarcella and Oxford 1992). All these features are set at the bottom level of the reading process and they are fundamental for the readers to be able to decode the written text. This competence is intrinsically related to discourse competence since deficiencies in linguistic competence may result, for instance, in a failure to identify the cohesive links and, therefore, cause problems in the interpretation of a written passage (CelceMurcia and Olshtain 2000).

(3) Q. 3 name of affective and social strategies. (Topic_73)

- ✚ Rewarding oneself
- ✚ Talking with others about what one reads
- ✚ Encouraging oneself

(5) Q. 5 Unknown words strategies (Topic_73)

1. Using other information in the context to understand an unknown word
2. Skipping/ignoring an unknown word
3. Waiting to see if more information is provided later
4. Analyzing the structure or parts of a word in order to understand it
5. Asking someone the meaning of a word

(5) Q. 5 purpose oriented strategies . (Topic_73)

- ✚ Planning what to do next, steps to take
- ✚ Reminding oneself about the purpose for reading
- ✚ Evaluating information in terms of whether it leads to one's purpose
- ✚ Deciding whether a text is relevant to one's purpose
- ✚ Comparing information from one text with that of another

(5) Q. 5 purposes of reading in your daily life (Topic_78)

In “real-world” reading, there are many different authentic purposes for which readers read – and, presumably, precisely the same real-world purposes for which many L2 learners will eventually need to be able to read in their target language. These include the range of purposes for which we read in daily life, for example, to obtain the information that we need in order to accomplish some real-world task. For example, this might take place when we read a guidebook, a train schedule, or an Internet website in order to purchase a ticket as part of making the necessary arrangements to travel to a desired destination. It could also include reading for academic purposes (e.g., reading to obtain information from various sources so that one can write a research paper or make an oral presentation in class); reading for business purposes (e.g., reading information or data in order to write a report or make a business decision); or even reading for entertainment, passing the time, or pleasure (e.g., reading a novel or a poem; or a magazine while waiting for a friend).

(3) Q. 3 purposeful reading material for decision making (Topic_81)

- ✚ Read business reports in order to make a business decision
- ✚ Read a college catalogue in order to decide whether to apply for admission
- ✚ Decide which candidate to vote for, on the basis of their campaign statements

(3) Q. argument purposes in the reading? (Topic_81)

- ✚ Read business reports to make a recommendation about which division a company should sell off
- ✚ Read several stories by a single author, in order to determine if a particular interpretation or claim about this author is justified
- ✚ Read a non-fiction book on the bear population in some urban areas, in order to decide if hunting of bears should be permitted

(3) Q. reading activities for entertainment (Topic_81)

- ✚ Read a novel, and share what you liked about it
- ✚ Read a magazine while waiting for a bus
- ✚ Enjoy a poem, by reading it out loud

(5) Q. 5 general purpose of reading. (Topic_81)

1. Make a decision
2. Report (orally or in writing) what one has learned about a subject
3. Synthesize or put information into a different format
4. Get a general idea about something
5. Learn about a subject (in order to pass a test on it)

(5) Q. strategies teachers can use to improve relationships and promote reading (Topic_82)

- ✚ Begin by brainstorming and discussing as a class or with partners about which strategies to use, how to use a particular strategy in a particular context, and what alternatives they have if a strategy doesn't work.
- ✚ Break down a task into a series of steps that can be used to accomplish it. In the process of accomplishing the task or purpose, the entire task can be visualized and the component steps listed so that an appropriate strategy can be selected to address each of those sub-steps. Students may refer back to these steps in the process over and over in their minds
- ✚ as a way of keeping a constant focus on whether their strategies are helping them accomplish their purpose.
- ✚ Call students' attention to the times when they are using strategies; Praise them for their use of strategies; Encourage students to offer and try out their own strategies.
- ✚ Cue the use of new strategies when students encounter situations where they might be applied profitably, regardless of when these occasions arise during the school day

(5) Q. what is summarization (Topic_82)

- ✚ Identify the genre of the text, and the typical text organization system for that genre.
- ✚ Identify information that matches each typical element of that genre.
- ✚ If applicable, identify main vs. supporting information; Relate main and supporting information.
- ✚ Delete trivial, irrelevant, and redundant information.
- ✚ Substitute superordinate terms for lists of items.
- ✚ Integrate a series of events with superordinate action terms.

