CUTE KURI

LESSON#1

Which of the following is not the function of food substances that are ingested by living organisms and can be metabolized ----------

Select the correct option

- [x] Help in DNA replication
- [ ] source of raw materials for growth and development
- [ ] source of energy
- [ ] to supply minute amount of nutrients to regulate vital metabolic processes

Click to Save Answer & Mo

Food is any substance consumed to provide _____ for an organism.

Select the correct option

- [ ] stimulate growth
- [ ] nutrition
- [ ] maintain life
- [x] all of these

Lesson#2

Question # 1 of 4

The building blocks of proteins are _____?

Select the correct option

- [ ] Monosaccharides
- [ ] Nucleotides
- [x] Amino acids
- [ ] Monomer

Which of the following are fat soluble vitamins?

Select the correct option

- ( ) C & K
- ( ) A & C
- ( ) A & C
- (•) A & D

Click t

Which of the following represent simplest type of carbohydrates------?

Select the correct option

Re

- ( ) Oligosaccharides
- (•) Monosaccharides
- ( ) Disaccharides
- ( ) Polysaccharides

Click to Save Answer & Mo

Maltose is made up of_____?.

Select the correct option

- ( ) Glucose + fructose
- ( ) Glucose + galactose
- (•) Glucose + glucose
- ( ) Glucose + ribose

Click to Sav

Question # 3 of 4

Proteins contain about _____ nitrogen?

Select the correct option

- (●) 16%
- ( ) 5%
- ( ) 17%

Which of the following is a manufactured fat?

Select the correct option

- (●) Margarine
- ( ) Palm Oil
- ( ) Butter
- ( ) Coconut oil

Click to

Food composition data are detailed sets of information on the _____ important components of foods and provide values for energy and nutrients including protein, carbohydrates, fat, vitamins and minerals and for other important food components such as fibre.

Select the correct option

- (●) nutritionally
- ( ) substantially

LESSON#3

What is the meaning of quantity of water present in various food products and ingredients?

Select the correct option

- ○ carbohydrate contents
- ○ All of the above
- ◉ moisture contents
- liquid contents

The quantity of water present in various food products and ingredients shows its ----------?

Select the correct option

Reloc

- ◉ Moisture content
- ○ Water content

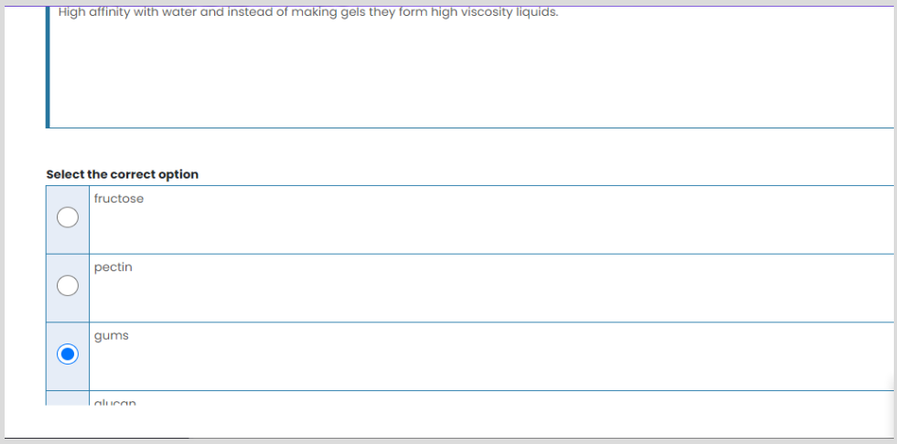

Lesson#4

Which of the following is an example of disaccharide?

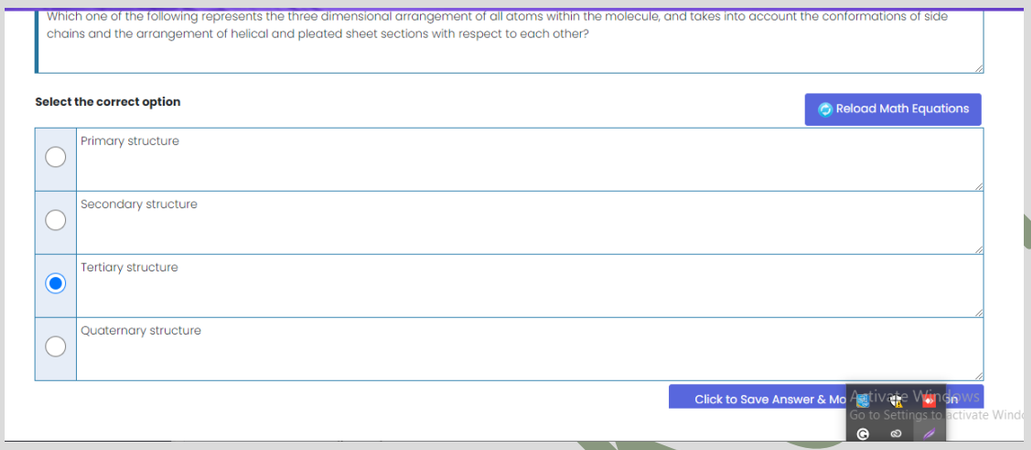

Select the correct option

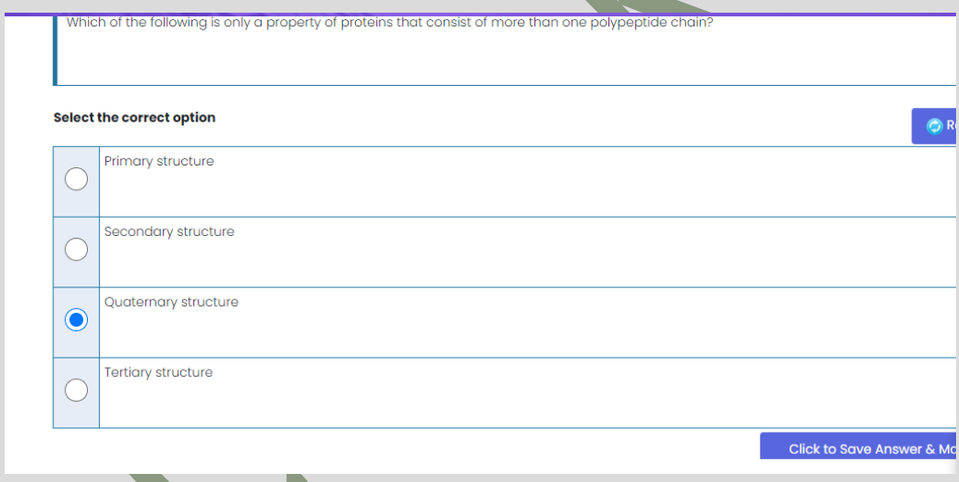

- ○ Ribose
- ○ Cellulose
- ○ Glucose
- ◉ Sucrose

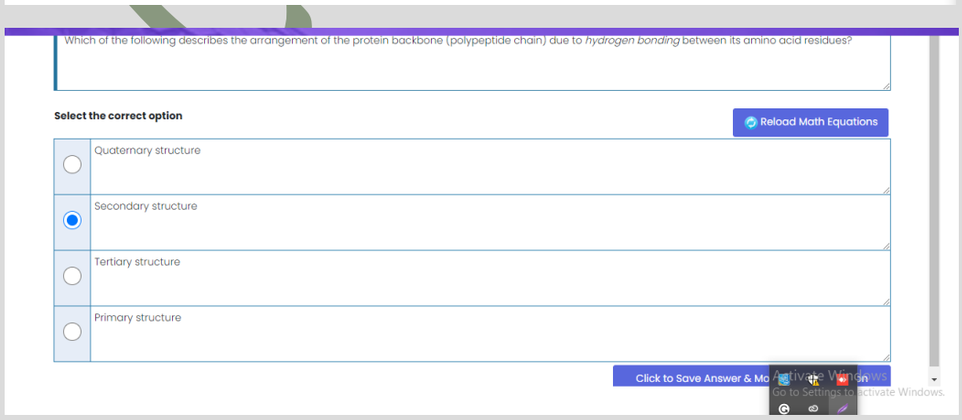

Cl

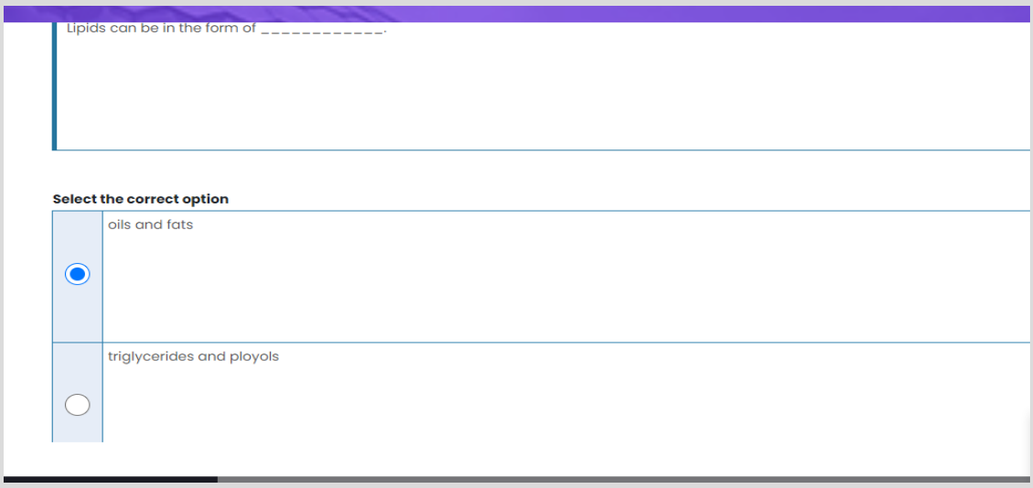

Lesson#5

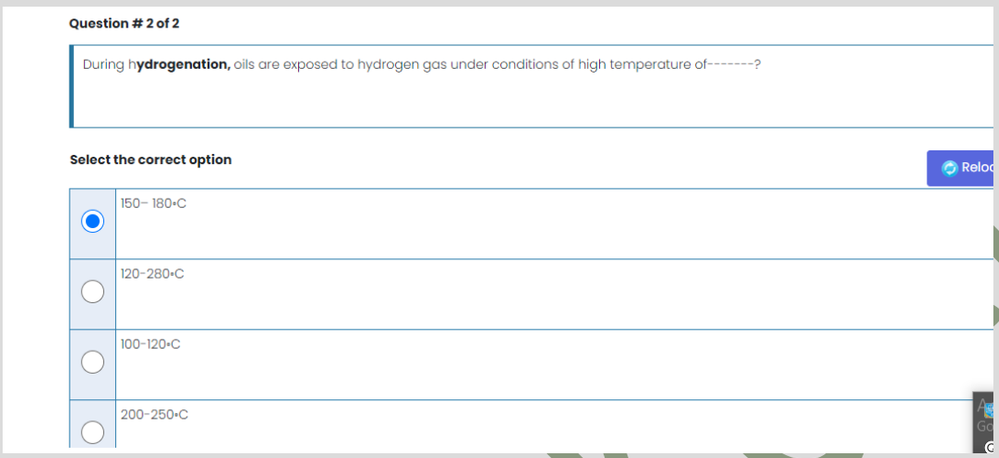

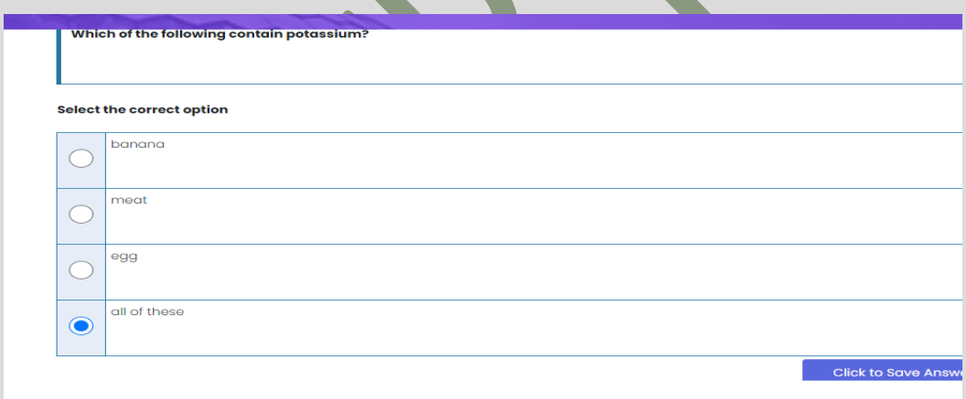

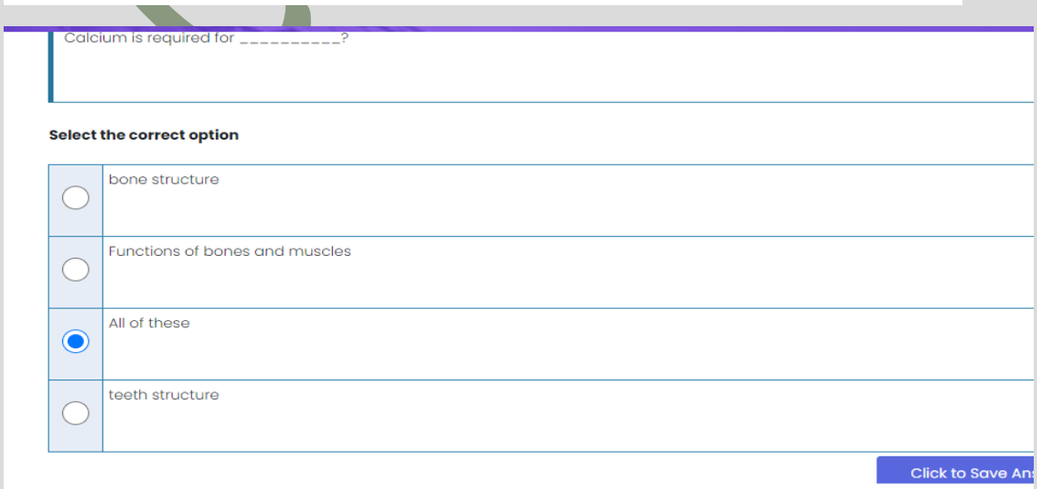

Lesson#6

Lesson#7

Lesson#8

Activated ergosterol is a vitamin_____.

Select the correct option

- C
- D
- A

Which of the following is essential for clotting of blood?

Select the correct option

- Vitamin D
- Vitamin A
- Vitamin K
- Vitamin B1

Click to Save Answer & M

Which of the following **is necessary for normal tooth and bone formation?**

Select the correct option

- Vitamin A
- Vitamin D
- Vitamin B1
- Vitamin K

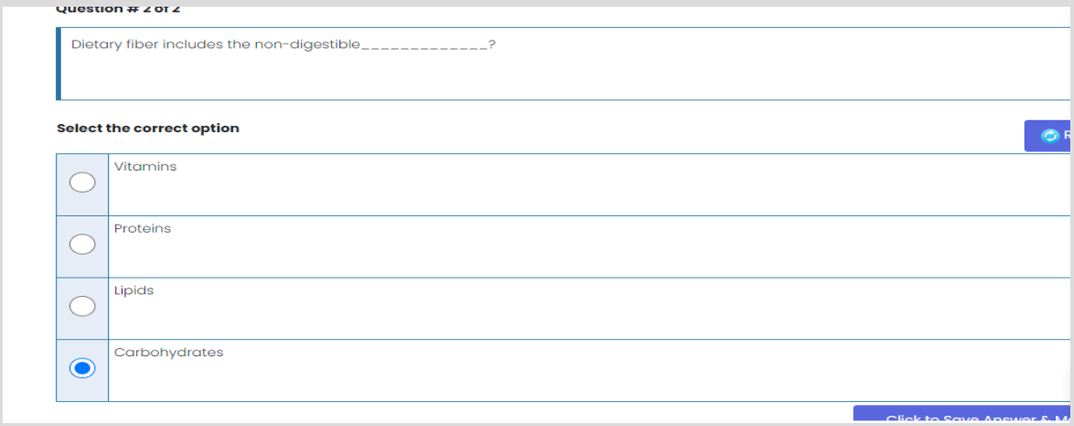

Click to Save Answer

Lesson#9

Which one of the following is water soluble fiber----------?

Select the correct option

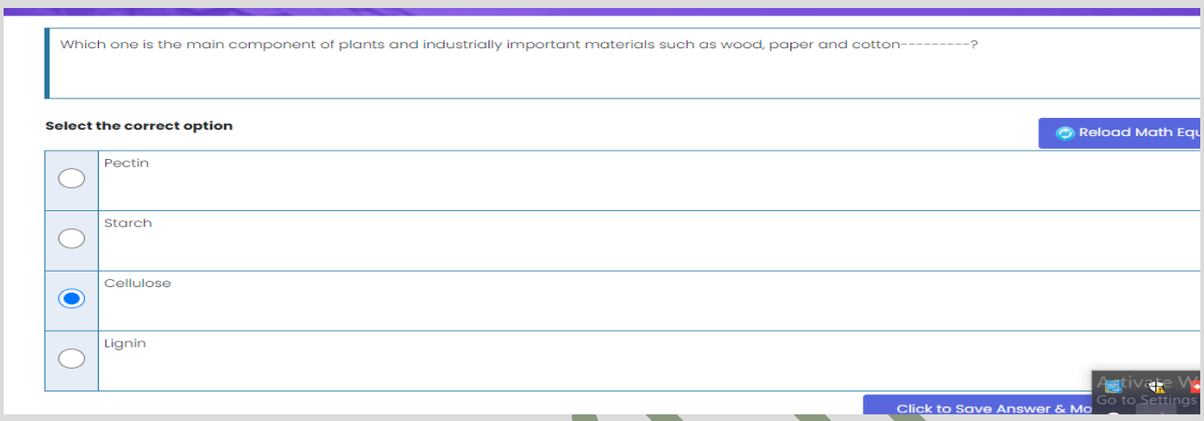

- Cellulose and Hemicellulose
- Pectin and Gums
- Gums and Cellulose
- Pectin and Cellulose

Question # 2 of 2

Dietary fiber includes the non-digestible_____?

Select the correct option

- Vitamins
- Proteins
- Lipids
- (•) Carbohydrates

Which one is the main component of plants and industrially important materials such as wood, paper and cotton---------?

Select the correct option

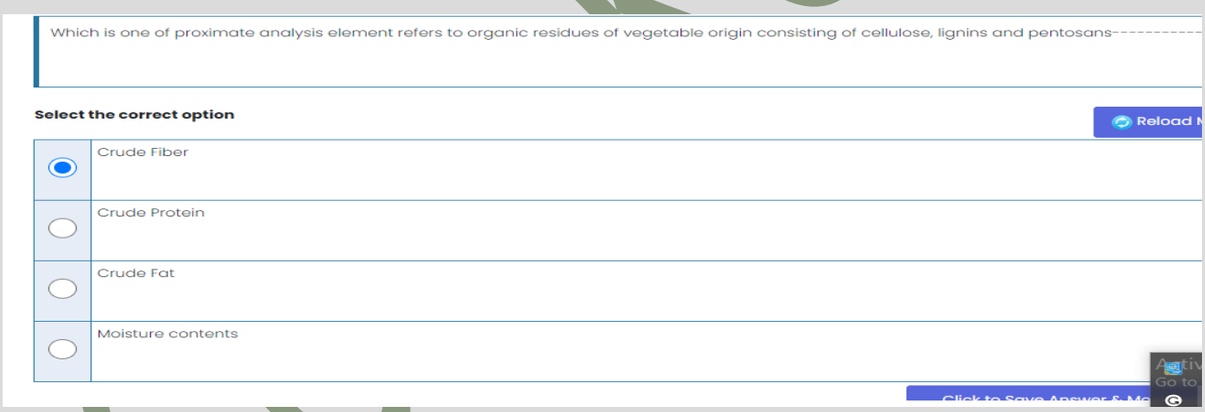

Reload Math Equ

- Pectin
- Starch
- (•) Cellulose
- Lignin

Lesson#10

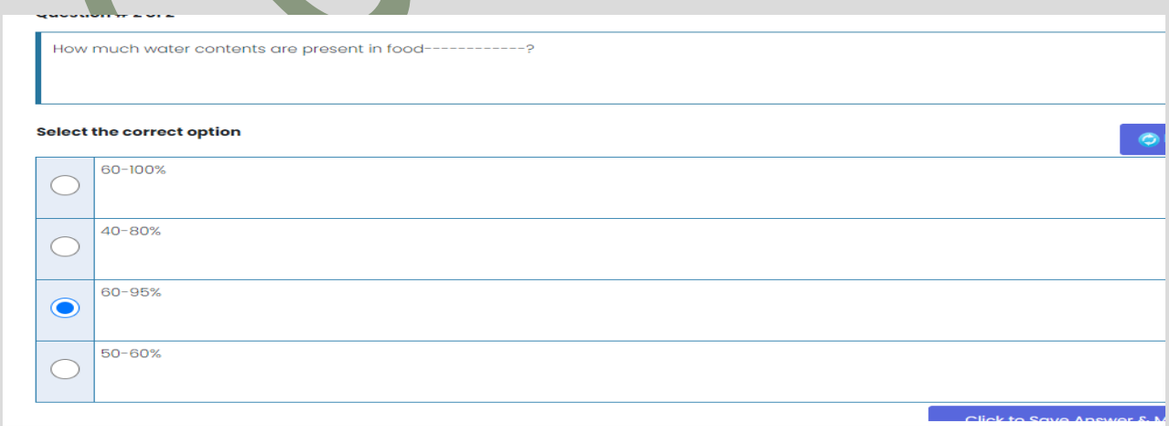

Which is one of proximate analysis element refers to organic residues of vegetable origin consisting of cellulose, lignins and pentosans----------

Select the correct option

Reload M

- (•) Crude Fiber
- Crude Protein
- Crude Fat
- Moisture contents

Click to Save Answer & Me

How much water contents are present in food----------?

