EDU406 – Final Term Past Papers File by Tanveer Online Academy

(Subjective)

Question: Process of peer observation?

Answer: The peer observation process involves planning, observation, feedback, reflection, and follow-up. First, the observer and teacher discuss goals and focus areas. Then, the observer attends the class, taking detailed notes. Afterward, they meet to provide constructive feedback. The teacher reflects on the feedback and considers how to implement suggestions. Finally, follow-up observations may be conducted to assess progress and provide ongoing support.

Question: Three stages of grounded theory

Answer: data collection, note-taking, coding and memorizing occur simultaneously from the beginning. Sorting occurs when all categories are saturated. Writing occurs after sorting.

Question: Phases of Dewey's extension to models?

Answer: Reflective thinking takes time and requires one to engage in several different —phases or —aspects of reflective thought:

1. Perplexity: responding to suggestions and ideas that appear when confronted with a problem.
2. Elaboration: referring to past experiences that are similar.
3. Hypotheses: developing several potential hypotheses.
4. Comparing hypotheses: finding some coherence within these hypotheses
5. Taking action: experiencing —mastery satisfaction, enjoyment when selecting and then acting on these hypotheses (Dewey, 1933, pp. 106-115).

Question: How does socratic method helps in developing critical thinking skills?

Answer: The Socratic method helps develop critical thinking skills by encouraging questioning and dialogue. Through asking and answering questions, students are prompted to think deeply, challenge assumptions, and explore different perspectives. This process enhances their ability to analyze, reason, and articulate their thoughts clearly.

Question: Teacher growth model?

Answer: The teacher growth model focuses on continuous professional development through self-reflection, goal-setting, collaboration, and feedback. Teachers identify areas for improvement, set specific goals, seek out resources and training, and engage in peer observations and mentoring. Regular reflection and assessment of progress ensure ongoing growth and improvement in teaching practices.

Question: Name six phases of Dewey extension model?

Answer: Dewey's extension model includes identifying a problem, gathering information, proposing a solution, testing the solution, evaluating results, and reflecting on the process.

Question: What are the 3 principles of supervision?

Answer: The three principles of supervision are support, guidance, and feedback to improve teaching practices and student outcomes.

Question: What are the three stages of grounded theory?

Answer: The three stages of grounded theory are open coding (identifying themes), axial coding (linking categories), and selective coding (developing a theory).

Question: How does Socrates' method help teachers in developing critical thinking?

Answer: Socrates' method encourages questioning, dialogue, and critical examination of beliefs, helping students develop independent and reflective thinking skills.

Question: What is the teacher growth model?

Answer: The teacher growth model emphasizes continuous learning, professional development, and evolving teaching strategies for improving student outcomes.

Question: What are the 5 phases of Dewey's reflective cycle?

Answer: Dewey's reflective cycle involves experiencing, reflecting, conceptualizing, planning, and testing the solution.

Question: What are the stages of team development?

Answer: The stages of team development are forming, storming, norming, performing, and adjourning.

Question: Why is teaching seen as an art rather than a science?

Answer: Teaching is seen as an art because it involves creativity, intuition, and personal interactions that go beyond structured theories and methods.

Question: What does it mean for a teacher to be a lifelong learner?

Answer: Being a lifelong learner means that a teacher continuously seeks knowledge, improves their skills, and adapts to new teaching strategies throughout their career.

Question: What is the difference between homogeneous and heterogeneous?

Answer: Homogeneous refers to a group that is similar in nature or characteristics, while heterogeneous refers to a diverse group with varied characteristics.

Question: What are dialogic diaries?

Answer: Dialogic diaries are reflective journals that encourage ongoing dialogue between a teacher and their thoughts, fostering deeper reflection on teaching experiences.

Question: What are the stages of grounded theory?

Answer: The stages of grounded theory are similar to the three stages mentioned earlier: open coding, axial coding, and selective coding, to build a grounded theory.

Question: What are Dewey's phases?

Answer: Dewey's phases include problem identification, inquiry, suggestion, reasoning, and solution testing.

Question: What is Boud's model?

