MGT522 — Introduction to Public Policy

Final Term Preparation File By **M. Mubashir Ali**

Join The Group For More Files: [Premium Preparation Files Group](#)

Introduction

رَبِّ زِدْنِي عِلْمًا

"Ay mere Rab, mere ilm mein izafa farma." (Surah Ta-Ha 20:114)

Allah ne Quran mein ilm haasil karne ki bahut takeed ki hai toh yeh file sirf exam preparation nahi, balke ek ibadat ka zariya bhi hai.

Yeh MGT522 Final Term Preparation File 19 - 45 lectures ko cover karti hai jisme har lecture 5 sections mein divide hai.

Deep Explanation, Key Points, Example, Conceptual Questions aur Lesson Quizzes waghera shamil hain.

Mehnat karo, Allah par tawakkul rakho kamyabi Inshaallah zaroor milegi

Baki Bhai ko duaon me yad rakho Fi Amaan Allah.

SECTION 1 — LESSON HEADING

Lesson 19: Trade Policy of Pakistan

SECTION 2 — DEEP EXPLANATION

Deep Explanation

PART A — Opening Analogy: Socho tumhare mohalle ka ek bara dukandaar hai jo foreign cheezein bechta hai. Woh chahta hai ke woh apni dukaan khol kar bahar se sasta saman mangwaye taake log us se khareedein. Lekin doosri taraf, mohalle ke chhotay dukandaar kehte hain ke agar bahar se saman aane laga toh humari dukaan band ho jayegi. Ab mohalle ki committee ko decide karna hai ke kisko sunna hai aur kaun si policy banani hai. Yahi tension Pakistan ki trade policy mein hoti hai — kya hum imports kholen, kya apni industry ko bachayen, aur kaise exports barhayein. Trade policy ka matlab hai ke government yeh decide kare ke desh ka darwaza trade ke liye kitna khula rakhna hai aur kis tarah ki cheezein andar aane deni hain.

PART B — Key Content List: Label: Key Points

1. **Centrality of Trade:** Trade is considered central to economic growth, and many countries have grown through trade, but economists debate the specific policies needed for success.
2. **Failure of Trade Policy Framework 2009-2012:** The policy failed because only Rs 3 billion out of Rs 35 billion allocated were disbursed, and key initiatives like exporter capacity building were left undone.
3. **Narrow Export Portfolio:** Pakistan's export portfolio remains slim, with textiles and clothing making up 55% of exports, showing little diversification into other sectors.
4. **Implementation Gaps:** 70-80% of the initiatives in trade policy were not implemented due to a lack of human resources at the Ministry of Commerce and poor coordination.
5. **Trade Policy 2012-15 Focus:** The new policy emphasized regional trade, strengthening institutional frameworks, regulatory efficiencies, and increasing exports from less developed regions.
6. **Reforming Trade Policy (Sakib Sheerani's View):** Trade policy should be "embedded" with industrial policy to ensure that trade incentives also support domestic manufacturing growth.
7. **Successful Trade Policy Elements:** Common elements from successful countries include export incentives, an under-valued exchange rate, subsidized credit, and selective liberalization of imports.
8. **Anti-Export Bias:** The Musharraf era's stable exchange rate and cheap credit for import-based consumption created an anti-export bias, harming local manufacturing.
9. **Impact of Free Trade Agreement with China:** Drastic tariff reductions and the FTA with China in 2006 led to a surge in imports, causing the manufacturing sector to shrink and increasing the trade deficit.
10. **Cautious Liberalization:** Reforms suggest a cautious approach to liberalization, avoiding wholesale opening of imports, as many countries protect key industries like the US protects its steel and auto sectors.

SECTION 3 — EXAMPLE

Example: Socho Lahore mein ek chhoti si jooti banane wali factory hai. Jab Pakistan ne China ke saath Free Trade Agreement sign ki, toh saste aur achi quality ke chinese joote market mein aa gaye. Log woh khareedne lage kyunke woh saste the. Pakistani factory ka maal bechna mushkil ho gaya aur factory ko band karna para. Yahi hota hai jab trade policy mein imports ko khol diya jaaye bina local industry ko protect kiye. Policy makers ko sochna padta hai ke balance kaise banayein — imports se consumer ko faida hai lekin local industry aur rozgar ko nuqsan ho sakta hai. Trade policy ka kaam hai in dono ke beech mein balance banana taake desh ki economy ko long term mein faida ho.

SECTION 4 — CONCEPTUAL QUESTIONS

Conceptual Questions

Q: What were the main reasons for the failure of Pakistan's Trade Policy Framework 2009-2012, and why is the gap between allocation and disbursement a critical policy failure? Answer: The main reasons for failure were the lack of implementation, where only a tiny fraction of the allocated budget was spent, and key initiatives like capacity building were left undone. The gap between allocation and disbursement is critical because it shows a systemic breakdown in the policy execution mechanism, where funds are not reaching their intended purpose. This indicates a lack of human resources, poor coordination, and a failure to translate policy intentions into action. - Pakistan's textile sector, which forms 55% of exports, received little support from the allocated funds, showing how policy announcements can be disconnected from actual ground realities.

Q: Why do economists like Sakib Sheerani argue that trade policy should be "embedded" with industrial policy, and how would this help Pakistan's export challenges? Answer: Economists argue for an embedded policy because trade policy alone cannot solve the problem of a narrow export base. By embedding trade policy with industrial policy, the government can ensure that trade incentives directly support the growth of local manufacturing and diversification. This approach would help Pakistan move beyond its reliance on textiles by creating a supportive environment for other industries like ceramics, footwear, and tires, which have been harmed by cheap imports. - For example, providing subsidized credit to new export sectors like IT or agriculture processing would be an industrial policy that directly supports trade diversification, creating a more resilient economy.

SECTION 5 — LESSON QUIZ

Lesson Quiz

What percentage of Pakistan's exports are comprised of textiles and clothing? (55%) How much of the Rs 35 billion allocated for the Trade Policy Framework 2009-2012 was actually disbursed? (Rs 3 billion) According to the lecture, what is a common element of successful trade policies in countries like Vietnam and Bangladesh? (Export incentives) What was one key focus area of the Trade Policy 2012-15? (Strengthening the institutional framework for promotion of exports) How did the Free Trade Agreement with China in 2006 affect Pakistan's manufacturing sector? (It shrank due to a surge in cheap imports)

SECTION 1 — LESSON HEADING

Lesson 20: Herbert Simon and Bounded Rationality

SECTION 2 — DEEP EXPLANATION

Deep Explanation

PART A — Opening Analogy: Socho tumhe college ke liye konsa subject choose karna hai. Tum sab options dekhna chahte ho, har field ka future jaanna chahte ho, har university ki fee compare karni hai. Lekin time kam hai, tumhare paas sab data nahi, aur tum thak gaye ho. Aakhir mein tum woh subject choose karte ho jo "acha lage" ya "chal sakta hai" — perfect nahi lekin satisfactory. Yahi Herbert Simon ka bounded rationality hai — insaan complete rational nahi ho sakta kyunke uske paas limited time, limited information, aur limited dimaag hai. Hum "best" nahi dhundhte, hum "good enough" dhundhte hain, aur Simon ne isko satisficing ka naam diya.

PART B — Key Content List: Label: Profile and Ideas

1. **Full Name and Field:** Herbert Alexander Simon (1916-2001) was a political scientist, economist, sociologist, psychologist, and computer scientist, making him one of the most multidisciplinary thinkers of the 20th century.
2. **Key Concept — Bounded Rationality:** Simon's most enduring contribution is the theory of bounded rationality, which argues that full or perfect rationality is a myth; human decision-making is limited by cognitive limits.

3. **Key Concept — Satisficing:** Instead of maximizing or optimizing, individuals "satisfice" — they search for a solution that is "good enough" or satisfactory rather than the best possible option.
4. **Context of Scholarship:** Simon developed his critique in response to neoclassical economics and the Savagian conception of rational human behavior, which he saw as unrealistic "heroic abstractions."
5. **Behavioral Economics:** He created behavioral economics as an alternative, using insights from political science and psychology to alter economic theorizing.
6. **Heuristics and Problem Solving:** Simon emphasized heuristic models—informal, experience-based strategies—for problem-solving, linking theory to practice as thinkers like John Dewey had done.
7. **Critique/Limitation:** His work on artificial intelligence proved to be a dead end, and he disliked metaphysical concepts like "creativity," preferring the more concrete term "problem solving."
8. **Relevance to Pakistan:** Bounded rationality is highly relevant in Pakistan's bureaucratic and political settings where decision-makers often have incomplete information, limited time, and institutional constraints, explaining why many policies are "good enough" rather than optimal.

SECTION 3 — EXAMPLE

Example: Socho WAPDA ka officer jo load shedding ka schedule banata hai. Woh chahta hai ke har city ko barabar bijli mile, lekin uske paas limited electricity hai, grid ki old system hai, aur har ilaqe ki demand alag hai. Woh perfect solution nahi nikal sakta. Is liye woh ek aisi timing banata hai jo "theek" ho — kuch ilaqon ko zyada, kuch ko kam, magar sab ko kuch na kuch mil jaaye. Yeh satisficing hai — perfect nahi, lekin feasible aur acceptable solution.

SECTION 4 — CONCEPTUAL QUESTIONS

Conceptual Questions

Q: What is the fundamental difference between "bounded rationality" and "full/perfect rationality" in decision-making theory? Answer: Full or perfect rationality assumes that decision-makers have complete information, unlimited cognitive capacity, and the ability to calculate the optimal outcome to maximize their utility (e.g., profit). Bounded rationality, in contrast, acknowledges that humans have limited information, limited time, and limited cognitive ability, so they cannot process all data to find the best solution. Instead of "maximizing," individuals "satisfice" by accepting a solution that is good enough given their constraints. - For

example, a Pakistani government official designing a subsidy program for farmers might not have data for every village; instead of aiming for the perfect allocation, they use a simple rule of thumb based on landholding size to make a feasible decision.

Q: How does Herbert Simon's concept of "satisficing" challenge the traditional economic view of human behavior, and what are its implications for public policy? Answer: The traditional economic view assumes the "economic man" who makes decisions to maximize benefits (utility). Simon challenges this by arguing that in reality, individuals do not seek to maximize but to "satisfice"—finding a solution that meets a minimal threshold of acceptability. In public policy, this means that policy-makers do not always find the "best" policy; they find a policy that is "good enough" given their time, resources, and information. This explains why many policies are incremental or imperfect, rather than revolutionary or fully optimized. - In Pakistan, the government's decision to set a minimum support price for wheat is often based on satisficing—setting a price that is deemed "acceptable" for farmers and consumers rather than a price that would perfectly balance the entire agricultural economy.

SECTION 5 — LESSON QUIZ

Lesson Quiz

What is the name of the theory Herbert Simon is most famous for? (Bounded Rationality) What term does Simon use to describe the act of seeking a "good enough" solution instead of the optimal one? (Satisficing) In which academic field did Simon win a Nobel Prize in 1978? (Economics) According to Simon, what are human decision-making processes bounded by? (Cognitive limits/Information-processing abilities) What did Simon propose as an alternative to the neoclassical school of economics? (Behavioral economics)

SECTION 1 — LESSON HEADING

Lesson 21: Theory in Public Policy

SECTION 2 — DEEP EXPLANATION

Deep Explanation

PART A — Opening Analogy: Socho tumhe Karachi mein driving seekhni hai. Agar tum sirf sadar par gaari chalte ho bina traffic rules jaane, toh haadsa ho sakta hai. Theory of driving,

jaise traffic signals, lane discipline aur indicators ka istemal, tumhe road pe safe rehne ka framework deti hai. Public policy theory bhi yahi hai — yeh framework nahi toh policy makers sirf hawa mein teer chalaayenge, kuch bhi kar denge. Theory batati hai ke policy kyun kaam karti hai, kaise log react karte hain, aur kya improvement ho sakti hai. Agar theory na ho toh har policy manager apna alag tareeqa apnaa lega, aur desh ka governance random ho jayega.

PART B — Key Content List: Label: Key Points

1. **Definition of Theory:** Theory is a lens or a system of ideas that explains how things work; it is abstract and generalized thinking that helps in solving real-world problems.
2. **Growth of Theory (1993):** A major advance was made in 1993 with the work of Baumgartner and Jones (Punctuated Equilibrium) and Sabatier and Jenkins-Smith (Advocacy Coalition Framework).
3. **Punctuated Equilibrium Theory:** This theory explains that public policy experiences long periods of stability and short, rapid periods of unpredictable change, unlike the deterministic model of incrementalism.
4. **Advocacy Coalition Framework (ACF):** This framework analyzes policy change through the lens of coalitions (elected officials, interest groups, researchers) that share beliefs and compete with other coalitions, learning from policy implementation.
5. **Lack of Unifying Theory:** There is no single theory applicable to public policy as a whole, partly because the world is too complex and policy is influenced by 23 different disciplines.
6. **Policy as "Art and Craft":** Some scholars argue that policy is more like a "mood" or an "art and craft" rather than a genuine science, lacking a tightly integrated body of systematic knowledge.
7. **Normative Theories:** Scholars like Deborah Stone and Frank Fischer argue that policy is political and value-laden, so rationalistic policymaking should be abandoned in favor of normative theories like discourse theory and constructivism.
8. **Future of Policy Theory:** Future directions include incorporating management into theories, addressing the parsimony-comprehensiveness tradeoff, and providing a more nuanced role for institutions.

SECTION 3 — EXAMPLE

Example: Socho Punjab mein smog ka masla har saal barhta ja raha hai. Kuch log kehte hain ke yeh parali jalne se hai, kuch kehte hain industries se hai. Agar government ke paas theory nahi hai toh woh random policy banayegi — jaise kabhi traffic rok de, kabhi factories band kar de. Lekin agar woh Punctuated Equilibrium theory use kare toh samjhegi ke short-term stability ke baad long-term crisis aa sakta hai, aur woh long-term planning karegi. Theory yahan lens ka

kaam karti hai — jo hai actual problem identify karne mein aur usko solve karne mein madad karti hai.

SECTION 4 — CONCEPTUAL QUESTIONS

Conceptual Questions

Q: What is the difference between "explanatory/descriptive" theories and "normative/prescriptive" theories in the context of public policy? Answer: Explanatory or descriptive theories aim to explain how the policy process actually works—they describe the patterns, actors, and dynamics of policy-making (e.g., Punctuated Equilibrium Theory). Normative or prescriptive theories, on the other hand, focus on how policy-making *should* work based on values, morality, and ideals; they prescribe what is good or just (e.g., discourse theory or argumentative theory). Normative theories are often seen as "gyroscopes" that keep policy studies focused on ethical and democratic goals, whereas descriptive theories are more analytical and empirical. - For example, studying how the Pakistani government allocated COVID-19 relief funds would be descriptive, but arguing that the funds should have been allocated more equitably to rural areas is a normative prescription.

Q: Why do some scholars, like Deborah Stone, argue that having "no theory" of public policy might actually be beneficial, and what does this imply for policy analysts? Answer: Scholars like Stone argue that rationalistic, unified theories often try to impose a false sense of order on a process that is inherently political, messy, and value-laden. They believe that having "no theory" allows policy analysts to be more open to the irrationalities and indignities of politics, and to focus on the meaning and power dynamics behind policy decisions. This implies that policy analysts should abandon the search for a single, overarching theory and instead adopt a more pluralistic and critical approach, using multiple theoretical lenses to understand different aspects of policy. - In Pakistan, this would mean a policy analyst should not just look at the "rational" cost-benefit of the Sehat Card program but also analyze the political narratives and power dynamics that led to its creation and expansion.

SECTION 5 — LESSON QUIZ

Lesson Quiz

According to the lecture, what is the definition of a "theory" in the context of public policy? (A lens/system of ideas that explains how things work) What major public policy theory was advanced by Baumgartner and Jones in 1993? (Punctuated Equilibrium Theory) What does the

Advocacy Coalition Framework (ACF) emphasize as a key mechanism for policy change? (Coalitions learning from policy implementation) According to Goodin, Rein, and Moran, how is public policy often described? (More art and craft than a genuine science) Which type of theory is described as a "gyroscope" for policy studies, according to the lecture? (Normative theories)

SECTION 1 — LESSON HEADING

Lesson 22: Sanitation Policy

SECTION 2 — DEEP EXPLANATION

Deep Explanation

PART A — Opening Analogy: Socho Karachi mein monsoon aayi aur naaliyan band hain, pani galiyon mein khara hai, aur ganda pani peene ke pani mein mil raha hai. Har koi problem jaanta hai, lekin koi kuch nahi karta. Kuch log kehte hain yeh government ka kaam hai, kuch kehte hain paise nahi hain, kuch kehte hain technical expertise nahi. Sanitation policy ka kaam hai in sab ko ek jagah laana — paisa kahan se aayega, kaam kaun karega, aur logon ko kaise involve karenge. Orangi Pilot Project ne dikhaya ke agar community khud participate kare toh sasta aur effective solution ho sakta hai.

PART B — Key Content List: Label: Causes and Effects (for the crisis), Key Points (for policy responses)

Causes and Effects:

1. **Poor Access to Toilets:** Only 50.1% of the population has access to improved toilets, and 50 million people (31% of the population) still practice open defecation.
2. **Huge Economic Losses:** The total economic losses from poor sanitation are estimated at Rs. 343.7 billion (3.94% of Pakistan's GDP), with health impacts accounting for 87% of this cost.
3. **Infrastructure Failures:** The crisis is worsened by a lack of disposal systems, treatment plants, old and choked sewerage pipes, and drainage mixing with sewerage.
4. **Policy and Governance Causes:** The development paradigm has ignored sanitation, local governments are out of the sanitation business, and there is a lack of community participation.
5. **Health Consequences:** The lack of sanitation leads to a severe disease burden, water-borne mortality, and untreated sewerage being used for crops, contaminating the food chain.

