

# BT401 CURRENT MCQS JANUARY 2023

|                                                                                                         |                                                            |
|---------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
| All are derived genetic resources except                                                                | (weed)                                                     |
| Cryopreservation occur in                                                                               | (liquid nitrogen)                                          |
| Dwarf lake iris is a miniature iris with showy,                                                         | (deep blue flowers)                                        |
| according to the Smithsonian Institution of Tasmania tigers are the largest carnivores                  | (marsupial)                                                |
| "Gene flow blocked by physical barriers results in                                                      | (Allopatric speciation)                                    |
| crow follow ... migration                                                                               | (daily)                                                    |
| will always result in the selection of allele that gives an advantage to its possessor                  | Natural selection                                          |
| GEWIS stands for                                                                                        | (genome wide interaction scan)                             |
| The Indus River dolphin is one of the world's rarest                                                    | (mammals)                                                  |
| NCCP stands for                                                                                         | (National Culture Collection of Pakistan)                  |
| A concrete plan of action specially designed to achieve concrete goals                                  | (strategy)                                                 |
| According to FAO, there are approximately ... species of mollusks                                       | (85 000)                                                   |
| Scientific name of cat                                                                                  | (Felis catus)                                              |
| Full form of AnGr                                                                                       | (Animal genetic resources)                                 |
| An emollient is a                                                                                       | (moisturizer)                                              |
| Example of in-situ conservation                                                                         | all( biosphere reserves, national parks, gene sanctuaries) |
| Obsolete varieties are varieties developed since the advent of scientific agriculture in the ...century | (19 <sup>th</sup> )                                        |

|                                                                                                       |                                        |
|-------------------------------------------------------------------------------------------------------|----------------------------------------|
| shows changes in the genome that may be advantageous, deleterious or may have no effect.              | (genetic drift)                        |
| is known to occur between different species                                                           | (Horizontal gene transfer)             |
| Scientific name of Marco Polo sheep                                                                   | (Ovis Ammon)                           |
| Species in immediate danger                                                                           | (Endangered Species)                   |
| Causes of extinction                                                                                  | (climate change+hunting+pollution)     |
| ABSA stands for:                                                                                      | (Access and Benefit Sharing Agreement) |
| Genetic Diversity is the variation in the amount of genetic information within                        | (individuals)                          |
| chemical substance produced by microorganisms                                                         | (antibiotics)                          |
| Total area under Legumes crops                                                                        | (1.5m hectare)                         |
| According to FAO, there are approximately                                                             | (31 000 species of finfish)            |
| Gene pool types                                                                                       | (3)                                    |
| Peste des petits ruminants (PPR), also known as                                                       | ( sheep and goat plague)               |
| Total extinct species till now                                                                        | (5 billion)                            |
| When the gray wolf mates with a coyote, this may give rise to viable                                  | (red wolves)                           |
| In sickle cell disease ... mean to protect against malaria                                            | (genetic changes)                      |
| How many breeds of buffalo is used in food & agriculture                                              | (70)                                   |
| After how many generations pure breed is obtain in outbreeding                                        | (5 <sup>th</sup> )                     |
| The degree of relationship is not closer than half-brother half-sister matings or cousin matings      | (Line breeding)                        |
| Together with the components which fulfill agrieological functions they are grouped under the concept | (Agrobiodiversity)                     |
| Dolphin is a                                                                                          | (mammal)                               |
| Natural selection effects on                                                                          | (ecosystem)                            |

|                                                                                                                                  |                                                 |
|----------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| <b>Scientific name of horse</b>                                                                                                  | <b>(Equus ferus)</b>                            |
| <b>Genes can be transferred sexually or asexually</b>                                                                            | <b>(vertical gene transfer)</b>                 |
| <b>Dart-poison frogs have compound</b>                                                                                           | <b>(alkaloid)</b>                               |
| <b>Reef are home to ... % marine animals</b>                                                                                     | <b>(25)</b>                                     |
| <b>It involves storage in low and non freezing temperature</b>                                                                   | <b>(Cold storage)</b>                           |
| <b>Sheep were domesticated by humans around</b>                                                                                  | <b>(10,000 BC)</b>                              |
| <b>Sterculia khasiana was endemic tree of</b>                                                                                    | <b>(Khasi Hills)</b>                            |
| <b>Pakistan in Kinow production is at ... number</b>                                                                             | <b>(6<sup>th</sup>)</b>                         |
| <b>Which is called rosewood</b>                                                                                                  | <b>(Dalbergia Sissoo /Sheesham Tree)</b>        |
| <b>Wildebeest are the part of</b>                                                                                                | <b>(great migration)</b>                        |
| <b>Phenylketonuria caused by</b>                                                                                                 | <b>(mutation)</b>                               |
| <b>GSPC program founded in</b>                                                                                                   | <b>(1999)</b>                                   |
| <b>Result of environment &amp; human change</b>                                                                                  | <b>(bottleneck effect)</b>                      |
| <b>The deadly drug ... which is used in the feed for cattle is a chemical compound that kills these vultures at a rapid rate</b> | <b>(Diclofenac Sodium)</b>                      |
| <b>There are only ... snow leopards left in Pakistan.</b>                                                                        | <b>(200)</b>                                    |
| <b>GSPC stands for:</b>                                                                                                          | <b>(Global Strategy for Plant Conservation)</b> |
| <b>The longest migration of all is undertaken by the</b>                                                                         | <b>(Artic tern bird)</b>                        |
| <b>Syndrome named Ellis van Creveld occurs in</b>                                                                                | <b>(Amish people)</b>                           |
| <b>Person bitten by Asiatic cobra suffers from severe</b>                                                                        | <b>(neurotoxicity)</b>                          |
| <b>Which is easily regenerated from seed</b>                                                                                     | <b>(acacia nilotica)</b>                        |
| <b>Types of inbreeding</b>                                                                                                       | <b>(3)</b>                                      |
| <b>Which is used as large scale for food &amp; agriculture</b>                                                                   | <b>(sheep)</b>                                  |

|                                                                                     |                                 |
|-------------------------------------------------------------------------------------|---------------------------------|
| <b>Which of the following approach can be taken to analyze GxE interaction</b>      | <b>(Polygenic)</b>              |
| <b>Example of extinct specie</b>                                                    | <b>(white rhino)</b>            |
| <b>Biologists suspect we're living through the ... major mass extinction</b>        | <b>6<sup>th</sup></b>           |
| <b>Themes of genetic resources are:<br/>Genetic resources are sometimes called:</b> | <b>(2)<br/>(first resource)</b> |