Answer: Boud's model emphasizes reflection on experience, focusing on the critical analysis and learning gained from real-world situations.

Question: What is Johns' model?

Answer: Johns' model focuses on reflective practice, using structured reflection through a series of questions to analyze and improve practice.

Question: What is higher-order thinking?

Answer: Higher-order thinking involves analysis, evaluation, synthesis, and critical thinking beyond basic memorization or recall.

Question: What is the moral-ethical dimension in reflective practice (3)?

Answer: The moral-ethical dimension in reflective practice includes accountability, responsibility, and ensuring that teaching practices uphold ethical standards.

Question: What is the teacher growth model (5)?

Answer: The teacher growth model includes stages such as novice, advanced beginner, competent, proficient, and expert, each with increasing skill development.

Question: What are the four steps of the Socratic method (5)?

Answer: The Socratic method includes asking a question, encouraging dialogue, critically examining answers, and guiding students toward self-discovery.

Question: What is the difference between inward-looking and outward-looking reflection (5)?

Answer: Inward-looking reflection focuses on self-awareness and personal insights, while outward-looking reflection considers the external factors affecting practice, like student needs and context.

Question: What are the stages of team development (3)?

Answer: The stages of team development are forming, storming, and norming, focusing on collaboration and resolving conflicts.

Question: What is the modern version of Dewey's model of reflection (5)?

Answer: The modern version of Dewey's model includes experiencing, questioning, analyzing, planning, and evaluating solutions in reflective practice.

Question: What is the role of the teacher as a reflective practitioner in the classroom (3)?

Answer: The teacher as a reflective practitioner evaluates their teaching, adjusts based on student feedback, and continuously strives to improve their practice.

Question: What is apprenticeship inquiry (3)?

Answer: Apprenticeship inquiry involves learning through guided practice, where teachers and students collaborate to explore and reflect on learning experiences.

Question: What is action research?

Answer: Action research involves teachers identifying an issue, experimenting with strategies, and evaluating the results to improve their practice and student outcomes.

Question: What is the 7-step process?

Answer: The 7-step process involves identifying a problem, gathering information, analyzing data, forming hypotheses, testing solutions, evaluating results, and reflecting on the outcomes.

Question: What is John Dewey's model?

Answer: Dewey's model focuses on reflective thinking, emphasizing problem-solving through inquiry, evaluation, and continuous reflection on experiences.

Question: What is the difference between looking inward vs looking outward?

Answer: Looking inward reflects on personal experiences and self-awareness, while looking outward focuses on external factors such as context, student needs, and the learning environment.

Question: What is the 4D model/5D model?

Answer: The 4D model (Discover, Define, Develop, Deliver) and 5D model add a fifth step, "Determine," which helps in evaluating and adjusting based on outcomes.

Question: What are the types of supervision?

Answer: Types of supervision include instructional, administrative, and developmental supervision, each focusing on different aspects of teacher support and evaluation.

Question: What is the professional relationship of teacher and pupil in class in terms of reflection?

Answer: A reflective teacher builds a professional, respectful relationship with students by assessing their needs, adapting teaching methods, and fostering an environment conducive to learning.

Question: What are the 3 stages of Boud's Model?

Answer: Boud's Model includes returning to experience, attending to feelings, and reevaluating the experience, allowing for critical reflection.

Question: What is professional development planning?

Answer: Professional development planning involves setting goals, identifying resources, and creating a roadmap for continuous improvement in teaching skills and knowledge.

Question: What are the 3 purposes of action research?

Answer: The purposes of action research are to solve specific problems, improve teaching practices, and enhance student learning outcomes through reflective inquiry.

Question: What are the 3 principles of supervision?

Answer: The three principles of supervision are support, guidance, and feedback, aimed at improving teaching effectiveness and student learning.

Question: What are the 5 stages of Dewey's reflective cycle?

Answer: The five stages of Dewey's reflective cycle are experiencing, reflecting, conceptualizing, planning, and testing the solution.

Question: What is the teacher growth model?

Answer: The teacher growth model describes the progression from novice to expert, including stages like beginner, competent, proficient, and expert, to guide teachers' professional development.