Select the correct option

- 60-100%
- 40-80%
- (•) 60-95%
- 50-60%

Click to Save Answer & M

Kjeldahl Method is used to determine ---------- in sample?

Select the correct option

- ○ Fat
- ◉ Protein
- ○ Carbohydrate

Lesson#11

Question # 1 of 2 **Time Left: 63 sec(s)**

Infra-red lamps with a filament temperature of _____can penetrate heat to food and shorten drying time to 20-25 minutes only.

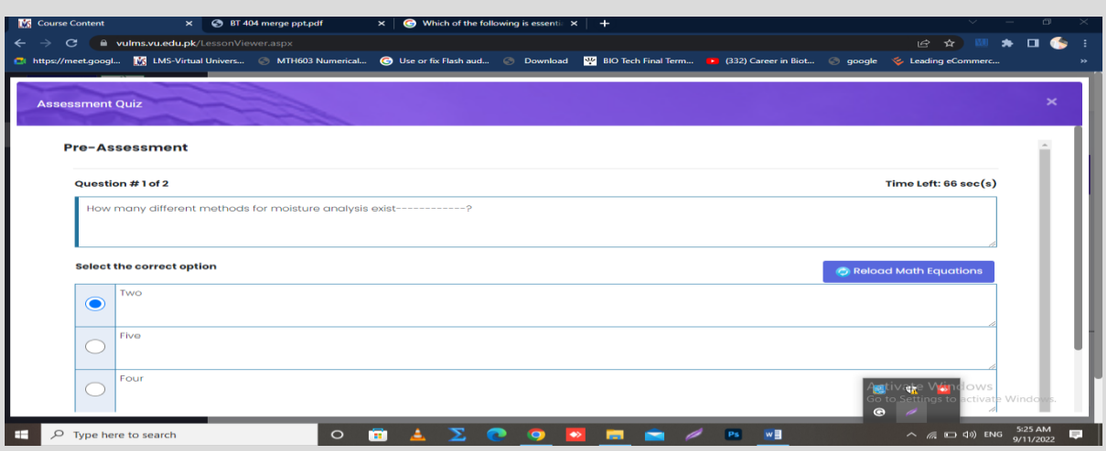

Select the correct option Reload Math Equations

- ○ 20000-25000 K
- ○ 200-250 K
- ○ 20-25 K
- ◉ 2000-2500 K

In distillation method, food sample is heated with a solvent having ----------?

Select the correct option

- ○ Lower boiling point and Lower specific gravity than water
- ○ Lower boiling point and Higher specific gravity than water
- ○ Higher boiling point and Higher specific gravity than water
- ◉ Higher boiling point and Lower specific gravity than water

Lesson#12

Question # 1 of 2

---------- ash is measure of added minerals to foods such as dirt, sand or talc?

Select the correct option

- ( ) Water soluble ash
- (•) Acid insoluble ash
- ( ) Wet ash
- ( ) Total ash

Question # 2 of 2

Which type of ash gives information about fruit contents in jams and preserves ----------?

Select the correct option

- ( ) Acid insoluble ash
- ( ) Wet ash
- ( ) Total ash
- (•) Water soluble ash

Lesson#13

Which technique is more capable of rapid, specific, sensitive and precise measurements of carbohydrates ----------?

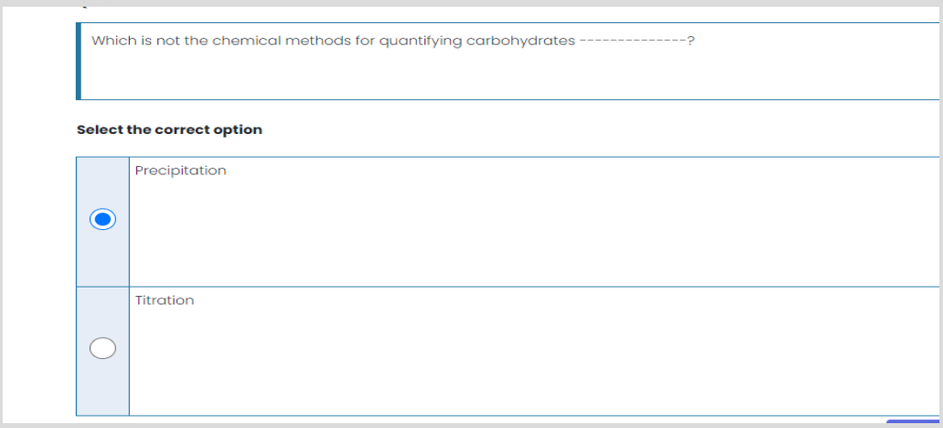

Select the correct option

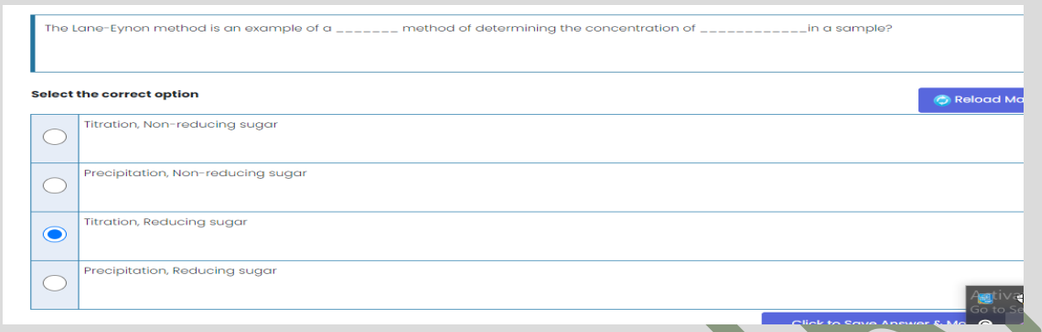

- ( ) All of these
- ( ) TLC
- (•) HPLC

Low molecular weight carbohydrates are extracted from foods by boiling a defatted sample with an_____?

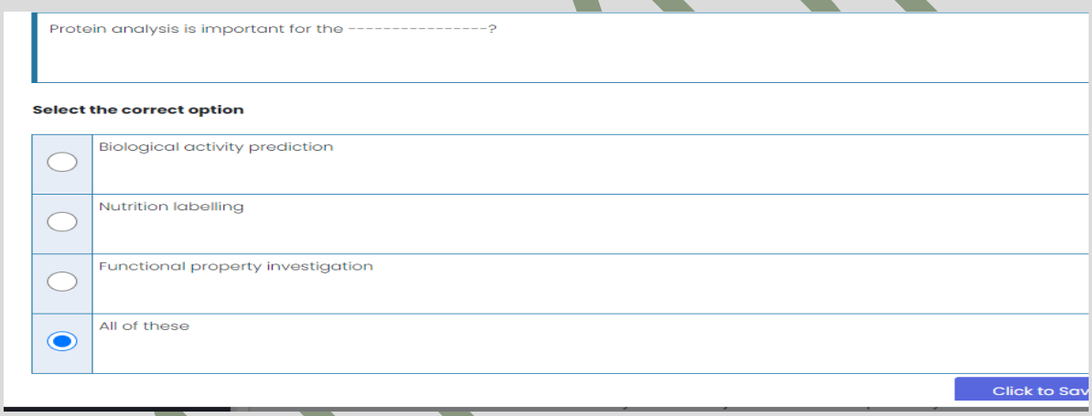

Select the correct option

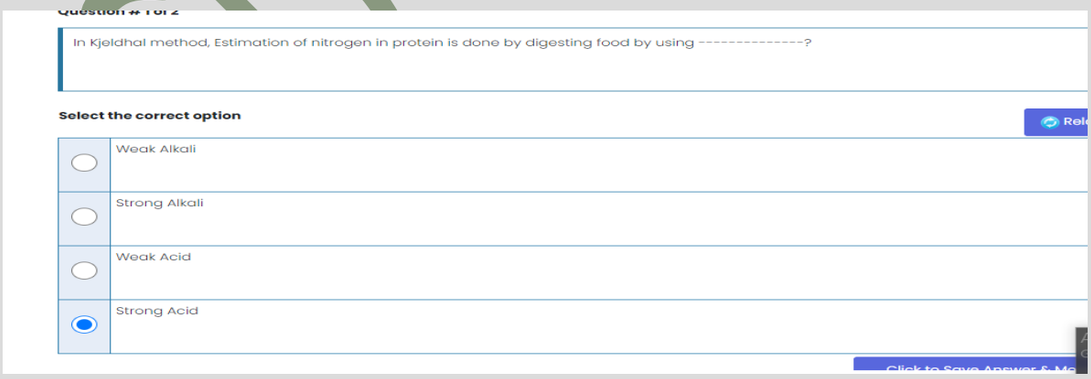

- ( ) 20% alcohol solution
- ( ) 60% alcohol solution
- ( ) 40% alcohol solution
- (•) 80% alcohol solution

Lesson#14

LESSON#15

Which one of the following is not non-solvent liquid extraction Method ----------?

Select the correct option

- [x] Goldfisch method
- [ ] Babcock method
- [ ] Gerber Method
- [ ] Surfactant Method

Click to Save Answer & Mo

Which one of the following about Soxhlet extraction method is correct ----------?

Select the correct option

- [ ] Supercritical Fluid Extraction
- [x] Semi-Continuous Solvent Extraction
- [ ] Accelerated Solvent Extraction
- [ ] Continuous Solvent Extraction

LESSON#16

Which term was originally synonymous with "roughage"—the non-digestible plant matter ----------?

Select the correct option

- [ ] Ashes
- [ ] Crude Fat
- [ ] Crude Protein
- [x] Dietary fiber

Dimethyl Sulfoxide (DMSO) the enzymatic–chemical methods were devised for specifically measuring ----------?

Select the correct option

- [ ] Lipids
- [ ] Starch polysaccharides
- [x] Non-starch polysaccharides
- [ ] Protein

Click to Save An

LESSON#17

How much total fat (%) is present in fatty fish ----------?

Select the correct option

- 5-50%
- 5-20%

Which one of following statement is correct about oils and fats ----------?

Select the correct option

- Oils and fats are liquids
- Oils are liquids and fats are solids
- Oils and fats are solids
- Oils are solids and fats are liquids

Click to Save Answer

How much total fat (%) is present in an Egg ----------?

Select the correct option

- 99%
- 40%
- 17%
- 13%

Lesson#18’

How many number of carbon atoms present in Linoleic acid ----------?

Select the correct option

- 16
- 12
- 5
- 18

Click

Which pair of fatty acids are unsaturated fatty acids ----------?

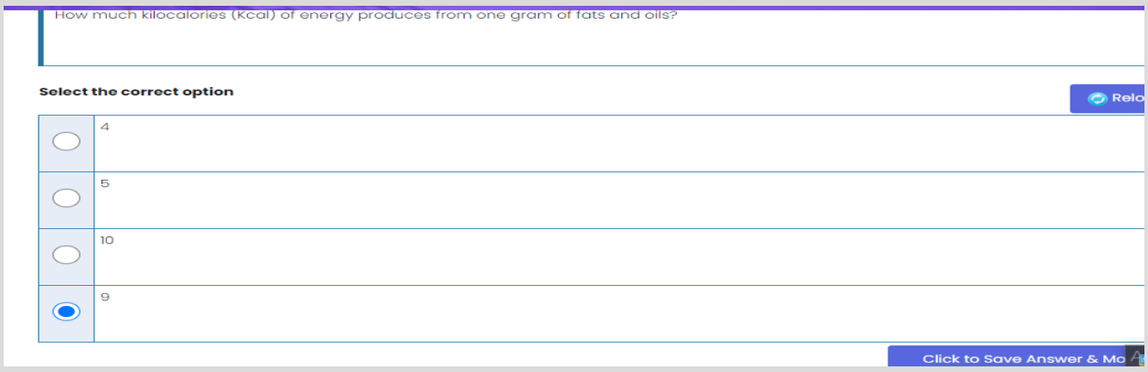

Select the correct option

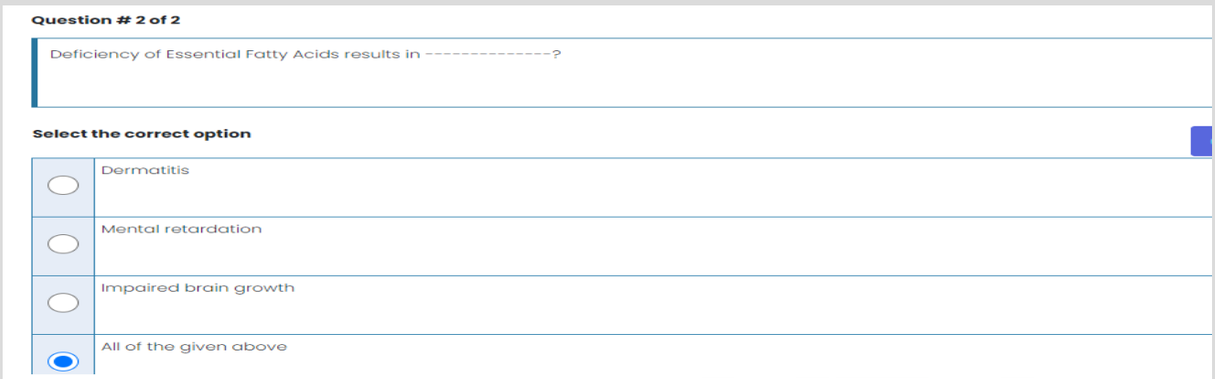

Reload Math Equations

- Butyric acid and Caproic acid
- Linoleic acid and Oleic acid
- Stearic acid and Caproic acid
- Myristic acid and Palmitic acid

Lesson#19

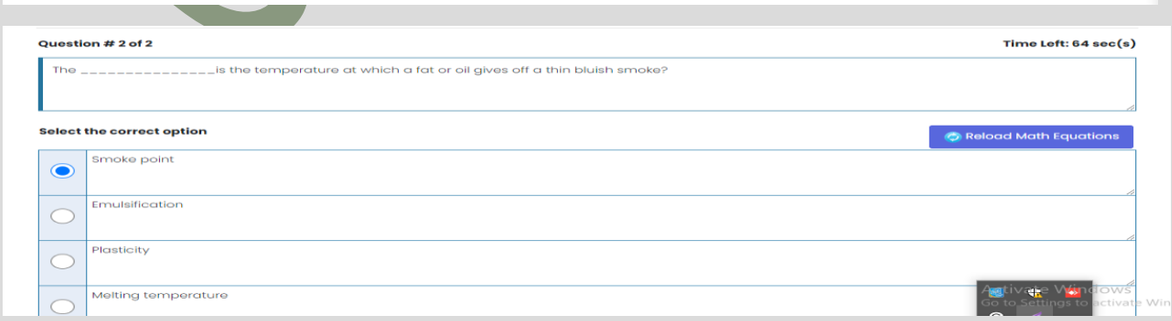

Lesson#20

Lesson#21

Injecting steam with agitation is done for what purpose?

Select the correct option

- decolourizer
- none of these
- deodorizing
- odourous

How many steps are involved in refining of crude oil ----------?

Select the correct option

- Three
- Two
- Four
- Five

Click to Save Answer

Question # 2 of 2

What types of impurities effects the shelf life of oil ----------?

Select the correct option

- Vitamins
- Colouring pigments
- Free fatty acids
- All of the above

Lesson#22

Which one is correct sequence of crude oil refining process?

Select the correct option

- Degumming->Neutralising->Washing and Drying->Bleaching->Deodourising
- Deodourising ->Neutralising->Washing and Drying->Bleaching-> Degumming
- Degumming-> Washing and Drying -> Neutralising ->Bleaching->Deodourising
- Degumming-> Bleaching ->Washing and Drying-> Neutralising ->Deodourising

Click to Save Answer

Liquid fats or oils with a _____are used for deep-fat frying purposes?

Select the correct option

- Low Plasticity
- High Plasticity
- Low smoke point
- High smoke point

Click to Save Answer & Ma

Question # 1 of 2

Foods get cooked in _____in shorter time than when cooked in _____?

Select the correct option

- ○ Water, Fat
- ◉ Fat, Water

Some fat is absorbed by the food and the calorific value of the food is _____when it is cooked in fat or oil?

Select the correct option

- ○ None
- ○ Decreased
- ○ Either increased or decreased
- ◉ Increased

LESSON#23

Spoilage of fats results in off flavor and renders the fat inedible. These changes are known as ----------?

Select the correct option

- ○ Oxidation
- ○ Flavor Reversion
- ◉ Rancidity Spoilage
- ○ Hydrolysis

Which of the following factors increase the rancidity and decrease the shelf life of product ----------?

Select the correct option

- ○ Air
- ○ Water
- ◉ All of the given
- ○ Enzyme

How many types of reaction are normally involved in food spoilage due to undesirable changes in fat and oil during storage ----------

Select the correct option

- ◉ Two
- ○ Three
- ○ Five
- ○ Four

LESSON#24

Which is correct percentage of fate in Heavy (whipping) Cream ----------?

Select the correct option

- (●) 85% Cream, 15% Milk
- ( ) 50% Cream, 50% Milk
- ( ) 20% Cream, 80% Milk
- ( ) 70% Cream, 30% Milk

Question # 2 of 2

Milk can be plain or flavored .Usually fortified with VITAMIN _____?

Select the correct option

- ( ) A
- ( ) E
- (●) D
- ( ) K

The Process of agitating milk to help distribute the fat throughout so it's uniform in texture (not clumpy) is ----------?

Select the correct option

- ( ) Pasteurization
- ( ) Sterilization
- (●) Homogenization
- ( ) Fermentation

LESSON#25

Question # 1 of 3

Number of non-pathogens in pasteurized milk is ---------?

Select the correct option

- (●) 2,000 to 20,000 organisms /ml
- ( ) 2,0 to 20,0 organisms /ml
- ( ) 2 to 20 organisms /ml
- ( ) 2,00 to 20,00 organisms /ml

----------grow at 5°c and less and make up a large number of the microbes in milk?

Select the correct option

- ( ) Thermoduric
- (●) All of the given
- ( ) Psychrotrophs
- ( ) Thermophilic

Question # 3 of 3

Number of non-pathogens in raw milk is _____of milk?

Select the correct option

- 500 to 3,000 organisms/ml
- 500,000 to 3,000,000 organisms/ml
- 500,0 to 3,000,0 organisms/ml
- 500,00 to 3,000,00 organisms/ml

LESSON#26

Pasteurization of milk at High temperature-Short time is done at ----------?

Select the correct option

- 70°C and 30 seconds
- 72°C and 15 seconds
- 80°C and 35 minutes
- 63°C and 30 minutes

Pasteurization of milk at Low temperature-Long time is done at ----------?

Select the correct option

- 50°C and 60 minutes
- 50°C and 50 minutes
- 63°C and 30 minutes
- 15°C and 35 minutes

LESSON#27

Condensed milk is concentrated to about ____of its original volume and has about _____ percent sugar added to the milk?