Policy Responses (Key Points):

1. **National Sanitation Policy:** Promises to universalize sanitation, improve the budget (currently only 0.1% of GDP spent), and implement proper solid waste management.
2. **Public-Private Partnerships:** The policy encourages partnerships and the "3Rs" (Reduce, Reuse, Recycle) to manage waste more effectively.
3. **Orangi Pilot Project (OPP):** A key success story that used a "component sharing" model, where the community took the lead on providing sanitation at a low cost, breaking psychological, technological, and economic barriers.
4. **Other Initiatives:** Other initiatives include the River Ravi Commission, the Green Bench of Lahore High Court, and NGOs like WaterAid Pakistan and the Lodhran Pilot Project.

SECTION 3 — EXAMPLE

Example: Socho Orangi Town, Karachi mein 1980s mein kya hua. Wahan koi naali nahi thi, ganda pani galiyon mein beh raha tha, aur log beemar ho rahe the. Dr. Akhtar Hameed Khan ne kaha ke government ka intezaar mat karo. Unhone community ko organize kiya, unko training di, aur component sharing model banaya — har ghar ne apni naali banayi aur phir woh main naali se connect hui. Is tarah Orangi Pilot Project ne saste aur effective tariqe se sanitation ka masla hal kiya. Yeh model Pakistan ke doosre shehron ke liye inspiration ban gaya.

SECTION 4 — CONCEPTUAL QUESTIONS

Conceptual Questions

Q: Why does Pakistan's sanitation crisis persist despite having a National Sanitation Policy, and what are the root causes of this implementation failure? Answer: The persistence of the crisis is due to a large gap between policy intent and on-the-ground implementation. The root causes include the absence of sanitation work at the local government level, a lack of community participation, and a traditional reliance on engineering solutions since colonial times. The policy is well-drafted but is not backed by sufficient budget allocation (only 0.1% of GDP) or the political will to enforce penalties and regulations. - For example, while the National Sanitation Policy promises treatment of industrial waste, in reality, most industrial effluents are still dumped untreated into rivers like the Ravi, due to weak regulatory enforcement.

Q: What is the "component sharing model" of the Orangi Pilot Project, and why is it considered a successful alternative to the traditional government approach to sanitation? Answer: The component sharing model divides the sanitation project into parts: the household-level component (sewer lines) is funded and built by the community themselves, while the

government is responsible for the main trunk sewer and treatment plant. It is considered a success because it empowers communities, reduces costs significantly, and breaks down barriers like the psychological belief that sanitation is only the government's responsibility. It also uses low-cost, self-help technology that is affordable for slum dwellers. - In contrast to the traditional, top-down government approach which is often expensive, slow, and prone to corruption, the Orangi model proved that participatory, low-cost solutions can be more effective and sustainable in a Pakistani context.

SECTION 5 — LESSON QUIZ

Lesson Quiz

What percentage of Pakistan's population still practices open defecation? (31%) According to the lecture, what is the total estimated economic loss from poor sanitation as a percentage of Pakistan's GDP? (3.94%) What is the name of the key Pakistani success story in community-led sanitation? (Orangi Pilot Project) Which model was used by the Orangi Pilot Project to involve both the community and the government? (Component sharing model) What is one of the main causes of the sanitation crisis mentioned in the lecture regarding local governance? (Local governments out of sanitation business)

SECTION 1 — LESSON HEADING

Lesson 23: Health Policy in Pakistan

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhare mohalle mein ek hospital hai jo subah 8 baje khulta hai lekin doctor aata hai 11 baje. Dawaiyan bhi nahi hain, nurse bhi nahi hai, aur agar koi mareez aa bhi jaaye toh usko kehte hain ke bahar jaake private clinic mein ilaaj karao. Ab agar tum apne ghar ke kisi ko beemar dekh kar hospital le jaao aur woh kehde ke paise nahi hain toh kya karoge? Yahi haal hai Pakistan ke health system ka — sarkari hospital hain lekin kaam nahi kar rahe, log apni jeb se paise kharch kar rahe hain, aur beemariyan badhti ja rahi hain. Health policy ka matlab hai ke government plan kare ke beemariyon ko kaise roka jaaye, logon ko kaise ilaaj mile, aur paisa

kahan se aayega. Lekin Pakistan mein abhi tak health ko bunyadi haq nahi banaya gaya, is liye har koi apni marzi se health system mein kuch bhi kar raha hai.

PART B — Key Points:

1. **Health Crisis in Pakistan:** Pakistan faces a severe health crisis with life expectancy at only 63.8 years, infant mortality at 78 per 1,000 live births, and under-five mortality at 94 per 1,000, indicating poor health outcomes compared to regional neighbors.
2. **Non-Communicable Disease Burden:** Over 38% of adults are overweight or obese, 48% have central obesity, 13.7% have high blood pressure, and 13.7% of adults over 25 have diabetes, showing a growing epidemic of lifestyle diseases alongside infectious diseases.
3. **Human Resource Shortage:** The doctor-population ratio is 1:1,326, nurse-population ratio is 1:22,622, and dentist-population ratio is 1:3,039, meaning Pakistan has a severe shortage of trained health professionals to serve its population.
4. **Financial Catastrophe for Patients:** Out-of-pocket health expenses are 73.38%, and only 26.62% of the population has any health coverage, meaning most Pakistanis pay for healthcare directly and can face financial ruin from a single major illness.
5. **Causes of the Health Crisis:** The crisis stems from inequalities in access, lack of food regulation leading to adulteration, weak health governance even after the 18th Amendment, corruption, little focus on preventive healthcare, poor nutrition, and the water-sanitation crisis.
6. **Regulatory Failures:** Regulatory bodies like the Pakistan Medical and Dental Council and Pakistan Nursing Council fail to properly regulate professionals, while dual practice allows public doctors to work privately, compromising public sector healthcare quality.
7. **Key Policy Issues:** Policy makers must address inter-provincial coordination, donor coordination, technical support to provinces, resource mobilization, disease surveillance systems, fair deployment of health staff, and improving utilization of primary healthcare services.
8. **Future Healthcare Recommendations:** The future requires expansion of private healthcare regulation, integration of indigenous medical systems, provision of safe drinking water, introduction of health insurance, health education in school curricula, and prioritizing health provision to poor areas.

SECTION 3 — EXAMPLE:

Socho Lahore ke ek middle-class ghar mein rehne wali Fatima ko pata chalta hai ke uske bete ko dengue hai. Woh pehle government hospital jaati hai lekin wahan par na doctor hai na dawai, sab keh rahe hain ke private mein le jao. Private hospital mein admission fee hi 30,000 rupay hai aur

do din mein 2 lakh rupay ka bill aa jaata hai. Fatima ke paas health insurance nahi, na koi sarkari sukoon. Woh ghar ka samaan bechti hai, relatives se udhaar leti hai, aur bete ko theek karaati hai. Yeh daily life ka masla hai — health policy ka matlab hai ke government ensure kare ke kisi ko beemari ki wajah se apna ghar nahi bechna pare, aur preventive measures jaise dengue spray aur cleanliness ko prioritize kare taake beemari ho hi na. Lekin Pakistan mein health policy weak hai, is liye log majboor hain ke apni jeb se har cheez khareedein, chaahe woh doctor ho, dawai ho, ya hospital ka bill.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What is the difference between curative healthcare and preventive healthcare, and why is preventive healthcare critically important for Pakistan's health policy?

Answer: Curative healthcare focuses on treating diseases after they occur, such as providing hospital care, surgeries, and medicines for sick patients. Preventive healthcare focuses on stopping diseases before they start, through vaccination programs, hygiene education, clean water provision, sanitation, nutrition programs, and health awareness campaigns. Preventive healthcare is critically important for Pakistan because the country faces high burdens of communicable diseases like dengue, hepatitis, and water-borne illnesses that are entirely preventable. Pakistan spends very little on prevention, which leads to more people getting sick, overwhelming the already weak curative system, and causing financial catastrophe for poor families. Investing in preventive health saves money in the long run and reduces suffering, yet Pakistan's policy has historically favored curative care.

- *For example, the Orangi Pilot Project's sanitation work prevented water-borne diseases for hundreds of thousands of people at low cost, proving that prevention works in Pakistan, yet such approaches are not scaled up nationally.*

Q: Why is health not considered a fundamental right in Pakistan, and what are the policy implications of this legal status?

Answer: Health is not a fundamental right in Pakistan because the Constitution does not explicitly guarantee it, unlike in many other countries. This means citizens cannot legally demand healthcare services from the state, and there is no constitutional obligation for the government to provide health facilities. The policy implications are severe: health spending remains low (less than 1% of GDP), there is no accountability mechanism when health services fail, the private sector fills the gap with expensive care, and poor citizens are left with no recourse when they cannot afford treatment. Without legal status as a right, health remains a luxury for the wealthy rather than a public good. Making health a fundamental right would force

the government to allocate more budget, create regulatory mechanisms, ensure minimum standards, and allow citizens to sue the state for health service failures.

- *Pakistan's health indicators are worse than many countries with similar GDP but with constitutional health guarantees, suggesting that legal recognition matters for policy outcomes.*

SECTION 5 — LESSON QUIZ

What is Pakistan's infant mortality rate per 1,000 live births? (78 per 1,000)

What percentage of Pakistan's population is covered by any form of health insurance or social health protection? (26.62%)

What are the two main types of healthcare services that need to be balanced in Pakistan's health policy? (Curative and preventive healthcare)

Which regulatory body is responsible for overseeing the medical profession in Pakistan? (Pakistan Medical and Dental Council - PMDC)

What key policy recommendation focuses on protecting poor families from catastrophic health expenditures? (Introduction of health insurance or safety nets)

SECTION 1 — LESSON HEADING

Lesson 24: Climate Change Policy

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho Punjab mein kisan hai jo apni zameen par roz kheti karta hai, lekin pichle kuch saalon mein mausam itna badal gaya hai ke kabhi itni barish ho jaati hai ke sari fasal doob jaati hai, aur kabhi itni garmi ke fasal jal jaati hai. Woh pareshan hai ke kya kare — same beej daale, same kheti kare, lekin result kuch aur aata hai. Ab woh ek shakhs nahi, poora Pakistan isi pareshani mein hai. Climate change matlab mausam ka aise badalna ke floods, droughts, garmi, aur smog sab extreme ho jaayein. Pakistan ne kabhi itni museebatein nahi dekhi thi, lekin ab floods 2010, 2011, 2022 ne sabko hila diya. Policy ka kaam hai ke government plan kare ke in extreme

halaton mein logon ko kaise bachaya jaaye, mangroves kaise bachayein, aur future mein aur nuksaan se kaise bacha jaaye.

PART B — Key Points:

1. **Pakistan's Vulnerability:** Pakistan was never a disaster-prone country historically, with adequate rainfall, mild seasonal temperatures, and 1,000 km of coastline, but climate change has transformed it into one of the most climate-vulnerable nations, ranked number one in climate-related disasters in 2010.
2. **Devastating Floods and GLOFs:** The 2010 floods were the most devastating in Pakistan's history, with 2022 floods being even worse; Glacial Lake Outburst Floods (GLOFs) in the north are increasingly common, destroying villages and infrastructure as Himalayan glaciers melt rapidly.
3. **Evidence of Climate Change:** Pakistan's average annual temperature has increased by 0.12°C, sea levels rise by 1.1 mm annually, rainfall patterns have changed drastically, and mangrove forests are depleting at an alarming rate of 2.3% annually, making coastal areas more vulnerable.
4. **Causes of Climate Vulnerability:** Man-made factors include deforestation (2.1% per annum — highest in Asia), pollution, and emissions; while developed countries are the primary greenhouse gas emitters, Pakistan's own deforestation and lack of adaptation measures have aggravated the problem.
5. **Food and Water Security Threat:** Climate change is impacting agricultural output significantly, with extreme flooding and sea intrusion affecting millions of hectares of agricultural land, threatening Pakistan's food and water security.
6. **Coastal and Northern Communities Impacted:** Northern communities face GLOFs and glacial melting, while coastal communities experience cyclones, floods, sea level rise, and loss of mangroves which protect them from storms and provide livelihoods for fishermen.
7. **National Climate Change Policy:** Pakistan formulated a National Climate Change Policy requiring integration into planning and development, with emphasis on mitigation and adaptation efforts, especially in coastal areas, but the budget for climate change division was reduced from Rs. 135 million to Rs. 58.8 million.
8. **Climate Change Initiatives:** WWF-Pakistan's Indus for All Programme planted 7,500 hectares of mangroves in Sindh's coastal areas to build resilience, and organizations like LEAD Pakistan work on climate advocacy.

SECTION 3 — EXAMPLE:

Socho Karachi ke kuch log hain jo coastal area mein rehte hain, machhli pakad kar roz ki roti kamaate hain. Pehle unki zindagi theek thi — samundar se achi machhli milti thi, aur unke ghar safe the. Lekin pichle kuch saalon mein samundar ka paani ooncha aa gaya, unke ghar doob gaye, aur machhliyan bhi kam ho gayi kyunke mangroves khatam ho rahe hain jo machhliyon ka ghar hotay thay. Ab woh log pareshan hain ke kahan jaayein, kya karein. Yeh climate change ka asli chehra hai — jo log sab se zyada vulnerable hain, woh hi sab se pehle apni zindagi aur rozi se haath dho baithe hain. Climate change policy ka matlab hai ke government in logon ko relocate kare, mangroves wapas lagaye, aur adapt karne ke liye madad de taake yeh log apni zindagi continue kar sakein.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What is the difference between climate change mitigation and climate change adaptation, and why are both necessary for Pakistan's climate policy?

Answer: Mitigation refers to actions that reduce or prevent greenhouse gas emissions, such as switching to renewable energy, reducing deforestation, and improving energy efficiency. Adaptation refers to actions that help communities adjust to the actual or expected effects of climate change, such as building flood defenses, relocating communities, planting mangroves, and developing drought-resistant crops. Both are necessary for Pakistan because Pakistan is a low emitter but highly vulnerable. Pakistan cannot stop global emissions alone, so mitigation is limited in impact locally, but adaptation is urgent and direct: Pakistan must build resilience to floods, heatwaves, and sea-level rise that are already happening. Mitigation is still important because Pakistan's own deforestation and pollution aggravate the problem, and as a responsible nation, it must reduce its environmental impact. A comprehensive climate policy must balance both, with a heavy emphasis on adaptation given Pakistan's immediate vulnerabilities.

- *For example, planting mangroves in Sindh (adaptation) reduces storm impacts, while switching to solar energy (mitigation) reduces Pakistan's carbon footprint; both are happening but adaptation requires more urgent investment.*

Q: Why did Pakistan's climate change budget decrease from Rs. 135 million to Rs. 58.8 million, and what does this reveal about Pakistan's policy commitment to climate action?

Answer: The decrease in climate change budget from Rs. 135 million to Rs. 58.8 million reveals a serious disconnect between policy rhetoric and actual commitment. Despite the devastating floods of 2010 and 2011, and Pakistan being ranked among the most climate-vulnerable nations,

the government reduced funding for the very department responsible for dealing with climate disasters. This suggests that climate change is not a genuine political priority, perhaps because its impacts are gradual (except during disasters) and electoral returns on climate spending are limited compared to other sectors. It also indicates that Pakistan's National Climate Change Policy exists on paper but lacks the financial backing to be implemented effectively. The reduction reveals weak institutional capacity, competing budget priorities, and a failure to understand that investing in climate resilience saves far more money than responding to disasters after they happen. Without sustained and increased funding, Pakistan will continue to be reactive to disasters rather than proactive in building resilience.

- *The 2022 floods alone caused over \$30 billion in damages, which could have been partially prevented with better climate adaptation spending, proving that the budget cut was short-sighted and economically irrational.*

SECTION 5 — LESSON QUIZ

In which year was Pakistan ranked number one in climate-related disasters? (2010)

What is the name for the floods caused by melting glaciers in northern Pakistan? (Glacial Lake Outburst Floods - GLOFs)

At what rate per annum are Pakistan's mangrove forests being depleted? (2.3% annually)

Which Pakistani policy document provides the framework for responding to climate change? (National Climate Change Policy - NCCP)

Which organization planted 7,500 hectares of mangroves in Sindh's coastal areas? (World Wide Fund for Nature-Pakistan - WWF-Pakistan)

SECTION 1 — LESSON HEADING

Lesson 25: Urban Development Policy

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho Lahore mein rehna kitna mushkil hai — subah traffic jam mein phanso, raat ko load shedding, aur agar barish aajaaye toh galiyan taar jahaz ban jaati hain. Ab agar tum socho ke yeh problems kyun hain, toh jawab yeh hai ke city ka koi plan nahi hai. Kisi ne yeh nahi socha ke log kahan rehenge, kahan kaam karenge, kahan jaayein ghoomne, aur unka samaan kahan se aayega. Urban development policy matlab hai ke city ka ek plan ho — land kaise use karein, transport kaise chalayein, private sector ko kaise shamil karein, aur logon ke liye jagah kaise banayein. Pakistan ki cities pehle choti thi, ab itni badi ho gayi hain ke koi system hi nahi hai, aur federal aur provincial governments aapas mein jhagad rahi hain ke city ka kaun zimmedar hai. Yahi wajah hai ke Karachi, Lahore, aur Faisalabad duniya ki sab se mushkil cities mein shamil hain.

