_____refers to the group of people whose performance data are used as a reference for evaluating individual test scores.

Select correct option:

Normative sample

Purposive sample

Convenient sample

Individual sample

What is the mean of the stanine scale?

Select correct option:

Three

Four

Five

Six

Raven's Progressive Matrices (RPM) is an example of:

Select correct option:

Group test

Individual test

Speed test

Both A and B

Domain referenced tests are also known as_____.

Select correct option:

Criterion reference test

Diagnostic reference Test

Summative Test

Survey test

Touseef

_____was a meteorologist, who is also considered to be the founder of differential psychology.

Select correct option:

Galton

Darwin

Cattell

Simon

A normal distribution is usually:

Select correct option:

Asymmetrical

Bilateral

Smooth

Rectangular

Which of the following test can be most useful for testing basic skills like reading and arithmetic at elementary levels?

Select correct option:

Survey tests

Summative Tests

Diagnostic reference Tools

Domain-referenced tests

Which of the following schedule was developed by Gesell to see the approximate developmental level that a child has achieved in months?

Select correct option:

The Gesell Developmental Schedule

The Gesell Growing Schedule

The Gesell Progressive Schedule

The Gesell Age-related Schedule

Touseef

Age norms are type of standardization that depicts the level of test performance for each separate _____ in a normative sample.

Select correct option:

School grade

Age group

Mentally challenged group

Police grade

Derived scores of any test not only tell about the relative standing of the participants in the test but also provide _____.

Select correct option:

Outcome measures

Atypical measures

Comparable measures

Intermediate measures

Question # 1 of 10 (Start time: 08:21:23 PM) Total Marks: 1

APA stands for_____.

Select correct option:

American philological association

American psychosomatic association

American psychological association

American psychosocial association

Gestures and actions which are exhibited by majority of people are called _____.

Select correct option:

Normal behaviour

Nonstandard behaviour

Touseef

Scarce behaviour

Odd behaviour

Prior learning is an example of which of the following error factor of measurement?

Select correct option:

Test related factors

Test administration process

Examinee related variables

True scores of test

SAT is an example of:

Select correct option:

Achievement test

Intelligence test

Personality test

Aptitude test

As the size of sample increases, the chance of making error will:

Select correct option:

Reduce

Increase

Moderate

Rise

Normal distribution curve is a _____.

Select correct option:

Hypothetical curve

Imaginary curve

Regular curve

Polar curve

Touseef

To measure test-retest reliability, _____ subjects and items are used.

Select correct option:

Diverse

Different

Same

Many

Followings are the examples of group tests EXCEPT:

Select correct option:

Wechsler Adult Intelligence Scale

Multidimensional Aptitude Test

Cognitive Abilities Test

Scholastic Assessment Test

Writing an essay is a type of which of the following format?

Select correct option:

Likert format

Category format

Response format

Checklists

Following are the possible factors that may cause error in measurement EXCEPT:

Select correct option:

Test related factors

Test administration process

Examinee related variables

True scores of test

_____is a measure of the difference between the proportion of high scorers and low scorers for answering the item correctly.

Touseef

Select correct option:

The item discrimination index

Zero item difficulty index

Multiple item difficulty index

None item difficulty index

According to which of the index, nobody can attempt the items correctly in a given test?

Zero item difficulty index

Nil item difficulty index

Multiple item difficulty index

None item difficulty index

_____ refers to the proportion of people who are expected to succeed on a criterion if they are chosen at random.

Base Rates

Hit Rates

Selected Rates

Fix Rates

The value of item difficulty index may range from:

Zero to 1

Zero to 1.5

Zero to 2

Zero to 2.5

Touseef

When items are discriminating between the two groups then they should be _____in the test.

Retained

Discarded

Improved

Deleted

In heterogeneous groups, the value of correlation will be _____ as compared to homogeneous groups.

Lower

Higher

Moderate

Best

Which of the following reflects that a test forecasts score on the basis of a criterion at some future time?

Content validity evidence

Criterion- related evidence

Construct validity evidence

Predictive validity evidence

In writing multiple choice questions, test developer is used to include incorrect options in answers; known as what?

Phrases

Distracters

Symbols

Options

Touseef

A test score above which will be the selection level and below which people will be rejected is called:

Cut- off score

True score

Standard score

Z-score

Verbal fluency is an example of:

Attitude

Verbatim

Construct

Content

Which of the following test is used for measuring brain damage and psychological deficit?

