- ☐ Age
 - ☐ Race
 - ☐ Ethnicity
 - ✓ ☐ Morality
39. What was the characteristic feature of the telegraph made by Wheatstone.
- ☐ It could send the message all over the world.
 - ✓ ☐ It could indicate the transmitted letters.
 - ☐ It had printed coded messages on a ribbon.
 - ☐ It did not use electricity for sending message from one place to other.
40. The original telephone designed by Graham Bell was just a modified version of:
- ☐ Radio
 - ☐ Letter Box
 - ✓ ☐ Telegraph
 - ☐ Printing Press
41. Which of the following drawbacks were found in the magnetic telephone of Graham Bell
- ☐ It was not good in look.
 - ✓ ☐ It had voice distortions, causing noise.
 - ☐ It transmitted only half the sentence to the receiver.
 - ☐ It could only make one-way communication.
42. Printing Press is the invention of:
- ☐ Guglielmo Marconi
 - ☐ Joseph John Thompson
 - ✓ ☐ Gutenberg
 - ☐ Isaac Newton
43. Block Printing originated from which country
- ✓ ☐ China
 - ☐ India
 - ☐ America
 - ☐ Rome
44. The way one interprets information around him or her is:
- ☐ Usually positive.
 - ✓ ☐ Tied to one's values, beliefs, and experiences.
 - ☐ Usually negative.
 - ☐ Tied to what others think.

Mass Communication Terminologies

Ethics:

Ethics means moral principles that govern a person or group's behavior.

Absolute Ethics:

The code of ethics that cannot be compromised, ignored or avoided, like Religion, Cultural values where beliefs are so strong must not be compromised.

Communication is the life line of human society. Discuss the importance and usage of communication in human life.

Communication – sending of a message from one person to another, in simplest terms - has been one of the oldest characteristics of human life. Even when formal languages were not available, people were able to make each other understand their feelings and gestures to accomplish routine tasks. The world communication has its origin in the Latin word COMMUNIS which stands for common or to create commonness with the people around you. This is possible when you share your feelings and ideas with others.

Why need Communication?

- 1) **Survival:** Survival is not possible without communication for himself and for his generation.
- 2) **Co-operation:** To work with each other.
- 3) **Relationship:** Human being is divided into relations. To mark or identify your relation you need communication.
- 4) **Persuasion or Influence:** It is built in by birth in human to persuade or influence others.
- 5) **Power:** To rule, power struggle is must for human being like physical power, economic power, political power etc.
- 6) **Social needs:** A human has to fulfill his basic needs. Workload is distributed between them to work efficiently.
- 7) **Information:** A person should remain informed what's going on around himself like cooperation, relationship, food etc.
- 8) **Decision Making:** Now a days communication helps person, organization or countries to take decision on certain matters on the basis of available information.

Why the manuscripts of the monasteries could not really affect life in Europe?

In the **7th to the 9th century** "**illuminated manuscript**" was very popular. Monks reproduced them in the monasteries scattered across Europe. It was the reproduction of Greece and Rome script survived in Europe. Religious and Secular manuscripts copies made did not contribute much more to the advancement of that intellectual tradition, because they forgot to link their work and the people living outside their monastery. The manuscript books were given great religious respect. Their creation was an act of religious devotion. The monks, spent years working on Bible were not who sat for reproducing books. They were making the word of God clear and obvious in the world.

Write a short note on the development of print media in Bombay.

In 1789 the first English newspaper published from Bombay, India was the **Bombay Herald**. After a year another newspaper the **Courier** started carrying advertisements in Gujarati. In 1791 the **Bombay Herald** name was changed to the **Bombay Gazette**. It was used to carry "official notifications and advertisements.

The development of media in India was for more than a century. We divide the time line into three 'ages'. The Age of Formulation, which starts with the Indian Telegraph Act in 1885 and ends with the Report of the Sub-Committee on Communication, National Planning Committee in 1948.

What do you know about Telex?

It is the combination of telegraph and telephone systems. Sending message was a big hurdle until 1935. Telegraphy providers started to develop systems that used telephone-like rotary dialing to connect teletypes. These machines were called "telex".

Telex machines first performed rotary-telephone-style pulse dialing, and then sent one bit per second dots code. This "type A" telex routing functionally automated message routing.

The first wide-coverage telex network was implemented in Germany during the 1930s to communicate within the government. At that time the transferring rate of 45.5 bits per second, up to 25 telex channels could share a single long-distance telephone channel, making telex the cheap method of long-distance communication.

13-16 Century is an expected era of print domination, explain how?

In 13-16 centuries the shift was to write books other than religion. It is called secularization of book production. The focus was to inform people things other than religion.

- The no of universities increase in Europe from Italy.
- The rediscovery of Greek and Roman literature occurred across Europe that eventually led to the development of the humanist movement in the next century.
- In 14th-16th Century during this time printing process was invented and which led to pace up the print media communication. These are print versions of traditional works like the Bible, Prayer books, religious calendar and so on were available for people.

How understanding of monetary and fiscal matters changed people economic ideas? Give your own analysis.

To steer country's economy in the right direction Government use monetary and fiscal matters. They can bring positive results in economy or slow it down if not used correctly. Both are effective in short or long run.

When government uses its spending through expenditure and revenue collection through taxing is called Fiscal matters. To create an easy money environment is called Monetary policy. It is controlled by Federal Reserve and used to speed up or slow down the economy.

The economy boom when govt increase its spending on goods and services. It make more demand for goods and services. To meet the demand, the factories and business houses require more manpower. Once people recruited they will have spending power and it requires more demand which increase in production. The cycle will go on and people will have better living conditions with good education and health.

Mention any five developments which led the telephone to its present status, making it a great facility.?

1. 1667: Robert Hooke invented a string telephone that conveyed sounds over an extended wire by mechanical vibrations. It was to be termed an 'acoustic' or 'mechanical' (non-electrical) telephone.
2. Sending message by wire to a reasonable distance in real time is called Telegraph. Samuel Morse on May 14, 1844 successfully established a link between Baltimore and Washington DC by transmitting the first tele message 'What hath God wrought' on a device invented by him.
3. A working electrical voice-transmission system was first demonstrated by Johann Philipp Reis in 1863. Alexander Graham Bell did experiments and find out that sound could be transmitted and reconverted through an electric wire by using a continuous electric current. The original telephone was just a modified version of a telegraph.
4. After two years, Alexander Graham Bell created a magnetic telephone which was the initial design to modern phones. This design consisted of a transmitter, receiver, and a magnet.
5. The first phones made available to consumers used a single microphone. This required the user to speak into it and then put it to the ear to listen.

People started using phone in 1891. Long-distance calling service was first made available in 1881. The transmission was not good and difficult to hear. In 1956, a submarine cable was laid across the Atlantic to allow transatlantic telephone communication. The telecommunication industry was revolutionized in 1962 when orbiting communication satellites were utilized. In 1980, a fiber-optic system was introduced, again revolutionizing the industry.

Briefly discuss on the development of print media in Madras (Chennai).

Richard Johnson launched the **Madras Courier** in 1785 in Madras, which is now called Chennai. He was a government printer. The second newspaper **Hurkaru** launched in 1791 by **Hugh Boyd**, who was the editor of the Courier and quit his job to launch this.

In 1795 the **Courier** emerged with the founding of the **Madras Gazette** followed by the **India Herald**. India Herald was an "unauthorized" publication, which resulted the deportation of its founder **Humphreys**. The Madras Courier was the official information in the Presidency.