PART B — Key Points:

1. **Urbanization and Economic Significance:** Pakistan's annual urbanization rate exceeds 4%, and cities contribute 78% of GDP, with more than half of the urban population living in just eight major cities including Karachi, Lahore, Faisalabad, Rawalpindi, Multan, Hyderabad, Gujranwala, and Peshawar.
2. **Urban Corridors and Ribbons of Development:** Development has created "ribbons" of urban expansion along major routes, such as the Gujranwala-Faisalabad-Lahore triangle and the Mansehra to Hasan Abdal corridor, with small towns growing into urban clusters.
3. **Expanding Middle Class and Labor Force:** Pakistan has an expanding middle class with a youthful and skilled labor force, with women increasingly entering the workforce, but city governments have little capacity to manage this rapid urban growth effectively.
4. **Task Force on Urban Development:** The Deputy Chairman of the Planning Commission constituted a Task Force on Urban Development on June 28, 2010, to make cities economically competitive, viable, functioning, and engines of economic growth with supporting infrastructure.
5. **Land Policy Challenges:** Land around small towns is controlled by big landlords, small farmers, and revenue departments; big landlords determine urban expansion, politicians and bureaucrats use land for patronage, and high land prices make appropriate development difficult.
6. **Land Use Inefficiency:** Available land is used extremely inefficiently, with extravagant regulations and planning standards, land held for speculation raises prices further, and multiple agencies with little coordination control land use, creating waste and economic inefficiency.

7. **Karachi's Economic Dominance:** Karachi contributes 60-70% of national revenue and 40% of manufacturing value-added, while the informal sector absorbs 30-70% of urban labor, highlighting the city's critical importance to Pakistan's economy.
8. **Housing and Real Estate Crisis:** Urban property markets are unregulated with distorted prices, bylaws and zoning regulations suppress development, housing is primarily for the elite, and developed land is unavailable for the poor, with housing finance at only 1% of GDP.
9. **Planning Failures:** Low density, anti-pedestrian, anti-street, anti-mixed land use planning has created sprawling, car-dependent cities with no planned transport terminals, wholesale markets, or storage areas; parks and public spaces are insufficient.

SECTION 3 — EXAMPLE:

Socho Karachi mein rehne wala Ali hai jo daily 2 gante rozana office jaane mein lagata hai kyunke sarak par itna traffic hai ke pata nahi chalta ke kab pahuchenge. Uske ilaqe mein koi park nahi, koi public transport nahi, aur agar ghar ke aas-paas koi naya plaza banta hai toh woh kisi bade builder ne banaya hai jis ka koi plan nahi hai. Ali kisi local government ko complain nahi kar sakta kyunke uske area mein local government hi nahi hai — sarak, pani, bijli sab alag alag departments ke paas hain. Yeh urban development policy ki failure hai — agar city ka proper plan hota, transport system hota, local government hoti jo Ali ki problems sunti, toh Karachi itna mushkil shehar na hota. Task Force on Urban Development ne yahi pata kiya ke Pakistan ki cities ko proper policy aur planning ki sakht zaroorat hai.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: Why do cities contribute 78% of Pakistan's GDP but receive so little attention and investment from the government, and what are the consequences of this neglect?

Answer: Cities contribute 78% of GDP because they concentrate economic activity, industry, services, and skilled labor, generating wealth that sustains the entire country. However, cities receive little attention because Pakistan's political structure remains rural-dominated, with powerful agricultural and feudal interests controlling policy. The consequence of this neglect is urban infrastructure collapse: roads, water supply, sanitation, and transport systems fail to keep up with population growth, making cities unlivable, unproductive, and unsustainable. Crime increases, health problems rise, and economic potential is lost. Moreover, local governments are weak and dependent on provincial transfers, lacking authority to raise revenue or plan effectively. The neglect also creates a crisis of governance where no single agency feels

responsible for urban problems, leading to a vicious cycle where cities become less competitive, investment falls, and the national economy suffers.

- *For example, Karachi contributes 60-70% of national revenue but its roads, public transport, and drainage are in terrible condition, showing that the city is treated as a cash cow for the rest of the country while being denied investment in its own infrastructure.*

Q: According to the lecture, how do land ownership patterns and government regulations create housing shortages and high prices for ordinary Pakistanis, and what policy changes could address this?

Answer: Land ownership patterns show that big landlords control land around small towns and determine urban expansion, while small farmers associate with developers to create low-income settlements by subdividing agricultural land. Politicians and bureaucrats use land as political patronage, holding it for speculation, which increases prices further. Government regulations are extravagant and suppress development: low-density zoning, anti-mixed land use, and complex bylaws make formal development expensive and slow. This creates a housing crisis where developed land is unavailable for the poor, housing finance is only 1% of GDP, and most people are forced into informal settlements or illegal subdivisions. Policy changes could include: reforming land use and zoning regulations to allow higher density and mixed-use development; making land records transparent and digitized; controlling land speculation through taxation; providing easier and cheaper access to land for low-income housing; and increasing housing finance through institutions like HBFC with better portfolios and new mechanisms for affordable mortgages.

- *The Lahore Development Authority (LDA) from 1975-2009 provided only 3,792 three-marla plots, 47,097 one-kanal plots, and 10,354 two-kanal plots, which is far too few for a growing population and shows the scale of the housing shortage.*

SECTION 5 — LESSON QUIZ

What percentage of Pakistan's GDP comes from cities? (78%)

What was the purpose of the Task Force on Urban Development constituted in June 2010? (To make cities strong, viable, functioning, and economically competitive)

What is the housing finance percentage of Pakistan's GDP? (1%)

Which city contributes 60-70% of Pakistan's national revenue? (Karachi)

What is one key policy recommendation for making cities work regarding local government financing? (Full financial autonomy to local governments)

SECTION 1 — LESSON HEADING

Lesson 26: Deborah Stone and the Polis Model

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhare ghar mein ek debate ho rahi hai — ammi kehti hain ke sab ko aik saath dinner karna chahiye kyunke is se family bonding hoti hai, aur abbu kehte hain ke jo marzi kare, kyunke sab ko apni marzi hai. Agar hum rational model use karein toh humein yeh decide karna hoga ke kaun sa option maximum benefit de raha hai — lekin yeh compromise nahi karta ke ammi emotions aur traditions ko importance deti hain. Deborah Stone kehti hain ke policy making market ki tarah nahi hai jahan log apna faida dekhte hain; yeh polis ki tarah hai jahan log emotions, traditions, loyalties, aur common goals ke saath jeetay hain. Policy analysis ka starting point political community hona chahiye, na ke individual market. Yahi unka Polis Model hai — jo rational model ko challenge karta hai aur kehta hai ke politics messy hai, lekin yahi asli zindagi hai.

PART B — Profile and Ideas:

1. **Full Name and Field:** Deborah Stone is a social policy scholar born in 1946 who teaches at MIT's Department of Urban Studies and Planning and serves on editorial boards of The American Prospect and the Journal of Health Politics, Policy and Law.
2. **Key Concept or Theory:** Stone is a postmodern, interpretive policy scholar who argues that policy is storytelling, ideas, and argumentation; she critiques the rational choice/economic model and presents a political model of society she calls the "Polis Model," articulated in works like The Policy Paradox.
3. **The Rationality Project:** Stone argues that the rational-technical model is a core part of American political culture, where Progressive Reformers like Woodrow Wilson sought to move policymaking from politicians to professionals, claiming legitimacy from science rather than politics.
4. **Three Models of the Rationality Project:** The Rationality Project includes: Model of Society (society as a market of trading individuals maximizing utility), Model of

Reasoning (rational decision-making following defined steps), and Model of Policymaking (policy created in an orderly sequence like an assembly line).

5. **Critique of Rational Model:** Stone argues that rational decision-making ignores feelings, emotions, intuitions, and does not help understand why parents want children to respect elders or why people pursue collective goals like health, education, and justice.
6. **Alternative Ideas:** Stone proposes political reasoning by metaphor and analogy, using metaphor-making and category-making; the starting point of policy analysis should be political community, not the market.
7. **The Polis Model:** The Polis Model is a model of political community where inputs are simultaneously outputs, many inputs and outputs are not quantifiable, efficiency for one person may be waste for others, and community (not the individual) is the unit of analysis.
8. **Key Distinction:** In the market model, all resources are scarce and competition is the means to success; in the Polis model, resources like social connections and advocacy skills grow with use, and policy problems are common problems, not individual problems.

SECTION 3 — EXAMPLE:

Socho Pakistan mein ek village hai jahan baarish se naaliyan band ho gayi hain aur log beemar ho rahe hain. Rational model use karein toh woh kehta hai ke survey karo, data collect karo, cost-benefit analysis karo, aur phir decide karo ke paisa kahan lagana hai. Lekin Stone kehti hain ke yeh nahi ho sakta kyunke logon ke emotions, traditions, aur community bonds bhi matter karte hain — maa apne bachay ko bachana chahti hai, buzurg apni identity nahi khona chahte, aur village ka apna ek social system hai. Polis model mein yeh sab cheezein policy ka hissa hain — decision sirf numbers se nahi, balke community ki kahani, uski feelings, aur uske collective goals se banta hai. Lahore ya Karachi mein policy failures is liye hoti hain ke hum rational model use karte hain jab ke zindagi aur politics messy hai, aur Stone humein batati hain ke in messy cheezon ko policy ka centre hona chahiye.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What is the fundamental difference between Deborah Stone's "market model" and her "Polis model" of society, and why does she argue the Polis model better reflects reality?

Answer: The market model views society as a collection of individuals engaged in trading relationships to maximize utility, assuming rational decision-making and scarce resources where

competition is the means to success. The Polis model views society as a political community where people are connected through emotional bonds, traditions, loyalties, and common goals like health, education, and justice. Stone argues the Polis model better reflects reality because people do not make decisions purely by rational calculation; they are motivated by feelings, intuitions, traditions, and commitments to others. In the Polis model, resources like social connections and advocacy skills grow with use rather than being depleted, and policy problems are collective problems requiring community responses. The market model ignores the complexity of human motivation and social relationships, presenting an artificial and misleading picture of how policy decisions are actually made in real communities.

- *In Pakistan, health policy cannot be understood only through cost-benefit analysis; it must consider that communities want to protect their elders, mothers want to save their children, and these motivations are not economic but emotional and traditional, which the Polis model captures and the market model misses.*

Q: According to Stone, what is the "Rationality Project," and why does she argue that its claim to political neutrality is deceptive?

Answer: The Rationality Project is a core part of American political culture that gained prominence through Progressive Reformers like Woodrow Wilson, John Dewey, and John Riis, who sought to move policymaking from elected politicians to professionals and managers. The project claims legitimacy from science rather than politics, arguing that analysis categories are apolitical, outside politics, and above politics. Stone argues this claim is deceptive because the rational model actually involves political choices: deciding which objectives matter, which alternatives are considered, and how to measure consequences all reflect value judgments and power relations. The model appears neutral but masks its political nature behind technical language and scientific authority. Moreover, even in the rational model, decisions are political, but that politics is "experts' politics," not people's politics — it excludes ordinary citizens from meaningful participation. By claiming to be apolitical, the Rationality Project removes important policy decisions from democratic accountability and places them in the hands of technical experts who may not represent community values or interests.

- *In Pakistan, when international donors impose rational-technical frameworks for policy, they often ignore local political realities and community perspectives, leading to policy failure because the "neutral" technical solution was never actually neutral — it reflected the values and priorities of the donors rather than Pakistani communities.*

SECTION 5 — LESSON QUIZ

What is the name of Deborah Stone's alternative model to the market model of society? (Polis Model)

According to Stone, what does the rational decision-making model ignore that is important for policymaking? (Feelings, emotions, intuitions, traditions, and loyalties)

What is the unit of analysis in Stone's Polis model? (Community, not the individual)

In the market model, resources are considered scarce and what is the means to success? (Competition)

What does Stone propose as the starting point for policy analysis instead of the market? (Political community)

Lesson 27: Investment Policy of Pakistan

Deep Explanation

PART A — Opening Analogy: Socho tumhare mohalle mein ek naya dukandaar aana chahta hai. Usko jagah chahiye, samaan rakhne ka space chahiye, aur bechne ki ijazat chahiye. Kuch log kehte hain usey aane do, rozgaar ayega. Kuch kehte hain mat aane do, hamare apne dukandaar ka nuksaan hoga. Government ko yeh decide karna hai ke kis ko aane dein, kis condition mein aane dein, aur kya rules lagayein ke local business bhi bachhe aur naya investment bhi aaye. Yahi tension investment policy mein hai — desh ko khula rakhein ya band, aur kya faida aur kya nuksaan.

PART B — Key Points:

1. **Low FDI in Pakistan:** Pakistan attracted negligible foreign direct investment in the 1990s, only 0.2% of the world total and less than 1% of Asia's subtotal, due to inconsistent economic policies, urban violence, and bureaucratic inefficiencies.
2. **Investment Policy 2013-17:** This policy removed lower and upper limits on investment, introduced a long approval process, and called for one-window operations to simplify procedures for investors.
3. **Special Economic Zones (SEZ) Act 2012:** The SEZ Act created industrial clusters with liberal investment regimes, physical infrastructure, and full legal protection, reducing the cost of business for investors.

4. **Sectors Restricted for FDI:** Foreign investment is prohibited only in security-related sectors like arms, ammunition, high explosives, radioactive substances, securities, currency, mint, and consumable alcohol.
5. **Rights of Foreign Investors:** Foreign investors may repatriate profits and dividends freely, sell shares, transfer ownership, and lease land without limitation, including 100% equity in corporate farming and 60% stake in agriculture projects.
6. **Promotional Institutions:** The Board of Investment (BoI), State Bank of Pakistan (SBP), Securities and Exchange Commission of Pakistan (SECP), and Ministry of Finance (MoF) work together to promote investment in insurance, banking, and financial sectors.
7. **Negative Implications of Liberal Policy:** Open FDI policies can lead to marginalization of domestic commerce, flight of capital, lack of encouragement for local entrepreneurship, lack of support for innovation, and land grabs.
8. **Balancing Investment Policy:** FDI alone is not the solution; Pakistan must correct institutions, encourage local entrepreneurship and innovation, and promote business with social responsibility.

Example:

Socho Lahore mein ek foreign company ne new car assembly plant lagani hai. Government ne kaha aao, tax exemptions diye, zameen de di, aur profit wapas le jao. Lekin local parts manufacturers ko lagta hai ke woh afford nahi kar payenge competition, aur unki dukaan band ho sakti hai. BoI ne SEZ mein plant lagaane ki permission de di, lekin local chamber of commerce ne protest kiya ke innovation ko support nahi mil raha. Yeh investment policy ka balance dikhata hai — FDI laana zaroori hai lekin local entrepreneurs ko bhi bachana hai.

Conceptual Questions

Q: What is the difference between a liberal investment regime and a protectionist investment regime in the context of Pakistan's economic development? Answer: A liberal investment regime removes restrictions, allows full foreign ownership, profit repatriation, and open entry across most sectors, aiming to attract capital and technology quickly. A protectionist regime imposes limits on foreign ownership, restricts profit repatriation, and protects local industries to nurture domestic entrepreneurship. Pakistan's policy has shifted toward liberalization, but the challenge is that it risks marginalizing local businesses and creating dependency on foreign capital rather than building indigenous capacity.

- Pakistan's SEZ Act 2012 exemplifies liberalization, while the restrictions on the arms and ammunition sector show where protection remains for national security reasons.

Q: Why is encouraging local entrepreneurship and innovation critical for Pakistan's investment policy to succeed, and what happens if these are ignored? Answer: Encouraging local entrepreneurship and innovation is critical because FDI alone does not build sustainable economic capacity; it often brings capital but can crowd out local producers who cannot compete. If innovation and local enterprise are ignored, Pakistan risks becoming a market for foreign goods and services without developing its own industrial base, leading to capital flight, dependency, and vulnerability to external shocks. Local entrepreneurship creates jobs, retains wealth within the country, and builds resilience that foreign investment cannot replace.

- The marginalization of domestic commerce mentioned in the lecture is a direct consequence of ignoring local entrepreneurship, as seen in Pakistan's textile sector where local manufacturers have struggled against cheaper imported goods.

Lesson Quiz

What percentage of the world's total FDI did Pakistan attract in the 1990s? (0.2%) Which Pakistani law created Special Economic Zones to reduce business costs for investors? (Special Economic Zones (SEZ) Act 2012) Name two sectors completely closed to foreign investment in Pakistan according to the lecture. (Arms and ammunitions, high explosives) What is one major negative implication of an overly liberal investment policy mentioned in the lecture? (Marginalization of domestic commerce) Which Pakistani institution works alongside SBP and MoF to promote investment in banking and insurance? (Board of Investment (BoI))

Lesson 28: State, Governance and Global Policy

Deep Explanation

PART A — Opening Analogy: Socho tumhare ghar mein ek bada faisla karna hai ke ghar mein pani ka naya system lagana hai. Pehle sirf abbu faisla karte the (government). Ab ghar ke tamam log, mohalle ki committee, aur bahar ki company bhi advice deti hai. Kuch kaam to abbu karte hain, kuch committee karti hai, aur kuch company. Yeh system ab single authority nahi raha. Governance ka matlab hai ke ab faisle sirf upar se nahi aate balke neeche, bahar, aur ander sab jagah se mil ke bante hain. State ka role badal gaya hai ab global zamanay mein.