Magnetic Resonance Imaging

Mental Imagery Test

Benton Visual Retention Test

Magnetic Resonance Tomography

Abstract and logical thought develops at:

Sensorimotor Stage

Preoperational Stage

Concrete Operational Stage

Formal Operational Stage

The Strong- Campbell Interest Inventory comprised of:

325 items

326 items

Touseef

324 items

323 items

_____ test is used parallel to GRE in Pakistan.

SAT

GAT

CAT

MMRI

_____ is a projective test which is used to evaluate an individual's thought patterns, observational capacity, and emotional responses with a help of abstract pictures.

COPE

TAT

MRI

MMPI

According to Piaget's theory, thought is systematic and logical, but only with regard to concrete objects. This concept is related to which of the following stage of cognitive development?

Sensorimotor Stage

Preoperational Stage

Concrete Operational Stage

Formal Operational Stage

Which of the following intelligence test has two sets of norms; grade- wise and age- wise?

Kuhlmann-Anderson Test

Henmon-Nelson Test

Simon-Binet intelligence test

Stanford-Binet intelligence test

Touseef

Identify the valuable source of quick data collection for research projects.

Individual tests

Speed tests

Aptitude tests

Group tests

_____refers to the lowest level or point where two consecutive items of approximately equal difficulty are passed.

Basal age

Mental age

Chronological age

Basic age

Bayley Scales of Infant Development is used to measure:

Infants' cognitive and motor functions

Infants' cognitive and social functions

Infants' cognitive and spatial functions

Infants' cognitive and neural functions

Brazelton Neonatal Assessment Scale (BNAS) is used to measure:

Newborns'competence

Adolescents'competence

Adults'competence

Orders'competence

Raven Progressive Matrices (RPM) is a non-verbal multiple choice measures of:

Touseef

Crystal intelligence

General intelligence

Fluid intelligence

Formal intelligence

Which of the following concept describes that some properties of an object/mass matter remain unchanged or invariant while some others have been changed?

Egocentric

Object permanence

Conservation

Symbolism

Social Cognitive Approach to Personality emphasizes the reciprocity between:

Individuals and their environment

Individuals and their family

Individuals and their schooling

Individuals and their thinking

Bayley Scales of Infant Development is meant for children within age range of _____.

2-30 months

2-10 months

2-40 months

2-20 months

The_____ section of GRE includes measurement of reasoning, antonyms, analogies and paragraph comprehension.

Select correct option:

Touseef

Verbal

Non-verbal

Analytical

Quantitative

Irrational Beliefs Test contains how many items?

100 items

101 items

155 items

115 items

In cognitive- behavioral assessment,determining of critical behaviors which are in excess or deficit is the _____ step of above mentioned particluar tool.

First

Second

Third

Fourth

_____ is a statistical method in which relationships between a large numbers of variables is summarized into fewer patterns.

Content analysis

Regression analysis

Factor analysis

Correlational analysis

Graduate Record Examination is an example of:

Speed test

Touseef

Class test

Personality test

Aptitude Test

Cognitive and behaviour strategies for coping with stress are known as:

Problem- focused strategies

Emotion- focused strategies

Avoidant- focused strategies

Support- focused strategies

MMPI has been developed by Hathaway and:

Kaplan

Gough

Cattell

McKinley

Sixteen Personality Factor Questionnaire was developed by:

Cattell

Gough

Pearson

Kaplan

Item difficulty index is represented by the symbol p and it varies between 0.0 and _____.

Select correct option:

1.0

1.5

2.0

2.5

Touseef

The outcome in which the person who is predicted to fail (rejected) and who actually would have failed and he or she had been accepted is referred to as _____.

Select correct option:

True positive

True negative

False positive

False negative

How many alternatives for each item are offered in the Likert format?

Select correct option:

Three

Four

Five

Six

Which of the following type of validity is established by showing that the behaviors sampled by the test are a representative sample of the attribute being measured?

Select correct option:

Content

Construct

Predictive

Concurrent

In which of the following format, ten alternatives are usually offered?

Select correct option:

Dichotomous format

Polychotomous format

Likert format

Category format

Which of the following option does NOT provide Information on psychological test?

Touseef

Select correct option:

Reference books

Publisher's catalogue

Journals

Newspapers

In multiple choice items, what do we call an incorrect alternative?