Select the correct option

- 1/2 , 15
- 1/3 , 15

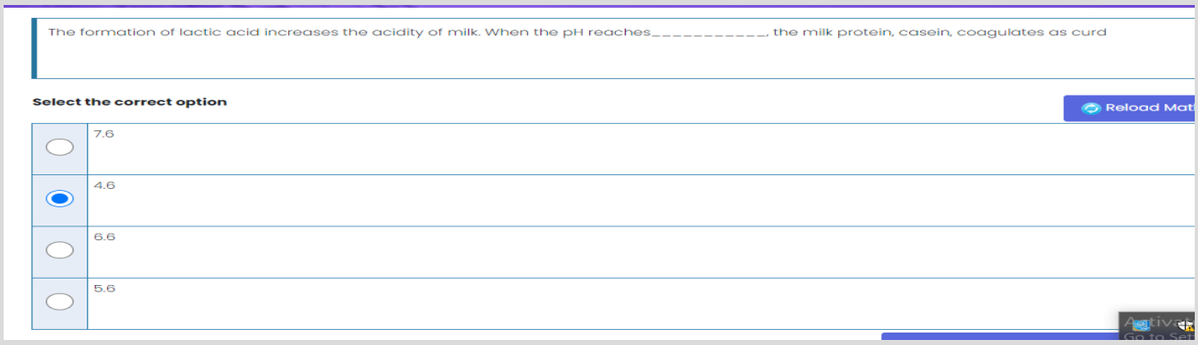

Click to Save Answer &

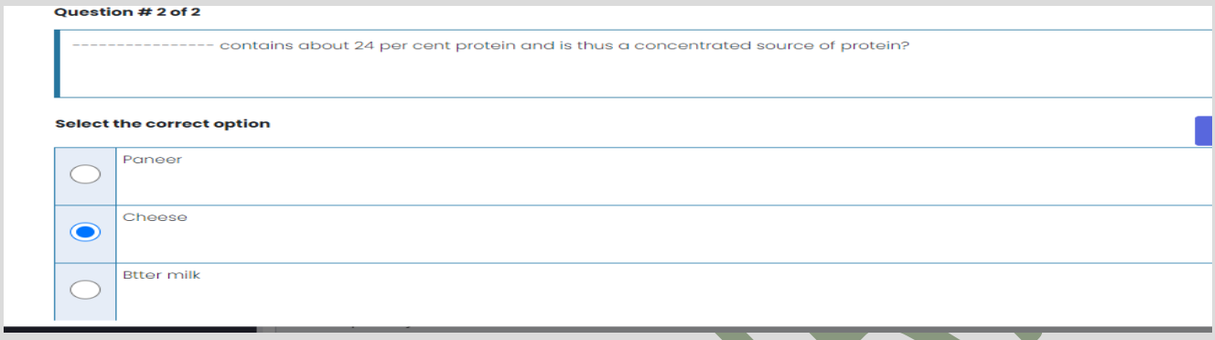

Milk is heated to a temperature of 89–90°C or more for 1 second or less in ----------?

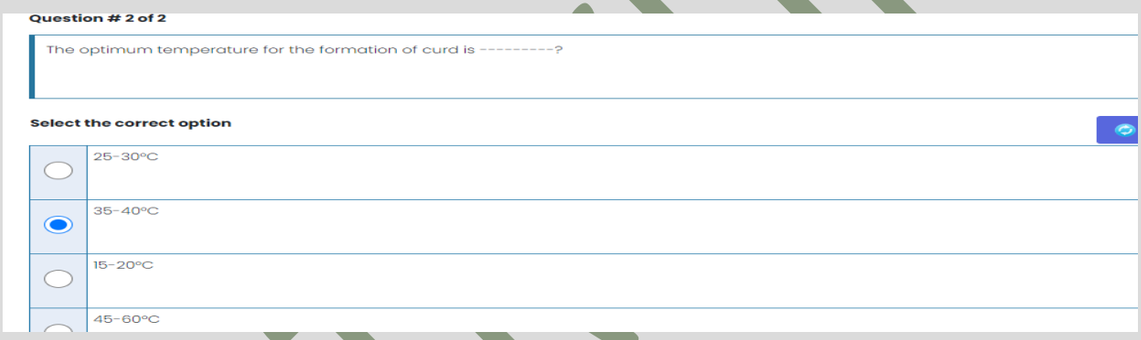

Select the correct option

- Ultra High Temperature Process
- Holding Method
- Higher Temperature Short Time Method
- Low Temperature Long Time Method

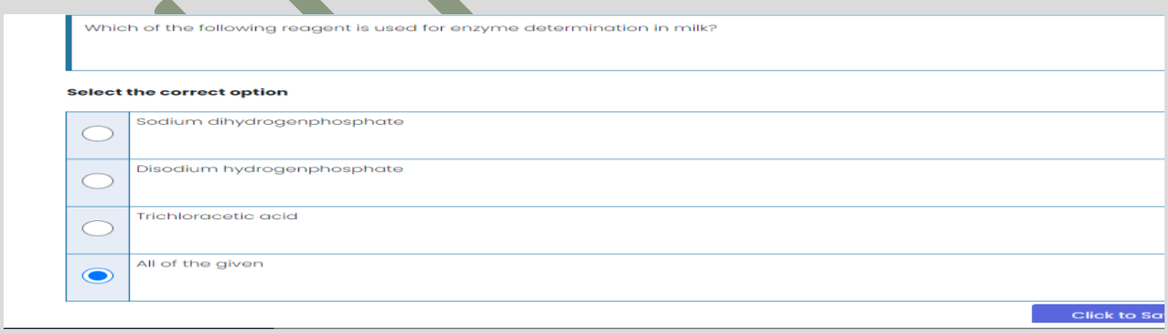

LESSON#28

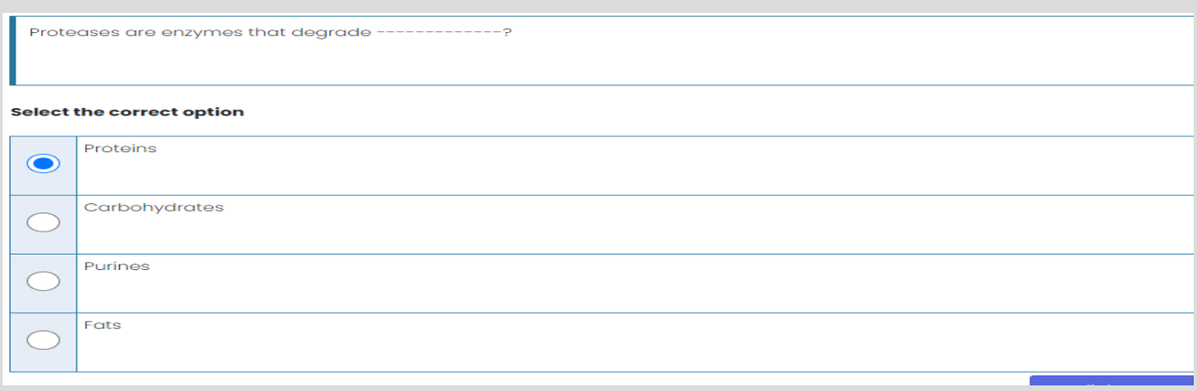

LESSON#29

LESSION#30

The measurement involves digestion of the soluble matter with a malt infusion (extract) and following increase in reducing substances by measuring reduction of _____?

Select the correct option

Reload Math Equations

- Tollens' Solution
- Fehling's Solution
- Molisch's Solution
- Benedict's Solution

The amylase activity in milk is often referred as _____and refers to the production of reducing substances by the action of alpha & beta amylases?

Select the correct option

Reload Math Equations

- Fermentation
- Diastatic power
- Pasteurization
- Homogenization

Activate Windows
Go to Settings to activate

Question # 1 of 2

Limit dextrin is prepared by action of ----------?

Select the correct option

- Protease
- Beta amylase
- Alpha amylase
- None

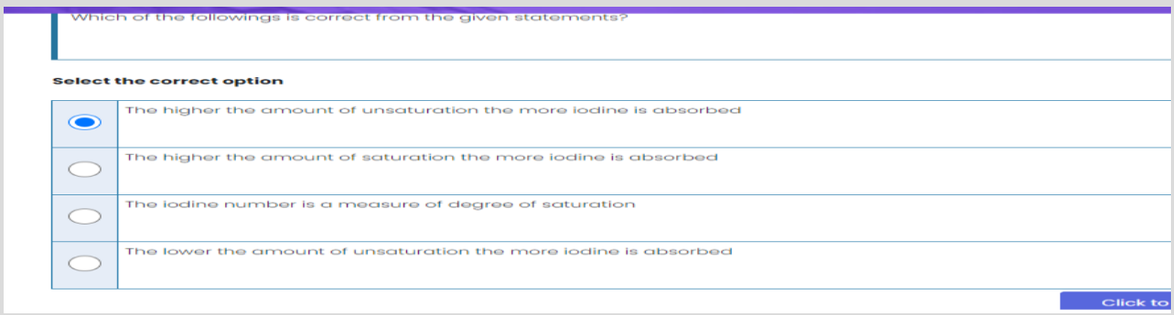

LESSON#31

Question # 2 of 2

Iodine number is the number of _____in relation to the_____?

Select the correct option

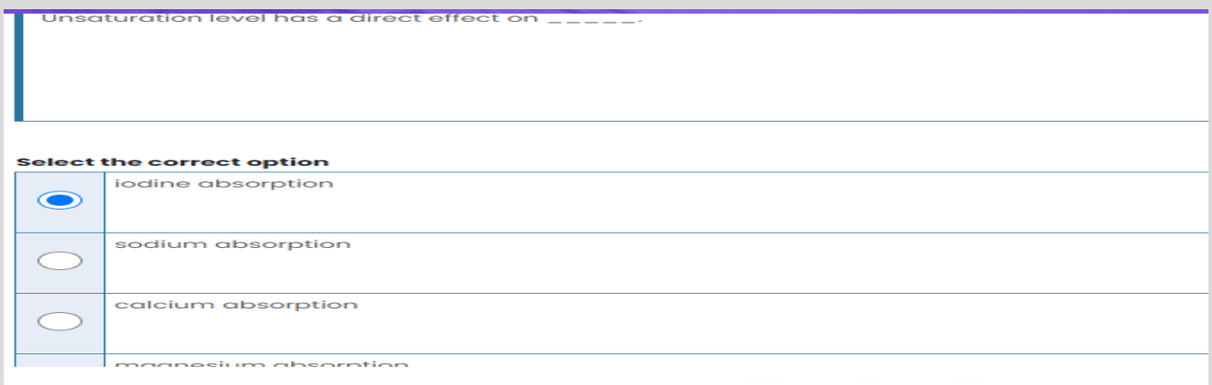

- carbon single bond, amount of fat
- carbon double bonds, amount of fat
- carbon single bonds, amount of iodine
- carbon double bonds, amount of iodine

Which of the followings is correct from the given statements?

Select the correct option

- The higher the amount of unsaturation the more iodine is absorbed
- The higher the amount of saturation the more iodine is absorbed
- The iodine number is a measure of degree of saturation
- The lower the amount of unsaturation the more iodine is absorbed

Click to

Unsaturation level has a direct effect on _____.

Select the correct option

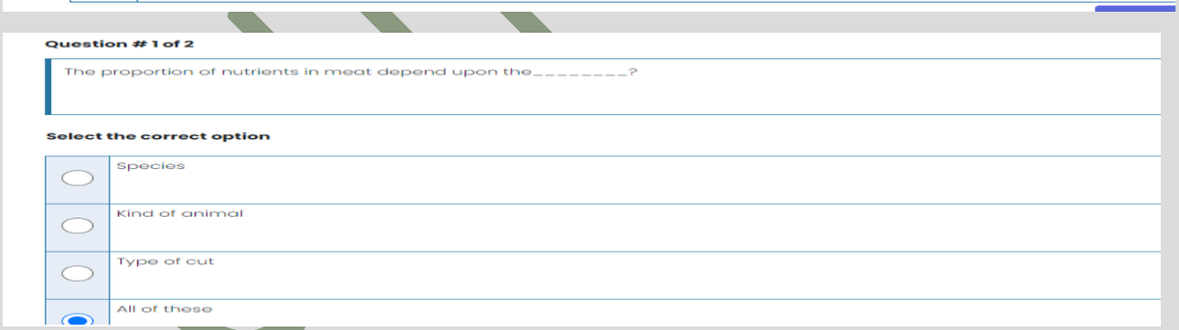

- iodine absorption
- sodium absorption
- calcium absorption
- magnesium absorption

LESSON#32

Meat is a good source of _____ and_____?

Select the correct option

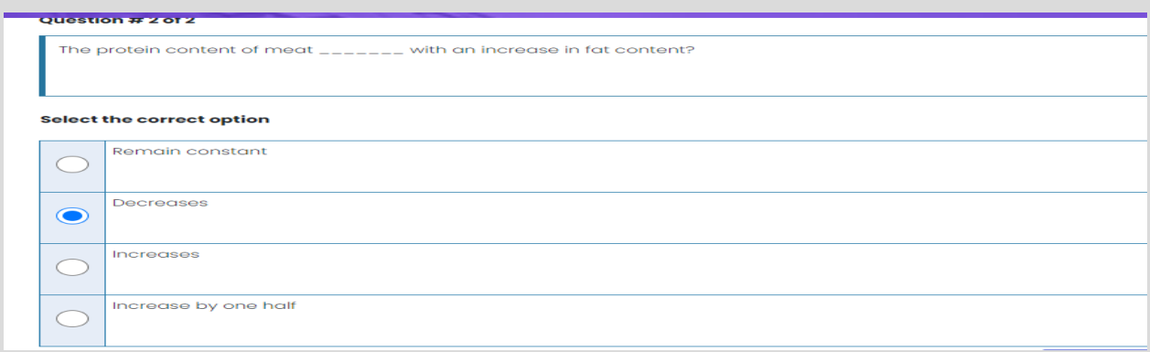

- Proteins, Fats
- Vitamins and minerals
- Fats and carbohydrates
- Proteins, carbohydrates

Question # 1 of 2

The proportion of nutrients in meat depend upon the_____?

Select the correct option

- Species
- Kind of animal
- Type of cut
- All of these

Question # 2 of 2

The protein content of meat _____ with an increase in fat content?

Select the correct option

- Remain constant
- Decreases
- Increases
- Increase by one half

LESSON#33

The red colour of the meet is due to_____?

Select the correct option

- (●) Myoglobin
- ( ) Glycohemoglobin
- ( ) Hemoglobin
- ( ) Methemoglobin

Question # 2 of 2

Collagen and elastin are two types of----------?

Select the correct option

- ( ) Muscle fiber
- (●) Connective tissues
- ( ) Fatty tissues
- ( ) Fasciculi

Question # 1 of 2

Meat muscle is connected to the bone by means of a _____?

Select the correct option

- ( ) Fatty tissues
- (●) Connective tissue
- ( ) Fasciculi
- ( ) Muscle fiber

Question # 2 of 2

The smallest unit of a muscle is a _____?

Select the correct option

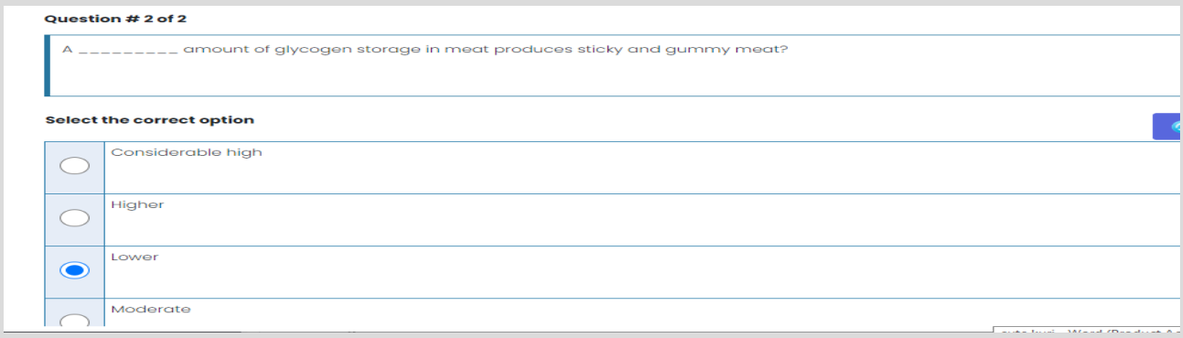

- (●) Muscle fibre
- ( ) Connective Tissue
- ( ) Fasciculi
- ( ) None of these

LESSON 34

Oxidation of glycogen results in _____ production.

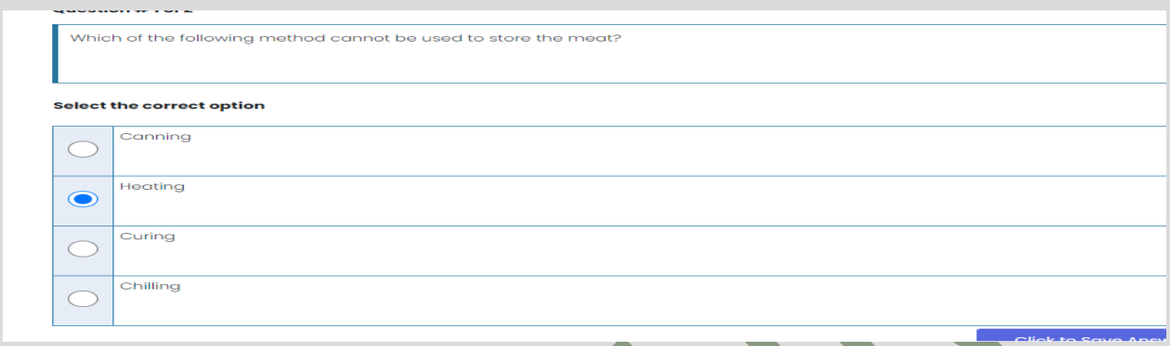

Select the correct option

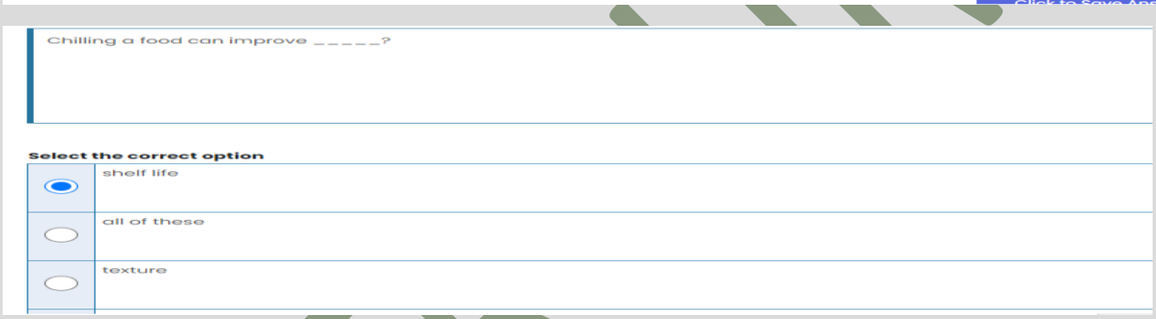

- ( ) amino acid
- ( ) NONE OF THESE
- (●) lactic acid
- ( ) HCL

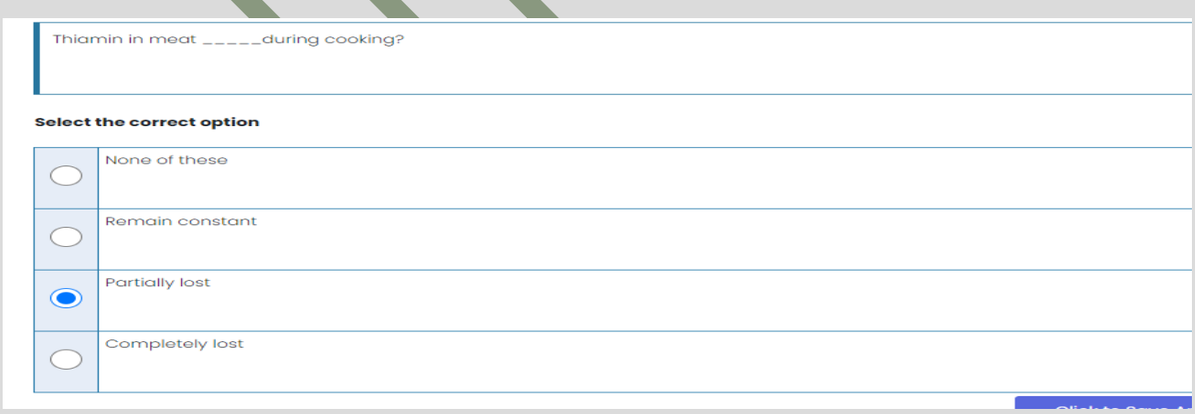

I

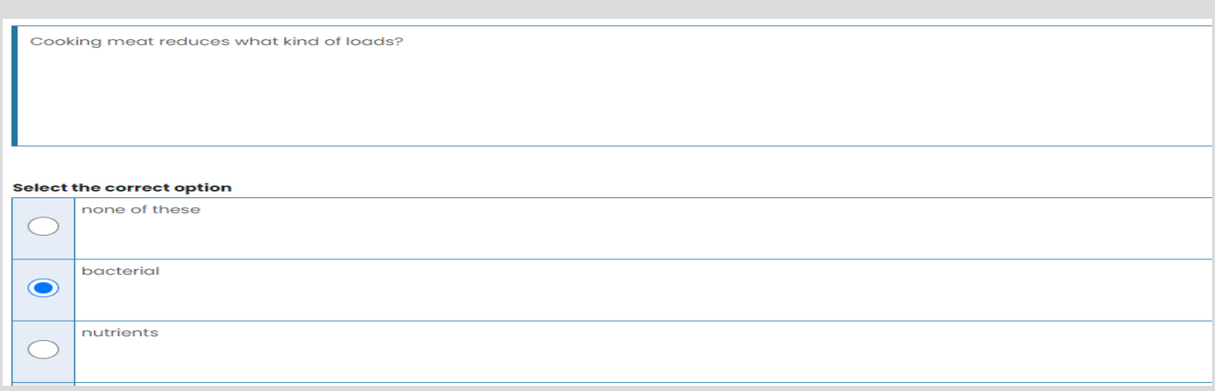

Lesson#35

LESSON#36

LESSON#37

Jowar is an eaxmple for _____.