PART B — Key Terms:

1. **State:** The political entity with sovereign authority over a defined territory, traditionally the sole organizer of public policy but now facing competition from other actors.

2. **Government:** The formal instrument through which the state exercises its authority, including institutions like the executive, legislature, and judiciary.
3. **Governance:** The process of organizing collective action through both formal and informal institutions, including rules that permit, prescribe, or prohibit actions; it is a way to manage power and policy beyond top-down government control.
4. **Hollowing Out of the State:** A concept by Rhodes (1994) describing how national governments have delegated activities downwards to local governments, outwards to private organizations, inwards to semi-autonomous agencies, and upwards to global institutions.
5. **Global Public-Private Partnerships:** New forms of authority that emerge alongside state institutions, involving collaborations between public and private actors across borders to address global issues.
6. **Transnational Executive Networks:** Networks of officials from different countries who coordinate policy across borders without formal treaty structures, representing non-hierarchical governance.
7. **Globalization of Public Policy:** The process of policy borrowing, exchange, and isomorphism (copying policies across countries) in areas like education, health, and environmental standards.
8. **Neoliberal Economy:** The global economic paradigm that emphasizes markets as primary allocators of resources, orienting public policy toward deregulation, privatization, and free trade.

Example:

Socho Pakistan mein environmental policy banani hai. Pehle sirf federal government faisla karti thi, lekin ab provincial governments bhi bolte hain, NGOs jaise WWF bhi advice dete hain, aur global institutions jaise UN Climate Change bhi standards dete hain. Sindh aur Punjab apni alag policies bana rahe hain, aur local bodies bhi shamil hain. Kuch regulations ab private companies khud follow karti hain without government forcing them. Yeh governance ka modern form hai — hierarchical nahi, network-based hai. Sirf government nahi, sab mil ke policy shape kar rahe hain.

Conceptual Questions

Q: What is the distinction between government and governance, and why does this distinction matter for understanding modern public policy in Pakistan? Answer: Government refers specifically to the formal institutions of the state—executive, legislature, judiciary—that exercise authority through laws and coercion. Governance is a broader concept that encompasses all mechanisms of collective action, including informal norms, private sector rules, civil society participation, and global institutions. This distinction matters because in Pakistan today, policy is no longer made solely by federal or provincial governments; local governments, NGOs, private

corporations, and international organizations all participate, meaning the state's role has shifted from command-and-control to coordination among many actors.

- For example, Pakistan's environmental policy is shaped not just by the Ministry of Climate Change but also by international agreements, NGO advocacy, and private sector compliance, reflecting governance beyond government.

Q: What does "hollowing out of the state" mean in the context of globalization, and how does this concept apply to Pakistan's public policy processes? Answer: Hollowing out of the state refers to the loss of functions and authority by national governments as they delegate activities downwards to local governments, outwards to private organizations, inwards to semi-autonomous agencies, and upwards to global institutions. The state becomes less central as the sole policy maker. In Pakistan, this is visible in how local governments now manage sanitation and health, private sector partners run infrastructure projects, the SBP operates with relative autonomy, and international bodies like the IMF influence economic policy, all reducing the exclusive control of the federal government.

- Pakistan's devolution under the 18th Amendment, transferring powers to provinces, is a prime example of hollowing out downwards, while IMF conditionalities represent hollowing out upwards.

Lesson Quiz

Which concept by Rhodes describes national governments delegating activities to other levels and actors? (Hollowing out of the state) What is the primary difference between government and governance? (Government is the formal instrument of authority; governance is the broader process of organizing collective action through all institutions) Name one example of a global public-private partnership mentioned in the lecture. (Environmental standards, labor standards, or women rights) What does the globalization of public policy involve? (Policy borrowing, policy exchange, and isomorphism across countries) According to the lecture, what economic paradigm drives the globalization of public policy? (Neoliberal economy with markets as allocators)

Lesson 29: Yehezkel Dror

Deep Explanation

PART A — Opening Analogy: Socho ek bade doctor ko bulaya gaya ke woh mohalle ke health system ka jaiza le. Woh sirf mariz ko dawai deta nahi, balke hospital ka structure, staff ki

training, budget, aur plan sab dekhta hai. Woh kehta hai ke sirf ilaaj se kaam nahi chalega, poor system change karna padega, aur leaders ko special training leni chahiye. YEH hai Yehezkel Dror ka style — woh policy analysis ko ek naya profession maante hain, sirf technical kaam nahi balke rulers ko advise karna. Unka kehna hai ke agar governance improve nahi hui, toh society tabah ho sakti hai.

PART B — Profile and Ideas:

1. **Yehezkel Dror (Born 1928):** Professor Emeritus at Hebrew University of Jerusalem, international consultant for UN, EU, and OECD, and a founder of the policy sciences who established policy departments globally.
2. **Policy Analysis as a New Profession:** Dror advocated that policy analysis should become a distinct profession separate from economics and implementation, with analysts advising rulers on complex policy decisions.
3. **Critique of Economic Imperialism:** Dror criticized the invasion of public decision-making by economics, arguing that policy analysis is not just about resource allocation but encompasses broader societal considerations beyond economic rationality.
4. **The Capacity to Govern (2001):** Dror argued that knowledge and technology have changed dramatically but policymaking remains outdated; without improved governance capacity, societies face self-destruction, requiring a "quantum leap" in governance.
5. **Raison d'humanité:** Dror called for shifting from "raison d'état" (reason of state) to "raison d'humanité" (reason of humanity), emphasizing moral responsibility and intervention to prevent evil rulers from harming populations.
6. **Policy Analysis for Advising Rulers:** Dror stressed that policy analysts must work with rulers one-on-one, adjust to their psychological needs, maintain confidentiality, and refuse to work with tyrants or evil rulers.
7. **Critique of Dror's Approach:** His model relies heavily on elite-level advising and assumes rulers will listen, which may be unrealistic in corrupt or authoritarian settings, and his top-down approach can be seen as insufficiently democratic.
8. **Relevance to Pakistan:** Dror's ideas on mixing technical and political skills in leadership, improving the quality of politicians, and establishing policy analysis units in government departments are directly applicable to Pakistan's governance challenges.

Example:

Socho Pakistan ke kisi Chief Minister ko CPEC ke baray mein faisla karna hai. Woh economists ki advice leta hai jo paise aur ROI batate hain, aur bureaucrats ki advice leta hai jo procedure batate hain. Lekin Dror ka kehna hai ke inke alawa ek policy analyst bhi hona chahiye jo poor system dekhe — political impact, long-term governance capacity, aur mohallon par kya asar hoga. Yeh analyst CM ko confidential advice dega aur uski psychological needs ke mutabiq

kaam karega. Agar yeh system Pakistan mein ho, toh decisions sirf technical nahi balke strategic honge. Dror kehte hain ke is tarah ke analysts ko talimat deni chahiye.

Conceptual Questions

Q: What is the difference between Dror's conception of a policy analyst and a traditional economist or bureaucrat, and why does this distinction matter for Pakistan's governance?

Answer: A traditional economist views policy as resource allocation between alternatives and focuses on efficiency, while a bureaucrat focuses on procedure and implementation. Dror's policy analyst, however, is a professional with advanced knowledge of decision-making, systems analysis, and political psychology, who advises rulers on the full range of policy implications—social, political, ethical, and strategic—not just economic costs. This distinction matters for Pakistan because reliance on economists and bureaucrats has produced policies that are technically sound but politically or socially unviable; Dror's model would produce more comprehensive, context-sensitive advice for senior leaders.

- Pakistan's frequent policy reversals on energy pricing, taxation, and foreign investment could be mitigated if rulers received integrated policy analysis rather than fragmented advice from different departments.

Q: Why does Dror argue that societies are unprepared for modern challenges and what solution does he propose in *The Capacity to Govern*? Answer: Dror argues that knowledge, technology, and global interconnections have transformed society dramatically, yet governance institutions and policymaking remain rooted in outdated methods from the Renaissance era. This mismatch leads to social self-destruction through preventable crises like mass killing, environmental collapse, and economic instability. His solution is a "quantum leap" in governance capacity, requiring redesign of governance institutions, creation of dedicated capacity-to-govern research centers, improvement in the quality of politicians, and a shift from "raison d'état" to "raison d'humanité" with moral democratic rule as the preferred model.

- Pakistan's governance failures during the 2022 floods, where response was slow and uncoordinated, exemplify the unpreparedness Dror describes, showing why capacity building is urgent.

Lesson Quiz

What is the title of Dror's 2001 report to the Club of Rome? (*The Capacity to Govern*) According to Dror, what should policy analysts focus on instead of implementation? (Policymaking) What shift did Dror advocate in governance philosophy? (From *raison d'état* to *raison d'humanité*) Why did Dror criticize the economic approach to decision-making? (It reduces policy to resource allocation and does not capture broader societal concerns) What is one key piece of advice Dror

gave to policy analysts working with rulers? (Maintain confidentiality and adjust to the ruler's psychological needs)

Lesson 30: Aaron Wildavsky

Deep Explanation

PART A — Opening Analogy: Socho tumhare ghar ka monthly budget banta hai. Abbu decide karte hain ke petrol par kitna kharcha, bachon ki fees par kitna, aur ghar ki grocery par kitna. Agar budget nahi bana toh har koi apni marzi se kharcha karega aur ghar mein larai ho jayegi. Budgeting sirf paisa ka hisaab nahi hai, yeh batati hai ke ghar mein kaun kya chahta hai aur kaise sab log ek saath reh sakte hain. Aaron Wildavsky ne yahi kaha — budgeting se pata chalta hai ke society kaise ek saath rehti hai, aur agar budget nahi ban sakta toh governance nahi ho sakti. Yeh budget politics ka aaina hai.

PART B — Key Points:

1. **Aaron Wildavsky (1930-1993):** A leading scholar of public budgeting and political culture, Dean of the Goldman School of Public Policy at UC Berkeley (1969-77), and President of the American Political Science Association (1985-86).
2. **Budgeting Makes Living Together Possible:** Wildavsky argued that budgeting is not merely a technical process but a social and political one that helps people manage ideological differences and live together despite conflict.
3. **Budgetary Incrementalism:** Wildavsky proposed that budgeting proceeds through small, incremental changes from the previous year's base rather than through comprehensive, rational review (synoptic budgeting), because synoptic approaches increase disagreement and are politically unwise.
4. **Budgeting as Political Life:** Budgeting captures the classic questions of politics—who gets what, how, and why—because it involves power, authority, culture, consensus, and conflict all at once.
5. **Analysis Must Serve Politics:** Wildavsky believed that policy analysis should support political processes, not try to displace or replace them; analysis has to be useful to political actors, not impose technocratic solutions from above.
6. **Citizen as Analyst:** Like John Dewey, Wildavsky opposed state-imposed planning and rationalistic design, and instead encouraged citizens to figure things out for themselves by participating in public policies and evaluating what they give versus what they get.

7. **Opposition to Central Direction:** Wildavsky rejected "central direction by one mind that decides everything once and for all," supporting vouchers and participatory approaches over standardized, top-down curriculums.
8. **Craft Ways of Knowing:** Drawing on C.W. Mills, Wildavsky emphasized the importance of intellectual craftsmanship—writing and reading purposefully, organizing time effectively, using semi-structured interviews, and engaging in scholarly collaboration.
9. **Critique of Wildavsky's Work:** His incrementalism has been criticized for being conservative and reinforcing existing power structures, potentially preventing necessary major reforms during times of crisis or systemic failure.
10. **Relevance to Pakistan:** Wildavsky's focus on incremental budgeting and citizen participation is relevant to Pakistan's budget-making process, where large, centralized planning has often failed and local, participatory approaches could build greater trust and effectiveness.

Example:

Socho Punjab ka annual budget ban raha hai. Pehle saal health par 100 crore the, is saal 110 crore ho gaye (10% increment). Education par 150 crore the, 160 crore ho gaye. Koi bara revolutionary change nahi, bas thora thora izafa. Yeh incremental budgeting hai — Wildavsky kehti hai ke aise hi budgets bante hain kyunki agar government aik dam se health ko 200 crore aur education ko 50 crore kare toh opposition aur pressure groups dono khilaf ho jayenge. Budget incremental is liye ke siyasi conflict control mein rahe. Agar citizens khud analyst ban kar dekhain ke unhein tax de kar kya mil raha hai, toh woh policy mein shamil ho sakte hain.

Conceptual Questions

Q: What is the difference between incremental budgeting and synoptic budgeting, and why did Wildavsky argue that incrementalism is politically wiser? Answer: Synoptic budgeting is a comprehensive, rational approach where decision-makers review the entire budget from scratch each year, comparing all alternative uses of funds to determine optimal allocation. Incremental budgeting, by contrast, starts from the previous year's base and makes only small, marginal changes around the edges. Wildavsky argued that synoptic budgeting is politically unwise because it would reopen every political battle every year, creating massive conflict and gridlock. Incrementalism manages political disagreement by limiting the scope of conflict, allowing parties to agree on marginal changes while preserving existing allocations that reflect previous political settlements.

- In Pakistan, the federal budget typically shows incremental changes across most ministries from year to year, with major shifts only in politically salient areas like defense or subsidies, precisely to avoid inflaming political tensions.

Q: Why does Wildavsky believe that "analysis must serve politics, not try to displace it," and what are the risks when policy analysis ignores this principle in Pakistan? Answer: Wildavsky believed that policy analysis is a tool to inform political decision-making, not a substitute for it. Politics is the process by which societies negotiate values, interests, and conflicts; analysis can provide evidence and logic, but it cannot resolve normative disagreements about what is good or fair. When analysis tries to displace politics—by imposing technocratic solutions without political negotiation—it often fails because it ignores power dynamics, stakeholder interests, and cultural contexts. In Pakistan, technocratic reforms in taxation or energy pricing have frequently been reversed because they were designed without political consensus, showing that analysis alone is insufficient without political ownership.

- Pakistan's repeated efforts to reform the agricultural income tax have failed because economic analysis showed it was rational, but political resistance from powerful landlords and provincial governments made it unviable without political negotiation.

Lesson Quiz

Which American scholar argued that budgeting makes living together possible? (Aaron Wildavsky) What is the term for budgeting that makes small changes from the previous year's base? (Incremental budgeting) What did Wildavsky oppose instead of encouraging citizens to figure things out for themselves? (Central direction by one mind that decides everything once and for all) According to Wildavsky, should analysis serve politics or displace it? (Serve politics) What concept from C.W. Mills did Wildavsky draw upon for his work "Craft Ways"? (Intellectual craftsmanship)

SECTION 1 — LESSON HEADING

Lesson 31: Robert S. McNamara — Biography, Ideas, and Legacy

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhare school ka woh maths ka teacher jo kehta tha ke har problem ka ek numerical answer hota hai, aur agar tum figures sahi karo toh duniya ki har mushkil hal ho sakti hai. Us teacher ko bharosa tha ke data sab kuch hai — agar exam mein fail ho rahe ho toh figures batao,

agar school mein budget nahi hai toh figures batao. Lekin jab woh teacher principal ban gaya aur usne saare decisions sirf numbers ke basis par lene shuru kar diye, toh woh yeh bhool gaya ke school mein bache bhi hain, unke emotions hain, teachers ki problems hain. McNamara bilkul us teacher jaisa tha — numbers se usko itna lagao tha ke woh samajh hi nahi paya ke Vietnam jaise jung mein human lives, politics, aur local culture numbers se nahi measure hoti. Yahi lesson hai ke policy mein data zaroori hai lekin data hi sab kuch nahi, aur rationality ki bhi hadd hoti hai.

PART B — Key Content List:

Label: Profile and Ideas

1. **Full Name and Field:** Robert Strange McNamara — American business executive, U.S. Secretary of Defense (1961–1968), and President of the World Bank (1968–1981); known as a technocratic policy analyst who championed quantitative decision-making in public policy.
2. **Intellectual Background and Influences:** McNamara was a Harvard Business School graduate influenced by W. Edward Deming's statistical methods; he was a statistician who believed everything could be expressed in numbers and applied quantitative analysis to management and policy problems.
3. **Key Concepts and Methods:** He championed analytical techniques including cost-benefit analysis, linear programming, systems analysis, and impact evaluation; these methods aimed to identify problems, enlist alternatives, set objectives, estimate future effects, and recommend courses of action.
4. **Planning, Programming and Budgeting System (PPBS):** Introduced in 1961 at the Department of Defense, PPBS linked analytic planning to the budget process using microeconomic theory, welfare economics, quantitative decision theory, operations research, and program budgeting; President Lyndon B. Johnson extended PPBS to other departments in October 1965.
5. **Management Style and Analyst Team:** McNamara built a team of analysts who had direct access to the Secretary, and the Secretary had access to the President; these analysts were highly empowered and free from bureaucratic hierarchy, specializing in analytical techniques rather than the substance of policy details.
6. **Vietnam War Application and Failure:** McNamara applied statistical methods from WWII bombing campaigns to the Vietnam War but was criticized for treating human beings like "spare parts on a Ford" (Weidman); the war resulted in 58,220 American deaths, 303,644 wounded Americans, and approximately 4 million total casualties, with McNamara's own son agitating against the war.
7. **World Bank Contributions:** As President of the World Bank, McNamara dramatically increased lending from US\$1 billion to US\$13 billion and shifted focus toward addressing rural poverty, attempting to remake the institution's development agenda.