Select correct option:

Reflector

Distracter

Diverter

Simulator

Which one of the following tests can be utilized to assess the capability for a relatively specific task or type of skill?

Select correct option:

Personality tests

Achievement tests

Intelligence tests

Aptitude tests

In 1975, _____ has proposed a content validity ratio as a measure of the extent to which expert judges agree on content validity.

Select correct option:

Thorndike

James

Wundt

Lawshe

Scales of independent behavior-revised (SIB-R) consists of 259 behaviors items organized into _____ subscales.

Select correct option:

Touseef

12

13

14

15

Some individuals prefer structured roles such as bank teller or computer operator. Which of the following personality-environment type is being discussed here?

Select correct option:

Artistic

Social

Enterprising

Conventional

Which of the following research is used to determine the success or likely future success of a product or service?

Select correct option:

Human factors research

Organizational research

Marketing research

Social research

At which stage of cognitive development, children typically develop conservation and demonstrate limited capacities of logical reasoning?

Select correct option:

Sensorimotor

Preoperational

Concrete Operational

Formal Operational

Which of the following definition defines a concept in terms of the way it is measured?

Select correct option:

theoritical definition

Touseef

Factual definition

Conceptual definition

Operational definition

There is less opportunity to establish a rapport, obtain concentration and maintain the interest of the examinees in _____.

Select correct option:

Individual test

Stanford-Binet intelligence test

The Wechsler scaled

Group test

If a test length increases, then how will it affect the reliability of the test?

Select correct option:

It is affected but insignificantly

It will increase

It is not affected either way

It will decline

One of the fundamental purposes for evaluating capacity in an educational context is to determine students' strengths and weaknesses, the areas where they are doing well and those where they are doing poorly. Assessment for this purpose is called:

Select correct option:

Summative evaluation

Formative evaluation

Total evaluation

Comprehensive evaluation

Several problems whose answers must be drawn from a single list of possible answers are offered in _____.

Select correct option:

True false items

Touseef

Matching items

Short questions

Essay type questions

In which of the following test performance is evaluated not in relation to the set of tasks peruse but in relation to the performance of some more general reference group?

Select correct option:

Criterion referenced test

Mean referenced test

Norm referenced test

Standard referenced test

The nine subtests of the multilevel CogAt are grouped into three batteries, which of the following battery is NOT among them?

Select correct option:

Verbal battery

Nonverbal battery

Qualitative battery

Quantitative battery

Which of the following is an advantage of individual tests?

Select correct option:

Can provide wealth of information about a subject beyond test score

Scoring is typically more objective

Are cost efficient

Require less examiner's skill and training

Which of the following method of estimating reliability involves a) administering a test to a group of individuals, (b) splitting the test in half, and (c) correlating scores on one half of the test with scores on the other half?

Select correct option:

Test-retest methods

Touseef

Alternate forms methods

Split-half methods

Internal consistency methods

If a 33 years old man's performance on a task is equivalent to 11 years of boy. What will be his mental age? Explain it with reference to developmental norms. (3)

Your task is to develop three items basing upon "completion item format" using the construct of life satisfaction. (1+1+1)

Alia claims that Beck depression scale mainly involves concurrent validity and does not rely on predictive validity. How can you justify her statement? (3)

Suppose you want to get your best friend rated by your class fellows using Q- sort format. What five statements will you write to be used by the subjects? (5)

A mathematical ability test is validated on a sample comprising people of mixed abilities and background and later on it is administered to a group of accountants. How can this situation be threatening for validity of that test? (5)

what is the difference between psychological testing and psychological assessment? 3

when reliability is very necessary? 3

Item response theory is becoming very popular now a days, what are its distinguishing advantages? 5

what are grade norms? tell briefly 5

PSYCHOLOGICALTESTING AND MEASUREMENT PSY 631

Ali is supposed to get full marks in each type of test of his class? What type of bias it is?

Do you agree with Galton point of view that it would be "quite practicable to produce a highly gifted race of men by judicious marriages during several consecutive generations?" why or why not?

Write about Thematic Apperception Test

Difference between social and moral intelligence?

Difference between structured interview and case history interview

Touseef

Benefits of objective based question test

What type of assessment should be used to assess the reason behind a crime for a prisoner?

Develop a likert format scale for “happiness”

Touseef