Select the correct option

- barley
- maize
- millet
- rice

Which of the following is the most important cereal in worldwide?

Select the correct option

- Wheat
- Rice
- Corn
- Oats

Click to Save An

LESSON#38

Question # 1 of 2

Bran is _____chaffy part that covers the _____ of the grain?

Select the correct option

- Outer, kernel
- Inner, kernel
- Inner, Endosperm

Cereal grains are composed of _____?

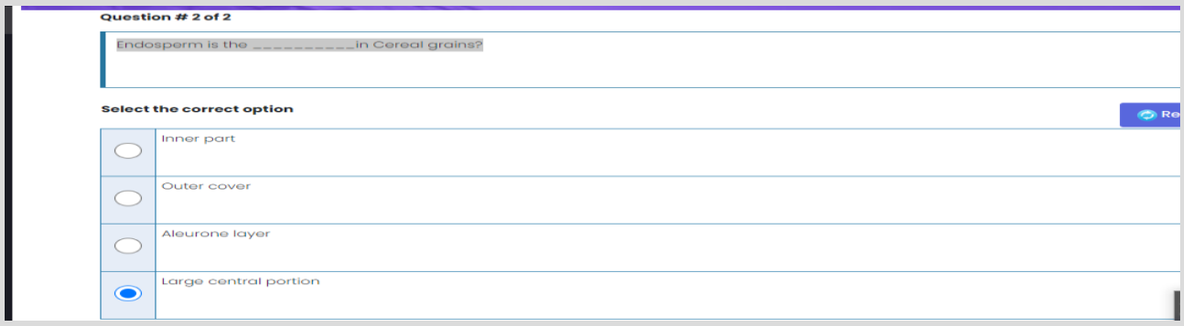

Select the correct option

- Germ
- Bran
- All of these
- Endosperm

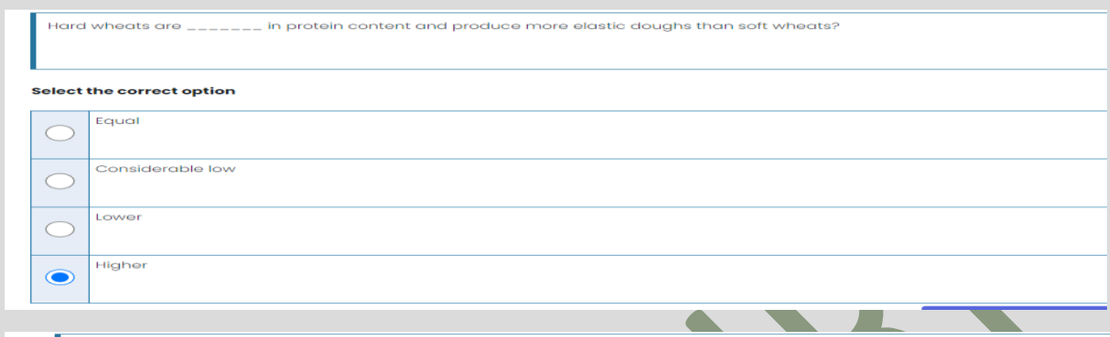

_____Constitutes about 84-85% of the kernel?

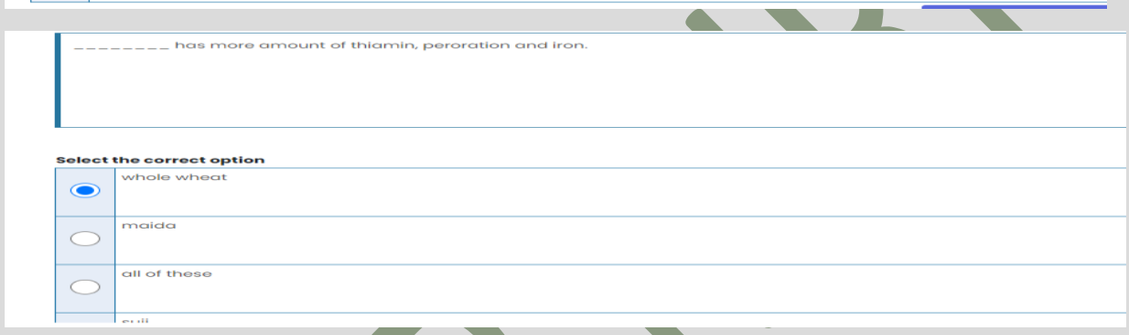

Select the correct option

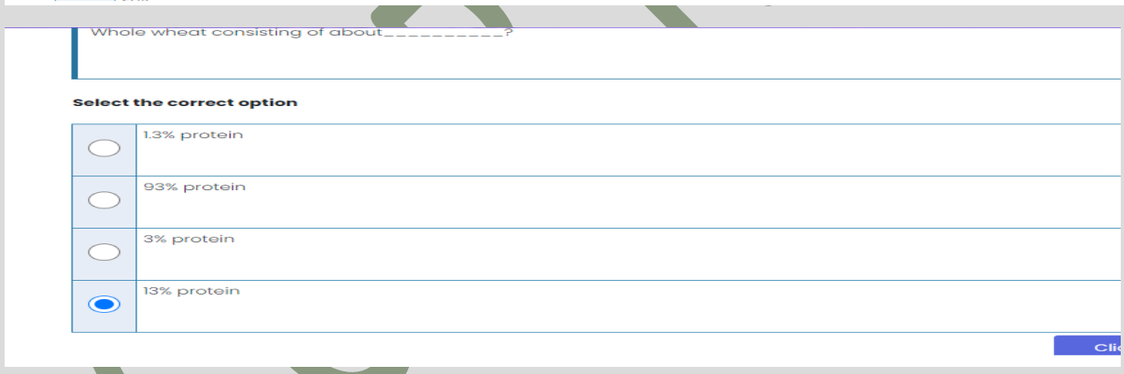

- Germ
- Bran
- Aleurone layer
- Endosperm

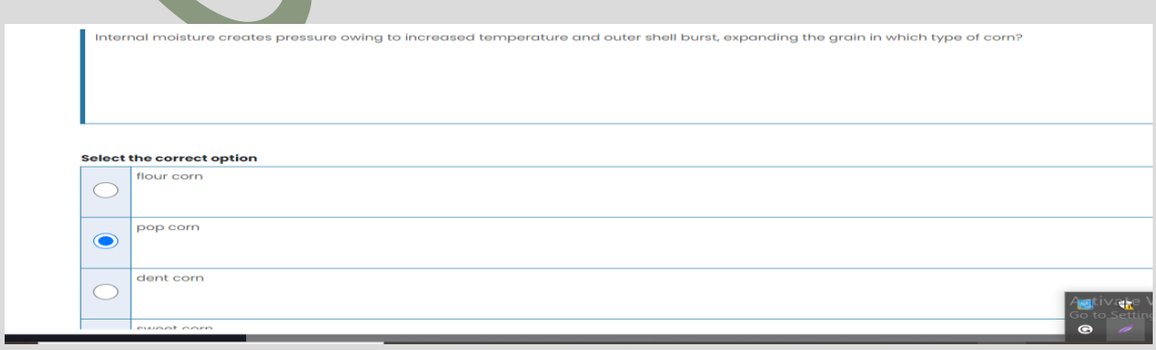

LESSON#39

Lesson#40

Lesson#41

Oryza glaberrima is a scientific name for _____?

Select the correct option

- (●) African rice
- ( ) American rice
- ( ) Chinese rice
- ( ) Asian rice

Which of the followings is correct from the following statements?

Select the correct option

- ( ) Rice is equal in total protein as compared to wheat
- (●) Rice is lower in total protein as compared to wheat
- ( ) None of these
- ( ) Rice is higher in total protein as compared to wheat

Clic

Oryza sativa is a scientific name for _____?

Select the correct option

- (●) Asian rice
- ( ) American rice
- ( ) African rice
- ( ) Chinese rice

Question # 1 of 2

Highly polished milled rice has _____thiamin content?

Select the correct option

- ( ) Very high
- (●) Very little
- ( ) No
- ( ) High

LESSON#42

Avena sativa is a scientific name of_____?

Select the correct option

- (●) *Oats*
- ( ) *Corn*
- ( ) *Wheat*
- ( ) *Rice*

Oats are harvested in the same manner as _____.

Select the correct option

- milltet
- wheat
- rice
- barley

LESSON#43

_____is used for the production of malt for brewing?

Select the correct option

- *Wheat*
- *Oats*
- *Rice*
- *Barley*

Hordeum vulgare is a scientific name of_____?

Select the correct option

- *Oats*
- *Barley*
- *Rice*
- *Wheat*

Enzymes that hydrolyze starch to maltose is followed by what treatment?

Select the correct option

- fungal
- viral
- yeast

LESSON#44

All cereal grains belong to the botanical family_____?

Select the correct option

- *Fabaceae*
- *Polygonaceae*
- *Malvaceae*
- *Gramineae*

Silverhull used because of its higher yield of endosperm to produce ____.

Select the correct option

- extract
- flour
- feed

LESSON#45

Food spoilage can be _____?

Select the correct option

- Chemical
- Physical
- Biological
- All of these

Shelf life of a whole grain is almost____?

Select the correct option

- four year
- three year
- one year
- two year

cute kuri

LESSON #46

The type of Food spoilage in which the organism uses the material as food for energy source is called_____?

Select the correct option

- Biochemical Assimilatory Food Spoilage
- Biochemical Dissimilatory Food Spoilage
- Physical Food Spoilage
- Biodegradation

Which of the following organisms can only use organic matter as their nutritional requirements?

Select the correct option

- ○ Mesotrophs
- ◉ Heterotrophic
- ○ Eutrophs
- ○ Autotrophic

Spoilage is a characteristic of food but it can also occur in _____.

Select the correct option

- ◉ wood
- ○ plastic
- ○ metal
- ○ steel

LESSON#47

Food spoilage can rarely be caused by _____.

Select the correct option

- ○ goats
- ○ camels
- ◉ birds

Micrococcus is known for_____ in food materials.

Select the correct option

- ○ All of these
- ○ Gas formation
- ○ Decoloration
- ◉ Rancidity

LESSON#48

_____ is the breakdown of fats and other lipids by hydrolysis to release Fatty Acids.

Select the correct option

- ○ Liptolysis
- ○ Peptipolysis
- ◉ Lipolysis
- ○ None of these

Auto-tropic bacteria are _____.

Select the correct option

- depend on food
- none of these
- both of a and b
- self sustaining

LESSON#49

Beverage can swells due to the activity of _____?

Select the correct option

- *Lactobacillus*
- *Micrococcus*
- *Clostridium Botulinum*
- *Leuconostoc*

What is the full form of LAB?

Select the correct option

- lactic acid bacteria
- lunatic acid bacteria
- lactic acidophile bacteria

LESSON#50

Factor affecting Microbial growth are _____?

Select the correct option

- Temperature
- Availability of Oxygen
- All of these
- pH

Which of the following is more sensitive to pH?

Select the correct option

- Yeast
- Bacteria
- Fungus
- Molds

Which of the following is correct from the given statements?

Select the correct option

○	Facultative Anaerobic bacteria can only survive without Oxgyen
○	None of these
○	Facultative Anaerobic bacteria can only survive with Oxgyen
●	Facultative Anaerobic bacteria can survive with or without Oxgyen

LESSON#51

Micro-organisms grows best at _____ pH.

Select the correct option

●	Neutral
○	Basic
○	Slightly
○	Acidic

Micro-organisms grows best at _____ pH.

Select the correct option

●	Neutral
○	Basic
○	Slightly
○	Acidic

Acetic acid fermentation is mostly used in which foods?

Select the correct option

○	bread products
○	milk products
●	pickles
	butter products

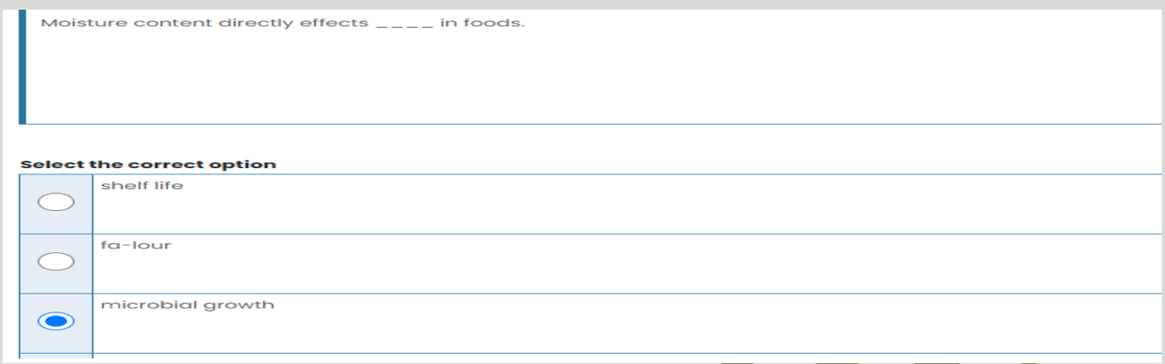

LESSON#52

Which of the following foods are less prone to spoilage?

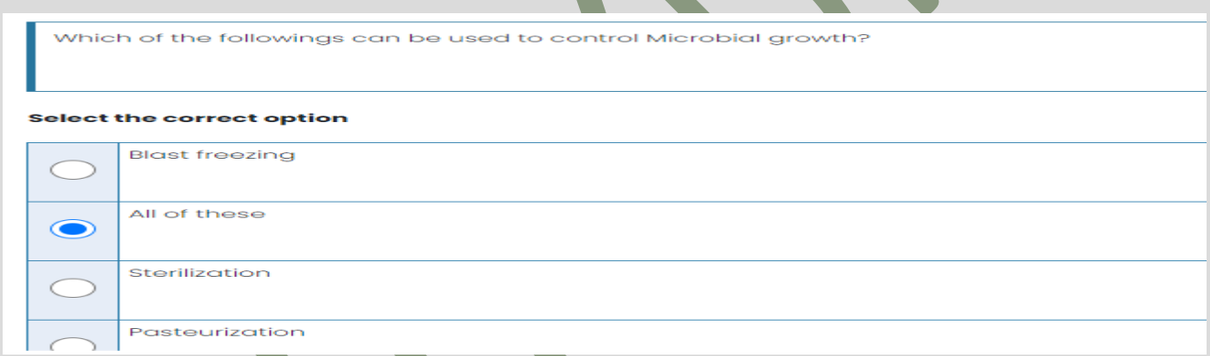

Select the correct option

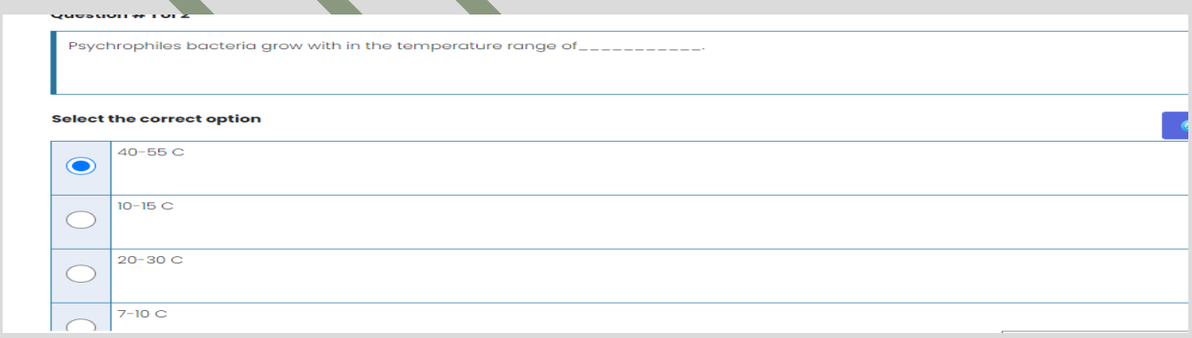

○	Perishable
●	Stable foods
○	All of these

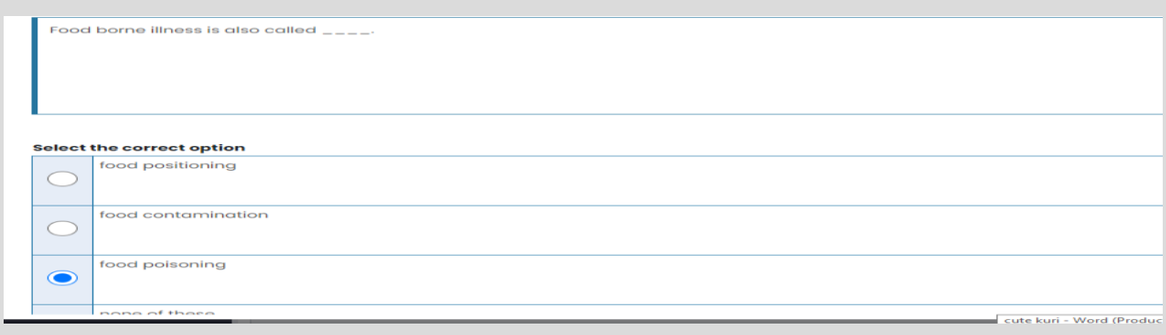

LESSON#53

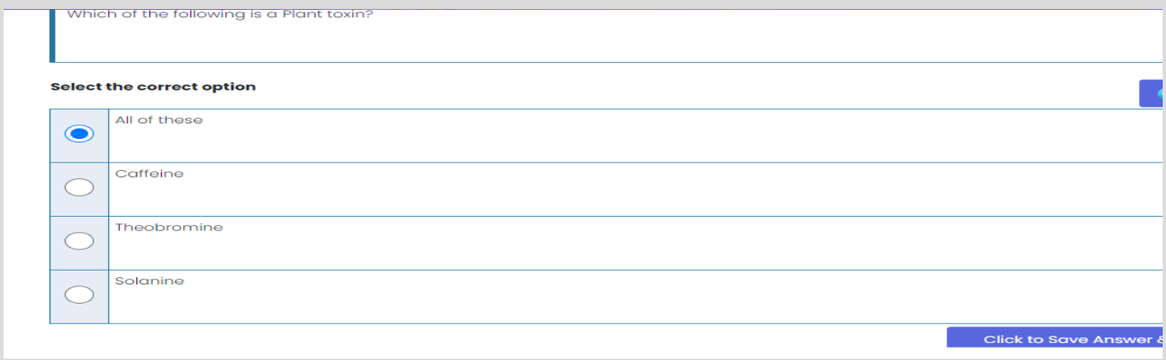

LESSON#54

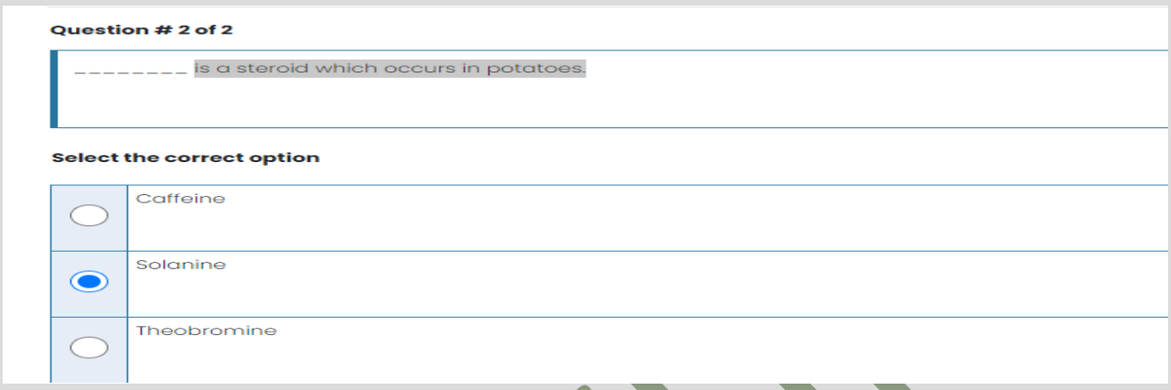

LESSON#55

Which of the following is a Plant toxin?

