The process by which an extrinsic motivation has been fully internalized by the individual is referred to as . _____

Identified regulation

Introjected regulation

Integrated regulation

External regulation

Information in _____ can be continually upgraded, recognized and strengthened

New information store

Sensory information store

Short-term information store

Long-term information store

The first stage of appraisal in the stress process, which involves appraisal of the individual's coping resources, is referred to as

Primary appraisal

Secondary appraisal

Principal appraisal

Key appraisal

_____ Sport Competition Anxiety Test (SCAT) measures

Unidimensional trait anxiety

Multidimensional trait anxiety

Unidimensional state anxiety

Multidimensional state anxiety

Which of the following hypnotic trance theory based on the notion of a division of consciousness

Social cognitive theory

Hypnosis as an altered state of consciousness

Neodissociation theory

Existential theory

:An athlete who does not possess physically challenging disabilities is called

Able-bodied athlete

Disable athlete

Immobilize athlete

Weak athlete

?Which one of the following is NOT a projective test of personality

Rorschach test

Thematic Apperception Test

Troutwine athletic profile

House Tree Person Test

._____ Competitive State Anxiety Inventory-2 (CSAI-2) measures

Unidimensional trait anxiety

Multidimensional trait anxiety

Unidimensional state anxiety

Multidimensional state anxiety

._____ Individuals with beginning skill levels will tend to do better under

A zero level of arousal

Lower levels of arousal

Moderate levels of arousal

Higher levels of arousal

._____ Sport psychologists study the relation of leadership with sport in

to 1960 1950

to 1970 1960

to 1980 1970

to 1990 1980

?Sport Competition Anxiety Test (SCAT) can best measure which of the following

Unidimensional trait anxiety

Multidimensional state anxiety

Unidimensional state anxiety

Multidimensional trait anxiety

Who is considered the most responsible for developing the conceptual framework for
?the locus of causality

Julian B. Rotter

Thomas Hobbes

John D. Lawther

Ellen Lenney

Basketball team of Punjab University had a meeting today in which further goals
:reflected upon and being discussed. This exercise may refer to

The initiation phase

The evaluation phase

The meeting phase

The planning phase

?Who introduced the concept of a zone of optimal functioning

Yuri Hanin

Mihaly Csikszentmihaly

Landers

Nideffer

?Which of the following is correct with reference to Heider's attributional model

Behavioral outcome = personal force + environmental force

Environmental force = personal force + Behavioral outcome

Personal force = Environmental force + Behavioral outcome

Behavioral outcome = ecological force + environmental force

Instinct theory provides one explanation for which of the following phenomenon in athletes
?

Violence

Fairness

Interest

Reinforcement

Small incremental increases in arousal result in small incremental increases or decreases in performance and moderate arousal results in optimal performance are the basic assumptions of inverted-U theory. Which of the following theory questions both of these notions

Apter's reversal theory

Marten's multidimensional anxiety theory

Fazey and Hardy's catastrophe theory

Jones directionality theory

Assume a young cricket player observes on television that professional athletes are often able to intimidate bowlers through aggressive behavior. Using the professional athletes as his model, he tries the same tactics in his game, and is appreciated by the coach with a pat on the back. This is an example of

Psychodynamic theory

Social learning theory

Humanistic theory

Trait theory

has been defined as "using all senses to re-create an experience in the _____".mind

Imagery

Hypnosis

Cohesion

Self-activation

Which of the following phenomenon states that a person's attributions for success or failure can be predicted on the basis of the performance of others on the same task

Cephalocaudal principle

Proximodistal principle

Principle of equi-potentiality

Covariation principle

?Which of the following is a cognitive approach to motivation

Social learning theory

Psychodynamic theories
Theory of moral development
Attribution theory

Which of the following is a daily or regular exercise program across a long period of time

Acute exercise
Aerobic exercise
Chronic exercise
Anaerobic exercise

Which of the following refers to a self-contained activity, one that is done not with the expectation of some future benefit, but simply because the doing itself is the reward

Auto telic experience
Vicarious learning
Motivation
Perception

Which of the following is a model of social facilitation based upon drive theory

Zajonc's model
Harter's competence model
Vealey's sport specific
Model of psychological momentum
]

Which of the following is a cognitive approach to motivation

Social learning theory
Psychodynamic theories
Theory of moral development
Attribution theory
]

All the below are stages in the transtheoretical model of change EXCEPT

Goal setting

Precontemplation

Contemplation

Maintenance
]

Which of the following is by far the most commonly used instrument for measuring mood states in psychology

(The Profile of Mood Measurement (TPMM)
(Self Mood States Test (SMST

(The Profile of Mood States (POMS

(The Inventory of Mood Measurement (IOMM

]

Which of the following audience or crowd interacts in various ways with the athletes?

.Usually the interaction is visual and auditory

Interactive audience

Hostile audience

Argumentative audience

Unfriendly audience

]

According to Lane and Terry, which of the following have a curvilinear effect on

?performance in the absence of depression

Vigor

Fatigue

Anger

Confusion

]

Which of the following is a destructive personal characteristic that is associated with

?inflexibility and a variety of other maladaptive cognitions and effective responses

Normal perfectionism

Neurotic perfectionism

Psychotic perfectionism

Neutral perfectionism

]

Which of the following theory states that anxiety is multidimensional in nature,

composed of two components i.e. a cognitive anxiety component and a somatic

?anxiety component

Martins' Multidimensional Anxiety Theory

Fazey and Hardy's Catastrophe Theory

Hanin's Individual Zone of Optimal Functioning Theory

Jones' Directionality Theory

]

Which of the following theory basically deals with unconscious conflicts between

?internal impulses and social restraints

Psychodynamic theory

Social learning theory

Humanistic theory

Trait theory