The Hindu was founded in 1878, and played a vital role to promoting the Indian independence from British rule. Its founder, **Kasturi Ranga Iyengar**, was a lawyer, and his son, K Srinivasan assumed editorship of this newspaper during for the first half of the 20th century. Today this paper enjoys the highest circulation in South India, and is among the top five nationally.

Discuss briefly the journey of books from handwritten to the printed editions.

People used to write books by hand for centuries and spreading their message across the countries. For instance, The central church in ROME had employed hundreds of clerics for the purpose of writing copies of bible for taking the message of Christianity to its followers.

Four early Periods in the History of the Books

• 7th to 13th Century:

The age of religious “manuscript” book production. Books in this period are entirely constructed by hand, and are largely religious texts whose creation is meant as an act of worship.

• 13th to 15th Century

The secularization of book production. Books are beginning to be produced that do not serve as objects of worship, but that try to explain something about the observable world. The problem was that all the books were produced by hand writing methods.

The production of secular books is driven by two things:

- The no of universities increase in Europe from Italy.
- The rediscovery of Greek and Roman literature occurred across Europe that eventually led to the development of the humanist movement in the next century.

• 15th-16th Century

During this time printing process was invented and which led to pace up the print media communication. These are print versions of traditional works like the Bible, Prayer books, religious calendar and so on were available for people.

• 16th to 17th Century

New information is put into books that have important consequences on European life and society.

Define Communication?

Communication is a relationship between two or more then two persons, when they at a certain time & place, are engaged in the exchange of information through a mutually shared medium. For instance, language, facial expression, music, color etc.

When human started to record history, communication level was at high level. Language, societies, culture, traveling and wars. Language was not in the same form you see today etc. alphabets, shapes and writing pattern, left to right or vice versa.

Origin of Communication

In early days there was no formal language exists as in now a days. Human express its emotions through sounds. It was born from communication.

What is Mass Communication?

It is a public communication that takes place through the use of mass media. (OR) Such act of communication in which information is made available without restricting who may be the receiver. It was born from communication.

Difference between Communication & Mass Communication

1. Technical device is used in Mass communication, where as, 5 senses of human are generally used in Communication.
2. In Mass communication, the audience is large, scattered & unidentified to the sender, where as, Audience is identified to the sender in Communication.
3. Mass communication is controlled by many gate keepers (who can change or edit the message), where as, Communication is mostly face-to-face & gate keeping do not involve in it.
4. Feed back is delayed in Mass communication, where as, Feedback is quick in communication.

Categorization of Communication

- 1) Intra Personal Communication: A Person speaks to itself like thinking, dreaming.
- 2) Inter Personal Communication: Communication between human beings (two or more than two persons)
- 3) Organization Communication: Communication between members of an organization, company or party
- 4) Group Communication: Communication between same type of people like students, teachers, farmers, technicians, doctors etc.
- 5) Mass Communication: Communication between from one person to unlimited and unidentified persons without any restriction of age, color, area etc.

Major Fields of Mass Communication

General Information

To inform people at large about things which are in their immediate interest. This includes the vast area of news, views and current affairs, entertainment which may include sporting events, music or recreation.

Public Relations

Keeping relations with various types of public, organizations and Govts according to their nature.

Publicity

Publicity, which is more known as advertising, is definitely an outcome of modern means of communication depends on the technology to address masses for purely commercial purposes.

Printing:

To communicate with others, human used many forms to preserve communication (language, signs etc) on stones, leaves and some type of paper materials. Before printing press printing was there in different forms.

Stages of Printing:

- 1) **Block Printing:** Block printing is a technique for printing text, images or patterns used widely throughout East Asia and originating in China in antiquity as a method of printing on textiles and later paper.
- 2) Block printing is using a carved piece of wood or other type of block to imprint an image on fabric or paper. In the early days of printing, it was used to print entire books.

Printing Press: Johannes Gottenberg

Born 1398 – February 3, 1468) was a German blacksmith, goldsmith, printer, and publisher who introduced printing to Europe. His introduction of mechanical movable type printing to Europe started the Printing Revolution and is widely regarded as the most important event of the modern period. His introduction of mechanical movable type printing to Europe started the Printing Revolution and is widely regarded as the most important event of the modern period.

Books were written on religious and ethics.

No of books produced from 350AD-1450AD were same which were produced in 50 years after the introduction of Printing Press.

Regulations of Printed Materials and Press

When people started to write, which hurts others, requires to put up rules and regulations with ethics from the experts.

Authorship - Copyrights - Indices - Page Nos are required after the invention of printing press and the publishing of books.

People uses books for almost 200 years of printing press.

Books Requirement and its limitations

Title, Author, Contents and will be updated after long time.

Diamond Sutra - 886 AD

Earliest know printed text book on Buddhist Scripture (Religion) based on block printing.

Handwritten communication continued for about 1000 years.

1041 - Printing Press in China

Printing with movable letters. Blocks made from Mud (Clay) to recycle and reuse for other books.

Johannes Gottenberg used Oil based ink and use of rag paper in printing technology.

Secularism

Ideas other than religion. Does not meant anti religion. Economic, Political and Social.

Indices

Detailed alphabetical listing of topics, names and places.

Mass Communication Terminologies

Accuracy

To have an understanding on the sender's behalf that the message sent will be understood by the receiver in the similar way as it has been delivered by the sender.

1450 - 1620

Book printing continuation.

1620 or 1621 > *The Corrant*

The first English Private Newspaper was published in London.

1631 > *The Gazette*

The first French newspaper was published.

1690 > *Public Occurrences*

The first newspaper published in Boston, America. It was published just for a day because it was British Colon and Govt did not like the idea.

1702 > *The Daily Courant*

The first English daily newspaper was founded by Samuel Buckley on 11 March 1702.

1803 > *Sydney Gazette*

15 years after the first British penal colony was established, Australia's military government published the Sydney Gazette.

1927 > *The Invention of TV*

Took hardly ten years to assume a regular shape as one strong source of mass communication.

1964 > *TV Station in Lahore*

Pakistan had its first TV station in Lahore in November 1964.

1960 > *Computer*

Introduced for communication and data processing.

Rules of Publication

200 years people producing books on different topics. Since this time some of the rules developed for publications. Something which hearts others or hated material.

How to speed up the printing process if someone want to update or review the available information on regular basis. People should have regular publication. Books have their own limitations. This was the birth of the Newspaper/Magazine because the printing press system as updated and improved in 200 years.

The difference in Mass Communication is it must be mediated in the form of technology. Without technology it is not possible.

Code of Ethics

It was made available after high no of books were available on different topics.

Draconian Laws

An Athenian law scribe under whom small offenses had heavy punishments. They were introduced by Draco in 621.

Era of Hot Lead with Linotype Machine

1884 Otto Mergenthaler invents the Linotype machine which casts type in full lines, using hot lead, a quantum leap in newspaper publishing, and ushering in the era of "hot lead." Before it was letters only.

Broadcast Advertising

Then another element entered the picture — broadcast advertising. In 1922, a station in New York ran a **10-minute talk** on the merits of some co-op apartments in Jackson Heights, N.Y — and charged \$50 for their effort.

Television – Miracle in Modern Mass Communication

It was not much later that people heard radio as one top and fast means of communication, that scientists brought a device in the middle which along the voice could support images and events unfolded in front of the people as a real life occurrence.