Select the correct option

- All of these
- Caffeine
- Theobromine
- Solanine

Click to Save Answer &

Question # 2 of 2

_ _ _ _ _ _ _ _ is a steroid which occurs in potatoes.

Select the correct option

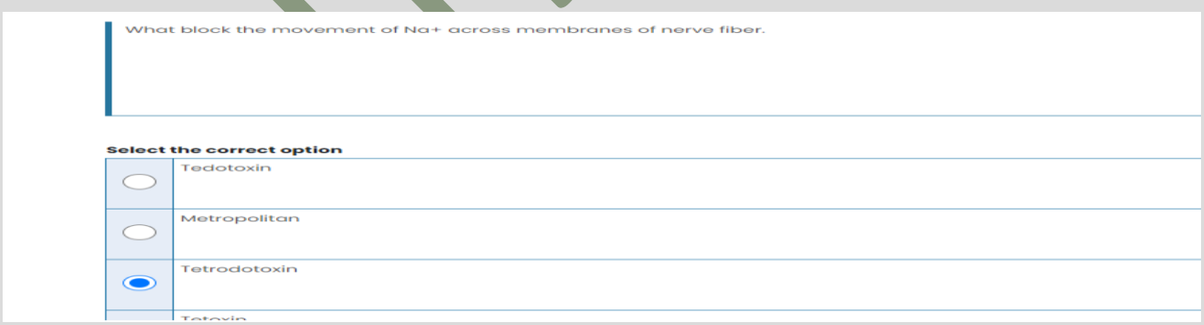

- Caffeine
- Solanine
- Theobromine

Theobromine can also act as _ _ _ ,when used in a conc. above certain level.

Select the correct option

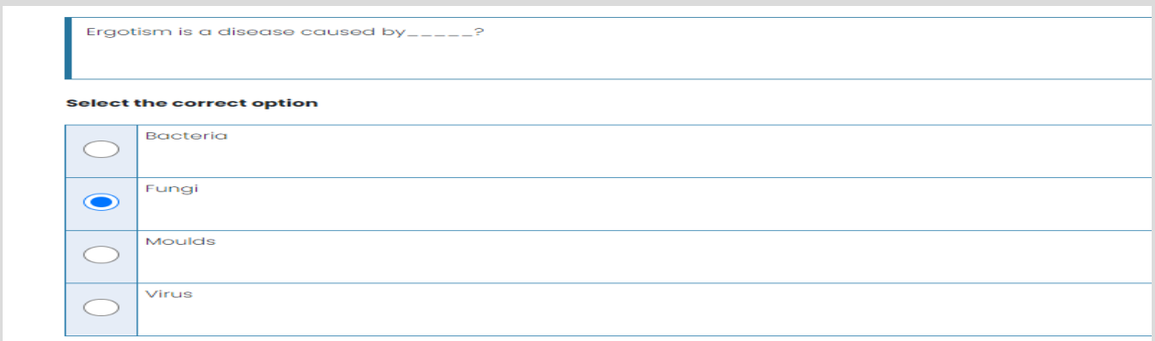

- tumor causing
- cancerous
- toxin

LESSON#56

What block the movement of Na+ across membranes of nerve fiber.

Select the correct option

- Tedotoxin
- Metropolitan
- Tetrodotoxin
- Tetrovin

Ergotism is a disease caused by_ _ _ _ _?

Select the correct option

- Bacteria
- Fungi
- Moulds
- Virus

Ergotism is a disease caused by_____?

Select the correct option

- ( ) Fungi
- ( ) Bacteria
- ( ) Virus
- (•) Moulds

Toxins produced by _____are known as *mycotoxins.*

Select the correct option

- (•) Moulds
- ( ) Virus
- ( ) Fungi
- ( ) Bacteria

Toxins produced by _____are known as *mycotoxins.*

Select the correct option

- (•) Moulds
- ( ) Virus
- ( ) Fungi
- ( ) Bacteria

LESSON#57

Which of the following is a pesticide residues found in food?

Select the correct option

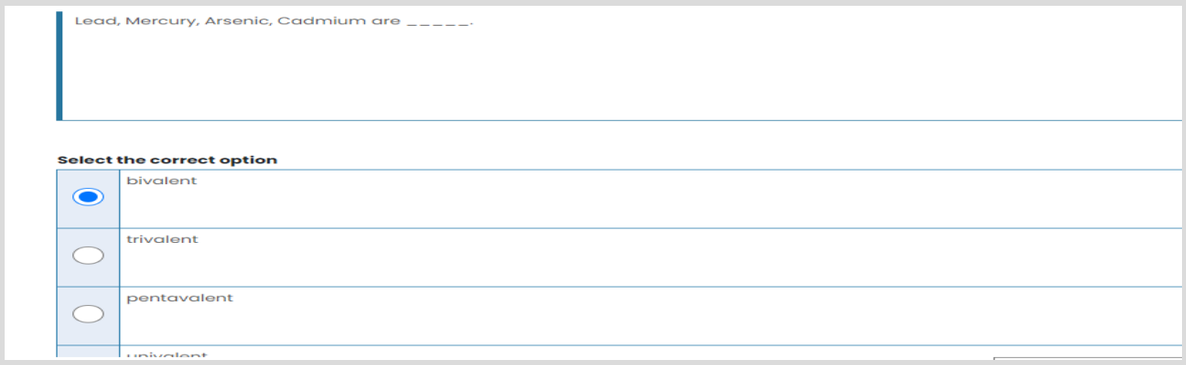

- ( ) Lindane (BHC)
- ( ) DDT
- (•) All of these
- ( ) Dieldrin

What chemical is used for killing mosquitoes

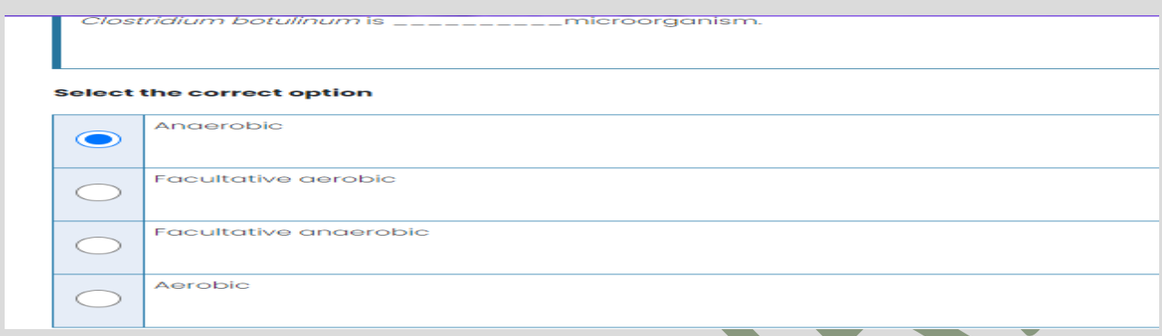

Select the correct option

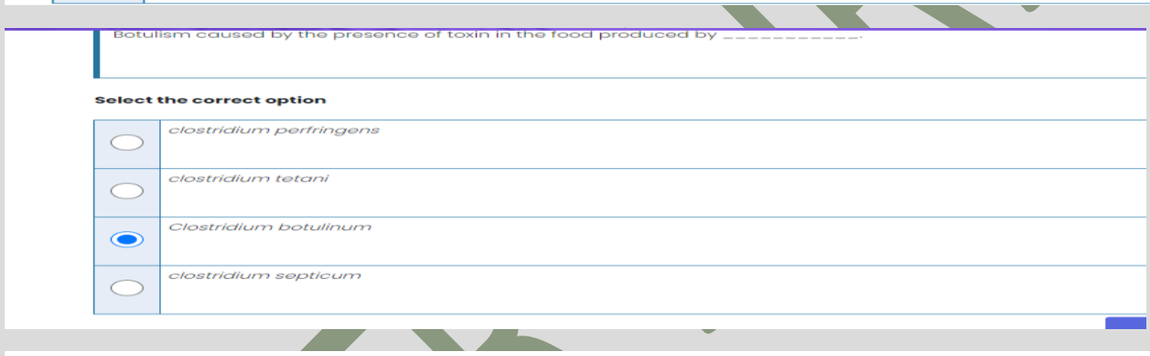

- ( ) DTT
- (•) DDT
- ( ) TTD

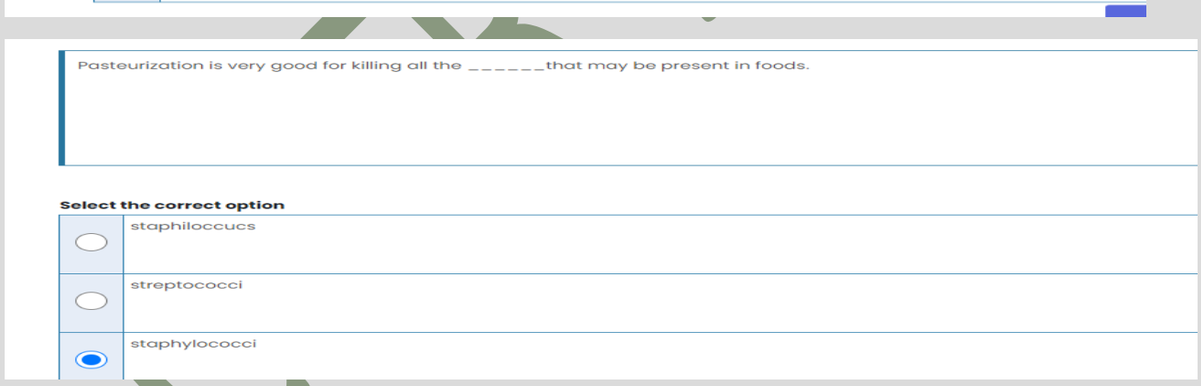

LESSON#58

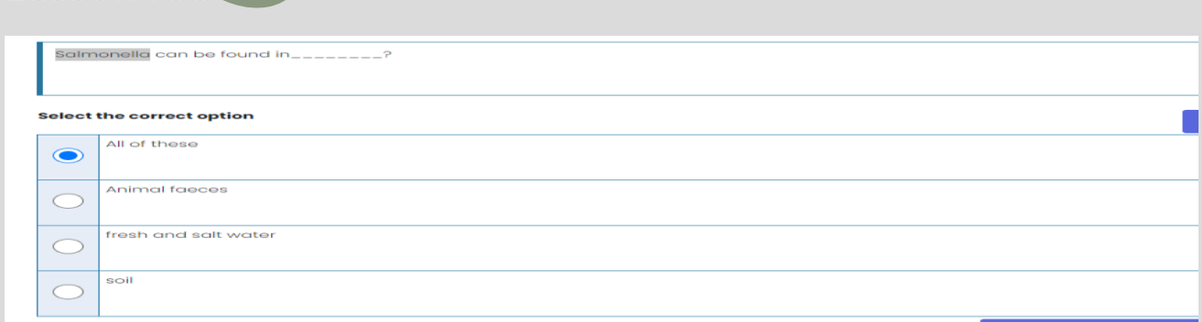

LESSON#59

Lesson#60

Which of the following statement is incorrect about the Salmonella?

Select the correct option

- ○ It is Gram-negative
- ○ It is motile bacterium
- ○ It is rod shaped
- ● None of these

Question # 2 of 2

Which of the following statement is incorrect about the *Clostridium botulinum*?

Select the correct option

- ○ It is Gram-positive
- ● None of these
- ○ It is sporeforming
- ○ It is obligate anaerobe

Click to Save An

Lesson#61

Which of the following event is necessary for a successful pathogenic food infection?

Select the correct option

- ○ Consumption of the food contaminated with a pathogenic virus
- ○ There should be a source of a pathogen
- ○ The pathogen has to contaminate the food
- ● All of these

Bacteria requires specific _____ for the successful pathogenic food infection.

Select the correct option

- ○ pH
- ● All of these
- ○ Temperature
- ○ Growth support

Vibrio cholerae has the capability to multiply in _____.

Select the correct option

- ○ liver
- ● digestive system
- ○ brain

Lesson#62

Detection of E.coli in water is done by what method?

Select the correct option

- turbidity
- viscosity
- most probable number
- coliform count

LESSON#62

Which of the followings is early methods of food Preservation?

Select the correct option

- All of these
- Storing in alcohol
- Pickling in vinegar
- Salting meat

All are preservation agents except?

Select the correct option

- vinegar
- acid
- water
- salt

MAP stands for?

Select the correct option

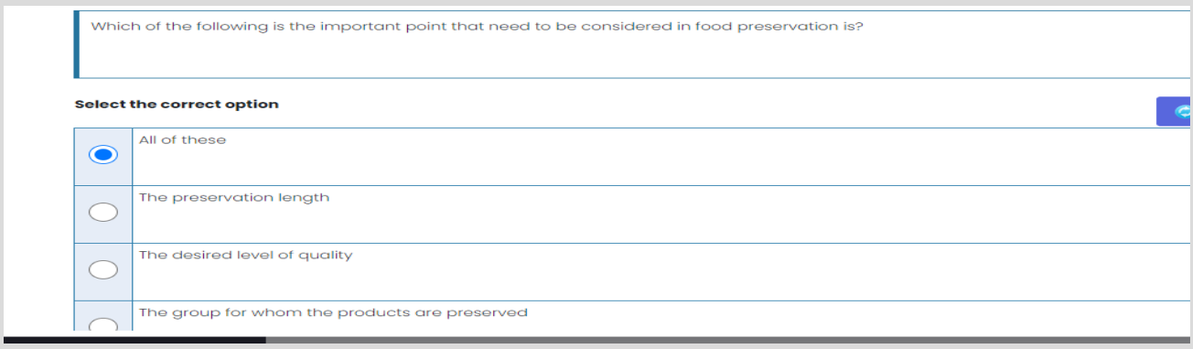

- Modified atmosphere packaging
- None of these
- Modified applied packaging

LESSON#64

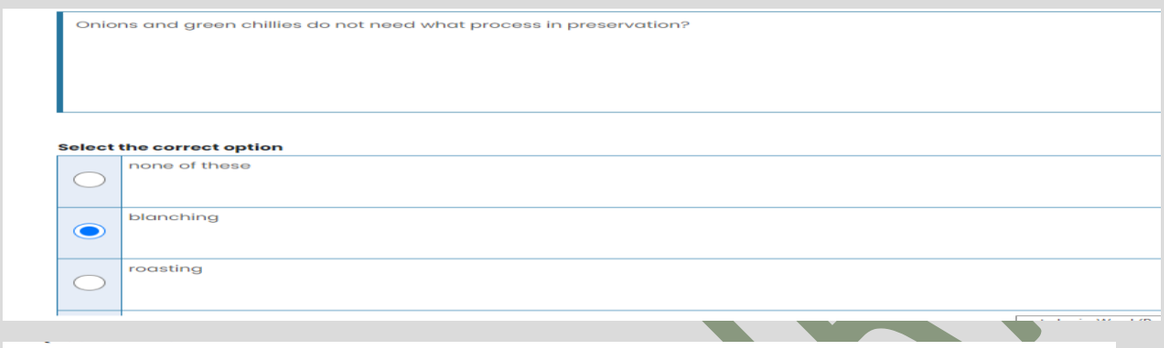

Food preservation is done to reduce_____.

