BT503 Enviriment Biotechnology

Quiz 1

Created by SHAKEEL AHMAD.

1. All of these are artificial processes of pathogen removal except……**Land treatment.**
2. In situ technique is suitable for_____Contramination……..**Widespread.**
3. A sludge with a level of dry solids of 2% has water content of_____…….**98%.**
4. A sludge with a solids load of 120 kgSS/d and a solid concentration of 2.0% (20.000mg/L) will have a flow of……**6.0 m3/d.**
5. Most frequently used unit for concentration of sludge……**%.**
6. Which of the following method affects the Reproduction of the pathogenic agents……..**UV radiation.**
7. The main characteristic of_____Methodsare that the soil is removed from where it originally lay, for treatment……..**Ex situ.**
8. For preliminary waste water treatment all basic equipment are required except one…….**Grit chamber.**
9. The design of sludge treatment and final disposal stages is based on which of the following……..**Sludge flow.**
10. Which of the following pathogen removal system does not need chemicals……Matu**ration ponds.**
11. _____ are well suited to large scale treatment where speed is not of the essence……..**Extensive technologies.**
12. Capillary water maintain it self absorbed in which of the following phase…….**Solid.**
13. In a dewatering process the dry solid level in the dewaterd sludge of filter press____……..**20-30%.**
14. Facultative pond require how much time for sludge removal from liquid phase…….**Decades.**
15. The process in which decomposition of aerobic organic matter is achieved through control condition of temperature, water content, and nutrients is known as……**Compositing.**
16. Following Chemicals are added in the sludge preparation process……..**Coagulants and Polyelectrolytes Both a & c.**
17. Soil washing and thermal treatments are example of_____Technologies……**Intensive Technologies.**
18. Which of the following is highly recommended system for pathogen removal……..**Maturation Ponds.**
19. Which of the following Sludge management stage accomplished through the removal of the biodegradable organic matter of the sludge……**Stabilization.**
20. A very effective method for removal of disease causing organisms **is……Ozonisation.**
21. Disposal of sludge in the mining areas is known as……..**Land reclamation.**

22. _____ technique is the best suited to instances of relatively localised pollution with an insight typically in hotspot of medium relatively high concentration……**Ex situ.**
23. Cropping accumulater of heavy metal plants occur in_____technology……. **Extensive Technology**
24. _____ is normally uses high-temperature refuse the contaminated materials……..**Vetrification.**
25. Which of following process does not introduce chemical product into the liquid ……**Membranes.**
26. Among dewatering processes the process which is least used is called……**Stabilization.**
27.