The rate of Accuracy was very high with Television as you see the events in front of your eyes how they happened. People have the communication in three formats, **Writing, Listening and Seeing.**

Computer

The unending research and developments in the field of science and technology brought computers – Internet, so to say, for people who wanted to be beneficiaries of mass communication. Computers which were introduced on limited scale in early 1960 for the purposes of communication and fast data processing became in 1990s the major source of communication across the world.

Radio – Radical change in Mass Communication (Voice Communication)

As the world was enjoying the benefits of mass communication through print medium, scientists had been working on some other miracle – reaching out masses through voice. At the brink of 20th century when Italian born Guglielmo Marconi introduced to the world his marvel which today we all know as a radio – the device which brings voice to you from thousands of kilometers.

Why FRC was established? What is its present name and what are its functions?

The Radio Act of 1912 was the first major legislation regulating radio enacted by Congress. By the early 1920s, hundreds of commercial radio broadcasting stations were operating on the Amplitude Modulation (AM) broadcast. The cross-talk and interference were causing unbearable conditions for broadcaster as well as listeners.

Radio Act of 1927, The Beginning of Broadcast Regulation

The Federal Radio Commission (FRC), born out of the Radio Act of 1927, and was considered as a separate regulatory body for radio communications. FRC was authorised to assign specific frequencies to broadcasters and to deny license applications when no room for additional broadcast stations. In 1934, the FRC renamed as Federal Communications Commission (FCC) which control US Broadcasting. Telephone, telegraph, television comes under it.

What is meant by stereotyping?

Stereotyping – a typical hurdle in mass communication. Stereotypes are ideas held by some individuals about members of particular groups, based solely on their attitude. They are often used in a negative or prejudicial sense and are frequently used to justify certain discriminatory behaviors.

Stereotypes are generalizations, or assumptions that people make about the characteristics of all members of a group based on an image (often wrong) about what people in that group are like. For example, one study of stereotypes revealed that Americans are generally considered to be friendly, generous, and tolerant, but also arrogant, impatient, and domineering. Asians, on the other hand, were expected to be shrewd and alert, but reserved. Clearly, not all Americans are friendly and generous; and not all Asians are shrewd. If you assume you know what a person is like, and don't look at each person as an individual, you are likely to make errors in your estimates of a person's character. Stereotypes is a part of characteristics; they reduce complexity, provide stability and also can offer opportunities to identify themselves with others.

In common practice we assume a certain attitude by a group of people and start using our assumption as a reality and thereafter all our analysis are based on our assumption. Problem is compounded when listeners (receivers) also start taking the assumption for granted and so a wrong done once continues to cast shadows in our communication which at times results in complete disaster.

Stereotype Groups

- Age
- Race
- Ethnicity
- Religious beliefs
- Gender
- Social class

1895 > Guglielmo Marconi

Credited for transmits signals by **Radio** waves.

1900 > Audio signals sent across Atlantic

Once he proved that wireless transmissions (radio to you and me) could work, Marconi patented the invention in England and set up the **Marconi Wireless Telegraph Company**.

1920 > 1st Radio Station 1922 > Broadcast Advt

1927 - FRC

Federal Radio Commission

1934 - FCC

Federal Communications
Commission

Mass Communication Terminologies

Apartheid

Discrimination on Racial grounds.

Racial Discrimination

When a person is treated less favourably than another person in a similar situation because of his race, color, nationality, ethnic origin or immigrants status.

What is meant by a Communication model?

A model is a systematic representation of an object or event used to explain the process in simple form. It provides visual details about each step to understand how the mechanism will go on.

Communication models are just pictures; because they stop or freeze transitional process into a static picture.

What is meant by frame of reference in communication?

A frame of reference is a complex set of assumptions and attitudes which we use to filter perceptions to create meaning. The frame can include beliefs, lifestyle, preferences, values, culture and other ways in which we bias our understanding and judgment.

What is Culture?

Culture refers to the beliefs, values, behavior and material objects that, together, form a People's way of life.

How Culture is important in communication process?

The ideas, customs, and social behavior of a particular people or society. You can say the way people live in or say the living style of people of particular area. It is very important in communication to know their living habits, cooking style, dressing up, language they speak, social values and the religion they follow. A slight change in the part of sender or receiver may change the meaning differently and you feel embarrassed many times.

Do all tourists identify with Pakistani traditions and values? Likely not. But the more interesting question is: Why not? The answer lies in the simple fact that most tourists come from different cultures: some vastly different like those from United States, others less different, such as tourists from India or Bangladesh. Even if tourists share the same language, they may have much different customs and values.

Explain with the help of an example that sometimes language itself becomes an obstacle in effective communication?

As we know when our communication is a combination of Verbal Communication and Non Verbal Communication. Non verbal communication has much bigger impact than verbal communication, especially when it is Face-to-Face, Interpersonal communication.

The fact remain is that we communicate our message through language which we do not know how to came in existence. It consists of words, we do not know how there usage, grammar, rules and regulations were made. It is the strongest tools of communication but it has flaws which hamper the communication.

Linguistic Barrier

People even belong to the same tribe and area does not have equal speaking and understanding skills. By using words and actions we get the meaning. Imaging a situation where people with different background speak to each other and the words have different meanings. What about if sender and receivers speaks different language. There are high chances to get misunderstanding and misgiving.

MAHMOOD RANA
MSc Mass Communication
1st Semester - Fall 2015
Updated: Jan2020

Standard Meaning's Problem

Some time a language does not transmit the exact level even if sender and receiver speaks the same language and share the same culture.

For instance in summer if a sender says its hot outside, it will not convey how much hot outside. May be for other person it is not up to that level.

Written Message Confusion

When we communicate our message through written words they does not express the same feelings. If you explain some one about UAE development and outline the main point still if he/she did not see the area physically will not be able to understand properly.

Static Evaluation

Words does not have meaning, we gave them meaning. With the passage of time their meanings changes even some words disappear. Thats why we see many language which were spoken widely are no more available today.

Innate flaws in language which hamper communication

There is no doubt that the language is on of the strongest tools of communication but they have some flaws which hamper communication.

Polarization

We explain things in extreme when communicate. When asked about some one, we say he is good, despite the fact that he is good in some sense and bad in some sense. The person may be bad because he committed crime but good that he always speaks truth. Polarized feeling dot let you explain things in actual.

Labeling

We label people of different categories and thereafter always keep impression about them as such. When we ascribe a label to someone we are at risk of making assumptions about what they think and feel. We never consider to explore whether it is true or not. This can then form the root of prejudice, stereotypes and 'fixed' views about different categories of people.

People of some tribe and clan are labeled as quarrelsome. When they communicate with other peoples by default their voice and tune changed and they start quarreling. They think there is nothing wrong in it.

Static Meaning

Sometimes we assign names to our friends and this associated with them for the whole life. Event the person is graduated, has respectable job, but still when we recall him we say the name associated with him.

Indiscrimination.

Another problem in language it provides you common nouns and suggest that people in this area have the same behaviour. When we talk about Police and Custom, automatically some feelings comes in our mind. You came to know she is Model, you immediately get some meaning related to her.

The purpose is not to say that the language is worthless. It is to identify the area where language becomes fall short of meaning and cause problems.

Main Elements of Shannon and Weaver Model of Communication

Claude Shannon was an American Mathematician, Electronic Engineer and Warren Weaver was an American scientist both of them join together to write an article in "Bell System Technical Journal" called "A Mathematical Theory of Communication" and also called as "Shannon-Weaver model of communication."

What is a Model?

- A model is a systematic representation of an object or event used to explain the process in simple form. It provides visual details about each step to understand how the mechanism will go on.
- Communication models are just pictures; because they stop or freeze transitional process into a static picture.