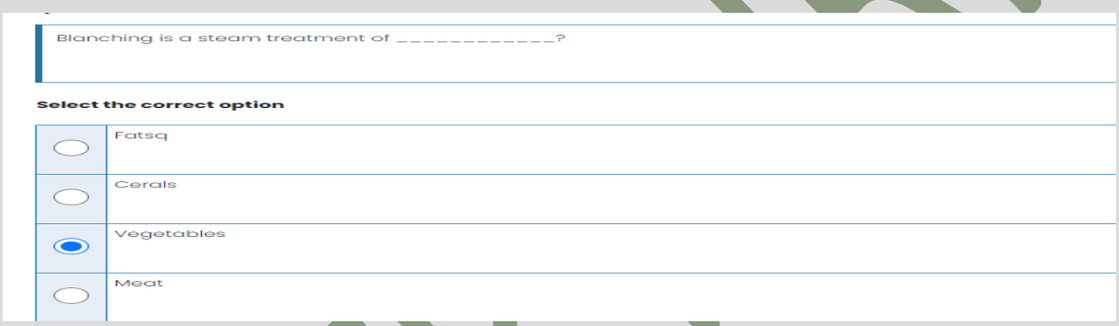

Select the correct option

- viral factors
- spoilage factors
- none of these

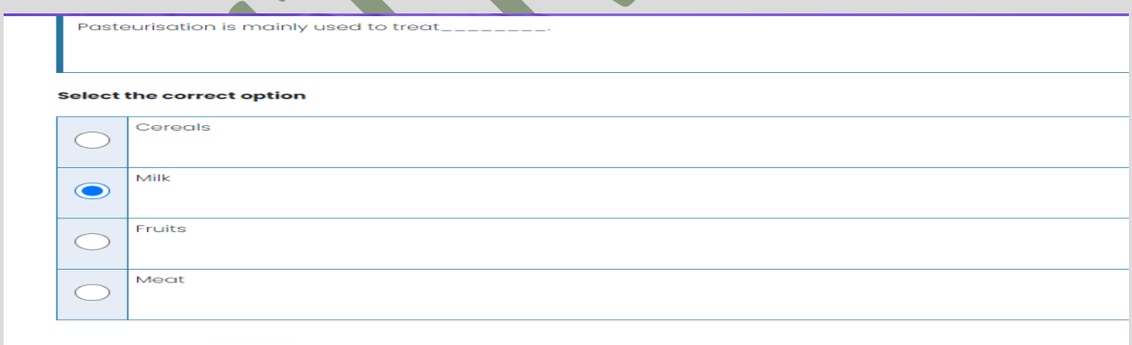

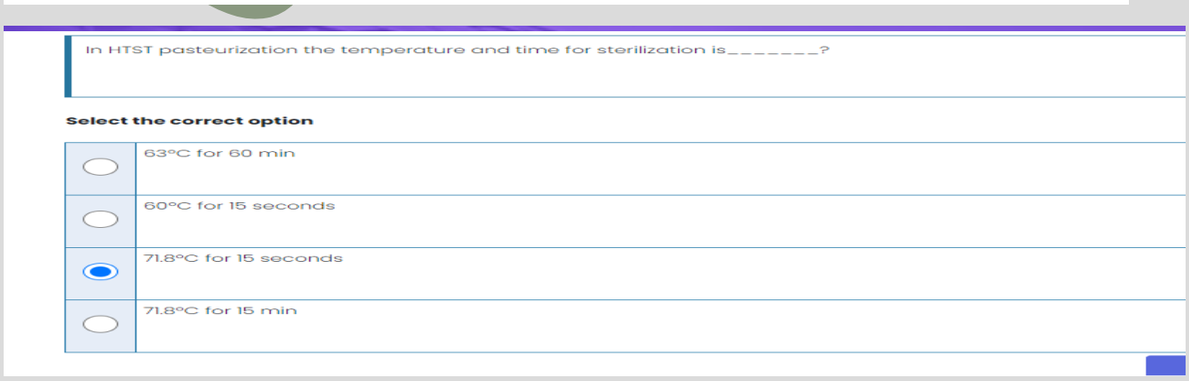

Lesson#65

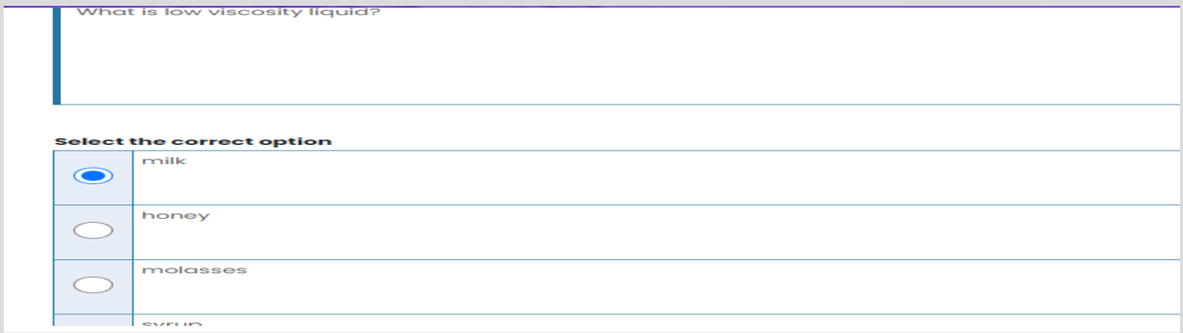

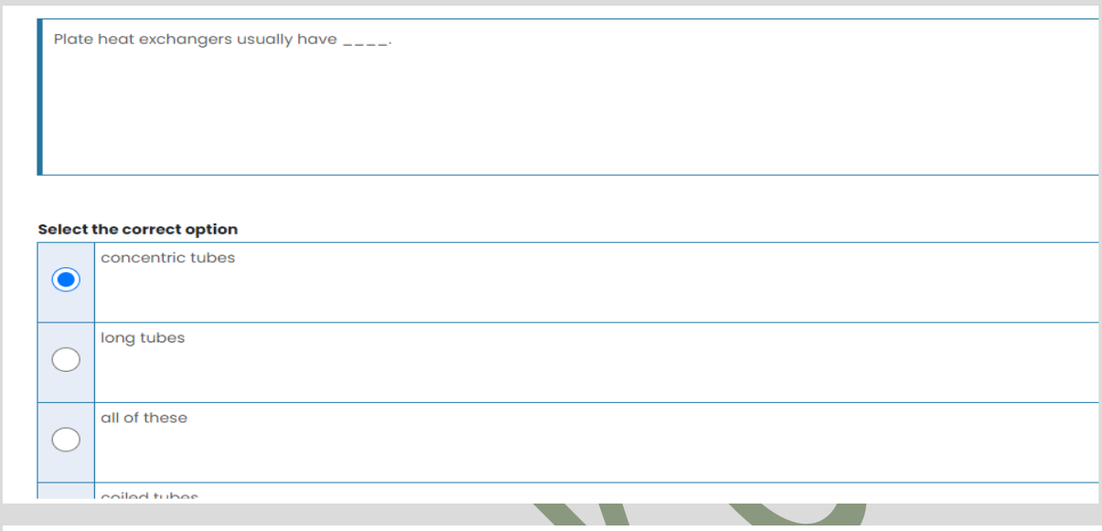

Lesson#66

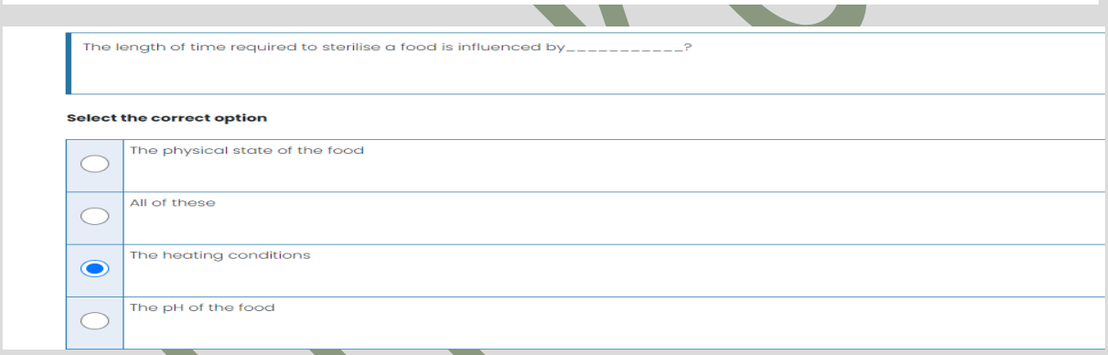

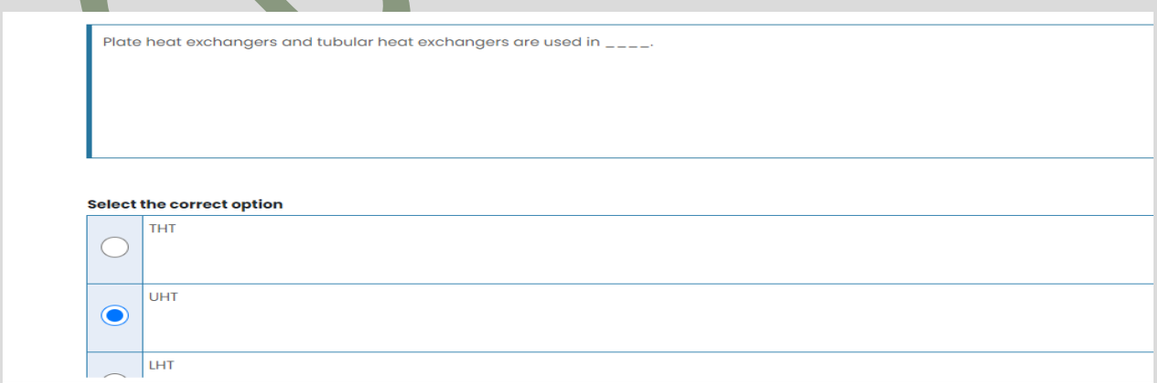

Lesson#67

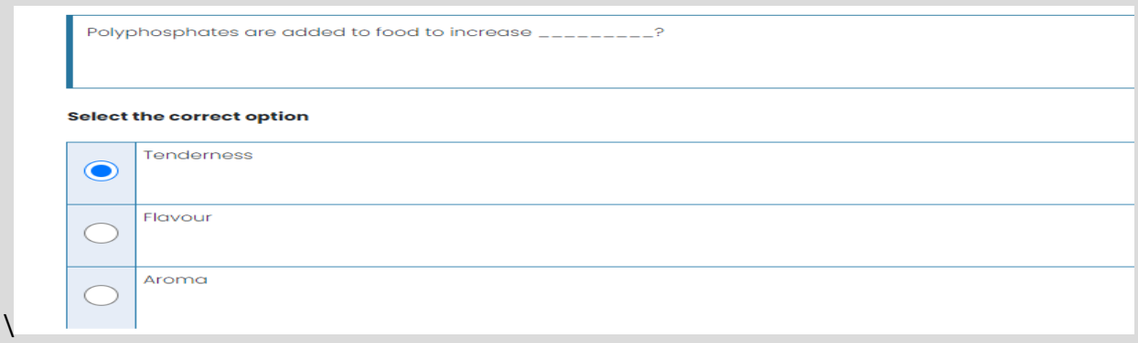

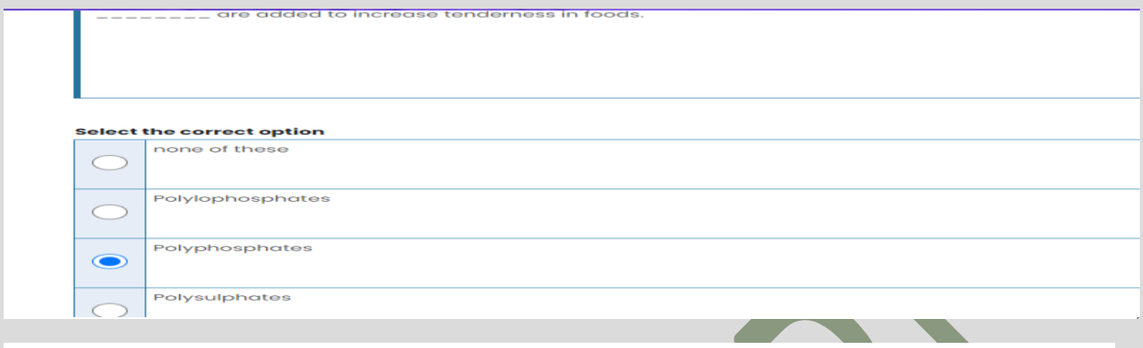

Lesson#68

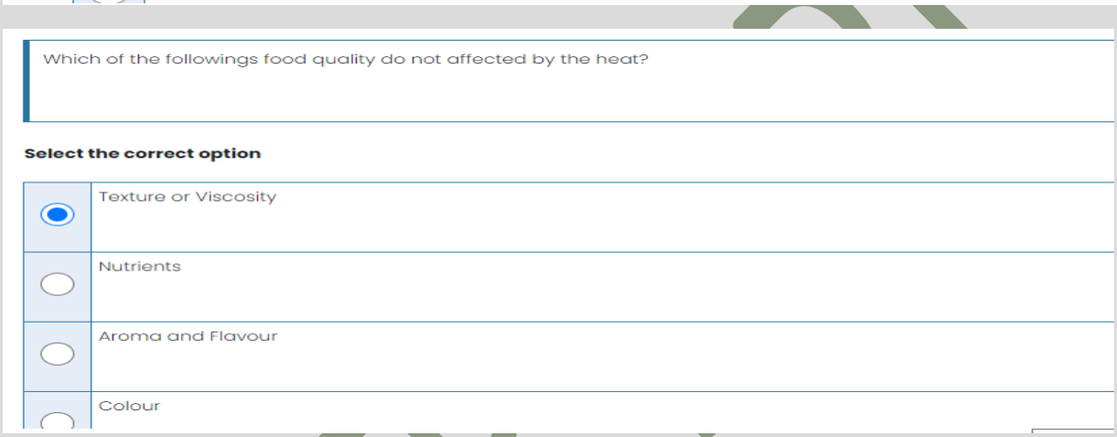

Lesson#69

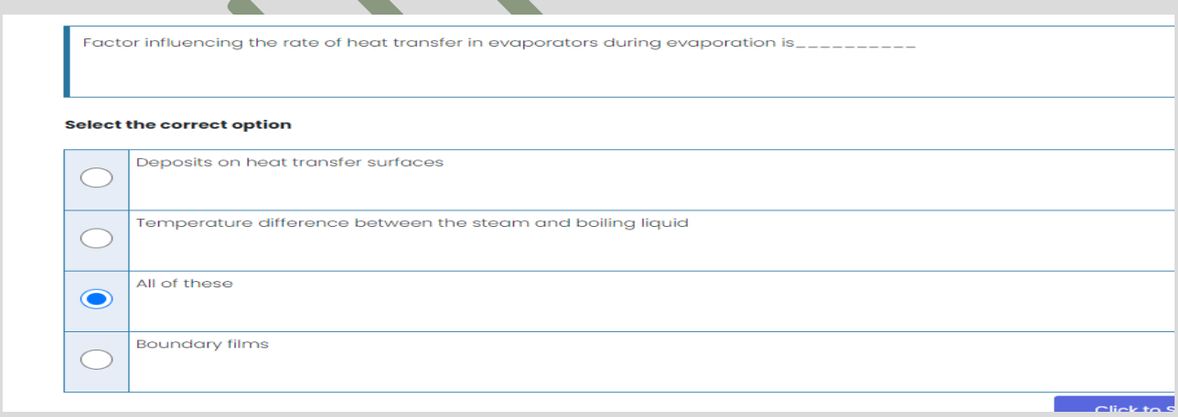

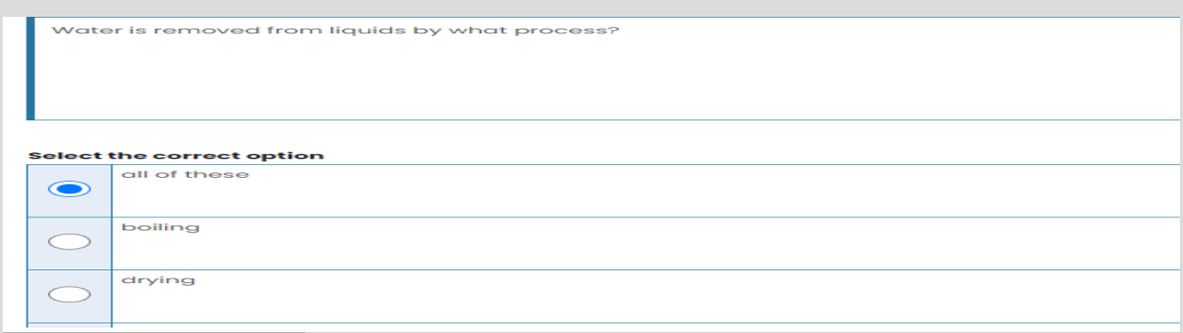

\

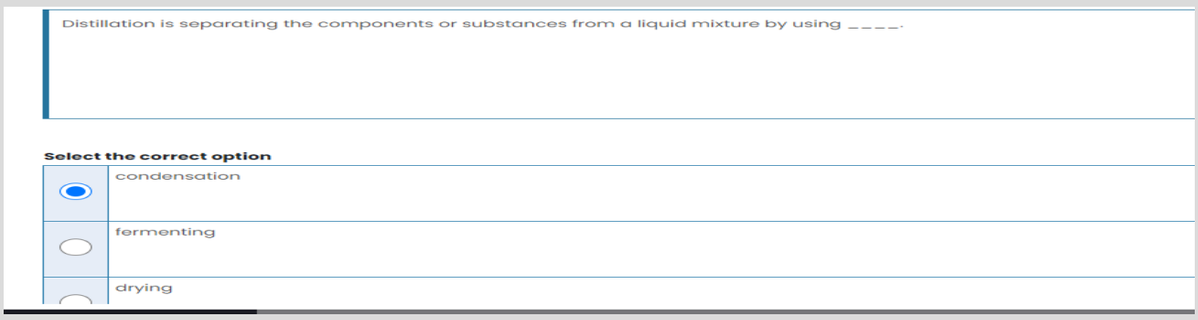

Lesson#70

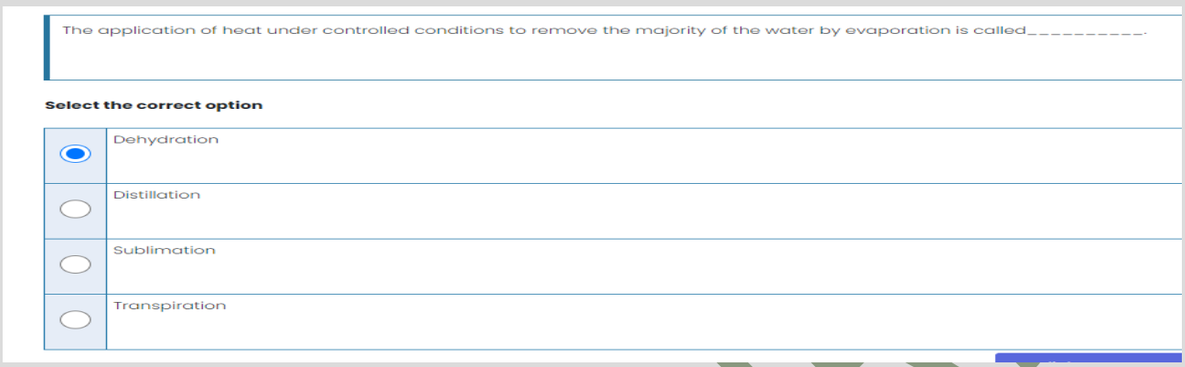

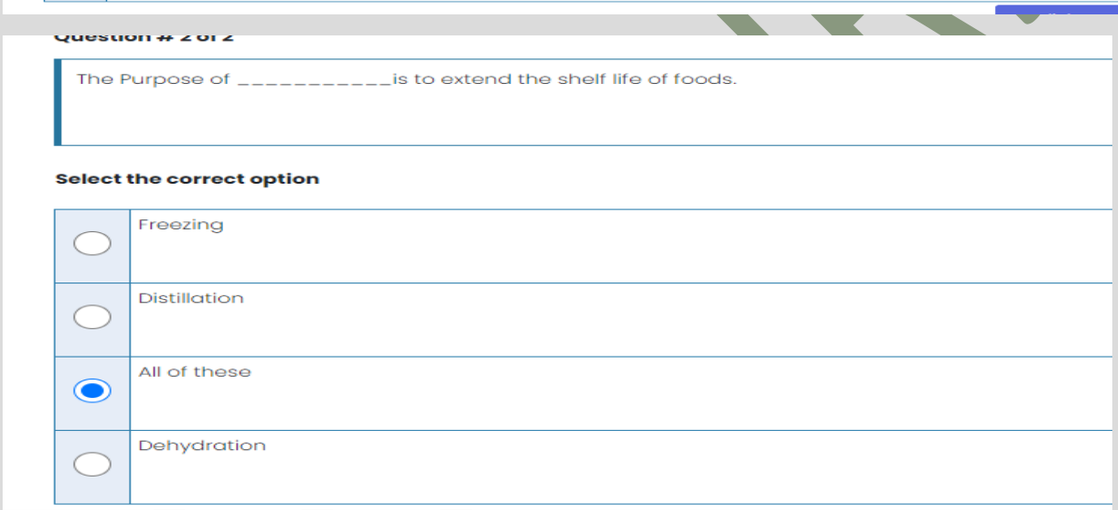

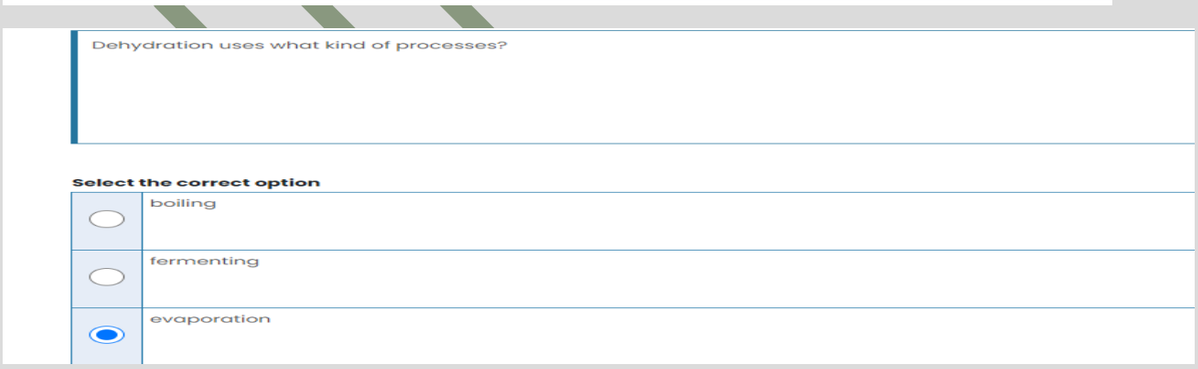

Lesson#71

Lesson#72

LESSON#73

Which of the following is not a part of Mechanical refrigerators?

Select the correct option

○	Condenser
○	Evaporator
○	Compressor
●	Distillator

Thermophillic bacteria can survive at temperature range of_____.

Select the correct option

○	20–30°C
○	10–20°C
○	1–10°C
●	55–65 °C

Low temperature causes ____ in foods.

Select the correct option

●	reduce biochemical degradation
○	increase microbial processes
○	reduce cooking
○	none of these

LESSON#74

Which of the followings can be used to prevent molds and bacterial growth in fruits juices?

Select the correct option

●	Benzoic acid
○	Potassium carbonate
○	Calcium carbonate
○	Sodium carbonate

LESSON#75

High pressure for short time like 20 mins has ability to effect foods at ____ level.