Question: How does Socrates' method help teachers in developing critical thinking?

Answer: Socrates' method promotes questioning and dialogue, encouraging students to critically examine assumptions and reason through problems, which helps develop critical thinking.

Question: What is the process of peer practice?

Answer: Peer practice involves teachers working together to observe, give feedback, and reflect on each other's teaching practices, aiming to improve instructional effectiveness.

Question: What is the importance of "taking in" the problem as the reflective practitioner?

Answer: Taking in the problem helps the reflective practitioner understand the root causes, analyze the situation deeply, and make informed decisions on how to improve practice.

Question: What are the 6 stages of Dewey's model?

Answer: Dewey's six stages are: 1) Identification of the problem, 2) Inquiry, 3) Suggestion, 4) Testing solutions, 5) Reasoning, and 6) Solution.

Question: What is the role of the teacher in modern learning as a reflective practitioner?

Answer: As a reflective practitioner, the teacher continually assesses their teaching, adapts to students' needs, and integrates feedback for continuous improvement.

Question: What is the importance of self-regulated learning in teaching?

Answer: Self-regulated learning helps students take responsibility for their learning, set goals, monitor progress, and adjust strategies, fostering independence and accountability.

Question: What is the 4D cycle?

Answer: The 4D cycle consists of Discover, Define, Develop, and Deliver, used for problem-solving and improving practices.

Question: What is the difference between homogeneous and heterogeneous teams?

Answer: Homogeneous teams consist of members with similar skills and characteristics, while heterogeneous teams include diverse backgrounds, skills, and perspectives.

Question: What are the six phases of Dewey's model?

Answer: The six phases are: 1) Identify the problem, 2) Inquiry, 3) Suggestion, 4) Testing solutions, 5) Reasoning, and 6) Solution.

Question: What are the 3 components of supervision?

Answer: The three components of supervision are planning, observation, and feedback aimed at improving instructional quality.

Question: What is the purpose of action research?

Answer: The purpose of action research is to identify problems, test interventions, and improve teaching and learning outcomes through reflective practice.

Question: What is teacher work as a reflective practitioner?

Answer: Teacher work as a reflective practitioner involves continuously evaluating and improving teaching methods, engaging with student feedback, and striving for professional growth.

Question: What is the 4D cycle?

Answer: The 4D cycle includes Discover, Define, Develop, and Deliver, focused on improving problem-solving and practices through an iterative process.

Question: What is teaching as a reflective practitioner?

Answer: Teaching as a reflective practitioner involves constantly evaluating one's own teaching practices, considering student feedback, and adjusting methods to improve learning outcomes.

Question: What is reflexive practice?

Answer: Reflexive practice refers to the ability of a professional to critically analyze their actions, decisions, and beliefs, leading to continuous improvement and self-awareness.

Question: What are three benefits of peer observation?

Answer: Peer observation provides feedback for professional growth, encourages collaborative learning, and offers new teaching strategies and perspectives.

Question: What are the six phases of Dewey's extension model?

Answer: The six phases of Dewey's extension model are: identifying the problem, gathering information, proposing solutions, reasoning, testing the solution, and evaluating results.

Question: What is the difference between homogeneous and heterogeneous?

Answer: Homogeneous groups have similar characteristics, while heterogeneous groups are diverse in skills, backgrounds, and perspectives.

Question: Why is ethical practice fundamental in action research?

Answer: Ethical practice ensures that action research is conducted responsibly, respecting participants' rights and promoting fairness and integrity in the research process.

Question: What is action research?

Answer: Action research involves identifying a problem, implementing solutions, and reflecting on the results to improve practice, often in educational settings.

Question: What is the 5D cycle?

Answer: The 5D cycle includes: Discover, Define, Develop, Deliver, and Determine, used to improve practices through structured problem-solving.

Question: What is peer observation?

Answer: Peer observation is when teachers observe each other's teaching to provide feedback, share ideas, and enhance professional development.

Question: What is IA (Appreciative Inquiry)?

Answer: Appreciative Inquiry (AI) is a positive, strengths-based approach to problem-solving that focuses on what works well in an organization rather than its problems.

Question: What is a team in educational context?