Models of Communication:

Communication Models are used to explain the communication process in a simple way. The first major model for communication came in 1949 by Claude Shannon and Warren Weaver. It was from the basic concept they developed in 1947 which describes "Communication is the process of sending and receiving messages or transferring information from one part (sender) to another (receiver) through Channel. The modification they made in 1949 was to add Feedback element in the communication process to get confirmation that the message is received to sender properly or not. Purpose of the model was to specify the steps required to transfer a message from sender to receiver in telecommunication.

Elements of Communication:

There are 5 main elements of the communication system.

Sender :

The originator of message or the source of information makes desired message.

Encoder :

The transmitter which converts the message into signals for telecommunication. Signals can be varying in forms like waves or binary data to send message through cables or satellites. For instance, Voice will be converted into wave signals and transmit through cables.

Channels:

It is a medium which communicate with sender and receiver and let your information pass and reach to its destination. Noise (Physical) may interrupt the flow of information at this stage.

Decoder :

The reception place of the signal which converts signals into message. A reverse process of encoding. The receiver converts those waves or binary signals into message which is understandable. Otherwise receiver will not be able to receive the message and it will effect communication.

Receiver:

The destination of the message from sender wants to send message. In communication terms Transmitter and Receivers must be similar systems. In case on incompatibility the communication will not occur.

MAHMOOD RANA
MSc Mass Communication
1st Semester - Fall 2015
Updated: Jan2020

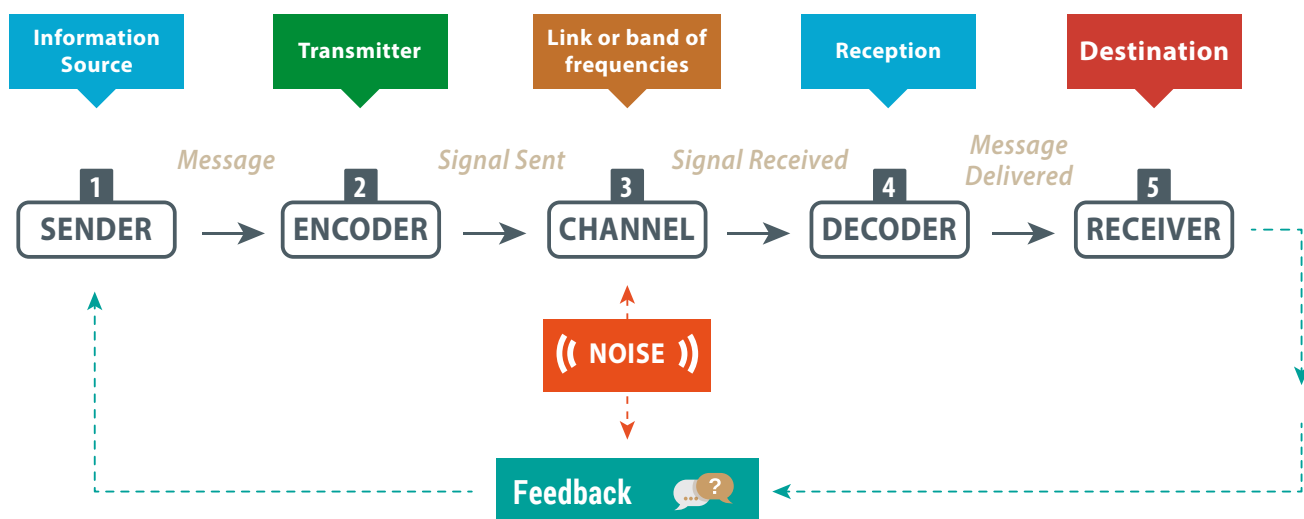

Noise (Physical/Mechanical):

The messages are transferred from encoder to decoder through channel. During this process the messages may be affected by noise (physical or mechanical) like horn sounds, thunder and crowd noise or encoded signals may get damaged in the channel during the transmission process which affect the communication flow or the receiver may not receive the correct message.

Noise (Semantic):

Noise could be Semantic also. It is described the interpretation of the same message according to people's knowledge, skills, experience and cultural values. Feedback: It is the vital part of communication. How will we conclude that the information sent reached its destination or not? It confirms that the information is received completely or partially by the receiver as sender wants. Again we need to keep in mind that the Feedback can also be affected by (Physical) Noise

Shannon and Weaver Model of Communication

Practical Example of Shannon-Weaver model of Information Communication :

Signal is an electrical current if message needs to submit through telephone (analog), telephone is the Channel, the Transmitter and Receiver are the telephone handsets and speakers. Noise could disturb information communication including cracking the wire, faulty telephone or handsets or external noise.

I (Mahmood Rana) called my friend Raza Butt and said "See you in the restaurant at 9:00 pm today". During my call, noise appeared (transmission error or external noise) and he received "See you in the restaurant" only and missed the time. I told him "9:00pm today when he clarified.

MAHMOOD RANA

MSc Mass Communication
1st Semester - Fall 2015

Updated: Jan2020

Criticism of Shannon-Weaver Model of Communication :

The major drawback in Shannon-Weaver's model was that it does not emphasize on the interpretation of message. In human communication interpretation plays an important role. Same message provides different meaning if interpretation change due to Gesture, Tone, or different Cultural values. There is no decoder invented so far which could decode meaning of a human message as it is meant by the source of the sender.

1. Metaphors (Representation of Meaning)

Shannon-Weaver's model of communication can be seen as mechanical information model based on a transport metaphor. In this model you assume transporting information as you are transporting goods which is different in human communication where the view of communication is very important.

Meaning is not 'extracted', but constructed.

2. Linearity (One Way Communication)

Information travel from "Sender" to "Receiver". Sender is the active decision maker and determines the meaning of message. Sender take the lead role and Receiver is having Secondary role.

In Human Communication two people simultaneously 'sending' and 'receiving' messages (Verbal and Non Verbal). Communication is not one-way theory.

3. Content and Meaning (Interpretation and Semantic Noise)

It equates content and its meaning. The meaning-making is not central in information communication models. It is widely assumed that meaning is contained in the 'message' rather than in its interpretation.

Some times it may be related to people's knowledge level, their communication skills, their experience, and their prejudices and so on. It all depends on the commonality of experiences on part of the receiver to understand message from sender. It is also called "***Semantic Noise***" which Shannon-Weaver model is unable to identify.

4. Context

The importance of context: situational, social, institutional, political, cultural, historical is not mentioned in the Communication Model. A message may have different meanings, depending upon the specific context or setting. Shouting "Fire!" on a rifle range gives message to shoot, while the same words said in a crowded theatre will create panic among people and they will try to vacate the place immediately. Quite different reactions for the same word.

5. Relationships and Purposes

People in society do not all have the same social roles or the same rights. And not all meanings are accorded equal value. We all know that certain voices 'carry more authority' than others, and that in some contexts, 'children are to be seen and not heard'.

MAHMOOD RANA
MSc Mass Communication
1st Semester - Fall 2015

Updated: Jan2020

6. Time (Changes in Behavior occurs over the period of time)

Shannon and Weaver's model makes no room for dynamic change over time. People don't remain frozen in the same roles and relationships, with the same purposes. As the time pass, words, their meanings and their languages changed.

Conclusion

The Shannon-Weaver model just highlights the key elements in information communication. The whole model can not be applicable as it is for human communication.