Select the correct option

●	conformational
○	aroma
○	texture

The effects of ultrasound on meat proteins produce_____ in meat tissues.

Select the correct option

○	Hardening
◉	Tenderisation
○	All of these
○	Cavitation

Question # 1 of 2

In which phase of the growth bacteria are more barosensitive (sensitive to high pressures)?

Select the correct option

○	Death phase
○	Stationary phase
○	Log phase
◉	Lag phase

LESSON#76

Question # 1 of 1

What is the function of a magnetron?

Select the correct option

○	infrawave generator
◉	microwave generator

Lesson#77

Yeast and moulds incubation in medium required temperature and time ----------?

Select the correct option

○	23–30°C for 5–7 days
◉	22–25°C for 3–5 days
○	12–20°C for 1–2 days
○	20–22°C for 2–4 days

What type of media will be used for enumeration of xerophilic yeasts and moulds in grains, flours, nuts, and spices ----------?

Select the correct option

○	Malt extract agar with50% (w/w) sucrose
○	Malt agar with 10% (w/v) sucrose
○	20% sucrose
●	Dichloran-glycerol DG 18 agar (DG-18)

Click to Save Answ

Detection of yeast and moulds in dairy and bakery products is possible by ----------?

Select the correct option

○	PCR
○	Microarray
○	None of the above
●	The enumeration of viable yeasts and moulds in foods and food ingredients

Lesson#78

Which type of media agar are suitable for foods where the water activity is above 0.95 ----------

Select the correct option

○	20% sucrose
●	All of the given
○	Dichloran-glycerol DG 18 agar (DG-18)
○	Malt extract agar with50% (w/w) sucrose

The average count (arithmetic mean) is calculated to compute the yeast and mould count, use the formula ----------?

Select the correct option

○	$N = A - D$
○	$D = A \times N$
●	$N = A \times D$
○	$A = N \times D$

Lesson#79

How many different ways are used for fermented food, based on the sources of the desirable microorganisms ----------

Select the correct option

○	Two
●	Three

Fermented dairy products can be broadly divided into how many groups ---------?

Select the correct option

- Three
- Two

Lesson#80

Cottage cheese is made from low-fat or skim milk and has a soft texture with --------

Select the correct option

- Ca. 40% moisture
- Ca. 80% moisture
- Ca. 20% moisture
- Ca. 60% moisture

Buttermilk is produced from partially skim milk through controlled fermentation with starter cultures. It has slight effervescence due to --------

Select the correct option

- Diacetyl
- Lactic acid
- All of the given
- Carbon dioxide

Lesson#81

Which one of the following is the drawback of natural fermentation ---------?

Select the correct option

- Rapid growth of desired one
- Special aroma
- Suppress the growth of undesired one
- Non-consistency in the organoleptic properties

In which type of fermentation conditions are set to facilitate the growth of the microorganisms coming from the previous product -----

Select the correct option

- Natural Fermentation
- Controlled Fermentation
- All of the given
- Back Slopping

Back Slopping is a type of _____ process.

Select the correct option

- hydration
- aging
- fermentation
- distillation

Lesson#82

Which type of fermentation mostly used for the production of vinegar ----------?

Select the correct option

- Lactic Acid Fermentation
- Alcoholic Fermentation
- None of the given
- Acetic Acid Fermentation

Which type of fermentation mostly used for the production of yoghurt from milk ----------?

Select the correct option

- None of the above
- Alcoholic Fermentation
- Acetic Acid Fermentation
- Lactic Acid Fermentation

Lesson#83

Which dairy product is made from streptococcus thermophiles and Lactobacillus delbrueckii subsp. Bulgaricus ----------

Select the correct option

- Kefir
- Cheese
- All of these
- Yogurt

Which dairy product is made with Lab. casei and may contain Bifidobacterium specie ----------?

Select the correct option

- ○ Yogurt
- ◉ Yakult

Bifidobacterium is used in making of ___ .

Select the correct option

- ○ Yogurt
- ○ Kefir
- ◉ Bifidus milk

Lesson#84

Which process is not involved in milk treatment step ----------?

Select the correct option

- ◉ Fermentation
- ○ Homogenization
- ○ Standardization
- ○ Heat treated

B- galactosidase in some strains of *Str. thermopilus* polymerizes glucose to produce_____, which may give a viscous texture to yogurt?

Select the correct option

Reload Math Eq

- ○ Proteinase
- ○ Acetaldehyde
- ○ Diacetyl
- ◉ Oligosaccharides and glycan

Lesson#85

---------- is made by coagulating the casein in milk with lactic acid produced by lactic acid bacteria?

Select the correct option

- ○ Yogurt
- ○ Soya milk
- ◉ Cheese
- ○ Butter

Cottage cheese is an example of _____.

Select the correct option

○	Ripened cheese
◉	Unripened cheese
○	Semi-hard cheese

Lesson#86

The average composition of salami meat fermented product is ----------?

Select the correct option

○	50% fat, 20% protein. 3% minerals (salts), and 27% water
○	20% fat, 20% protein. 3% minerals (salts), and 57% water
○	10% fat, 20% protein. 3% minerals (salts), and 67% water
◉	30% fat, 20% protein. 3% minerals (salts), and 47% water

Which one is meat fermented product ----------?

Select the correct option

○	None of the above
○	Kefir
○	Cheese
◉	Sausages

Lessom#87

In semi dry sausages, gas formation can occur because of growth of _____ spp.

Select the correct option

◉	Leuconostoc
○	Basil
○	Salmonella
	E. coli

Gas formation can occur because of growth of _____during meat fermentation and during storage in vacuum packages?

Select the correct option

○	*Pediococcus acidilactici*
○	*Lab. Plantarum*
◉	*Leuconostoc spp.*
○	*Ped. acidilactici*

Lesson#88

Fermented vegetable products have Sour taste with clean acid flavor. They can be Fermented for ----------?

Select the correct option

- 1-2 months (15°C)
- 3-4 months (37°C)
- 1-3 months (10°C)
- 2-3 months (18°C) ✓

Sauerkraut , reddish, turnips , beets , beans, peas , corn can be fermented because they have ___ .

Select the correct option

- none of them
- lactic acid bacteria ✓
- acetic acid bacteria

Leeson#89

Sauerkraut is fermented because of

Select the correct option

- lactic acid bacteria ✓
- microorganisms
- none of these

_____ is finely cut raw cabbage that has been fermented via various lactic acid bacteria which gives it a special sour flavor and aroma?

Select the correct option

- Sauerkraut ✓
- Sausages

Leeson#90

Pickling can be done by the ----------?

Select the correct option

- Anaerobic Fermentation
- (A & B) both ✓
- none of the Above
- Direct immersion

Which one of the following is the correct order of Process of Vegetable Pickling ----------?

Select the correct option

- Preparation of vegetables, Selection of vegetables, Filling, Layering of Oil, Fermentation
- Selection of vegetables, Preparation of vegetables, Fermentation, Filling, Layering of Oil ✓
- Selection of vegetables, Preparation of vegetables, Filling, Layering of Oil, Fermentation
- Filling, Layering of Oil, Selection of vegetables, Preparation of vegetables, Fermentation

Leeson#91

Standards of identity for Cheddar include ----------?

Select the correct option

- 40% moisture and 60% fat
- 39% moisture and 50% fat
- 10% moisture and 90% fat
- 50% moisture and 50% fat

Ingredients used for cheese making includes ----------?

Select the correct option

- All of the above
- Milk
- Starter Culture
- Calcium Chloride

Cheddar cheese is classified as a ----------?

Select the correct option

- Not a cheese
- Hard cheese
- Soft cheese
- Mild cheese

Lesson#92

The recognizable yellow to orange color of Cheddar and Colby cheeses is derived from annatto, an extract from seeds of the ----------

Select the correct option

Reload Mat

- Moringa tree
- Lipstick tree
- Palm tree
- Deodar Cedar

Starter Culture that produce sufficient acid, reduce the pH of milk to the ----------?

Select the correct option

- 5.3
- 4
- 2
- 7

Lesson#94

Which one of the foolowing is the pre-treatment method of milk for cheese making ----------?

Select the correct option

- All of above
- Centrifugation
- Standardization
- Homogenization

In the process of cheese making, ripening occurs for the time of ----------?

Select the correct option

○	24 hours
○	20 days
○	2 year
◉	15–30 minutes

Lesson#95

In the process of cheese making, curds are allowed to "heal" for---------- prior to agitating and cooking?

Select the correct option

○	2 hours
◉	5–10 min
○	1 hour
○	1 day

In the process of cheese making, salting ensures ----------?

Select the correct option

○	Aging
○	Drying
○	None of the above
◉	Inhibits further growth and metabolism

Lesson#96

High-quality Cheddar cheese has a full, balanced nutty, sharp, but not ----------?

Select the correct option

○	None of these
○	Soft texture
◉	bitter flavor
○	Pale color

Ammonia-like and sulfur-like odors and bitter taste typically occur in aged cheeses. It is a consequence of ----------

Select the correct option

○	Drying
◉	amino acid breakdown
○	None of the above
○	Ripening

Salmonella can survive in ripening Cheddar cheese for ----------?

Select the correct option

◉	7–10 months
○	cannot survive
○	2 months
○	2 year

Lesson#97

Enzymes are very important for living beings because _____.

Select the correct option

- because they are found in foods
- because they provide energy
- (●) because they accelerate metabolic reactions in body

The presence of necessary reactants plus ---------- is required to start a particular enzymatic reaction?

Select the correct option

- (●) Activation energy
- Affinity

Lesson#98

Prosthetic groups present in enzymes are also called____.

Select the correct option

- activators
- inducers
- (●) coenzymes

Lesson#99

Peptidases split polypeptides and peptides into ----------?

Select the correct option

- (●) Amino Acids
- Nucleotides

Peptidases are responsible for splitting of _____.

Select the correct option

- none of these
- amino acids
- (●) peptides

Lesson#100

Wick of a candle burning is a best example for _____.

Select the correct option

- metabolism
- reduction
- oxidation

Wick of a candle burning is a best example for _____.

Select the correct option

- redox reactions
- oxidation
- metabolism

Lesson#101

10 carbon atoms containing fatty acid is:

Select the correct option

- Capric acid
- Butyric Acid
- Caproic Acid
- Caprylic acid

Glycerine contains..... alcohol groups.

Select the correct option

- 5
- 3
- 9

Lesson#102

.....breaks down the sucrose.

Select the correct option

- Lipase
- Invertase
- Amylase
- Urease

..... supports structure in fruits.

Select the correct option

- Lecithin
- Pectin
- Amylose
- Sucrose

The primary unit of pectin is:

Select the correct option

- Hyaluronic acid
- Phoshpholipds
- Lecithin
- Galacturonic acid

Lesson#103

The presence of traces of ..... causes degradation of mayonnaise.

Select the correct option

- Phosphoric acid
- Oxygen
- Nitrogen
- Hydrogen

The most important application of glucose oxidase is in the treatment of:

Select the correct option

- Fruit products
- Egg products
- Beverages
- Wine

Lesson#104

Hydrogen peroxide is used to preserve.....,when refrigerator is not available.

Select the correct option

- Vegetables
- Fruits
- Meat
- Milk

.....are used to break down hydrogen peroxide (H_2O_2) to water and oxygen.

Select the correct option

- (●) Catalase
- ( ) Reductase
- ( ) Invertase
- ( ) Hydrolase

Lesson#105

Enzymes used for tenderizing meat are:

Select the correct option

- (●) Proteolytic enzymes
- ( ) Anabolic enzymes
- ( ) Hydrolytic enzymes

..... are added to dried egg whites to improve the whipping quality.

Select the correct option

- ( ) Proteases
- ( ) Urease
- ( ) Amylase
- (●) Lipases

Protein hydrolysates can be produced from the use of ..... from both plant and animal sources.

Select the correct option

- (●) Proteases
- ( ) Amylase
- ( ) Urease

Lesson#106

.....tests foods that have been irradiated and approves irradiation sources and maximum dosages.

Select the correct option

- ( ) IPH
- ( ) NCOC
- (●) FDA
- ( ) NIH

The chemical substances deliberately added to foods, directly or indirectly, to process and preserve the foods are called.....

Select the correct option

- (●) Food additives
- ( ) Food toxins
- ( ) Food colors
- ( ) Food flavors

Food additives should be.....

Select the correct option

- ( ) Colorful
- (•) Hazardous
- ( ) Non toxic
- ( ) Toxic

LESSON#107

A large number of chemical additives are unfamiliar, and there is a need for .....to question their use from the standpoint of safety.

Select the correct option

- ( ) Safety measures
- ( ) Standard operating protocols
- (•) Regulatory agencies

Most food additives are components of .....

Select the correct option

- (•) Natural foods
- ( ) Vegetables
- ( ) Fruits
- ( ) Synthetic flavors

Our most reasonable evaluation of an additive for safety can be made through conventional ..... studies.

Select the correct option

- (•) Animal feeding
- ( ) Lab experiments
- ( ) Toxicity studies
- ( ) Human trial

Lesson#108

Naturally occurring antioxidant is:

Select the correct option

- ( ) Vitamin D
- ( ) Sodium bicarbonate
- ( ) Vitamin B
- (•) Vitamin C

Anti-oxidants prevent ..... from reacting with components of the food, as in a hermetically sealed container.

Select the correct option

- ( ) Nitrogen
- ( ) Carbon monoxide
- (•) Oxygen
- ( ) Hydrogen

Oxidative quality changes in foods include:

Select the correct option

- Healthy nutrition
- Good texture
- Rancidity
- Detoxification

Lesson#109

7-dehydrocholesterol is converted to pre vitamin D3 by the ..... of sunlight.

Select the correct option

- Cosmic rays
- Infra-red rays
- Visible rays
- Ultraviolet rays

kwashiorkor results from insufficient ..... intake.

Select the correct option

- Minerals
- Carbohydrates
- Proteins
- Vitamins

The major source of vitamin D for humans is a precursor compound called 7-dehydrocholesterol which is produced in .....

Select the correct option

- Pancrease
- Brain
- Liver
- Kidney

Lesson#110

..... are variable due to season and other uncontrollable factors.

Select the correct option

- Plant flavorings
- Synthetic flavorings
- Animal flavorings
- Natural flavorings

Amyl acetate is used to give artificial flavor of .....

Select the correct option

- Orange
- Banana
- Apple
- Mango

An oleoresin is a solvent extract of ..... from which the solvent, usually a hydrocarbon, has been removed by distillation.

Select the correct option

- (●) Spices
- ( ) Pomegranate
- ( ) Animal liver
- ( ) Orange trees

Click to Save Ans

Lesson#111

Naturally occurring acidulant is.....

Select the correct option

- ( ) carbonic acid
- (●) Citric acid
- ( ) Phosphoric acid
- ( ) Hydrchloric acid

Acidulant used in carbonated drinks is.....

Select the correct option

- ( ) Butanoic acid
- ( ) Acetic acid
- (●) Citric acid
- ( ) Malic acid

..... contain all the three acidulants i.e. citric acid, malic Acid, acetic acid.

Select the correct option

- ( ) Apple
- (●) Figs
- ( ) Vinegar
- ( ) Oranges

Lesson#112

..... along with other compounds used to reduce the amount of hardness in drinking water

Select the correct option

- ( ) Sodium hydroxide
- (●) Sodium carbonate
- ( ) Aluminium hydroxide

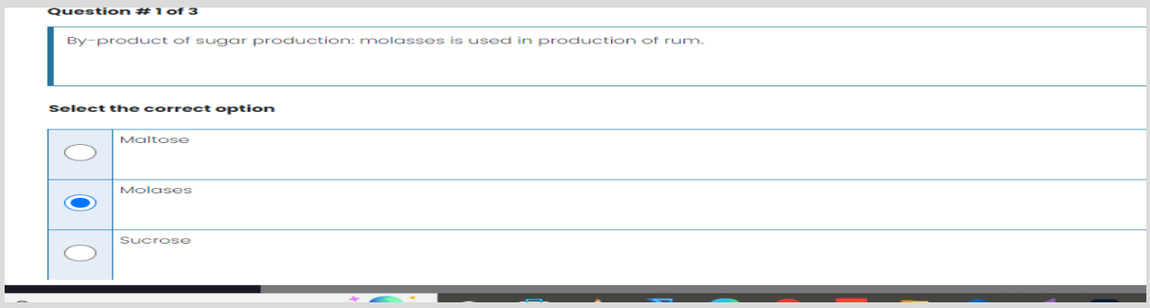

Question # 1 of 3

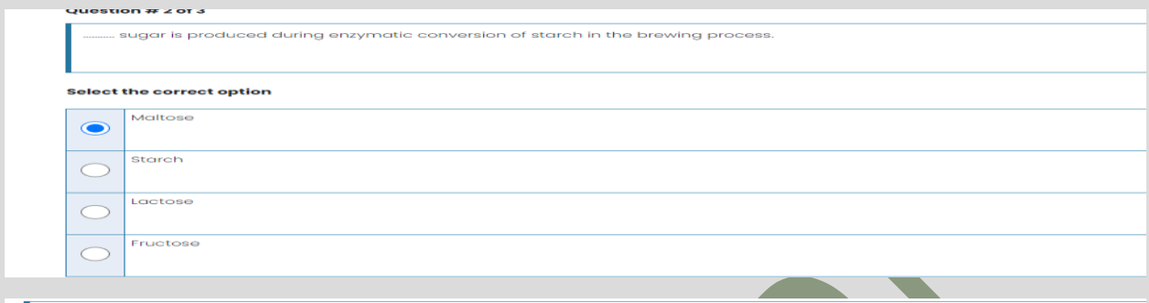

..... used in production of caramel.

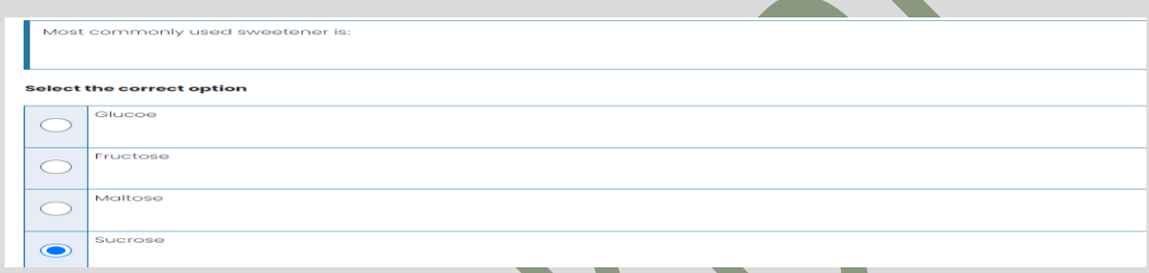

Select the correct option

- ( ) Sodium carbonate
- ( ) Sodium bicarbonate
- (●) Sodium hydroxide

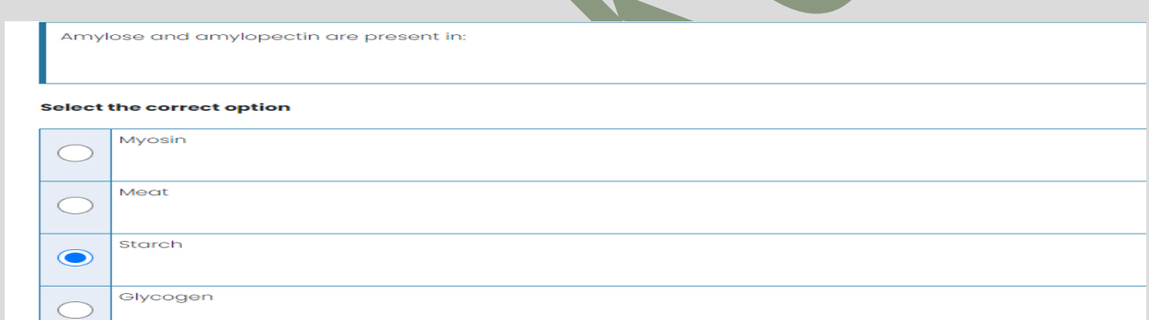

Lesson#113

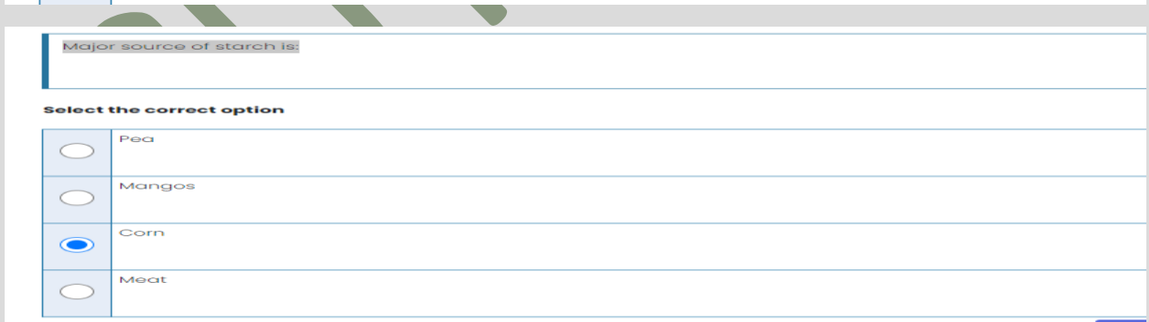

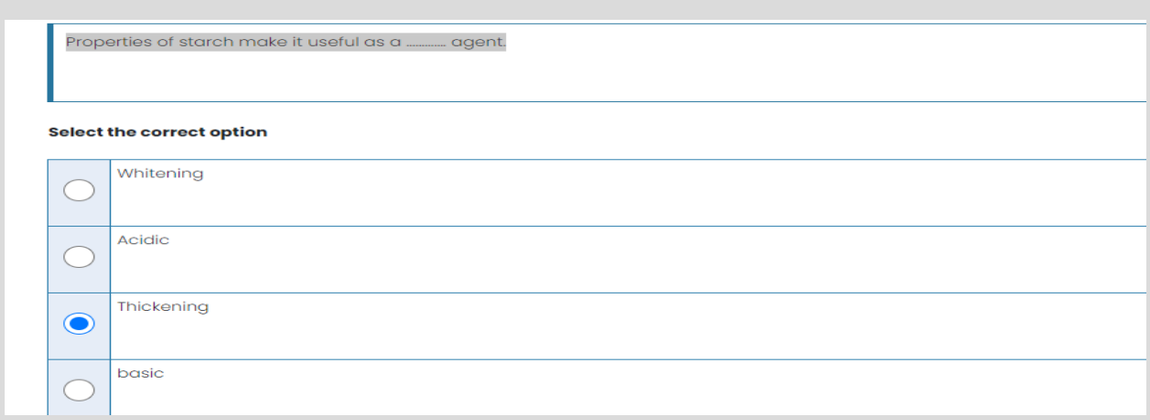

Lesson#114

Lesson#115

Gums are used to prevent formation of large ice crystals in:

Select the correct option

- Frozen meat
- (•) Frozen desserts
- Frozen fruits

..... Are used to stabilize ice-cream and desserts.

