BT503 QUIZ-1 SOLVED

1. **Biological system may be used to clean up pollutants which of the following attributes must be present in the pollutants. It should be highly toxic**
2. **Halophiles are extremely important in environment biotechnology these are microorganisms that survive in highly saline environment . they do so by ensuring that-----. Their cytoplasm contains a higher concentration of solutes then their surroundings**
3. **Glyphosate (herbicide) is analyze of phosphenol pyruvate and inhibits the enzyme, the plants that gave the best result were --------. Petunias**
4. **Lichens are used as bioindicators to monitor -------- quality. Air**
5. **Microorganisms are now being used for the removal of pollutants from environment . all of the following statementsin this regards are true except-------. The tolence degradation pathway and p-cumate catabolic pathway are coded by genes present on the same operon.**
6. **In bacteria genetic transfer of materials occurs through --------. Plasmids**
7. **Which statement about endocrine disrupters is true------. Feminization of male fish has occurred due to increased levels of oestrogen in water ways,**
8. **Plants have been produced using the Ti plasmid transfer system of the bacterium. Agrobacterium tumefaciences**
9. **The plant pathogen that is used to increase the resistance of plant to disease is ----------. Erwinia Carotovora**

10. **Living organisms may be used to define the characteristics of biosphere , those that are used to get quantitative information on the quality of the environment are known as ---------. Biomonitors**
11. **The removal of pollutants by plant that breaking down into compounds that can be vaporized is known as -------. Degradation, phytovolatislation, phytosorption**
12. **Planktons are often used as indicator of water pollution, many planktons reproduce at increased rate in lakes when there are high centralization of ------. Phosphorus and nitrogen**