Types of Communication

There are two types of communications:

- Intra personal communication
- Inter personal communication

Intra personal Communication

It is called self communication. A person talks to himself via brain. An idea come to his mind, converted into message and the instruction pass through the nerves (channels) to different parts of the body. The body parts act on the basis of message received.

|Even when we talk to other person, we communication with ourself and as well as with others at the same time. Thinking, talking to himself, dreaming all are examples of it.

Inter Personal Communication

When two (or few) people talk to each other (using technology) or face-to-face is called Inter-Personal Communication. Conversations, dialogue and discussions are part of Inter-Personal Communication.

Inter Personal Communication is a two-way communication and also has the element of Intra-Personal Communication. Because each person talks himself before sending message to other person. Sending messages consists of Verbal and Non Verbal Communications.

Group Communication

When people talk to each other in the form of a group. They share their ideas, raise concerns and find solutions. All members enjoy equal status like Cricket team players discussing match, group of doctors discussion on medical etc

Organizational Communication

The communication which takes place in the organizations are called Organizational Communication. Basically it travels vertical (from top to bottom).

The message passed from the CEO will be delivered to each employee through their department heads. Organization strictly follow the communication protocol to exchange information between its members and employees.

MAHMOOD RANA

MSc Mass Communication
1st Semester - Fall 2015

Updated: Jan2020

Mass Communication

It is a public communication that takes place from one source to the multiple source regardless of their age, cast, religion and nationality. It requires the use of technology. Without using mass media tools not possible to send message to countless no of people.

Forms of communication

We can divide the communication process into two forms:

Verbal Communications

The use of sounds and words, said or written to express yourself.

Non Verbal communication

Our facial expressions, gestures, eye contact, posture, symbols and signs and tone of voice is used to convey messages.

Public Relations (PR)

Communication that convey the right message to the right audiences through simple, accurate and timely manner is called Public Relations (PR). PR is a set of activities that creates, positive image, promote good will and involve people interaction. It helps business organization to increase their sales and Govt. or non profit organization earn good reputation and respect. It needs proper planning and management. Specific steps must be taken in order to meet its objectives.

Essentials Points to Design an Effective PR Campaign

Goals of your campaign

Very important step is defining your goals. What are your goals? Why do you want to carried out the PR Campaign? Do you want to build a good will among your customers or perhaps create your corporate image and promote your brand and increase sale? Another reason could be to build credibility and good perception among people?

Targeting Right Audience

You must be sure what are your right audience? From where they are belonging? Are you going to target the common man or educated people associated with particular groups? Research work is required to launch the PR Campaign.

Medium of Communication

Very carefully choose the medium of communication. Is it print based or broadcast based campaign. How people will understand your message and act upon them. Is your message reachable to the audiences? Are they interpreting the message, it should be understood? Remember communication is a two-way process and your message should match your audience in term of education level, social status, geographical locations etc.

Framework of Campaign

First outline your PR campaign. Duration of the campaign and budgeting must be considered. How much staff required with logistics arrangements?

MAHMOOD RANA
MSc Mass Communication
1st Semester - Fall 2015
Updated: Jan2020

Develop your action plan

Important ways to implement your PR Campaign are:

- Press releases in local and international news papers.
- Writing Articles about organization, its vision and mission.
- Success Stories will highlight based on the core value of the organization.
- Highlight the social impact on society through net, social media and other channels.
- Organizing Press Conferences, participating in exhibitions or arranging Media Tours.
- Using Radio, Television, or Press Interviews.
- Road shows and Public gathering
- Designing Outdoor Signage's, billboards or participating community event

Key Messages

Informing people what are the reasons your organization is involved in this activity. How it is going to be beneficial for the target audience. Your message to the audience must be clear and concise.

Measure Effectiveness

You need to measure the effectiveness of your PR campaign. Following steps will help you that how much you have achieved? Do you see change in people's behavior? Audience satisfaction level will show you how successful you are in your campaign. It is very vital point and must not be forgotten.

Convergence Media /Journalism

Convergence Media is very exciting and challenging in Journalism. It involves print, broadcast, photography, videography and disseminating news on social media and internet. The nature of this media requires journalist to be skilled in multiple domains. Skilled journalist can write the contents for newspaper and same time can upload on internet with photos, videos and info-graphics supported by different links to throw more light on the issue. It allows readers to read the story and easily visualize the whole event as he was present there when it happened.

More challenges faced journalism and society are:

- 1) Schools require changing the curriculum and way of teaching.
- 2) Digital publishing is becoming necessary for every print and publishing house.
- 3) No need to spend millions to set up presses. A small office with required digital tools and minimum no staff can do the same work.
- 4) Monopoly of Media house is over. People doesn't care from where they are getting news.
- 5) Free websites and social media are the easy source of information free of charge.
- 6) Citizen journalism has grown up as every person has a mobile phone equipped with camera and voice recorder. He can easily get news and make available same time.

MAHMOOD RANA

MSc Mass Communication
1st Semester - Fall 2015

Updated: Jan2020

- 7) People want quality news immediately as it happened, anytime and anywhere, unlike print and broadcast media where it requires time to edit and publish contents.
- 8) Media houses preferred Reporters having multiple skills in handling different media applications on the spot. It is called Two-Way or Three-Way reporting.
- 9) News to be disseminated on multiple platforms at the same time like TV, Newspapers, mobile phones, hand held devices.
- 10) People are able to send their feedback immediately and keep in touch with the writer.
- 11) Live updates on web sites and blogs allow to reach more people and get more publicity.
- 12) More companies are advertising on online medium rather than print or broadcast media.
- 13) Journalists have to work under pressure and long working hours to meet deadlines.
- 14) Journalists have high stress level and have less time for family and friends.

No doubt more jobs are created but the challenges are far more than ever. Quality news and control on news no longer exist. The guidelines for journalism are compromised on the use of language and target audiences.

Keeping all the above challenges in mind, we define journalism as:

"The gathering, writing, editing, photographing, or broadcasting of information through newspapers, magazines, radio, television, or the Internet by any news organization as a business (Lydia A. Miljan)".

How Public Relation and Advertising are taken as form of mass communication?

Public relation is the art and science of managing communication between an organization and its key publics to build, manage and sustain its positive image. Advertising is also a form of mass communication. It involves a process of transmission of information by the manufacturer or a seller of a product or service to modify or stimulate the behavior of the buyer to buy a particular product. Both use mass media tools to fulfill their objectives.

What is meant by globalization?

Globalization is a process of interaction and integration among the people, companies, and governments of different nations, a process driven by international trade and investment and aided by information technology. This process has effects on the environment, on culture, on political systems, on economic development and prosperity, and on human physical well-being in societies around the world.

Updated: Jan2020

What is theory?

A theory suggests a relationship between different phenomenon's. Theories allow us to reduce the complexity of reality into an abstract set of principles, which serve as models to compare and contrasts different types of realities.

What is photography?

Answer: Method of recording permanent images by light on to a chemically sensitive material is called photography. It was developed in the 19th century through the artistic aspirations of two Frenchmen, Nicéphore Niepce and Louis-Jacques-Mandé Daguerre, whose combined discoveries led to the invention of the first commercially successful process, the daguerreotype in 1837.

What is classed as New Media?

Web Sites including Blogs Email CD/DVD Electronic kiosks Virtual worlds
Interactive Television Internet Telephony Mobile Pod-cast Hypertext Fiction

What is motion picture? Explain its two factors or principles?

It is a form of entertainment and also called film or movie. Motion Picture is a series of still slightly changed photographs are shown fast enough to trick the human mind to think its viewing moving image. We see multiple still photos in very short time and this gives the illusion of actual, smooth, and continuous movement.