(5) Q. 5 barriers in L2 Fluency... (Topic_84)

1. Study intensely and to the point of exhaustion
2. Tackle increasingly difficult materials, far above one's current language level
3. Continue to translate all texts into L1 under the assumption that one can't really understand them unless every word is translated
4. Study only authentic materials at the highest levels
5. Avoid long texts in favor of short, difficult ones
6. Slow reading, using a pencil or a finger to keep track of lines, seeing one word at a time

(3) Q. What do you mean by term motivation? (Topic_90)

The amount of time and effort that an intermediate-to-advanced students need to devote to becoming a fluent readers of English is substantial. Only students with high motivation, self discipline, and clear goals will achieve the levels they envision. Motivating students to do this much work is not easy, especially if they have not traveled or lived in the L2 environment at all. Fear and threats seldom work, and none of us want to teach in such a manner anyway. The motivation that will transform their wishes into the actions they must take to become fluent readers have to be internal, positive, and sustained. Day and Bamford's (1998) chapter on motivating students to do extensive reading provides excellent suggestions that apply to a fluent reading program as well. Motivation that arises from stress, worry, or fear is exhausting, shortlived, and usually external.

(3) Q. bottom-up model for reading (Topic_92)

Most researchers agree that reading is an interactive process that involves both bottom-up and top-down activities. Recent emphasis on top-down processes (e.g., schema building, guessing words in context) is now being balanced with more attention to de-coding and word recognition exercises (Birch 2002). Exercises that push learners to recognize and process words quickly are good correctives for those who read very slowly and translate even the simplest words. Positive results with bottom up vocabulary study are reported by Ichiyama (2003). The exercises used in her study included rapid and repetitive exposure to vocabulary that appeared to help students not only to recognize but also to memorize and remember words (see also Grabe 1988; Segalowitz, Poulson, and Komoda 1991; Paran 1996). For beginning readers, the bottom-up strategies are critical, and some recent approaches have neglected them sadly. If high-intermediate-to-advanced readers are lacking some of these bottom-up skills, additional or new training may be necessary.

(3) Q. Elementary level (Topic_93)

Elementary school readers do not read medical textbooks; however, beginning EFL students may be asked to read nearly that far above their current language levels. Waring and Takaki (2000: 7) insist that “learners need to be reading at or below their reading ability in order to develop fluency and confidence.” Moreover, they emphasize that “there is no ‘short cut’ to the automatic recognition of words.”

(3) Q. Define collocation. Give an example (Topic_93)

Further Developments in the Lexical Approach. Lewis and other authors lay out an extensive program for collocation study, one that focuses on noticing and recording the most useful language in a given text and helping students build vocabulary through collocation notebooks. Collocations help us understand different meanings and definitions of words in actual contexts where they appear. Collocations also teach us to recognize “multi-word units” or “ready-made chunks” of language (Lewis 2000). Nearly all researchers agree that L2 readers need a large vocabulary in order to read fluently, but that is something of a simplification. A large vocabulary

is only the first element in the recognition of larger-than-a-word chunks of language. By focusing on chunks of language and phrases that include a number of words, collocation study gives learners the chance to recognize larger packages of text, process them faster, and read more fluently. Combined with bottom-up strategy training, reading at level to develop automaticity, and narrow reading described below, collocation study will add an important processing element to the learner's program.

(3) Q. Define narrow reading (Topic_94)

The final element in a comprehensive vocabulary study plan must address the specialty vocabulary necessary for study or work in an Englishspeaking environment. Most people already know the subject, career track, or specialization that they will pursue in another country. They need a program, concurrent with the three types of vocabulary study described above, that will help them recognize quickly the words and phrases in their academic or career area. Schmitt and Carter's (2000) experiment with "narrow reading" provides an illustration of how the teacher can design, with the student's input, some narrow reading exercises, gather materials for narrow reading on one topic, and re-enforce the learner's familiarity with a specialized vocabulary. For example, asking students to read 1 or 2 newspaper articles specifically in their area (such as economics, computer science, business management, biology) will begin the process.

