Final Term Past Paper

2017 -2018

Bio Mates sign of bright future

Short Question

1. What is meristem culture?
2. Bio pesticides
3. Protoplast culture optimizing requirements
4. Bio-inoculants
5. Short note on Pest resistance
6. Gene splicing
7. Multipartite viruses
8. Competent cells
9. Lettuce why used instead of tobacco for human growing plants
10. How Gm adds more nutrition value to plants
11. Conjunction
12. Successful pathogen infection or diseases
13. Positive and negative PCR
14. Characteristics of synthetic seeds
15. What multiplication steps take place in tissue culture
16. Define bio compost
17. What is constant flow system in microinjection 2?
18. Define stress.2
19. What are advantages of insecticides 2?
20. Growth characteristics of cell suspension culture. 3
21. What are botanical pesticides? 3
22. Paramerts strategies important for plant growth?
23. What is synthetic seed?
24. How GM can be used in medicine.
25. What is bio fertilizer?
26. Advantages of bio fertilizer
27. What is agrobacterium transformation?
28. What are ready rot up plants?
29. Why nitrogen fixation is important for plant?
30. Role of ROS in plant
31. What is abstract flow?
32. Application of germplasm
33. Factors of pesticides on plant

Long Question

1. Bio fertilizer resources.
2. Pesticides effect on environment.
3. Types of tissue culture.
4. Role of Flavonoids.
5. Pesticide poisoning types.
6. Meristem culture principle.
7. Losses of plants due to diseases.
8. Write pre zygotic barrier.
9. Describe briefly flavonoids.
10. Gibberellins.
11. Briefly explain bio inoculation.
12. Explain pre zygotic conditions in plants?
13. Genetically engineered practice how effect on the environment?
14. Herbicides weed resistance.
15. Advantages of agrobacterium mediated transformation.
16. How plant defend against pathogens.
17. Skoog.
18. Ethics long.
19. Food med
20. Bacterial carriers important for gene transfer.
21. Why plasmid transformation is necessary.
22. Factors of embryo culture.

Bio Mates sign of bright future