Two Principles of Motion Picture

Below are the two principles that created illusion of motion:

1. The **Phe Pphenomenon** explains that when you see slightly different still images in a very short span of time, illusion of movement is created in the transition between images.
2. **Persistence of Vision**, explains that the human eye and brain can only process 10-12 separate images per second and retain an image up to fifteenth second. This ability of brain and eye is called Persistence of Vision. If an image replaces it in this period of time, it will create the illusion of continuity.

What is Propaganda?

Propaganda is used to spread information with malicious intentions or gaining support for an opinion or belief. It lacks truth and generally an appeal to emotion, not intellect. It explains how to control the mind of public through manipulated spoken or written words or in pictorial representation in mass media.

The term "Propaganda" first used in 16th century to promote Faith and Missionary activities of Catholic church. It was an honorable word associated with religious activities. Later on it was used for selfish, dishonest and manipulated views for malicious intentions and used during World War II.

Propaganda can be divided into three types:

Black propaganda - White propaganda - Grey propaganda

Black Propaganda

It is deliberately created and distributed with malicious intentions. It could be true or false but released with bad intent. Its effectiveness is that it look like to be produced by a legitimate or trustworthy source. Deliberately disseminated rumors or gossips also comes under this category. Used in world war II by Nazi's.

White Propaganda

Although it does not tell complete truth but most of the information is based on truth and factual elements. Its source is clearly identified. It is disseminated in a way that convenience people that the sender has good reputation. It is also used to distract people attention from problematic issues. Like testimonials of war prisoners that they are treated well and life is much better there.

Grey Propaganda

It is in between white and black propaganda. The disseminated information might or might not be false. The information passed without checking its authentication because it suits his/her interests. Sometimes its source also not be correctly identified.

Reason why media show half truth?

Media provide news/information to the people. It educate and entertain them. In present era of globalization, people depend on information and communication to be connected rest of the world. Unfortunately, as the media becoming more stronger, it also tells people half-truth. The better half will be censored by the gate keepers who filter news before it is presented to public.

Reasons for hiding better half

Exaggerate and Blackmailing

Today's media try to blow up the sensitive news out of its proportion to put up pressure on government or other targeted group. Media blackmailed them and get favors in terms of advertisements and other social benefits when they do not find other way to stop media.

Sensationalism in News Coverage

Media outlets purposely do sensationalism in news coverage to get more people attracted and increase in rating. It become very difficult for people to distinguished between truth and biasness. The news reporter find some juicy thing and build a spicy story on it. Most of the time it is proved wrong by later investigation.

Damaging cultural and family traditions

Media project western lifestyle as a role model for eastern countries because they have wealth and better living standard. Bold photos of women's as a show piece, mixture of both genders in dance parties where cigarette alcohol being served are damaging our society and cultural values.

Updated: Jan2020

Biasness

When journalism lacks truth, accuracy, fairness and impartiality it is called bias news. Editors or news journalist select stories aligning with their agenda, find out sources that support their point of view and show one sided version.

Commercialism Interest

Media houses always look for business in the form of advertisement to cover their expenses and get good profit. The rich and big business groups run their advertisement worth of million rupees newspapers and TV channels. In return media house do not inform people about their wrong doings but cover their corruption. The government give more advertisements to media house who promote their version of story.

Write down the names of silent film and its hero names?

It is a film which consists of pictures only with out recorded sound or spoken dialogue. The silent film lasted from 1894 to 1929 also know as "Silent Era".

The first ever silent feature film from Punjab

The Daughter of Today

- Premier Film Company
- Released in: 1924
- Actors: **A.K. Kardar** (Hero), Wilayat Begum, **M. Ismael** (Hero), Vijay Kumar, Heera Lal, Master Ghulam Qadir, G.K. Mehta.

First silent feature film of subcontinent,

Raja Harishchandra (1913) made by Dadasaheb Phalke.

The first Indian sound film,

Alam Ara made by Ardeshir Irani's was released in 1931. It was was a super hit. Bollywood and all the regional film industries quickly switched to sound filming.

PTV Broadcasting in 1965 War between Pakistan and India.

The September 1965 war with India was a testing time for the whole nation. Nothing was above the country's defense. The PTV Lahore station did the heroics it still gets credit for. Its OB teams went to the borders and captured some incredible images of the battlefield. Nothing more could have excited people seeing with their own eyes Pakistan Army's jawans invading Indian posts, destroying them and capturing enemy's land across the border. With madam Noor Jahan's spirited national songs in the backdrop, the PTV's showings worked as a catalyst to fuel the passion for national defense.

What do you know about holography?

Holography is a photographic technique that records the light scattered from an object, and then presents it in a way that appears three-dimensional. A holographic image can be seen by looking into an illuminated holographic print or by shining a laser through a hologram and projecting the image onto a screen.

How understanding of monetary and fiscal matters changed people economic ideas? Give your own analysis.

To steer country's economy in the right direction Government use monetary and fiscal matters. They can bring positive results in economy or slow it down if not used correctly. Both are effective in short or long run.

When government uses its spending through expenditure and revenue collection through taxing is called Fiscal matters. To create an easy money environment is called Monetary policy. It is controlled by Federal Reserve and used to speed up or slow down the economy.

The economy boom when govt increase its spending on goods and services. It make more demand for goods and services. To meet the demand, the factories and business houses require more manpower. Once people recruited they will have spending power and it requires more demand which increase in production. The cycle will go on and people will have better living conditions with good education and health.

How media transform assumptions into reality?

The media play a central role in informing the people about what happens in the world, particularly in those areas in which audiences do not possess direct knowledge or information access. Media start overuse of certain ideas and displaying news to people, so they start believing it as a truth.

Media construct public belief and attitudes and its relationship to social change. The Particular idea disseminate through different mass media channels like news, documentaries, TV dramas, films or cartoons. It is used to portray a group of people with certain characteristics and create division among societies. Like all cleaning services jobs are offered to Christians. People having long beard portrayed Islamic extremists or terrorists.

What is the role of media in promoting need of education?

Media is everywhere and it has become a part of our daily life. It has a dominant role in the learning process. Media has a power to change our perception about world and how we perceive things.

Print Media, Eletronic Media, Social Media has the capacity to run education campaigns and spread knowledge among masses. It also help in promoting basic literacy skills of reading, writing and arithmetic, in order to make their living efficient. Media share knowledge in different riginal languages and easy for people to understand.

It dessiminate expert opinion from major filed of life like medicine, education, environment, economists and religious scholars which bring change in peoples thinking. Media and Education go hand in hand. Without media contribution the learning process can not take place.

Do you think that with the arrival of TV and Internet, the charm of Radio has diminished?

Few things have changed the humanities like the introduction of radio and television and internet into our social world. Invention of radio was helpful in a one-way communication that is intended for a large audience. Radio became a primary source of news, information and entertainment in the first half of 20th century in audio format. People listen news stories, radio dramas, songs and show solidarity with their nation during times of war. Radio tore down the barriers and was helpful to educate people.

In 1950s radio success was disrupted by the introduction of television. TV has the capability to show visuals on screens. Every news and information had visuals. They can see newscaster, characters of drama, and music with singers. Moreover, television provided visual tours of events which helped people to understand what happened and what are the post event affects. It also help people to see different culture, and life style around the world.

With the rise of the Internet in recent decades, its impact on society has been transformative at multiple levels – including in communication, access to knowledge and social interaction. Internet roles is very crucial in delivering news and information, entertainment. The internet was created to provide easy access to much needed information and is less expensive source.