(3) Q. motivation for reading (Topic_97)

The motivation for a fluent reading program must be nurtured, modeled, and reinforced by the teacher, but the motivation must come from within the student. Motivation is energy transformed into constructive, methodologically sound, efficient and productive activities. It needs to be reinforced regularly by work with peers, rewards, and recognition of progress. Integrate motivational elements into the programs – team goals, a buddy system, posting of goals, posting of timed reading scores, posting of books or materials read, individual record keeping, reading logs, and anything that helps keep the learners' energy levels high.

(3) Q. what is narrow perspective of an academic work? (Topic_98)

The narrow perspective focuses upon the abilities of individuals, and generates research work into initial reading, and reading as comprehension, in both first and additional languages.

Work on reading in the broad perspective, on the other hand, examines literacy practices generally in society, and has its origins in sociology and anthropology. This perspective is part of an intellectual movement which has been influential from the 1980s onwards, and which has turned the focus of attention away from the individual, characteristic of the previous psychological approaches, and towards the social. It accordingly concentrates upon the meanings and values of literate behaviour in social contexts, and to some extent may be regarded as the "communicative competence" perspective on reading and writing.

(3) Q. language and reading component (Topic_99)

The proponents of simple two-component models of reading put forward what may be roughly characterised as a reading component, and language component. Prominent advocates of the two-component view of reading are Hoover and Tunmer (1993: 1) who say “this view holds that reading consists of only two components, one that allows language to be recognised through graphic representation, and another that allows language to be comprehended.” In short, their intuitively appealing claim is that in order to understand a written text, the two necessary components are the ability to read, and competence in the language of the text.

(3) Q. Syntax in L2 (Topic_100)

In L2 studies of syntax in reading, there is universal acceptance of the view that adequate competence in L2 syntax is necessary. Berman (1984) for example, after conducting a series of studies looking at Israeli students reading English concludes that “efficient FL readers must rely - in part, though not exclusively - on syntactic devices to get at text meaning”. However, Berman’s note of reserve is in order. It may well be possible for successful reading to be achieved with less than perfect competence in syntax, through a combination of lexical knowledge and background knowledge. In other words, readers may “guess” at a structural meaning, as they “guess” at lexical meaning.

(3) Q. Autonomous literacy model and “ideological literacy” model (Topic_100)

An important distinction in the broad approach is between the “autonomous literacy” model and the “ideological literacy” model (Street 1984). The autonomous model sees literacy as a value-neutral set of skills, detached from social context, the possession of which is assumed to bring certain cognitive and social results. Much of what has been described above as the “narrow” approach to literacy is in the “autonomous” tradition. The “autonomous” nature of schooled literacy has long been an issue of concern, as shown in W.B. Hodgson’s essay of 1867 (see Graff 1995), where Hodgson questions the value of the ability to read with no consideration given to the value of what is read.

(3) Q. background knowledge for learning (Topic_100)

In recent decades a great deal of attention in the applied linguistics view of reading has been devoted to “background knowledge”, particularly under the label “schema theory” (the terms “script” and “framework” are also used for what is essentially the same notion). Whatever labels may be used, the effects of prior knowledge have been frequently demonstrated in both L1 reading (Anderson et al. 1977), and L2 reading, where Steffensen and Joag Dev (1984) have demonstrated the importance of “general” or “cultural knowledge, while Alderson and Urquhart (1988) have done so for academic knowledge.

(3) Q. Inherently natural process (Topic_111)

Reading is not an inherently natural process in the same way that speaking and listening are in a first language (L1). Unlike our first spoken language, which one might say “comes for free,” nothing is free with respect to reading. Learning to read requires considerable cognitive effort and a long learning process, whether one is learning to read in the L1 or in a second language (L2). If a person is not taught to read, in one way or another (e.g., by a teacher, a parent, a sibling), that person will not learn to read (Grabe and Stoller 2002).

(3) Q. Methods for text comprehension (Topic_116)

Text comprehension requires both a) language knowledge and b) recognition of key ideas and their relationships (through various comprehension strategies). Language knowledge, for purposes of this review, primarily involves vocabulary knowledge (see above) and grammar knowledge. There is a range of research that argues for a strong relation between grammar knowledge and reading. Furthermore, research on syntactic processing, or word integration processes (integrating lexical and syntactic information into clause-level meaning units), also suggests significant relations between syntactic processing abilities and comprehension abilities (Fender 2001).