8. **Retrospective Assessment and Lessons:** In his later years, McNamara advocated nuclear disarmament, called American and British nuclear policy "immoral, illegal and militarily unnecessary" (2005), and admitted the Vietnam War was a mistake; his lessons included: "Rationality alone will not save us," "Get the data," "Be prepared to reexamine your reasoning," "Never say never," and "Human nature can't be changed."
9. **Critique and Limitation of His Work:** McNamara's technocratic approach exemplified the limits of pure rationalism in policy-making — his methods worked well for measurable problems but failed catastrophically when applied to complex human, political, and cultural contexts where numbers could not capture reality; his story demonstrates that quantitative analysis is a tool, not a complete philosophy of governance.
10. **Relevance to Pakistan:** McNamara's legacy offers a cautionary tale for Pakistani policy-makers who rely heavily on technocratic solutions, donor-driven frameworks, and quantitative metrics (such as in IMF programs, development projects, or bureaucratic reforms) without adequately considering political feasibility, local knowledge, and human consequences — the Pakistan Bureau of Statistics, FBR data-driven reforms, and CPEC cost-benefit analyses all face the same danger of mistaking measurement for understanding.

SECTION 3 — EXAMPLE

Example:

Socho Pakistan mein koi naya welfare scheme launch hota hai jaise Ehsaas program. Government kehte hain ke data ke mutabiq 20 lakh families register hain, 50 crore rupees allocate kiye gaye hain, aur 80% target poora hua hai. Yeh sab numbers impressive hain. Lekin jab aap gaon mein jaake dekhte hain toh ek widow ko scheme ka pata hi nahi, doosre ke paas computer nahi hai register karne ke liye, teesra application submit kar ke bhool gaya ke ab kya karna hai. Yahi masla tha McNamara ke sath — woh numbers dekhte the lekin Vietnam mein reality kuch aur thi. Pakistan mein agar hum sirf FBR ke tax collection figures dekhein aur yeh na sochein ke woh tax kab poor logon par unjustly impose ho raha hai, toh hum bhi wohi galti kar rahe hain jo McNamara ne Vietnam mein ki — numbers ka jadoo reality ko nahi badalta.

SECTION 4 — CONCEPTUAL QUESTIONS

Q1: What is the fundamental difference between McNamara's approach to policy analysis and the perspective advocated by scholars like Deborah Stone or Helen Ingram?

Answer: McNamara's approach was grounded in a rational-technical model where policy decisions are made through objective data, quantitative analysis, cost-benefit calculations, and systems thinking — policy is treated as a technical problem solvable by experts using scientific methods. In contrast, scholars like Stone and Ingram argue that policy is inherently political and normative, shaped by narratives, social constructions, power dynamics, and democratic deliberation. McNamara saw policy as a science; Stone and Ingram see it as a craft that requires understanding meaning, interpretation, and citizen participation. McNamara's methods produce efficiency; their methods produce democratic legitimacy.

- *For example, in Pakistan, a McNamara-style approach to the health sector would focus on building more hospitals, tracking patient numbers, and measuring cost-per-treatment, while a Stone/Ingram approach would ask who defines the health problem, whose narratives are included, how communities participate in designing solutions, and whether the policy reinforces or challenges existing inequalities.*

Q2: Why did McNamara's technocratic rationality fail so spectacularly in the Vietnam War, and what lesson does this hold for Pakistani policy-makers dealing with complex governance challenges?

Answer: McNamara's technocratic rationality failed in Vietnam because the war was not a production problem but a deeply complex political, cultural, and historical conflict that could not be reduced to statistical models, cost-benefit calculations, or systems analysis. His methods measured what was measurable (bomb tonnage, body counts, resource allocation) but missed what truly mattered: local political dynamics, nationalist sentiment, historical context, human psychology, and the limits of military power. He treated people as "spare parts" in a machine, ignoring that human beings do not behave predictably like Ford automobile components. The lesson for Pakistani policy-makers is that complex problems like terrorism, poverty, climate change, or sectarian conflict cannot be solved through data alone — they require understanding local narratives, engaging communities, respecting historical context, and accepting that rationality has boundaries. McNamara's story warns that over-reliance on technical solutions creates a dangerous illusion of control while blinding policy-makers to the human and political dimensions that ultimately determine policy success or failure.

- *In Pakistan, this is visible in development projects funded by international donors that insist on quantitative benchmarks and "evidence-based" approaches but fail because they ignore local power structures, cultural norms, and political realities — like a sanitation project that builds infrastructure but doesn't account for community ownership, or an education reform that measures enrollment but ignores quality and social barriers to girls' education.*

SECTION 5 — LESSON QUIZ

1. What analytical system did McNamara introduce at the U.S. Department of Defense in 1961 that linked planning to budgeting? (Planning, Programming and Budgeting System / PPBS)
2. What was McNamara's educational background and which management thinker significantly influenced his quantitative approach? (Harvard Business School graduate; influenced by W. Edward Deming)
3. According to the lecture, what did McNamara's critics mean when they said he treated people "like spare parts on a Ford"? (That he applied abstract, dehumanizing statistical thinking to human beings and ignored human complexity and political realities)
4. What major institutional achievement is McNamara credited with during his tenure as President of the World Bank? (Significantly increasing lending from US\$1 billion to US\$13 billion and shifting focus to rural poverty)
5. What key lesson about rationality did McNamara himself learn from his Vietnam War experience, as expressed in his later reflections? (Rationality alone will not save us / Human nature can't be changed / Be prepared to reexamine your reasoning)

SECTION 1 — LESSON HEADING

Lesson 35: Pakistani Policy Thinkers I

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhare mohalle mein kuch log hain jo sirf baatein karte hain ke naaliyan saaf karni chahiye, lekin kuch log hain jo apne haathon mein paani laga kar khud naaliyan saaf karte hain aur doosron ko bhi sikhaate hain. Yeh doosre log koi bade baat-cheet karne wale nahi hote, bas kaam karne wale hote hain. Islamabad mein bade log policy likhte hain lekin asli kaam to woh log karte hain jo galiyon mein rehte hain aur maslay ko apni aankhon se dekhte hain. Aaj hum unhi Pakistani practitioners ke baare mein parhenge jinhe ne public policy ko sirf kitaabon mein nahi, balke sadkon aur mohallon mein ja kar banaya.

PART B — Key Content List:

Key Content Type: Profile and Ideas

1. **Dr. Akhtar Hameed Khan:** A former Indian Civil Service officer who pioneered the Orangi Pilot Project and promoted low-cost, affordable development models, emphasizing that Pakistan's fundamental problem is moral rather than merely technical.
2. **Orangi Pilot Project (OPP):** A landmark community-led sanitation initiative in Karachi that demonstrated how low-cost solutions designed with community participation could solve urban infrastructure problems without waiting for government action.
3. **Arif Hasan:** Chairman of the Orangi Pilot Project and the Urban Resource Centre in Karachi, known for his work on appropriate technologies, social transformations, and low-cost development models while consistently questioning why successful models fail to become part of government culture.
4. **Tasneem Ahmad Siddiqui:** A civil servant who developed the Saiban-Khuda Ki Basti initiative, which won the prestigious Habitat Award for providing affordable housing solutions to low-income communities through innovative land and shelter policies.
5. **Perween Rahman:** A dedicated activist who worked through community mapping and documentation, emphasizing the importance of learning from communities and working through local activists to address urban challenges and sanitation issues.
6. **Common Critique of Pakistani Policy Practitioners:** The fundamental challenge is that despite producing successful pilot projects and community models, these practitioners could not institutionalize their approaches within the government's bureaucratic culture and policy framework.

SECTION 3 — EXAMPLE

Example:

Socho Karachi ke Orangi Town mein Dr. Akhtar Hameed Khan ne dekha ke naaliyan kahan se kahan tak ja rahi hain aur ganda pani kahan ruk raha hai. Unhone bas ek baat ki — logon ko bataaya ke agar woh khud apni gali ki naali bana lein toh paani beh jayega aur bimariyan kam hongi. Logon ne socha "Yeh toh hum kar sakte hain" aur khud paise jama kar ke naaliyan banaain. Arif Hasan aaj bhi yeh sawaal karte hain ke jab Orangi mein kaam ho gaya toh sarkar ne yeh model poore Karachi mein kyun nahi lagaya. Yeh **community-led policy** ka asli Pakistan mein example hai jahan log khud apna masla hal karte hain.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What is the fundamental difference between government-led policy making and community-led policy making as demonstrated by Pakistani practitioners like Dr. Akhtar Hameed Khan?

Answer: Government-led policy making is top-down, bureaucratic, and often slow-moving, relying on large budgets and formal procedures that may never reach the community level. Community-led policy making is bottom-up, participatory, and action-oriented, where communities themselves identify problems, contribute resources, and implement solutions directly. The Orangi Pilot Project succeeded because it empowered residents to build their own sanitation systems at a fraction of the cost the government would have spent, and it worked because the community took ownership.

- For example, the Orangi Pilot Project in Karachi showed that one family could build a sewer connection for less than 500 rupees, whereas the government's cost estimates were over 6,000 rupees per connection.

Q: Why is it a significant problem that successful Pakistani policy models like the Orangi Pilot Project have not become part of government culture, according to Arif Hasan's critique?

Answer: This is significant because it means that successful, proven, and cost-effective solutions remain isolated experiments rather than becoming standard government practice. When successful models are not replicated, the government continues to waste resources on inefficient top-down approaches, and millions of Pakistanis continue to suffer from the same problems that have already been solved at a small scale. This reveals a deep institutional failure — the government lacks the capacity, will, or flexibility to learn from grassroots successes and scale them up.

- In Pakistan, this problem is seen repeatedly where pilot projects succeed but are never expanded, whether in sanitation, health, or housing, because government bureaucracy prefers large contracts and foreign consultants over local, low-cost, community-driven solutions.

SECTION 5 — LESSON QUIZ

What is the Orangi Pilot Project most famous for? (A community-led low-cost sanitation initiative in Karachi)

Which Pakistani practitioner consistently questioned why successful models fail to become government culture? (Arif Hasan)

What was the profession of Tasneem Ahmad Siddiqui before he worked on housing policy? (Civil servant)

What was the name of the housing initiative developed by Tasneem Ahmad Siddiqui?
(Saiban-Khuda Ki Basti)

What method did Perween Rahman use to understand community needs and problems?
(Mapping and documentation)

Lesson 36: Amitai Etzioni

SECTION 1 — LESSON HEADING

Lesson 36: Amitai Etzioni

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhein koi kaam karna hai jaise ghar ke liye naya phone lena. Kuch log saare brands, rates, features pooray check karte hain jo bohot mushkil hai, aur kuch log bas purani phone hi rakh lete hain kyunki sochte hain "Chalo theek hai". Kya koi beech ka raasta hai? Socho tumhara dost jo kehta hai "Pehle dekh lein ke kitna paisa hai aur kaunsay models aam hain, phir uske baad andaza laga lein ke kaunsa best ho sakta hai." Amitai Etzioni ka **mixed scanning** exactly yahi hai — na toh har cheez ka poori tarah analysis karo aur na hi bilkul ignore karo. Bich mein kuch karo jo practical ho.

PART B — Key Content List:

Key Content Type: Profile and Ideas

1. **Amitai Etzioni (Full Name and Field):** A highly influential American sociologist and communitarianist who took sociology out of academe into politics, policy, and social reform, believing that one must understand society in order to change and reform it.
2. **Buber's Concept of "Dialogue":** The distinction between "I-Thou" relationships (treating others as fellow human beings) and "I-It" relationships (treating others as objects) profoundly shaped Etzioni's communitarian philosophy and his approach to social relations.

3. **Socio-Economics:** Etzioni developed the concept of socio-economics as "better economics for a better society," arguing that a good society does not allow a free or unfettered market and that sociological variables are necessary for economic models.
4. **Critique of Rational Choice Theory:** Etzioni criticized rational choice and neoclassical economics as morally inadequate, famously asking: "Show me a society in which people really behave as if pleasure and self-interest were the governing motivations."
5. **Mixed Scanning (Key Concept):** A decision-making model that combines elements of rational-comprehensive and incremental approaches, using different lenses for small issues versus bigger problems, thereby adapting strategies to the limited cognitive capacities of decision-makers.
6. **Basic vs Policy Research:** Basic research focuses on understanding the world, while policy research focuses on changing the world; policy research needs to be communicated in plain English to policymakers and is wider in scope, similar to medical science which draws on many sciences.
7. **Critique of Mixed Scanning:** The model rejects "crippling objections" — utilitarian objections (when means are not available), normative objections (when alternatives violate decision-makers' values), and political objections (when alternatives violate interests of essential actors).
8. **Relevance to Pakistan:** Etzioni's communitarian approach is highly relevant to Pakistan's collectivist, family-oriented society, where individual rights and community responsibilities need to be balanced; however, his emphasis on two-parent families and virtue-sustaining communities may conflict with Pakistan's diverse religious and cultural interpretations.

SECTION 3 — EXAMPLE

Example:

Socho Pakistan mein load shedding ka masla hai. Rational approach yeh kehti hai ke saare data collect karo, har power plant ki efficiency check karo, aur perfect solution nikalo — lekin yeh bohot mushkil hai. Incremental approach yeh kehti hai ke bas wohi karo jo pehle se ho raha hai, thoda sa temporary generator laga do. Amitai Etzioni ka mixed scanning kahega ke pehle bade level pe dekho ke total demand kitni hai aur kaunsi technologies available hain, phir chhotay issues pe focus karo jaise specific cities mein outages ka schedule. Yeh **mixed scanning** approach WAPDA ko practical solution dene mein madad kar sakti hai.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What is the key difference between Etzioni's mixed scanning model and Charles

Lindblom's incrementalism in decision-making? Answer: Lindblom's incrementalism argues that decision-makers should make small, marginal adjustments to existing policies because they lack the capacity for comprehensive analysis, often described as "muddling through." Etzioni's mixed scanning, however, argues that decision-makers should first take a broad, high-level scan of the whole situation to identify fundamental options, and then engage in detailed analysis for those specific areas that require it. The difference is that mixed scanning is more proactive and strategic, while incrementalism is reactive and conservative — mixed scanning looks at the forest first, then examines particular trees, whereas incrementalism only looks at the nearest tree.

- In Pakistan's context, a purely incremental approach to the energy crisis would only make small adjustments to existing power plants, while a mixed scanning approach would first assess the overall energy mix, identify that renewable energy is a game-changer, and then focus detailed policy work on implementing solar or wind projects in specific regions.

Q: Why does Etzioni criticize rational choice theory and neoclassical economics as

"morally inadequate" for policy making? Answer: Etzioni argues that these models assume human beings are purely self-interested actors who make decisions based solely on maximizing pleasure and minimizing pain, ignoring the moral, social, and community-based values that actually guide human behavior. He believes that people are motivated not just by self-interest but also by a sense of duty, sympathy, fairness, and community belonging. When policy makers rely only on rational choice models, they design policies that ignore these human dimensions, leading to policies that may be economically efficient but socially destructive or morally questionable.

- For example, in Pakistan, health policy designed purely on cost-benefit analysis might decide to close rural health clinics because they are not "cost-effective," ignoring the moral obligation to provide healthcare to remote communities and the social value of saving lives — exactly the kind of moral inadequacy Etzioni warns against.

SECTION 5 — LESSON QUIZ

What is the decision-making model developed by Amitai Etzioni that combines rational and incremental approaches? (Mixed scanning)

What is the difference between basic research and policy research according to Etzioni? (Basic research understands the world; policy research changes the world)

Who were the two thinkers that influenced Etzioni's communitarian philosophy? (Martin Buber and Emile Durkheim)

What term does Etzioni use to describe treating others as fellow human beings rather than as objects? (I-Thou relationships)

Why does Etzioni criticize rational choice theory? (Because it is morally inadequate and ignores community values and human motivations beyond self-interest)

Lesson 37: James Q. Wilson

SECTION 1 — LESSON HEADING

Lesson 37: James Q. Wilson

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhare mohalle mein ek bara aadmi hai jo roz subah sadar bazar ja kar dekhna hai ke kya ho raha hai — sabzi mandi mein kya rate hain, galiyon mein kya masla hai, log kya keh rahe hain. Woh kisi bade theory mein nahi padta, bas asli zindagi mein rehta hai aur jo dekhta hai woh kehta hai. Agar woh kahe ke "Gali mein kachra mat pheko kyunki bimari hogi" toh log maan lete hain. James Q. Wilson exactly yahi tha — ek old-fashioned conservative jo ordinary logon ke maslon mein interest rakhta tha, jo kitaabon se zyada field work mein yakeen rakhta tha.

PART B — Key Content List:

Key Content Type: Profile and Ideas

1. **James Q. Wilson (Full Name and Field):** An old-fashioned conservative, political scientist, and policy intellectual who studied problems of ordinary citizens such as crime, family, and morality, preferring facts over ideology and philosophy.
2. **Motivation for His Work:** Wilson was motivated by helping ordinary, poor people and studied the problems that actually affect everyday citizens, unlike most academics who study esoteric topics like federalism and separation of powers.
3. **Writing Style and Influence:** He published in popular publications like Commentary, The American Spectator, The New Republic, and the Wall Street Journal rather than only

scholarly journals, believing that policymakers take cues from the general public and that academics can and must serve both the academy and society.