Answer: In education, a team refers to a group of educators working together to achieve common goals, collaborate, and improve teaching and learning.

Question: What is Appreciative Inquiry (AI)?

Answer: AI is a strengths-based approach where the focus is on identifying and building upon positive elements within an organization to foster growth and improvement.

Question: What are the key phases of Gibbs' Reflective Cycle (Topic 231, 232, 233, 234, 235)?

Answer: The key phases of Gibbs' Reflective Cycle are: Description, Feelings, Evaluation, Analysis, Conclusion, and Action Plan.

Question: What are the key phases of knowledge transformation in the SECI cycle?

Answer: The SECI cycle involves Socialization, Externalization, Combination, and Internalization to transform tacit knowledge into explicit knowledge and vice versa.

Question: What is work-based learning?

Answer: Work-based learning involves applying theoretical knowledge in practical, real-world work environments, fostering both skill development and practical understanding.

Question: What are the key outcomes of work-based learning?

Answer: Key outcomes of work-based learning include improved practical skills, enhanced problem-solving abilities, and better preparedness for real-world tasks.

Question: What are the stages of Gibbs' model?

Answer: The stages of Gibbs' model are: Description, Feelings, Evaluation, Analysis, Conclusion, and Action Plan.

Question: What is reflexive writing?

Answer: Reflexive writing involves critically analyzing one's experiences and reflecting on personal growth, decisions, and learning from those experiences.

Question: What are three premises that should be in a good teacher?

Answer: A good teacher should be empathetic, have strong communication skills, and possess a commitment to lifelong learning.

Question: What is the 5D cycle?

Answer: The 5D cycle consists of: Discover, Define, Develop, Deliver, and Determine, used for systematic problem-solving and continuous improvement.

Question: What is the difference between reflective and reflexive writing?

Answer: Reflective writing focuses on looking back at experiences and learning from them, while reflexive writing involves deeper self-examination and critique of one's actions and underlying assumptions.

Question: Explain Gibbs' model.

Answer: Gibbs' Reflective Cycle involves six stages: Description of the situation, Feelings experienced, Evaluation of what was good and bad, Analysis of the situation, Conclusion on what could be improved, and an Action Plan for future improvement.

Question: What is the difference between a model and a mentor?

Answer: A model is a method or framework for guiding behavior or practice, while a mentor is an experienced individual who provides advice, guidance, and support to someone less experienced.

Question: Describe inward and outward looking in reflection.

Answer: Inward looking reflection focuses on personal insights and self-awareness, while outward looking focuses on external factors such as context, student needs, and broader perspectives.

Question: What are the three components of Boud's model of reflective practice?

Answer: Boud's model includes returning to the experience, attending to feelings, and reevaluating the experience for deeper learning.

Question: Why is the lesson plan considered the backbone of learning?

Answer: A lesson plan provides structure, clear objectives, and organized activities that guide the learning process and ensure all necessary content is covered.

Question: What are three outcomes of observational learning for a reflective practitioner?

Answer: Observational learning outcomes include gaining new teaching strategies, identifying areas for improvement, and receiving constructive feedback for professional development.

Question: What are the six phases of Dewey's extension model?

Answer: The six phases are identifying the problem, gathering information, proposing solutions, reasoning, testing the solution, and evaluating results.

Question: How does Socrates' method help teachers in developing critical thinking?

Answer: Socrates' method fosters critical thinking by encouraging students to question assumptions, engage in dialogue, and think deeply about their responses and beliefs.

Question: What is Appreciative Inquiry (AI)?

Answer: Appreciative Inquiry focuses on recognizing strengths and positive attributes within an organization or group to foster improvement and innovation.

Question: "What was good or bad about the experience?" This question belongs to which stage of Gibbs' reflective cycle?

Answer: This question belongs to the **Evaluation** stage of Gibbs' Reflective Cycle, where one assesses the positive and negative aspects of the experience.

Question: What type of skill does a reflective practitioner need to develop?

Answer: A reflective practitioner needs to develop **critical thinking, self-awareness, analytical, and problem-solving skills** to effectively evaluate and improve their practices.
