

CS301P - Data Structures (Practical)

Solved by: **Sahirullah** | 03191954292 | info.sahirweb@gmail.com

1. When the call to remove a node is made, a node which is being pointed by _____ will be deleted.

Current node

Null node

Last Current node

head node

2. Removing an element from the end of stack using a linked list takes _____ time than removing an element from the start.

Equal

No

More

Less

3. Which of the following linked list method moves the pointer forward?

remove ()

add ()

start ()

next ()

4. In stack, which node will be considered as the Top of stack?

Last node

First node

Any node

Middle node

5. Which type of linked list has two Null pointers?

Circularly linked list

singly linked list

doubly linked list

None of the given options