(3) Q. Intrinsic motivation (Topic_121)

In L1 settings, the strongest evidence of the direct impact of positive motivation on reading comes from Guthrie and his colleagues. In two studies, they demonstrated the impact of reading engagement on both reading amount (reading extensively) and reading comprehension. First, Wigfield and Guthrie (1997) demonstrated that motivation and engagement with reading were significantly related to amount of reading. More highly motivated fourth and fifth grade students engaged in significantly more reading. In a further study, Guthrie et al. (1999) demonstrated that higher motivation among third and fifth grade students significantly increased their amount of reading and their text comprehension. In examining related questions of whether or not motivation (defined as reading engagement) could be taught directly through classroom instruction, Guthrie et al. (1998) demonstrated that Concept-Oriented Reading Instruction (CORI) developed significantly higher levels of student motivation than control classes among third and fifth grade students.

(3) Q. multiple choice questions (Topic_124)

Multiple-choice questions can focus on details (microstructure) and on more general aspects (macrostructure) of the text, although some researchers have found difficulty in using multiple-choice to measure global comprehension. Multiple-choice tests only involve reading and so the measurement is less likely to be affected by writing skill than it is in a short answer test. If a multiple-choice test has not been well prepared, learners may be able to get a reasonable score without reading the text, and part of the preparation of a good test involves checking this. Multiple choice questions can be checked by checking the length of the answers to make sure that the correct answer is not always shorter or longer than the distractors, asking a native

speaker to answer the test to see if they get all of the answers correct, getting a colleague to look critically at the items to see if they can see any problems with them, and looking at learners' answers to the items to see if some items are too easy or too hard or if the learners are all choosing the same wrong choice.

(3) Q. Pronominal question (Topic_124)

These questions require learners to make a written answer which can range in length from a single word to several paragraphs. Usually for comprehension, short answers are required and these forms of questions are called short answer questions. If the answers the learners have to make are short, then more questions can be answered, thus increasing the reliability and validity of the test. These questions can be used for all focuses of comprehension. They are suited to checking literal comprehension because it is not difficult to write the questions avoiding the same words that are used in the reading text. They are suited to inferences, application and responding critically because the learners have to search for and construct their own answers using what is found in the text. Another positive feature of these types of questions is that they can be marked using a grading scale, for example 0, ½, 1 or 0, 1, 2, 3 marks for each question depending on the completeness and accuracy of the answer. This allows credit to be given for partial comprehension and credit to be given for high quality comprehension.

(3) Q. Three characteristics of multiple choice question (Topic_125)

Multiple-choice questions can focus on details (microstructure) and on more general aspects (macrostructure) of the text, although some researchers have found difficulty in using multiple-choice to measure global comprehension. Multiple-choice tests only involve reading and so the measurement is less likely to be affected by writing skill than it is in a short answer test. If a multiple-choice test has not been well prepared, learners may be able to get a reasonable score without reading the text, and part of the preparation of a good test involves checking this. Multiple choice questions can be checked by checking the length of the answers to make sure that the correct answer is not always shorter or longer than the distractors, asking a native speaker to answer the test to see if they get all of the answers correct, getting a colleague to look critically at the items to see if they can see any problems with them, and looking at learners' answers to the items to see if some items are too easy or too hard or if the learners are all choosing the same wrong choice.

(3) Q. spelling techniques (Notes provided by instructor)

- ✚ Look, say, cover, write, check. Look, say, cover, write, check is the method used to practise spellings in most primary schools. ...
- ✚ Spelling sentences. ...
- ✚ Dictation. ...
- ✚ Spotting patterns. ...
- ✚ Listen and spell. ...

✚ Mnemonics. ...

✚ Tracing. ...

(3) Q. What should you do if you don't understand something in reading? (Notes provided by instructor)

✚ **Step 1**—Find the reference words in the difficult sentence and find what they refer to.

✚ **Step 2**—Rewrite the sentences as two or more sentences by removing and, but, or or.

✚ **Step 3**—Find the nouns and remove the items following the nouns which are a part of each noun group.

✚ **Step 4**—Do the What does what? exercise with the verbs to make sure their subjects and objects are known.

(3) Q. What should do when don't understand something that are reading..3 (Notes provided by instructor)

1. Do not stop immediately but keep reading a bit.
2. Think whether it's important to understand.
3. Know that there are no easy ways to understand.

(3) Q. Use adverb 'only' write three sentences in different meaning. (Notes provided by instructor)

✚ It's only an idea, but I thought we could try it out.