4. **The Moral Sense (Key Book):** Wilson's major work that defends morality against "modern skepticism" by drawing on evolutionary psychology and moral sentiment theories of Scottish philosophers such as Francis Hutcheson, David Hume, and Adam Smith.
5. **Four Components of Moral Sense:** According to Wilson, mankind has a moral nature built on sympathy, fairness, self-control, and duty — elements that are closer to communitarianism than to Enlightenment individualism.
6. **Critique of Enlightenment Beliefs:** Wilson criticized the Enlightenment belief that individuals are everything, rights are trumps, and people should be bound together only by choices, contracts, and entitlements.
7. **Broken Windows Theory (Contribution to Criminology):** Wilson's most famous contribution to criminology, which neither conservative nor liberal nor "zero tolerance," draws on Jane Jacobs' concept of "eyes on the street" and focuses on identifying and encouraging what makes a neighborhood work.
8. **Relevance to Pakistan:** Wilson's emphasis on crime prevention through community-level interventions like Broken Windows is directly applicable to Pakistan's major cities where street crime and neighborhood disorder are significant problems; however, Pakistan's complex mix of formal law, informal justice, and political interference complicates the straightforward application of his theories.
9. **Advice for Students (Four Key Recommendations):** Always get the facts before opining; be practical; recognize that root causes are often elusive and policy must make do regardless; and be prudent when proposing solutions because reforms can often make matters worse.

SECTION 3 — EXAMPLE

Example:

Socho Lahore ke ek ilaqe mein ek toota hua darwaza hai, kachra jama hai, aur gali mein light nahi hai. Log sochte hain "Yeh toh chhoti baat hai" lekin phir dheere dheere wahan chorii honay lagti hai, log darne lagte hain, aur zameen ki qeemat gir jaati hai. James Q. Wilson ka **broken windows theory** kehta hai ke agar hum chhoti problem — toota darwaza, kachra — ko theek kar dein toh bari crime apne aap kam ho jati hai. New York city mein Rudy Giuliani ne yahi kiya aur crime rate gira. Lahore ki police agar chhoti street crimes ko seriously le to bari crime bhi ghat sakti hai.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What is the core argument of James Q. Wilson's "Broken Windows" theory, and why is it considered neither conservative nor liberal nor "zero tolerance"? Answer: The core argument is that visible signs of disorder, such as broken windows, graffiti, or litter, signal that the community does not care about its public spaces, which encourages more serious crime to flourish because criminals perceive that law enforcement is weak. Wilson's theory is not about being "tough on crime" in a punitive sense but about maintaining order and community standards to prevent crime from escalating. It is not "zero tolerance" because it does not call for harsh punishment but rather for attention to the physical and social environment that enables crime. It is neither conservative nor liberal because it focuses on community-level solutions, not on ideology, and because it draws on Jane Jacobs' progressive urban planning ideas about "eyes on the street" and diverse public use.

- In Karachi, for example, neighborhoods where streetlights work, garbage is collected, and abandoned buildings are secured tend to have lower crime rates, while areas with visible disorder become magnets for criminal activity, supporting the Broken Windows logic.

Q: According to James Q. Wilson, why did he believe that academics should write for popular publications rather than only scholarly journals? Answer: Wilson believed that public policy is ultimately shaped by public opinion and that policymakers take their cues from the general public's concerns, not from academic journals. By writing for popular publications, academics can influence the public conversation, frame policy debates, and ensure that evidence-based arguments reach the people who actually make decisions. He believed that academics have a duty to serve both the academy and society, and that speaking directly to ordinary citizens through accessible writing is part of that duty. Wilson also recognized that emotional and narrative impact, such as making documentaries, can be more persuasive than quantitative analysis in shaping public understanding.

- In Pakistan, many policy debates — from the IMF program to health policy to education reform — are often shaped by op-eds, talk shows, and public commentary rather than by academic research, showing that Wilson's approach of engaging the public directly is highly relevant.

SECTION 5 — LESSON QUIZ

What is the name of James Q. Wilson's most famous book that defends morality against modern skepticism? (The Moral Sense)

What are the four components of Wilson's concept of moral sense? (Sympathy, fairness, self-control, and duty)

What major contribution did Wilson make to criminology theory? (Broken Windows theory)

Which Scottish philosophers influenced Wilson's work on moral sense? (Francis Hutcheson, David Hume, and Adam Smith)

What is one piece of advice Wilson gave to students of public policy? (Get the facts before opining; or be practical; or recognize that root causes are elusive; or be prudent when proposing solutions)

Lesson 38: Peter deLeon

SECTION 1 — LESSON HEADING

Lesson 38: Peter deLeon

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhare school mein principal hai aur teachers hain. Principal kehta hai "Hum decide karenge ke syllabus kya hoga, kitni chutti honi chahiye, aur kaunsi books parhani hain." Lekin students ko koi nahi poochta ke unhein kya mushkil lagti hai. Peter deLeon kehta hai ke policy analysis mein bhi yahi hota hai — experts aur bureaucrats decide karte hain, aur jo log policy se effect ho rahe hain unko koi nahi poochta. Woh kehta hai ke participatory democracy mein citizens ko bhi policy bananay mein hissa lena chahiye, nahi toh system tyrannical ban jaata hai. Dekho Pakistan mein IMF wale policy banate hain aur awam ko sirf result bata diya jaata hai.

PART B — Key Content List:

Key Content Type: Profile and Ideas

1. **Peter deLeon (Full Name and Field):** A scholar at the Graduate School of Public Affairs at the University of Colorado, Denver, who wrote extensively on policy sciences, democracy, political corruption, and the development of participatory policy analysis.
2. **Motivation for His Work:** DeLeon was motivated by the observation that citizens feel unimportant, citizens are distancing from governments, policies fail to achieve results, and the legitimacy of policy analysts is at stake, leading him to critique the isolation of policy analysts from the people they are supposed to help.
3. **Critique of Traditional Policy Analysis:** DeLeon criticized the over-reliance on instrumental rationality, the technocratic orientation of policy analysis, and the distance from the original idea of multidisciplinary policy sciences, arguing that professional elites are responsible for this democratic deficit.
4. **Inspiration from Hank C. Jenkins Smith:** DeLeon cites Jenkins Smith's argument that "an unintended side effect of policy analysis may be to erect barriers in the way of important ends of participatory democracy."
5. **Diagnosis of the Problem (Why Policy Sciences Fail Democracy):** DeLeon identifies three causes — excessive reliance on instrumental rationality, the complexity of problems beyond technocratic solutions, and distance from the original idea of multidisciplinary policy sciences that valued dignity and democracy.
6. **Argument for a New Paradigm:** DeLeon argues that policy sciences must accept a new analytic paradigm to move toward democracy, incorporating critical thinking, post-positivism, and a "minipopulist" procedure for more citizen participation.
7. **Participatory Policy Analysis (Key Concept):** Drawing on Jurgen Habermas' communicative rationality, deLeon argues that citizens deserve a greater say in policy and can best articulate their own needs through participatory mechanisms such as citizens assemblies, mini-publics, and collaborative policy networks.
8. **Practical Methods of Participation:** DeLeon recommends expanding the range of actors and stakeholders in a discursive and deliberative mode, using methods such as consensus conferences, citizens panels, and collaborative networks that incorporate values beyond efficiency and effectiveness.
9. **Relevance to Pakistan:** DeLeon's critique is highly relevant because in Pakistan, public policy is a relatively new discipline, democracy is fragile, and unelected technocrats and economists often govern policy making, removing policy sciences far from the democratic process; Pakistan needs more participatory approaches to bridge this gap.
10. **Advice for Students (Five Key Points):** Appreciate the complexity of issues; recognize that there are many sides to many issues; appreciate what those sides look like; accommodate different views and postures; and teach how to structure and analyze while also learning from students.

SECTION 3 — EXAMPLE

Example:

Socho Pakistan mein health card scheme banayi gayi. Experts ne computer pe data analyze kiya, budget dekha, aur decide kiya ke konse hospitals cover honge. Lekin kisi ne gareeb muhalle mein ja kar nahi poocha ke logon ko kya problem hai — kya unhein doctor ki zaroorat hai ya dawai ki? Peter deLeon ka **participatory policy analysis** kehta hai ke agar hum health policy banayein toh humein awaam ko bhi baithana chahiye, unse poochna chahiye ke unki priorities kya hain, aur unki knowledge ko bhi policy ka hissa banana chahiye. Denmark mein toh citizens committee experts ko bhi select karti hai!

SECTION 4 — CONCEPTUAL QUESTIONS

Q: According to Peter deLeon, what is the "policy sciences of tyranny," and why is participatory policy analysis the solution? Answer: The "policy sciences of tyranny" refers to a situation where policy analysts and experts, despite their good intentions, end up imposing their expertise on citizens in a way that undermines democratic decision-making. When analysts are sequestered in their bureaucratic positions, insulated from public needs and values, and when policies fail to achieve results, the public becomes disillusioned and distanced from government. DeLeon argues that this creates a technocratic tyranny where experts rule without democratic legitimacy. The solution is participatory policy analysis, where citizens are actively involved in policy formation, bringing their tacit knowledge, expressing their needs directly, and sharing responsibility with analysts. This policy sharing, deLeon argues, is essential to sustain democracy and avoid tyranny.

- In Pakistan, policies like the National Finance Commission award, taxation reforms, or energy pricing are often made by bureaucrats and economists in Islamabad with minimal public consultation. DeLeon would argue that this creates exactly the kind of democratic deficit and citizen alienation he warns against, and that involving citizens could make policies more effective and accepted.

Q: What is the significance of the Danish consensus conference model for participatory policy analysis, and how might it be adapted for Pakistan? Answer: The Danish consensus conference model is significant because it demonstrates a practical, structured method of citizen participation in policy making. In this model, a citizens' panel of 10-20 ordinary people is recruited, they prepare with help from analysts and independent experts, they select the questions to ask, they choose experts from a pool to answer their questions, and they deliberate over 3-4 days to produce a final report and recommendations. This is important because it proves that

ordinary citizens, when given proper resources and a structured process, can deliberate on complex policy issues and produce thoughtful recommendations. For Pakistan, this model could be adapted for issues like education policy, health policy, or energy policy, though challenges include literacy barriers, political interference, and the need to ensure that marginalized voices (women, minorities, rural populations) are adequately represented.

- For example, a consensus conference on education policy in Pakistan could bring together citizens from across the country to deliberate on whether Pakistan should focus on Urdu-medium or English-medium education, how to address the out-of-school children crisis, and what vocational training should look like, producing recommendations that the government could not ignore because they come from the people.

SECTION 5 — LESSON QUIZ

What is the "minipopulist" procedure that Peter deLeon advocates for in policy analysis?
(A procedure for more citizen participation in policy making)

Which German philosopher's concept of communicative rationality did deLeon draw upon for participatory policy analysis? (Jurgen Habermas)

According to deLeon, why are policy analysts often isolated from the people they are supposed to help? (Because of their geographical and bureaucratic positions)

What is one practical method of participatory policy analysis mentioned by deLeon?
(Consensus conferences; or citizens assemblies; or mini-publics; or collaborative policy networks)

What is Peter deLeon's advice to students about public policy? (Appreciate the complexity of issues and that there are many sides to issues; or accommodate different views; or learn from students)

MGT522 Lecture 39 — John S. Dryzek: Deliberative and Critical Policy Analysis

SECTION 1 — LESSON HEADING

Lesson 39: John S. Dryzek — Deliberative and Critical Policy Analysis

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhare ghar mein koi bada faisla lena hai — jaise ke naya ghar khareedna ya bachay ka school change karna. Kuch log kehte hain ke sab se bada kaam yeh hai ke hum research karein, data dekhein, aur sab se "logical" faisla lein. Lekin tumhara chota bhai kehta hai ke main bhi apni rai doon, tumhari ammi kehti hain ke unka tajurba bhi suno, aur padosi bhi mashwara deta hai. Agar sirf ek computer ki tarah data dekho toh shayad tum sab ko khush nahi kar paoge, aur agar sab ki baat bina soche sun lo toh faisla kabhi nahi hoga. Dryzek kehta hai ke policy mein bhi yahi hota hai — sirf expert ki baat na mano, aur na hi sirf awam ki har baat man lo. Balance chahiye aur sab ko baat karne ka mauka chahiye, lekin logic bhi hona chahiye.

PART B — Key Content List:

Key Points:

1. **Instrumental Rationality Critique:** Dryzek argues that instrumental rationality destroys the more congenial, spontaneous, egalitarian, and intrinsically meaningful aspects of human association by reducing everything to technical calculation.
2. **Technocratic Policy Failure:** Technocracies are repressive and ill-equipped for dealing with complex social problems because they rely on experts and systems analysts rather than including ordinary citizens in decision-making.
3. **Policy Sciences of Tyranny:** Dryzek contends that most policy analysis efforts are consistent with a subtle policy sciences of tyranny because they are undertaken by technicians and systems analysts rather than serving democratic purposes.
4. **Deliberative Democracy:** Dryzek is the founding father of the concept of deliberative democracy, which emphasizes authentic deliberations by affected parties and representation of discourses as well as persons or groups for democratic legitimacy.
5. **Deliberative Turn in Democratic Theory:** The deliberative turn began as a challenge to established institutions and models of democracy and requires a defensible theory of democracy that is critical of established power, pluralistic, reflexive, transnational, ecological, and dynamic.
6. **Critical Policy Analysis Tasks:** Critical policy analysis involves explicating dominant meanings in policy content, uncovering suppressed and marginalized meanings, identifying agents of impairment such as ideologies and lack of education, and equalizing communicative capacities of policy actors.

7. **Critique of Technocratic Policy Analysis:** Dryzek criticizes technocratic policy analysis for treating policy as only an experts' undertaking, which is disempowering to ordinary citizens who are affected by policy decisions.
8. **Interpretive and Narrative Methods:** Critical policy analysis uses interpretive, narrative, and discourse analysis instead of purely logical analysis, with the purpose of empowering the disempowered.
9. **Relevance to Pakistan:** In Pakistan, asking poor communities what research needs to be done would lead to science helping them grow more food and save their children from disease — making the methods of science democratic and not left to scientists and bureaucrats alone.

SECTION 3 — EXAMPLE

Socho Pakistan mein kisi ilaqe mein school nahi hai aur bache parh nahi sakte. Government ke experts baith kar kehte hain ke "humein naye school banane hain, yeh budget chahiye, aur yeh plan hai." Lekin woh poochte nahi ke bachon ke walidain kya chahte hain — shayad woh chahte hain ke madrasa mein hi taaleem ho, ya ladkiyon ke liye alag arrangement chahiye, ya woh sirf itna chahte hain ke bachay kuch likhna parhna seekh jayein. Dryzek kehta hai ke agar hum sirf experts ki sunain aur awam ki nahi, toh yeh "policy sciences of tyranny" hai. Agar hum awam ko bitha kar poochain aur unki baat ko policy mein shamil karain, toh policy "deliberative" ban jati hai aur sab ko empowerment milta hai.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What is the difference between Dryzek's deliberative policy analysis and traditional technocratic policy analysis?

Answer: Traditional technocratic policy analysis relies on experts, systems analysts, and operations researchers who use technical and logical methods to make decisions. It assumes that experts know best and that policy should be based on objective data and rationality. Dryzek's deliberative policy analysis, in contrast, emphasizes that policy decisions should involve authentic deliberation among all affected parties. It values narrative, discourse, and interpretive methods over purely technical analysis. Deliberative policy analysis aims to empower ordinary citizens and challenge established power structures, whereas technocratic analysis tends to disempower citizens and reinforce elite control over policy decisions.

- *In Pakistan, technocratic policy would have experts in Islamabad designing health policy without consulting rural communities, while deliberative policy would involve village elders, Lady Health Workers, and local women in discussions about what health services are actually needed.*

Q: Why is Dryzek's critique of instrumental rationality important for policy making in developing countries like Pakistan?

Answer: Dryzek's critique of instrumental rationality is important because it warns against reducing complex human problems to simple technical calculations. In developing countries like Pakistan, policymakers often rely on foreign experts, economic models, and technical solutions without understanding local social realities, cultural contexts, and community needs. Instrumental rationality can lead to policies that look good on paper but fail in practice because they ignore the lived experiences of ordinary people. By critiquing instrumental rationality, Dryzek encourages policymakers to consider multiple perspectives, include marginalized voices, and recognize that human association involves values, meanings, and relationships that cannot be reduced to numbers or technical formulas. This leads to more appropriate, sustainable, and democratically legitimate policies.

- *For example, Pakistan's sanitation policies have often failed because experts designed solutions without consulting local communities, whereas the Orangi Pilot Project succeeded precisely because it involved community participation and local knowledge alongside technical expertise.*

SECTION 5 — LESSON QUIZ

1. What concept does Dryzek criticize for destroying the more congenial and egalitarian aspects of human association? (Instrumental rationality)
2. According to Dryzek, what does the "policy sciences of tyranny" refer to? (Policy analysis that is undertaken by technicians and experts without democratic participation)
3. What is Dryzek known as the founding father of? (Deliberative democracy)
4. What methods does Dryzek advocate for critical policy analysis instead of purely logical analysis? (Interpretive, narrative, and discourse analysis)
5. What is the purpose of critical policy analysis according to Dryzek? (To empower the disempowered)

SECTION 1 — LESSON HEADING

Lesson 40: Pakistani Policy Thinkers II — Masood Khadar Posh, Zahid Hussain, Khalifa Abdul Hakim, and Fazlur Rahman

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhare mohalle mein alag alag log hain — koi bara admi hai jo zameen ke masail samajhta hai, koi bank wala hai jo paise ka hisaab rakhta hai, koi aalim hai jo philosophy aur deen ki baat karta hai, aur koi professor hai jo modernity aur Islam par sochta hai. Jab mohalle mein koi masla aata hai toh har koi apni taraf se sochta hai ke kaise hal ho. Masood Khadar Posh zameen aur kisanon ke masail samajhte thay, Zahid Hussain economy aur planning ke expert thay, Khalifa Abdul Hakim Islamic philosophy aur social justice ka soch rakhte thay, aur Fazlur Rahman Islam aur modernity ke darmiyan pul banane ki koshish karte thay. In sab ka soch alag tha lekin sab ne Pakistan ke liye kuch na kuch diya.