Yes with the arrival of TV and Internet the Charm of Radio is diminished. Still Radio has its own market and it provide information to people who are on road or travelling. It will update them on traffic issues, weather and news information while entertain them through music.

What was the ultimate affect of TV on the movies and theatres?

Watching movies or theatre play is a kind of entertainment. People go to cinema houses, buy tickets and watch movies. We are in a golden age of streaming content. The rise of TV didn't mean the death of popular entertainment. Its just migration from bigger screen to a smaller screen.

TV has a lot more advantage over watching movie in a cinema. In 21st century people are so much busy in work environment that they hardly get time to watch movies in cinemas except on weekends. They need to book ticket online, need to go to cinema and watch movie. If they changed their mind their money is not being refund.

Now a days TV are coming in from 32" to 82" with average screen size is 55-65 inch which is quite good to enjoy movie. At home you have privacy to watch with your family or loved one. At any time if you are tired or getting bored, you can switch to another movie or watch drama or news. The fast internet streaming service has made possible to watch movies without any commercial or break. It is a cheap medium and already available in their homes. Netflix is doing business on the same concept.

Explain with the help of an example that cultural differences (barriers) effect communication process?

As the world is becoming global village, effective communication is very important. Culture is handed down from one generation to another. It gives people their way of seeing the world and interpreting life. Cultural diversity makes communication difficult as the mindset of people of different cultures are different, the language, signs and symbols are also different. Cultural barriers is when people of different cultures are unable to understand each other's customs, resulting in inconveniences and difficulties.

Example - Touching Feets in Indian Culture:

Touching the feet of elders as a mark of respect is an age old practice in Indian tradition. People always been asked to bow down to elders including teachers to take blessings from them. Gaurav Jhaveri a student of Illinois Institute of Technology touched the feet of the Dean during the Commencement ceremony at IIT Chicago in the USA. The Dean was shocked and looked puzzled as Gaurav touched his feet.

Example - Indian Prime Minister Narendra Modi's awkward hugs

Hugging is normal in Sub Continent but looks awkward in another parts of world like USA, China, Japan, Franc, Mexico etc. Indian PM always tried to hug other head of the state and put them in awkward situation because in their culture hand shake is enough and they do not feel comfortable if someone hugs them. See the visuals of Indian PM hugging Mexican President Enrique Pena Nieto, or with Japanese Prime Minister Shinzo Abe and French President Emmanuel Macron.

Example - Hand Shaking

Hand shake is a formal gesture for welcoming guest. In Sub continent people press hand hard to show their solidarity and warmth. For others it could be awkward. One notable recent example came when Prince William visited India. While Modi went to shake his guest's hand, the imprint Modi made on the British royal's hand seemed to suggest a vice-like grip. A slightly pained expression on William's face after the shake was seen.

State the story behind the invention of motion picture?

In 1877, the former Governor of California, Leland Stanford had \$25,000 bet, with some of his friends. Stanford was a country horse breeder and thinks that in racing the horse "flew" means at some point the galloping horse had all four feet off the ground at the same time. Others people believed that a horse always has one hoof (foot) in contact with the ground.

In 1878 Photographer Eadweard Muybridge uses high-speed stop-motion photography to capture a horse's motion. The photos prove that the horse has all four feet in the air during some parts of its stride. The shots settle an old argument ... and start a new medium and industry.

Media is often blamed for sensationalizing the issue. Explain with the help of example.

Media outlets purposely do sensationalism in news coverage to get more people attracted to TV Screens and increase in rating. It become very difficult for people to distinguished between truth and biasness. The news reporter find some juicy thing and build a spicy story on it. Dramatic background music, images of clashes between security forces and civilians, riots all are part of sesationalism.

Sahiwal incident was a crystal clear example of sensationalism. In earlier news, media has declared them terrorists and claiming that huge amunition was recovered from them. Later on all the accusations were found baseless.

Zainab Murder case was naother examaple. where media has twisted events and topics and manipulate the facts. It plays with the audience's emotions. It employs the use of fear, anger, excitement and gloom in an attempt to increase viewership, ratings and, of course, profits.

Define Popculture and Consumer Culture

Popular Culture

The term "popular culture" means cultural traditions of the general people and it was originated in the mid-19th century. It means "way of life" or "set of practices" of particular people including their traditions, values, beliefs, behaviors, rituals, norms and rules.

Consumer Culture

Consumer culture is a relationship consumers have with certain products or services. A culture where social status, values and activities are based on the consumptions of goods and services.

Give names of any three women/children magazines.

Children Magazines

1. Monthly Sathee
2. Hamdard Naunehal
3. Anokhi Kahaniyan
4. Taleem-o-Tarbiat
5. Phool

Women's Magazine

1. Women's Own
2. She Magazine
3. Family Magazine
4. Fashion Magazine
5. DIVA

How film industry was benefited by the invention of radio?

In early twenties, when the film industry was developing and in early stages the radio technology prmoted films tremendously. Radio plays musical songs for the whole day which instigate people to visit movie theaters and watch movies. In 30s and 40s Radio and Film are the two sides of coin in supporting each other. To generate lot of interest among listeners, the radio also aired news about new movies, casting, starts scandals etc. Till today apart from broadcasting news, radio stations are heavily depended on Songs, Movie Reviews, hot talk about celebrities and their scandals.

Acculturation : In a media context the tendency of reporters or other media professionals to adopt the ideas and attitudes of the groups they cover or with which they have a great deal of contact.

Advertising agency : A company that handles both the creative and the business side of an advertising campaign for its clients.

Agenda-setting effect : The influence of the mass media created by emphasizing certain topics, thus causing people to perceive those same issues as important.

AM : Amplitude modulation of radio waves.

Audit Bureau of Circulations (ABC) : An organization formed by advertisers and publishers in 1914 to establish ground rules for counting circulation data.

Authoritarian theory : The prevailing belief that a ruling elite should guide the intellectually inferior masses.

Billboard : The sound recording industry trade publication that tabulates record popularity.

Circulation : The total number of copies of a publication delivered to newsstands, vending machines, and subscribers.

Communication : The process of creating shared meaning

Consumer advertising : Advertising directed at the general public

Corporate convergence : The merging of companies with holdings in one medium with companies that have assets in other media.

Culture : The world made meaningful; socially constructed and maintained through communication, it limits as well as liberates us, differentiates as well as unites us, defines our realities and thereby shapes the ways we think, feel, and act.

Decoding : The activity in the communication process by which physical messages are translated into a form that has eventual meaning for the receiver

Defamation : The act of harming the reputation of another by publishing false information.

Demographics : Measurable characteristics of media consumers such as age, gender, race, education and income level.

Developmental journalism : A type of journalism, practiced by many less-developed countries, that stresses national goals and economic development.

Digital technology : A system that encodes information—sound, text, data, video—into a series of on and off pulses that are usually denoted as zeros and ones.

Digital television (DTV) : Television signals consisting of binary signals that enable improved picture quality.

Updated: Jan2020

E-mail : Electronic messages sent from computer to computer.

Encoding : The activity in the communication process by which thoughts and ideas from the source are translated into a form that may be perceived by the senses.

Feedback : The responses of the receiver that shape and alter subsequent messages from the source.

Field of experience : The sender of a communication is the communicator, who brings to the interaction a field of experience or frame of reference (e.g., the sum of one's experiences during one's life, including one's culture and language). The marketer, the salesperson, and the advertiser are examples of a sender. The intended receiver of the communication is the targeted recipient of the communication (e.g., the consumer, the wholesaler, the retailer). The receiver also has a field of experience. The extent to which the two fields of experience overlap reflects the common field of experience.