Select the correct option

- Alkaline compounds
- (•) Gums
- Acidulants
- Sweeteners

Lesson#116

Which of the following polyols imparts a hot sensation?

Select the correct option

- (•) Glycerine
- Propanol
- Mannitol

Which of the following polyols imparts a cool sensation?

Select the correct option

- (•) Sorbitol
- Glycerine
- Mannitol

Polyhydric alcohols are also called.....

Select the correct option

- Polyketones
- (•) Polyols
- Polyesters
- Polyaldols

Lesson#117

Surface active agents affect the ..... at the interface of surfaces.

Select the correct option

- Intramolecular force
- (•) Physical force
- Chemical force
- Covalent bonds

.....affect the physical force at the interface of surfaces.

Select the correct option

- ○ Gums
- ○ Acidulants
- ○ Polyols
- ● Surfactants

Which of the following is not a use of surfactants?

Select the correct option

- ○ Act as a lubricant
- ○ Act as a wetting agent
- ● Act as a sweetener
- ○ Act as a detergent

Lesson#118

Baking soda can be of ..... types.

Select the correct option

- ● Two
- ○ Four
- ○ three

..... used to enhance the rising of dough in the manufacture of baked products?

Select the correct option

- ○ Wetting agents
- ○ Polyols
- ● Leavening agents

Sodium bicarbonate (base) and potassium acid tartrate (acid) are examples of:

Select the correct option

- ○ Double acting baking powder
- ● Single acting baking powder
- ○ Washing soda
- ○ Bleach

Lesson#119

Sulfur dioxide used to prevent browning in certain .....

Select the correct option

- ○ Drinks
- ● Dried fruits
- ○ Milk
- ○ Vegetables

..... is a natural component of cranberries.

Select the correct option

- ○ Calcium propionate
- ◉ Benzoic acid
- ○ Sorbic acid
- ○ Sulfur dioxide

..... is used to prevent wild yeast growth in wines used to make vinegar.

Select the correct option

- ○ Sodium diacetate
- ○ Sorbic acid
- ○ Calcium propionate
- ◉ Sulfur dioxide

Lesson#120

Canthaxanthin (red) is an example of .....

Select the correct option

- ○ Artificial colors
- ○ Natural colors
- ○ Synthetic colors
- ◉ Natural identical colors

Food colorants are of .....

Select the correct option

- ○ Five major types
- ◉ Three major types
- ○ Two major types
- ○ Four major types

..... is obtained from the annatto seed.

Select the correct option

- ○ Red
- ○ Green
- ○ Brown
- ◉ Yellow

Type here to search

Lesson#121

To determine the titratable acidity, a known volume of food sample is titrated with a ..... to an endpoint.

Select the correct option

- ◉ Standard base
- ○ Standard salt
- ○ Standard acid and standard base
- ○ Standard acid

All food acids are ..... acids.

Select the correct option

- Inorganic
- Weak
- Strong
- Mild

..... is used to determine the end point of an acid–base titration.

Select the correct option

- pOH
- **pH**
- pKb
- pKa

Lesson#122

A particular feature of ..... cultures is that they regulate the balance of the gut bacterial population.

Select the correct option

- Bacterial
- Probiotic
- Viral

Question # 2 of 3

Practically all organisms used in probiotic foods or food supplements are representatives of the genera.

Select the correct option

- Tuberculosis
- Streptococcus
- Salmonella
- Lactobacillus

..... are defined as live microorganisms which when reaching the intestines in sufficient numbers will exert positive effects.

Select the correct option

- Viruses
- Probiotics
- Antibiotics
- Protozoa

Lesson#123

Probiotics cannot be administered in the following forms:

Select the correct option

- Food products
- Pharmaceutical capsule
- Injections

LAB strains with the ability to survive passage of ..... can be used as probiotics.

Select the correct option

- Genital tract
- Respiratory tract
- Urinary tract
- Gastro intestinal tract (GIT)

Lactic acid fermented food of plant or animal origin can be consumed in .....

Select the correct option

- Capsule form
- Raw and uncooked state
- Processed and cooked state
- Injection form

Lesson#124

Role of the lactobacilli is more important in ..... where they comprise a higher proportion of the total population.

Select the correct option

- Large intestine
- Small intestines
- Pancreas

The estimated total population of 10^{14} viable bacteria in the adult human GIT represents about ..... times more than all body tissue cells.

Select the correct option

- 30
- 10
- 20
- 40

Microbiota supports the ..... process.

Select the correct option

- Digestion
- Blood circulation
- Urinary
- Respiratory

Lesson#125

Question # 1 of 3

A number of ..... strains, e.g., Bacillus cereus, are available in the market mainly as pharmaceutic preparations.

Select the correct option

- viral
- Non-lactic
- fungal
- Lactic

Functional food products contain primarily strains of different .....

Select the correct option

- Protozoa
- Bacteria
- Virus
- Fungi

Most strains currently in use as probiotics in food, nutrition, and in pharmaceutical preparations are members of the .....

Select the correct option

- Enterococcus bacteria
- Lactic acid bacteria (LAB)
- Salmonella Bacteria
- Listeria Bacteria

Lesson#126

The primary objective of selection of appropriate strains is to select microbial strains with.....

Select the correct option

- Pathogenic properties
- Lethal properties
- Notorious properties
- Functional properties

Efforts and resources are required for selection of an ..... probiotic strain.

Select the correct option

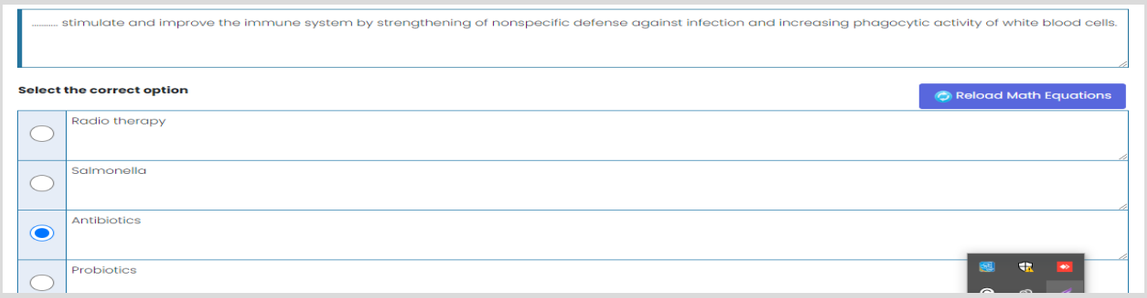

- Hostile
- Infectious
- pathogeneic
- Ideal

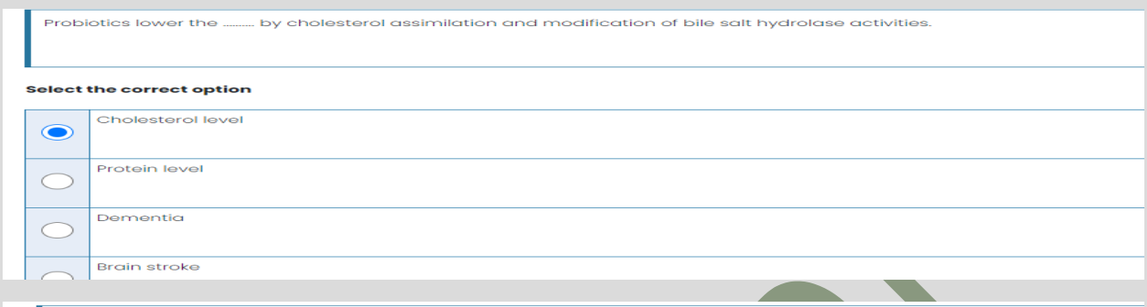

The safety and non-pathogenicity of a new strain is considered of major importance by the .....

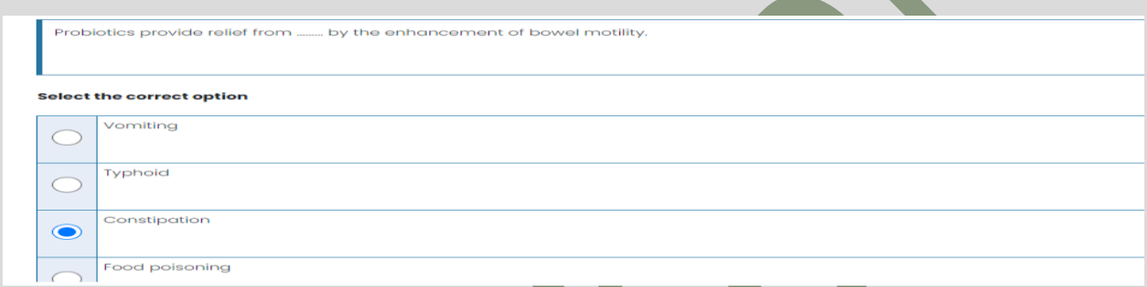

Select the correct option

- Doctors
- Regulatory authorities
- Microbiologist
- Pathologist

Lesson#127

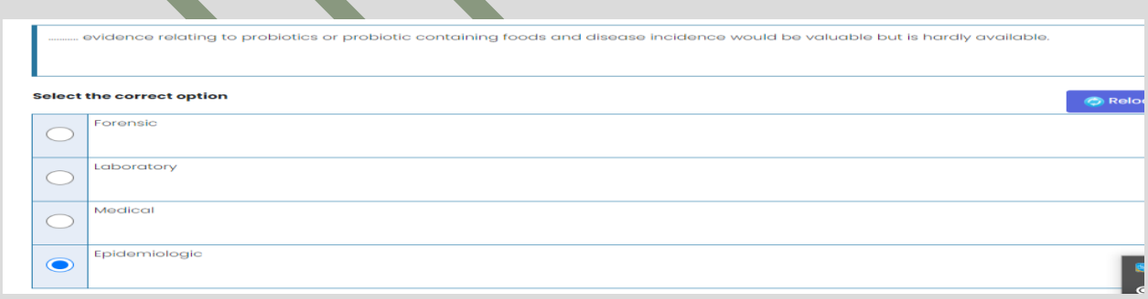

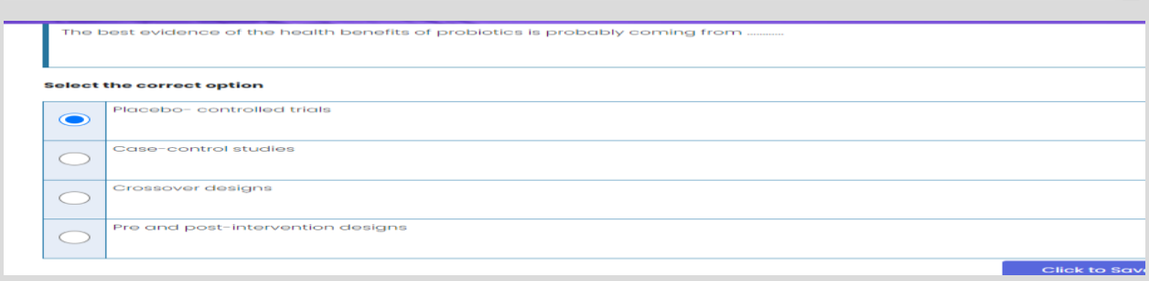

Lesson#128

Lesson#129

Question # 1 of 3

In addition to food products, probiotic cultures are also used in .....

Select the correct option

- ( ) Bioremediation
- ( ) Biofuel production
- (•) Pharmaceuticals and animal feed
- ( ) Forensic analysis

Products with an unfavorable water activity include.....

Select the correct option

- (•) Cereals and chocolate
- ( ) Curd
- ( ) Milk
- ( ) Meat

Probiotic cultures are applied to speed up the ..... process and provide the desired texture and flavor in food.

Select the correct option

- ( ) Alkalinization
- ( ) Neutralization
- (•) Acidification
- ( ) Hydration

Lesson#130

The assurance that food will not cause harm to the consumer when it is prepared and eaten according to its intended use is called.....

Select the correct option

- ( ) Food deterioration
- ( ) Food poisoning
- ( ) Food protection
- (•) Food safety

Question # 2 of 3

The harmful substances in foods are called .....

Select the correct option

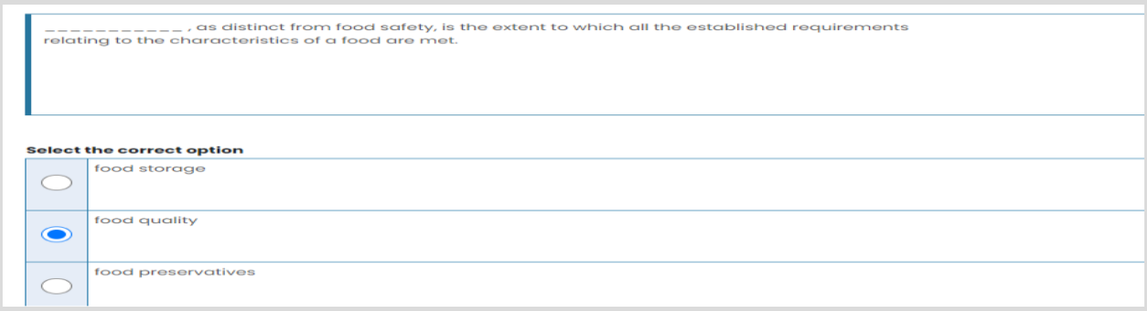

- (•) Food safety hazards
- ( ) Food safety products
- ( ) Food safety benefits
- ( ) Food preservatives

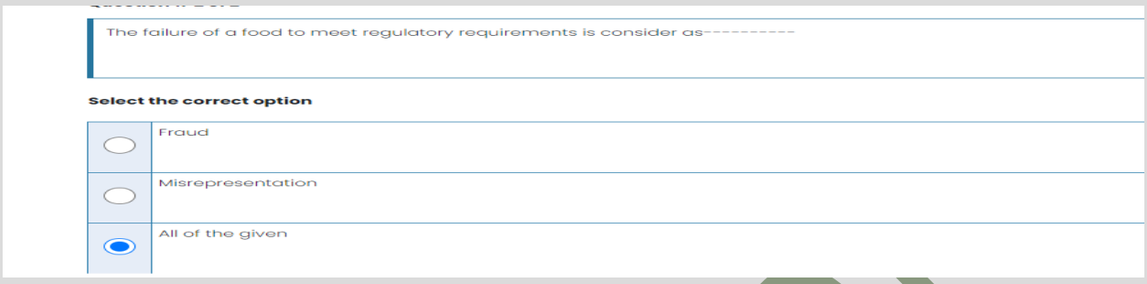

..... in addition to food laws and regulations also establish requirements for the safety and quality of foods.

Select the correct option

- (•) Food standards
- ( ) Food texture
- ( ) Food color
- ( ) Food flavor

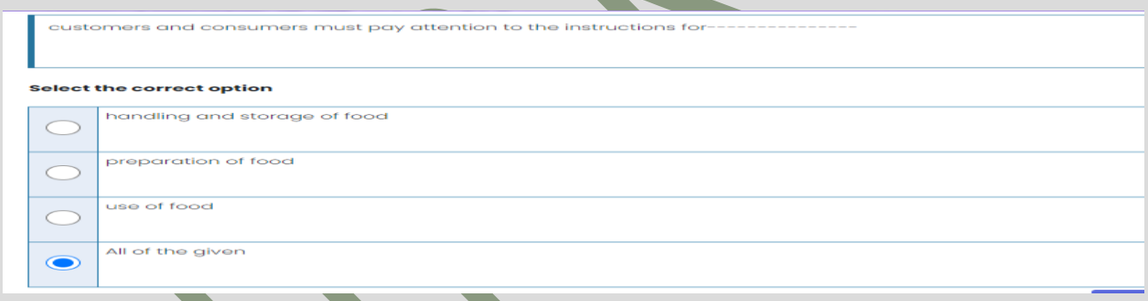

Lesson#131

Lesson#132

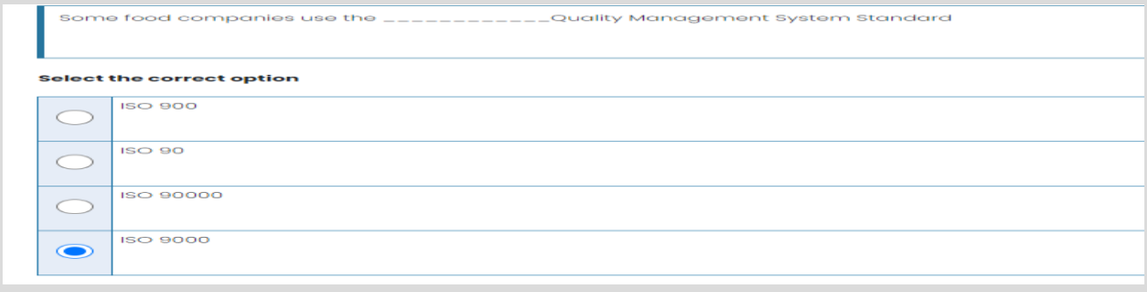

Lesson#133

NOTE;Plz ans chk 1st mcqs.

Lesson#134

The food industry has depended on the use of quality programs based on inspection and testing of food products for hazards, Since the late 1980s, there has been widespread use of the_____

Select the correct option

Reload Math Equations

- (●) HACCP system
- ( ) ISO9000
- ( ) GMPs

The_____, were used to address food safety requirements prior to the use of _____

Select the correct option

- ( ) The HACCP system, GMPs
- ( ) GMPs, GMPs
- ( ) The HACCP system, the HACCP system
- (●) GMPs, the HACCP system

Click to Save

The_____, were used to address food safety requirements prior to the use of _____

Select the correct option

- ( ) The HACCP system, GMPs
- ( ) GMPs, GMPs
- ( ) The HACCP system, the HACCP system
- (●) GMPs, the HACCP system