PART B — Key Content List:

Profile and Ideas:

1. **Masood Khadar Posh (1916-1985):** Indian Civil Service officer who worked with Bhil tribes in Maharashtra and served on the Hari Inquiry Committee (Agricultural Lands Reforms for landless peasants), which produced the famous "Hari Report" recommending the end of sharecropping. His work focused on land reforms and the rights of marginalized agricultural communities.
2. **Zahid Hussain (1893-1957):** Vice Chancellor of Aligarh Muslim University, aide to Quaid-i-Azam, first Governor of the State Bank of Pakistan, first High Commissioner to India, first chairman of the Taxation Inquiry Committee, and chairman of the Planning Commission Board that established Pakistan's First Five-Year Plan (1955-60). He emphasized agriculture development, administrative reforms, education as complementary to economic development, and warned against false promises of state welfarism and dependence on foreign loans.
3. **Zahid Hussain's Critique of Pakistani Administration:** He identified political, administrative, and social impediments to development, particularly highlighting that

public administration was a serious obstacle to development, and criticized the separation between policymaking and execution as well as the tendency to hide ugly facts from policymakers.

4. **Khalifa Abdul Hakim (1893-1959):** Philosopher, scholar, and writer who was the Founder Director of the Institute of Islamic Culture (1949-59). He had a close relationship with Allama Iqbal, worked in Osmania University's Philosophy Department in Hyderabad, and translated the Bhagavad Gita. He was known for his work on Islamic Socialism, progressive taxation, regulated economy, social justice, women equality, and Muslim family law.
5. **Khalifa Abdul Hakim's Policy Contributions:** He served on the Commission on Marriage and Family Laws (June 1955) which addressed polygyny and divorce rights, ultimately leading to the Muslim Family Law Ordinance of 1961. He emphasized the universal features of Islamic civilization and worked closely with Hanif Ramay, Professor Muhammad Usman, and Mohammad Safdar Mir on progressive Islamic policy ideas.
6. **Fazlur Rahman (1919-1988):** Harold H. Swift Distinguished Service Professor of Islamic Thought at the University of Chicago and Director of the Islamic Research Institute in Islamabad (1961-68). He was a logician and philosopher who had mastery over Classical Arabic, Persian, Ottoman Turkish, Greek, Latin, German, and French languages. He argued that intellectual renaissance was the most important prerequisite for Islamic revival and wrote extensively on Islam and modernity as well as Islam and the West.
7. **Relevance to Pakistan:** These thinkers collectively shaped Pakistan's early intellectual and policy landscape — Khadar Posh on land reforms for peasants, Zahid Hussain on economic planning and five-year plans, Khalifa Abdul Hakim on Islamic social justice and family law reforms, and Fazlur Rahman on reconciling Islamic thought with modern challenges — each representing a different dimension of Pakistani policy thinking.

SECTION 3 — EXAMPLE

Socho Pakistan ke 1950s ke daur mein jab mulk naya naya bana tha aur government soch rahi thi ke kis tarah taraqqi ki jaaye. Zahid Hussain ne Planning Commission banayi aur pehla Five-Year Plan tayyar kiya — unka kehna tha ke education ko economic development ke saath jorna zaroori hai aur foreign loans par dependence nahi honi chahiye. Lekin woh yeh bhi kehte thay ke humare officers policy banate hain aur execution mein fail ho jaate hain, aur ugly facts ko chhupane ki aadat hai. Unki yeh baat aaj bhi Pakistan mein sach hai — policy achi banti hai lekin implementation mein problem aati hai. Inhi soch walon ne Pakistan ko ek direction dene ki koshish ki.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What were the main differences in the policy approaches of Zahid Hussain and Khalifa Abdul Hakim?

Answer: Zahid Hussain focused primarily on economic planning, administrative reform, and the practical aspects of state-building. He was concerned with creating effective institutions, managing the economy, and ensuring that Pakistan could develop without excessive foreign dependence. He highlighted the administrative obstacles to development and emphasized education as complementary to economic growth. Khalifa Abdul Hakim, on the other hand, focused more on Islamic social philosophy and cultural transformation. His policy approach emphasized social justice, progressive taxation, women's equality, and family law reforms from an Islamic perspective. While Zahid Hussain approached policy from a state and administrative perspective, Khalifa Abdul Hakim approached it from a social and philosophical perspective rooted in Islamic civilization.

- *Their differences reflect a broader tension in Pakistani policy thinking — between technocratic state-building (Zahid Hussain) and value-based social transformation (Khalifa Abdul Hakim) — which continues to shape policy debates in Pakistan today.*

Q: Why is Fazlur Rahman's emphasis on intellectual renaissance important for Pakistan's policy development?

Answer: Fazlur Rahman argued that intellectual renaissance was the most important prerequisite for Islamic revival and, by extension, for meaningful policy development in Muslim societies like Pakistan. He believed that without critical thinking, rigorous scholarship, and intellectual engagement with both Islamic tradition and modern challenges, policy would remain superficial and fail to address deep-rooted problems. His emphasis on intellectual renaissance matters because Pakistan's policy challenges — from education and governance to social justice and economic development — require more than technical solutions; they require a fundamental rethinking of assumptions, values, and worldviews. By bringing together classical Islamic scholarship with modern philosophical and scientific knowledge, Rahman's approach suggests that Pakistan's policymaking must be intellectually rigorous, historically informed, and open to critical reflection.

- *This is particularly relevant for Pakistan's education policy, which needs to balance Islamic identity with modern knowledge — a challenge that Rahman's scholarship directly addressed.*

SECTION 5 — LESSON QUIZ

1. Which Pakistani thinker served as the first Governor of the State Bank of Pakistan and chaired the Planning Commission Board? (Zahid Hussain)
 2. What was the famous report produced by Masood Khadar Posh regarding agricultural land reforms? (The Hari Report)
 3. Which Pakistani thinker was the Founder Director of the Institute of Islamic Culture and served on the Commission on Marriage and Family Laws? (Khalifa Abdul Hakim)
 4. Which Pakistani intellectual argued that intellectual renaissance was the most important prerequisite for Islamic revival? (Fazlur Rahman)
 5. What did Zahid Hussain identify as a serious obstacle to development in Pakistan? (Public administration)
-
-

SECTION 1 — LESSON HEADING

Lesson 41: Training for Policymakers — Capacities for Grand Policy Thinking

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhein pata hai ke ek achha captain team ko kaisay jeeta sakta hai, lekin agar woh captain kabhi practice na kare aur sirf match ke din aaye toh kya hoga? Uski natural ability bhi ho sakti hai lekin practice aur training ke baghair woh mushkil situations mein fail ho jayega. Bilkul yahi baat policymakers ke saath hai — kuch log naturally intelligent hote hain, lekin unki training nahi hoti toh woh complex decisions jaise climate change, anti-terrorism, ya industrialization ke bare mein soch nahi paate. Yehezkel Dror kehta hai ke rulers ki quality improve karna taboo hai, lekin zaroori hai. Agar Alexander the Great ko Aristotle ne train kiya, toh Pakistan ke policymakers ko kyun nahi train kiya ja sakta?

PART B — Key Content List:

Types:

1. **Cognitive Capacities:** The ability to judge research and policy advice, understand and weave the future, cope with unforeseen circumstances, and practice "raison d'humanite" (reasoning for humanity). This includes recognizing that the wisdom of the past may be stupidity for the future and the ability to accept reality and engage in deep cogitation. In Pakistan, this means policymakers must think beyond immediate crises to envision long-term solutions for issues like climate change and energy security.
2. **Knowledge Capacities:** Familiarity with political philosophers like Machiavelli, Plato, Al Farabi, Ibn Khuldun, and thinkers like Zahid Hussain. This includes reading, skimming, analyzing, thinking in historical context, budget analysis, and understanding the economy. In Pakistan, this means studying leaders like Muhammad Ali Jinnah, Muhammad Iqbal, and Feroz Khan Noon to understand the country's intellectual and political heritage.
3. **Political Capacities:** The ability to assess political feasibilities, focus on only doable actions, increase political feasibility through forging political and social alliances, and appreciate diversity. This includes Socratic dialogue for self-clarification of values and dialogue with religious and cultural minorities. In Pakistan, this means working across party lines and engaging with diverse communities — as exemplified by Senator Raza Rabbani's work on consensus-building.
4. **Institutional Capacities:** The ability to build new governance structures, draft laws, make legal changes, and create institutional support for grand policies. This includes building new governance structures like regional local government associations and integrating markets through chambers and local governments' collective action. In Pakistan, this means strengthening local governments and creating effective institutions that can implement long-term policies.
5. **Risk and Problem Solving Capacities:** The ability to steer through complex challenges and respond to problems effectively. In Pakistan, this means learning from leaders like Lee Kuan Yew of Singapore and Mahathir Muhammad of Malaysia who transformed their countries through decisive policy action despite significant risks.
6. **Why Train Policymakers:** Dissatisfaction with leaders and rulers is widespread in administrative, business, and political spheres. Critical and long-term strategic decisions (like anti-terrorism, climate change, and industrialization) make a real difference, unlike routine decisions. History shows rulers were trained (Alexander by Aristotle), and even the best rulers often fail. Improvement of rulers is imperative, and local governments in Pakistan particularly need training for regional vision and value-based, goal-directed policy crafting.

SECTION 3 — EXAMPLE

Socho Pakistan ke kisi zile ke Deputy Commissioner ko training di jaaye kisi achi university mein, jaise ke National School of Public Policy Lahore mein. Woh wahan par history parhna seekhta hai — ke kya ghaltiyan hui hain, ke Pakistan mein implementation kyun fail hoti hai. Woh budget analysis karna seekhta hai aur samajhta hai ke paisa kahan se aana chahiye aur kahan kharch hona chahiye. Woh minorities aur religious groups ke saath dialogue karna seekhta hai, taake woh apne ilaqe mein sab ko saath le kar chal sake. Aur sab se zaroori baat — woh risk lena aur long-term sochna seekhta hai, jaise ke climate change ke effects ko dekh kar agriculture policy mein changes karna. Agar har Deputy Commissioner aisa trained ho toh Pakistan ke districts mein transformation aa sakti hai.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What is the difference between routine decisions and critical decisions in policy making, and why does this distinction matter for training policymakers?

Answer: Routine decisions are day-to-day administrative decisions that do not make much difference in the long run, such as approving minor budgets or managing routine operations. Critical decisions, on the other hand, are long-term strategic decisions that shape the future of a country, such as anti-terrorism strategy, climate change policy, or industrialization plans. This distinction matters for training policymakers because critical decisions require grand policy thinking, value-based goal setting, and the ability to understand and weave the future — skills that do not come naturally and require deliberate training. Policymakers need to be trained to recognize which decisions are truly critical and to develop the cognitive, political, and institutional capacities necessary for making such decisions effectively.

- *For Pakistan, the decision to invest in renewable energy to combat climate change is a critical decision, whereas deciding the location of a new government office is a routine decision — both require different kinds of thinking and training.*

Q: Why does Yehezkel Dror argue that improvement of rulers is imperative and why has it historically been considered taboo?

Answer: Dror argues that improvement of rulers is imperative because rulers and policymakers make critical decisions that affect the lives of millions. Even the best rulers often fail, and many make mistakes that could have been avoided with proper training. History shows that great leaders like Alexander were trained by philosophers like Aristotle, yet in modern times, the

improvement of rulers is considered taboo — it is seen as questioning their legitimacy, authority, or natural abilities. This taboo is problematic because it prevents the development of better governance and leads to continued dissatisfaction with leaders. Dror challenges this taboo by arguing that just as we train doctors, engineers, and military officers, we must also train policymakers to develop the cognitive, knowledge, political, institutional, and risk-related capacities required for grand policy thinking.

- *In Pakistan, the taboo against training policymakers has meant that many politicians and bureaucrats enter office without adequate preparation, leading to poor policy decisions, implementation failures, and repeated governance crises.*

SECTION 5 — LESSON QUIZ

1. What are the five types of capacities that policymakers need to develop according to this lesson? (Cognitive, Knowledge, Political, Institutional, and Risk/Problem Solving capacities)
2. What is the difference between routine decisions and critical decisions in policy making? (Routine decisions do not make much difference, while critical decisions and long-term strategies do make a significant difference)
3. Which scholar emphasized the need for "grand policy thinking" and argued that improvement of rulers is imperative? (Yehezkel Dror)
4. What is an example of a leader who was trained in history as mentioned in the lesson? (Alexander by Aristotle)
5. Why are local governments in Pakistan particularly in need of training for policymaking? (Because they need decisions that give vision to regions and require grand policy crafting qualities)

SECTION 1 — LESSON HEADING

Lesson 42: Postmodernism and Public Policy — From Modernist Rationality to Postmodernist Pluralism

SECTION 2 — DEEP EXPLANATION

PART A — Opening Analogy:

Socho tumhare ghar mein pehle ek strict rule tha — "sab ko subah 7 baje uthna hai aur exactly 8 baje breakfast karna hai." Yeh rule science par based tha, ek expert (jaani maani nutritionist) ne bataya tha, aur sab ko follow karna tha chahe woh raat ko der tak kaam karein ya nahi. Lekin ab ghar mein kuch log kehte hain ke "main 9 baje uthta hoon aur mujhe theek lagta hai," koi kehta hai "main raat ko parhta hoon toh subah der tak sota hoon." Ab rule flexibility hai, sab ki apni zaroorat aur routine hai. Modernist public policy pehle wali strict, ek-jaisi, expert-based policy hai. Postmodernist public policy doosri wali hai — jo diversity, culture, aur local traditions ko importance deti hai, aur sab ki baat sunti hai.

PART B — Key Content List:

Theories:

1. **Modernist Public Policy:** Modernism is an era, an ism, and a process representing a break with pre-modern traditions. It emphasizes science, reason, secularism, progress, economic development, individualism, managerialism, objectivity, and neutrality. Modernist public policy is a project of modernity that assists the modern state in modernization through social engineering for development. It relies on universally valid grand totalizing metanarratives, rational and unified subjects, linear progress, absolute truths, and methods of natural science applied to policy.
2. **Characteristics of Modernist Policymaking:** It involves rational planning of ideal social orders, gives too much power to experts and bureaucracy, relies on rational analysis, and eschews lived experience and history. The modus operandi is "Seeing Like a State" — top-down planning that ignores local realities. It has largely failed, becoming obsolete and leading to alienated citizens, distance from government, and "bumper sticker slogans" that replace substantive engagement.
3. **Postmodernist Public Policy:** Postmodernism is also an era, ism, and process representing a break with modernism and positivism. It embraces chaos, pluralism, culture, superstition, happiness, and encourages plural voices in policy debates. Postmodernist public policy is a postmodern response that does not treat development as the only end goal, values locally valid local narratives, traditions, and aspirations, and does not necessarily see progress as needed.
4. **Characteristics of Postmodernist Policymaking:** It accepts multiple truths and uses deliberative, communicative, and collaborative planning methods. Communities lead policy debates, and methods from literature, democracy, and deliberation are used alongside or instead of scientific methods. The modus operandi emphasizes citizens'

analysis and networks rather than top-down expertise. It is considered empowering people and democratizing policy processes.

5. **Key Scholars of Postmodernist Public Policy:** Foundational works include Robert Formaini's *The Myth of Scientific Public Policy* (1990), David Harvey's *The Condition of Postmodernity* (1992), James Scott's *Seeing Like a State* (1998), Hugh T. Miller's *Postmodern Public Policy* (2012), John B. Conn's *Postmodernism and Public Policy* (2012), Fenwick and McMillan's *Public Management in the Postmodern Era* (2010), Miller and Fox's *Postmodern Public Administration* (2007), Griffin and Falk's *Postmodern Politics for a Planet in Crisis* (1993), Frank Fischer's *Reframing Public Policy* (2003), and SE McClilan's *Planning for a Postmodern Era* (2012).
6. **Future of Postmodern Policy:** The future is likely to see more identity-based claims on public policy, environmental movements, climate change activism, addressing social problems with limited resources, recognition of limits to economic growth, and challenges to the legitimacy of government. These trends suggest a continued shift away from purely modernist, technocratic policy approaches toward more pluralistic, participatory, and context-sensitive approaches.