FM : Frequency modulation of radio waves

Gatekeepers : Individuals who decide whether a given message will be distributed by a mass medium.

Globalization : The process of interconnecting the world's people with respect to the cultural, economic, political, technological, and environmental aspects of their lives. A comprehensive world-wide process of the internationalisation of communication, trade and economic organization. In the economic sphere it can be seen in international trade agreements, vast increases in the volume of international trade and growing economic interdependency. It is also marked by the expansion of the size and power of multinational corporations and the development of the American entertainment industry's domination of international cultural communication. Generally the process is seen as driven by the growth of international capitalism and involving the transformation of the culture and social structures of non-capitalist and pre-industrial societies.

Halftone: Halftone is the reprographic technique that simulates continuous tone imagery through the use of dots, varying either in size or in spacing. 'Halftone' can also be used to refer specifically to the image that is produced by this process. Where continuous tone imagery (film photography, for example) contains an infinite range of colors or greys, the halftone process reduces visual reproductions to a binary image that is printed with only one color of ink. This binary reproduction relies on a basic optical illusion—that these tiny halftone dots are blended into smooth tones by the human eye.

HDTV : A super sharp television system that delivers about twice the resolution of traditional TV.

Internet TV : Sending video signals over the Internet.

Interpersonal communication : A method of communication in which one person (or group) interacts with another person (or group) without the aid of a mechanical device.

1st Semester - Fall 2015

Updated: Jan2020

Jazz journalism : Journalism of the Roaring Twenties that was characterized by a lively style and a richly illustrated tabloid format.

Kinetoscope : The first practical motion picture camera and viewing device, developed by William Dickson in 1889.

Libel : Written defamation that tends to injure a person's reputation or good name or that diminishes the esteem, respect, or goodwill due a person.

Libertarian theory : The assumption that all human beings are rational decision makers and that governments exist to serve the individual.

Lobbying : The practice of trying to influence governmental decisions. Usually done by agents who serve interest groups.

Mass communication : The process by which a complex organization, with the aid of one or more machines, produces and transmits public messages that are directed at large, heterogeneous, and scattered audiences.

Mass Media : The channels and the institutions of mass communication.

Media Vehicle : A single component of a mass medium, such as a newspaper or TV network.

Medium is the message : A central idea of communications theorist Marshall McLuhan who demonstrated that each media (print, speech, television) is connected with a different pattern or arrangement among the senses and thus results in a different awareness or perception. Although the literal message of a radio report of a disaster and the television coverage of the same event may be identical, the event will be perceived differently and take on different meaning because the two media arrange the senses differently. In this sense the medium (the singular for the word media) is the message; this message is often more important than the literal message.

Model : A verbal or pictorial description or representation of a process. [AR] A way of looking at something. [BA] A representation of something else. Models may represent their referents physically, verbally, and/or visually.

MPAA rating system : The G, PG, PG-13, R, NC-17 rating system for movies administered by the Motion Picture Association of America.

News conference : A news conference or press conference is a media event in which newsmakers invite journalists to hear them speak and, most often, ask questions. A joint press conference instead is held between two or more talking sides.

News Release : A written document designed to deliver a message to the media and generate publicity about an organization or program.

Noise : In communication, anything that interferes with the delivery of a message.

Nonverbal communication : The transmission of messages without the use of words (e.g., by gestures, the use of space). One of two major communication

MAHMOOD RANA
MSc Mass Communication
1st Semester - Fall 2015
Updated: Jan2020

code systems; sometimes defined as all that language is not; communicated via channels other than words. Any information that is expressed without words.

Norm : A culturally established rule prescribing appropriate social behaviour. Norms are relatively specific and precise and elaborate the detailed behavioral requirements that flow from more general and overarching social values . For example, it is a value in Western society that one should respect the dead, it is a norm that one should dress in dark colors for a funeral.

Organizational communication : Organizational communication, broadly speaking, is: people working together to achieve individual or collective goals. Communication can be defined as “the transfer of meanings between persons and groups.” The purpose of communication may range from completing a task or mission to creating and maintaining satisfying relationships. The survival of an organization depends on individuals and groups who are able to maintain among themselves effective and continuing relationships.

Paralanguage : Vocal (but nonverbal) dimension of speech; the manner in which something is said rather than what is said. The way we vocalize, or say, the words we speak.

Penny press : The mass-appeal press of the early 19th century.

Persistence of vision : The quality of the human eye that enables it to retain an image for a split second after the image has disappeared.

Persuasion : Attitude change toward a source’s proposal resulting from a message designed to alter a receiver’s beliefs about the proposal. Communication process, involving both verbal and nonverbal messages, that attempts to reinforce or change listeners’ attitudes, beliefs, values, or behavior.

Phi phenomenon : The tendency of the human perceptual system to perceive continuous motion between two stationary points of light that blink on and off; the basis for the illusion of motion in motion pictures.

Photojournalism : Journalism in which written text is secondary to photographs in news stories.

Plagiarism : Use of another person’s information, language, or ideas without citing the originator and making it appear that the user is the originator.

Prime Time : That part of a radio or television schedule expected to attract the largest audience.

Prototype : An organized understanding of what the defining qualities are of some category of people, events, objects, or situations.

Psychographics : A more sophisticated form of demographics that includes information about the psychological and sociological characteristics of media consumers such as attitudes, values, emotional responses and ideological beliefs.

MAHMOOD RANA

MSc Mass Communication
1st Semester - Fall 2015

Updated: Jan2020

Public relations : The PR of an organization is aimed at systematically promoting its objectives and priorities. PR aims to realize mutual understanding between the organization and its main clients, other stakeholders and target groups. PR uses free, paid or sponsored publicity. It is based on the principle “be good and tell it” or “be good and let others tell it”. PR tools are advertising, new letters, websites, brochures, gimmicks, etc. The relation management is often supported by a specialized information system, which contains information about clients, last contacts, etc.

Publicity : The placing of stories in the mass media.

Receiver : The target of the message in the communication process.

Reinforcement : Support of existing attitudes and opinions by certain messages.

Search engine : Software that enables users to search the Internet for specific information.

Semantic Barriers : Semantics is the study of the meaning of language. The language/words that we use, their denotation (what they literally mean), and their connotation (the cultural assumptions and values that surround them and the images, feelings, and assumptions that they generate) can effect our audience’s reaction. So it is important to realize that, in a speech, it isn’t simply what we say but how we say it. This exercise is a means of helping you realize the significance of particular words and phrases and is an opportunity for you to gauge your reaction to them.

Semantics: Semantics is the study of meaning in communication. In linguistics, it is the study of interpretation of signs as used by agents or communities within particular circumstances and contexts. It has related meanings in several other fields. Semanticists differ on what constitutes meaning in an expression.

Slander :Spoken defamation; in many states, if a defamatory statement is broadcast, it is considered libel, even though technically the words are not written; libel is considered more harmful and usually carries more serious penalties than does slander.

Social responsibility theory : The belief that the press has a responsibility to preserve democracy by properly informing the public and by responding to society’s needs.

Socialization : The ways an individual comes to adopt the behavior and values of a group.

Source : A person who initiates communication.

Spam : The electronic equivalent of junk mail.

Stereotypes : A form of media representation by which instantly recognized characteristics are used to label members of social or cultural groups. While often negative, stereotypes can contain an element of truth and are used by the media to establish an instant rapport with the audience.