✚ She was only 18 when she had her first child.

✚ I only hope we can finish this in time.

(3) Q. how positive attitude is helpful for reading (Notes provided by instructor)

A positive attitude helps you cope more easily with the daily affairs of life. It brings optimism into your life, and makes it easier to avoid worries and negative thinking. If you adopt it as a way of life, it would bring constructive changes into your life, and makes them happier, brighter and more successful. Reading is largely a valued and enjoyed activity in Thai society so there may also be positive attitudes to reading carried over to English.

(3) Q. Strategies of reading? (Notes provided by instructor)

To improve students' reading comprehension, teachers should introduce the seven cognitive strategies of effective readers: activating, inferring, monitoring-clarifying, questioning, searching-selecting, summarizing, and visualizingorganizing.

(3) Q. academic and non academic material (Notes provided by instructor)

Academic articles are written by professionals in a given field. ... Non-Academic articles are written for the mass public. They are published quickly and can be written by anyone. Their language is informal, casual and may contain slang.

(3) Q. explain grammar (Notes provided by instructor)

In linguistics, grammar (from Ancient Greek γραμματική) is the set of structural rules governing the composition of clauses, phrases and words in a natural language. The term refers also to the study of such rules and this field includes phonology, morphology and syntax, often complemented by phonetics, semantics and pragmatics. Fluent speakers of a language variety or lect have a set of internalized rules for using that form of speech. This rule set constitutes the lect's grammar. The vast majority of the information in the grammar is – at least in the case of one's native language – acquired not by conscious study or instruction but by hearing other speakers. Much of this work is done during early childhood; learning a language later in life usually involves a greater degree of explicit instruction. Thus, grammar is the cognitive information underlying language use.

(3) Q. Three types of text (Notes provided by instructor)

1. Expository texts.
2. Narrative texts, and.
3. Argumentative texts.

(5) Q. Teaching phonics to students? (Notes provided by instructor)

1. Gather the materials listed below and store them together in a box. ...
2. Teach the 5 short-vowel sounds and consonant sounds. ...
3. Practice two-letter blends.
4. Practice three-letter blends. ...
5. Teach the twin-consonant endings, plurals, and two-consonant blends. ...
6. Teach the digraphs (ch, sh, th, wh, ng, nk).

(5) Q. Principles of extensive reading (Notes provided by instructor)

1. Students read a great deal, quite quickly (at least 150-200 words a minute) and often.
2. The reading material is relatively easy for the level of the students. Too much unknown language prevents students from reading quickly and fluently.
3. It is the student, not the teacher, who chooses what to read.
4. Students have a wide variety of genres and topics to choose from.
5. Students read for pleasure, information or general understanding.

(5) (5) Q. Benefits of extensive reading (Notes provided by instructor)

1. Enhanced language learning in such areas as spelling, vocabulary, grammar, and text structure
2. Increased knowledge of the world
3. Improved reading and writing skills
4. Greater enjoyment of reading
5. More positive attitude toward reading

(5) Q. Characteristic of strategic reader 5 marks (Notes provided by instructor)

1. Good readers summarize as they read. To summarize is to retell the main ideas or events in a story in your own words. This helps you focus on the key points and make sure you understand what you're reading.
2. Good readers make and revise predictions as they read. When you make predictions you try to figure out what is going to happen in the text. This keeps your interest level high. It also causes you to notice details and to change and update your predictions.
3. Good readers make inferences as they read. When you make an inference you draw a reasonable conclusion based on information in the text. Authors often expect you to make inferences; they don't come right out and say everything you need to know.
4. Good readers ask questions as they read. Good readers ask themselves questions to make sure that they're understanding the text, and that the meaning they're constructing makes sense.
5. Good readers visualize as they read. To visualize is to try to picture what the author is describing. This helps give you a very clear image of what you're reading. It can also help you get into a story and imagine you're there.

(5) Q. Convert five statements into sentences without change their (unseen)

1. **Churchil was a great scientists and ... He got the noble prize for literature**

Churchil was a great scientist; philosopher and he got Nobel prize for literature.

2. **she is my sister. Mahira**

Mahira is my sister.

3. **She works hard. She wanted to pass the test**

She worked hard to pass the test.

4. **I put on my best dress. I want to impress her.**

I put on my best dress to impress her.