SECTION 3 — EXAMPLE

Socho Lahore mein smog ka masla hai. Modernist approach yeh hogi ke government ke experts baith kar kehain ke "hum ne smog ka data analyze kiya hai, yeh factories aur vehicles ki wajah se hai, hum ne yeh regulation pass ki ke yeh factories band karni hain aur yeh vehicles allow nahi." Lekin is mein local logon ki nahi suni gayi — jo factory workers hain unki naukri chali jaati hai, aur jo kisaan hain woh kehte hain ke humari taraf se bhi smog mein contribution hai. Postmodernist approach yeh hogi ke government har taraf se logon ko bithaaye — factory owners, workers, kisaan, doctors, aur awam — aur sab ko baat karne de. Sab apni apni kahani sunaye, aur phir mil kar faisla karein ke smog ka kya hal nikalein. Shayed koi solution aaye jo sab ko theek lage aur local conditions ke mutabiq ho.

SECTION 4 — CONCEPTUAL QUESTIONS

Q: What are the main differences between modernist and postmodernist approaches to public policy?

Answer: Modernist public policy is characterized by a belief in science, reason, objectivity, and universal truths. It relies on experts and technical analysis, views policy as social engineering for development, and emphasizes rational planning and bureaucratic implementation. It assumes

linear progress and treats citizens as passive recipients of policy. Postmodernist public policy, by contrast, is characterized by pluralism, diversity, and an acceptance of multiple truths. It emphasizes citizen participation, local narratives, and deliberative decision-making. It does not assume that development or progress is the only goal and questions the authority of experts and bureaucrats. Postmodernist policy uses methods from literature and deliberative democracy rather than purely scientific methods, and it aims to empower communities and democratize the policy process rather than impose top-down solutions.

- *In Pakistan, modernist policy would have experts in Islamabad designing a national education curriculum without local input, while postmodernist policy would involve local communities, teachers, and parents in deciding what education should look like for their children.*

Q: Why has modernist policymaking become obsolete according to postmodernist thinkers, and what are the consequences of this obsolescence?

Answer: Postmodernist thinkers argue that modernist policymaking has become obsolete because it alienates citizens, creates distance between government and people, and fails to account for diversity and complexity. It relies on grand metanarratives and absolute truths that do not reflect the pluralistic reality of societies. The consequences of this obsolescence include citizens feeling disconnected from government, policy failures due to ignoring local contexts, and the emergence of "bumper sticker slogans" that reduce complex issues to simplistic formulas. Modernist policy also gives too much power to experts and bureaucrats, which can lead to technocratic tyranny, the suppression of alternative perspectives, and policies that serve elite interests rather than public needs. As societies become more diverse and complex, modernist approaches become increasingly inadequate for addressing social problems.

- *In Pakistan, the modernist approach to urban planning in Karachi has led to policies that ignore informal settlements and the lived realities of slum dwellers, resulting in failed housing policies and increasing inequality.*

SECTION 5 — LESSON QUIZ

1. What does modernist public policy emphasize as the primary sources of knowledge? (Science, reason, objectivity, and methods of natural science)
2. What is the "Seeing Like a State" modus operandi in modernist policymaking? (Top-down rational planning of ideal social orders with too much power to experts)
3. What methods does postmodernist public policy advocate instead of purely scientific methods? (Methods of literature, democracy, and deliberation)

4. Which scholar wrote "Seeing Like a State" (1998) which critiques modernist top-down planning? (James Scott)
5. What trends does the future of postmodern policy include? (Identity-based claims, environmental movements, climate change, limits to economic growth, and challenges to government legitimacy)

Lesson 43: Collaborative Planning

SECTION 1 — LESSON HEADING

Lesson 43: Collaborative Planning

SECTION 2 — DEEP EXPLANATION

Deep Explanation

PART A — Opening Analogy:

Socho tumhare mohalle mein koi nala banwana hai. Purana tareeqa yeh tha ke government ka engineer aata, apni marzi se map banata, aur kehta ke yahan se nala guzarein ge — chahe woh kisi ke ghar ke saamne se ho ya kisi ki zameen kaat kar. Log kehte the ke humein kisi ne nahi poocha. Ab socho ke mohalla committee, dukaan daar, aur aurtein sab baith ke discuss karein ke nala kis taraf jaaye, kis ka nuqsan hoga aur kis ko faida, aur sab ki rai shaamil ho. Yahi collaborative planning hai — jab log apni jagah ki planning khud mil kar karein, na ke koi upar se thop de.

PART B — Key Content List:

Key Points:

1. **Crisis of Classical Rational Planning:** The traditional top-down, expert-driven model of planning failed because it ignored local knowledge, was inflexible, and often served the interests of the elite rather than the public.
2. **Origins of Collaborative Planning:** Emerging in the 1990s, this approach was a direct response to the failures of rational planning and was influenced by theories of communicative and deliberative democracy.
3. **Patsy Healey:** A key thinker who argued for planning as a process of interactive debate and dialogue among stakeholders, rather than a purely technical exercise.

4. **John Forester:** He contributed to planning theory by emphasizing the communicative turn and the importance of listening, argumentation, and practical wisdom in planning practice.
5. **Postpositivism:** Collaborative planning is built on a postpositivist worldview which rejects the idea that planning can be a purely objective, scientific, and mechanical process like in natural sciences.
6. **Collaborative Planning in Pakistan (ISDP-2035):** In Pakistan, the Integrated Strategic Development Program 2035 aims to give local governments a central role in planning, requiring a significant change in the culture of government.
7. **Arif Hasan's Question:** The renowned Pakistani architect and planner challenges the status quo, asking whether planning institutions truly empower local communities or simply perpetuate top-down control, highlighting the need for genuine collaboration.

SECTION 3 — EXAMPLE

Example:

Lahore mein agar naya Metro bus route banana hai, toh pehle government apne engineers se survey karwati thi aur route final kar deti thi. Logon ko baad mein pata chalta ke unka ilaqa kat gaya ya dukaan band karni par gayi. Collaborative planning mein yeh nahi hota. Is mein sarkar, traffic police, dukaan daar, aur mohalle ke log aik saath baithte hain, har koi apni mushkil bata sakta hai, aur phir sub mil kar route tay karte hain ke kis taraf se bus guzre taake zyada se zyada logon ko faida ho aur kisi ka nuqsan na ho. Yahi collaborative planning ka asal mafhoom hai — planning through debate.

SECTION 4 — CONCEPTUAL QUESTIONS

Conceptual Questions

Q: What is the fundamental difference between classical rational planning and collaborative planning, and why did the latter emerge as a response to the former? **Answer:** Classical rational planning assumes that technical experts can objectively determine the "best" solution for a society by using scientific methods and data, often without public input. Collaborative planning, in contrast, argues that planning is a social and political process where solutions are found through dialogue and debate among all stakeholders. It emerged as a response to the repeated failures of top-down, rational planning to address diverse local needs and its tendency to favor powerful interests over ordinary citizens.

- *For example, in Pakistan, large infrastructure projects like the Orange Line Metro Train in Lahore were criticized for lacking sufficient public consultation, a problem that collaborative planning aims to solve.*

Q: How would you apply the principles of collaborative planning to address a sanitation crisis in a Karachi neighbourhood, and why would this be an improvement over the traditional approach?

Answer: Applying collaborative planning to Karachi's sanitation crisis would mean moving beyond a purely technical solution designed by the government's engineering department. The process would involve bringing together the residents, local shopkeepers, community-based organizations, the municipal corporation's sanitation department, and perhaps even NGOs like the Orangi Pilot Project. They would collectively discuss the problem, identify the most affected areas, and agree on a practical, shared plan for cleaning the drains, managing waste, and ensuring maintenance. This is an improvement because it leverages local knowledge, builds community ownership for the solution, and ensures the plan is socially and culturally acceptable, leading to better implementation and sustainability.

- *The success of the Orangi Pilot Project itself is a testament to the power of a collaborative, community-led approach to solving sanitation problems.*

SECTION 5 — LESSON QUIZ

Lesson Quiz

1. Which planning theory emerged in the 1990s as a response to the failure of classical rational planning? (Collaborative planning)
 2. Who is the key thinker associated with the idea of "planning through debate"? (Patsy Healey)
 3. What is the name of the Pakistani government's program that aims to integrate collaborative planning with local governments? (Integrated Strategic Development Program 2035 / ISDP-2035)
 4. The rejection of the mechanical, natural science model in planning is known as what? (Postpositivism)
 5. Which famous Pakistani planner is known for challenging top-down planning practices in Pakistan? (Arif Hasan)
-
-

Lesson 44: Making Policy Work

SECTION 1 — LESSON HEADING

Lesson 44: Making Policy Work

SECTION 2 — DEEP EXPLANATION

Deep Explanation

PART A — Opening Analogy:

Socho tumhari ammi ne kaha ke ghar mein subah 8 baje se rozana saaf safai hogi. Yeh policy hai. Lekin agar har roz koi saaf nahi karta, jhadoo rakhi rehti hai, aur ghar mein kooda phaila hai, toh policy ka kya faida? Decision sirf faisla hai, results alag cheez hain. Isi tarah, government koi bhi policy bana leti hai, lekin asal masla yeh hai ke woh policy kaam karti hai ya nahi. Policy kaam tab karti hai jab government ke paas usay implement karne ki capacity, strength, aur direction ho. Policy banana ek baat hai, policy ko kaam karna bilkul doosri.

PART B — Key Content List:

Policy Tools:

1. **Policy Tool: Law and Regulation:** Laws are often the primary tool for policy, but they are difficult to rely on because they are costly, never fully implemented, and agencies often choose which laws to enforce, leading to a 'meta-problem' of achieving effective regulation.
2. **Policy Tool: Public Spending & Taxation:** Simply spending more money or taxing more does not guarantee good policy outcomes; success depends heavily on governance arrangements and the presence of wastage and corruption in the system.
3. **Policy Tool: Bureaucracy:** Bureaucracies can be ineffective policy tools because bureaucrats often resist change, fail to see problems from an outsider's perspective, and are driven by their own vested interests, power, and prestige.
4. **Policy Tool: Institutions:** Institutions can be highly effective for making policy work as they can enable speedy decisions, timely responses, and aggregate public knowledge, but highly centralized institutions can be detrimental to decision-making.
5. **How to Make Policy Work:** Overreliance on a single tool like law or finance can be counterproductive; institutions are better devices but take a long time to build, and a balance between tools is necessary.

SECTION 3 — EXAMPLE

Example:

Pakistan mein FBR (Federal Board of Revenue) ne tax collection barhane ke liye naya law banaya aur danda dikhaya ke agar log tax nahi bharenge toh saza hogi. Law bhi tha, lekin logon ko yakeen nahi tha ke woh enforce hoga. Aam log aur tajar tax bharna nahi chahte the kyunke unhe lagta tha ke yeh paisa kahan ja raha hai. Policy kaam nahi kari jab tak FBR ne apne system ko behtar banaya, logon ko samjhaya ke tax kyun zaroori hai, aur easy payment methods diye. Jab tak log khud cooperate na karein, sirf law se kuch nahi hota. Yahi policy tool ka istemal hai — law aur regulation ko enforce karna aur logon ko razi karna.

SECTION 4 — CONCEPTUAL QUESTIONS

Conceptual Questions

Q: According to the lecture, why does high public spending or the existence of a law often fail to produce the desired policy outcomes? **Answer:** High public spending often fails because it is plagued by wastage and poor governance, making it difficult to ensure money goes to the right place at the right time. Similarly, laws fail because they are often not fully implemented or enforced. Agencies may selectively enforce laws, and without the cooperation of society, even severe punishments don't change behavior. The outcome depends not on the policy itself, but on the capacity of the state and the governance arrangements to make it work.

- *For example, Pakistan's education sector has historically received significant funding, but learning outcomes have remained poor, often due to lax examinations and measurement system problems, not a lack of money.*

Q: Why are institutions considered a potentially effective policy tool, but also one that "takes long time" to build, according to the lecture on making policy work? **Answer:** Institutions are effective because they can provide the structure for speedy and consistent decision-making, avoiding the delays and excessive cross-checking that plague other methods. However, they are not a quick fix. Building effective institutions requires changing cultural norms, establishing trust, and developing a shared understanding of rules and procedures, which is a long-term process. This is why the state's capacity is central to making policy work, and this capacity takes decades to build.

- *In contrast, in Pakistan, the bureaucracy is a long-established institution, but it is often seen as a barrier to effective policy implementation because of its culture of resistance to change, showing that even established institutions need to be reformed to function effectively.*

SECTION 5 — LESSON QUIZ

Lesson Quiz

1. According to the lecture, what do policy decisions, implementation, and states need to produce actual outcomes? (Capacity, Strength, and Direction)
2. Which policy tool is described as having a 'meta-problem' of achieving effective regulation due to selective enforcement? (Law and Regulation)
3. A policy tool that can enable speedy decisions but is worse when it is highly centralized is a(n) _____. (Institution)
4. The scholar who wrote "Strong Societies and Weak States" is _____. (Joel S. Migdal)

5. Overreliance on which single policy tool is said to be counterproductive and can crowd out ethical or voluntary motivation? (Finance)

Lesson 45: Theorizing in Public Policy

SECTION 1 — LESSON HEADING

Lesson 45: Theorizing in Public Policy

SECTION 2 — DEEP EXPLANATION

Deep Explanation

PART A — Opening Analogy:

Socho tumhe gaadi chalani hai. Agar sirf driving ka theory parh lo ke yeh pedal hai, yeh steering hai, lekin real road par kabhi nahi chalao, toh gaadi nahi chalegi. Agar sirf road par gaadi chalao bina rules samjhe, toh accident ho sakta hai. Theorizing dono ka milaap hai — jaise driving seekhte ho, pehle observation (instructor ko dekhte ho), phir usko action mein apply karte ho, phir apna khud ka andaaz banate ho. Public policy mein theorizing yahi hai — na ke sirf doosron ki theory yaad karo, balke apni observation aur practice se apni khud ki samajh (theory) banate raho. Aik process hai, product nahi.

PART B — Key Content List:

Key Points:

1. **Troubles of Theory:** Theory is often seen as abstract, difficult, and the opposite of practical, leading to a perception that it is useless, and students learn it without knowing how to apply it.
2. **Gap Between Method and Theory:** In public policy, methods have advanced quickly, but theory has not developed at the same pace, creating a significant gap that can be reduced by focusing on the process of theorizing.
3. **Theorizing as a Process:** Theorizing is the active process of producing a theory; it is a skill that is iterative and involves intuitive ways of thinking, unlike theory which is a static product.
4. **C. Wright Mills' Call:** The influential sociologist argued that every scholar should be their own theorist and methodologist, integrating theory and method into the practice of a craft.
5. **Ways of Theorizing:** The lecture outlines different methods for theorizing, including induction (building theory from observations), deduction (testing theory with

observations), generalizing, model-building, using analogies, and abduction (inferring the most likely explanation).

6. **Basic Rules of Theorizing:** Foundational rules include practicing "mental hygiene" to observe openly, developing a tentative theory or explanation, and using tools like naming, conceptualizing, analogies, and metaphors to build understanding.

SECTION 3 — EXAMPLE

Example:

Socho Pakistan mein aik student hai jo dekhta hai ke har baar jab bhi petrol ki qeemat barhti hai, toh sabzi mandi mein sabziyon ke daam bhi barh jaate hain. Woh theory mein parh chuka hai ke "inflation ka effect hota hai", lekin woh khud observe karta hai aur sochta hai ke "shayad transport cost barhne ki wajah se aisa hota hai." Phir woh data collect karta hai, doosre markets mein check karta hai, aur apni ek choti si theory banata hai. Yehi theorizing hai — na ke sirf kitaab ki theory yaad kare, balke apni observation se khud result nikaale aur samjhe ke Pakistan mein yeh kyun ho raha hai.

SECTION 4 — CONCEPTUAL QUESTIONS

Conceptual Questions

Q: What is the main difference between "theory" and "theorizing" as described in the lecture, and why is this distinction important for students of public policy? **Answer:** "Theory" is presented as a static product or a finished lens through which we view the world, while "theorizing" is the active, iterative process of producing that theory. The distinction is crucial because by focusing only on theory, students learn the conclusions of others without understanding how they were reached. Theorizing encourages students to be active participants in their learning, to connect their observations to their own empirical work, and to develop their own analytical skills, making theory less abstract and more practical.

- *For example, a student who simply learns the theory of "incrementalism" understands it as a concept. But a student who theorizes asks "Does incrementalism actually explain how Pakistan's budget is made?" and observes the process to build their own understanding.*

Q: According to the lesson, what are some of the basic rules or ways to begin "theorizing" one's own empirical work, and how can this help overcome the "troubles of theory"? **Answer:** To begin theorizing, one should practice "mental hygiene"—observing the world openly without rigid preconceptions. From there, they should develop a tentative explanation for what they observe, using tools like naming, conceptualizing, analogies, and metaphors. This process helps overcome the "troubles of theory" because it shifts the focus from passively memorizing abstract

and difficult concepts to actively building understanding from one's own observations and practice. It makes theory a skill, not just a subject, bridging the gap between abstract knowledge and practical application.

- *For instance, a student might theorize about why Lahore's traffic jams are so bad by observing them, naming key factors (like "missing public transport" or "lack of enforcement"), and building a model to explain the phenomenon, thereby moving beyond just complaining about the problem.*

SECTION 5 — LESSON QUIZ

Lesson Quiz

1. What is the active process of producing a theory called? (Theorizing)
2. According to the lecture, the sociologist who argued that a scholar should be their own theorist and methodologist is _____. (C. Wright Mills)
3. Which method of theorizing involves building a theory based on observations? (Induction)
4. What is the term for one of the 'ways of theorizing' that involves inferring the most likely explanation from a set of observations? (Abduction)
5. What is the first basic rule of theorizing, according to the lecture, which involves observing openly? (Mental hygiene)
