Lesson-19

MORPHOLOGY III

Topic-105: Coinage

What is coinage in morphology?

Coinage is the word formation process in which a new word is created either deliberately or accidentally without using other word formation processes.

Give an example of a coined word that became a general term.

Google, derived from Googleplex, later became the name of a company.

What are some older examples of coined words that became everyday language?

Aspirin, nylon, vaseline, zipper.

Explain how eponyms contribute to word formation.

Eponyms are words created based on the name of a person or a place, such as Hoover, Spangle, Sandwich, Jeans.

Provide examples of technical eponyms and their origins.

Fahrenheit (Gabriel Fahrenheit), Volt (Alessandro Volta), Watt (James Watt).

Topic-106: Borrowing

Define borrowing in linguistics.

Borrowing is the process by which a word from one language is adapted for use in another, resulting in loanwords.

Give examples of borrowed words and their source languages.

Croissant (French), Dope (Dutch), Lilac (Persian), Piano (Italian), Pretzel (German), etc.

What is loan translation, and provide an example.

Loan translation involves translating elements of a word into the borrowing language; e.g., "moment of truth" from Spanish "el momento de la verdad."

Topic-107: Compounding / Blending

Explain compounding as a word formation process.

Compounding involves joining two separate words to create a single form, e.g., bookcase, fingerprint.

Provide examples of blending.

Smog (smoke + fog), brunch (breakfast + lunch), motel (hotel + motor).

What is clipping, and give examples.

Clipping involves reducing a word, e.g., fax from facsimile, gas (gasoline), ad (advertisement).

Topic-108: Clipping

Differentiate between clipping and hypocorisms.

Clipping involves reducing words, while hypocorisms involve reducing longer words to single syllables with -y or -ie added.

Give examples of hypocorisms.

Movie (moving pictures), telly (television), Aussie (Australian), barbie (barbecue).

Topic-109: Acronyms

Define an acronym.

An acronym is a word or name formed from the initial components of a phrase or word, often individual letters.

Provide examples of acronyms.

CD (compact disk), VCR (video cassette recorder), NATO, NASA.

How are initials pronounced in acronyms?

Initials in acronyms are pronounced as new single words.

Topic-110: Derivation (Prefixes, Suffixes, Infixes)

What is a derivational affix, and how does it differ from an inflectional affix?

A derivational affix forms a word from another, differs from inflectional affixes by not being obligatory, occurring closer to the root, and having a more meaningful impact.

Give examples of prefixes and suffixes in English words.

Prefixes: un-, mis-. Suffixes: -less, -ish.

What is an infix, and provide examples in English.

Infix is an affix not commonly used in English; examples include "absogoddamlutely" and "fandamntastic."

Lesson-20

GRAMMAR I

Topic 111: Grammar

What does the word 'grammar' mean and its origin?

Answer: The word 'grammar' comes from the Greek word 'gramma,' meaning 'art of letters.'

Define grammar and its components.

Answer: Grammar is the set of structural rules governing the composition of clauses, phrases, and words in a natural language. It includes phonology, morphology, and syntax, complemented by phonetics, semantics, and pragmatics.

How do speakers acquire grammar in their native language?

Answer: Speakers acquire grammar in their native language primarily through observation, not conscious study or instruction, often during early childhood.

Name some early systematic grammars and their origins.

Answer: Yaska, Pāṇini, Pingala, Katyayana, and Patanjali were early systematic grammarians of Sanskrit, originating in Iron Age India.

What are the strict rules for combining words into phrases in English?

Answer: English has strict rules for combining words into phrases, such as Noun Phrase, Verb Phrase, Adjective Phrase, Adverb Phrase, and Prepositional Phrase.

Topic 112: Traditional Grammar

Define traditional grammar.

Answer: Traditional grammar is the collection of prescriptive rules and concepts about language structure, often based on Latin grammar principles and focusing on a historical model of proper language use.

Name some characteristics of traditional grammar.

Answer: Mechanics (Proper Punctuation), Style (Sentence Structure), Usage (Diction and Parts of Speech), and Style (Spelling).

Topic 113: The Parts of Speech

What is a part of speech in traditional grammar?

Answer: A part of speech is a category of words with similar grammatical properties, defined by early grammarians like Yāska and Dionysius Thrax.

Topic 114: Agreement

What are the categories involved in agreement in traditional grammar?

Answer: Number, person, tense, voice, and gender are categories involved in agreement in traditional grammar.

Explain how gender works in grammatical terms.

Answer: Grammatical gender is different from natural gender; it's based on noun type (masculine, feminine). Some languages, like Spanish and German, have different forms for articles and adjectives based on noun gender.

Topic 115: Grammatical Gender

Describe the difference between natural and grammatical gender.

Answer: Natural gender is based on sex (male and female), while grammatical gender is based on noun type (masculine, feminine) and is not tied to sex.

Provide examples of languages with grammatical gender.

Answer: Spanish (masculine and feminine) and German (masculine, feminine, and neuter) are languages with grammatical gender.

Topic 116: Traditional Analysis

Compare Latin and English verb forms in traditional analysis.

Answer: Latin verb forms vary based on person and number, while English verb forms are mostly the same.

Lesson-21

GRAMMAR II

Topic 117: The Prescriptive Approach

Define the prescriptive approach in grammar.

Answer: The prescriptive approach involves setting rules for the 'proper' use of a language, often based on historical models, such as not splitting infinitives or ending sentences with prepositions.

Provide examples of prescriptive rules.

Answer: Rules like not splitting infinitives and not ending sentences with prepositions are prescriptive in nature.

Topic 118: The Descriptive Approach

What is the descriptive approach in grammar?

Answer: The descriptive approach involves describing the regular structures of a language based on samples, emphasizing the grammaticality of sentences produced by native speakers.

Topic 119: Structural Analysis

Explain the focus of structural analysis in grammar.

Answer: Structural analysis investigates the distribution of forms in a language, using test-frames to identify grammatical categories based on sentence structures.

Topic 120: Constituent Analysis

What is constituent analysis in grammar?

Answer: Constituent analysis shows how small constituents in sentences combine to form larger constituents, involving determining how words form phrases.

Topic 121: Labeled and Bracketed Sentences

How does labeled and bracketed sentences help in grammar analysis?

Answer: Labeled and bracketed sentences show how constituents in sentence structures can be marked off, aiding in understanding sentence organization.

Topic-122: A Gaelic Sentence

Compare the sentence structures of Gaelic and English.

Answer: Gaelic sentence structure is different from English, and understanding these differences can help explain challenges in language learning, such as producing phrases like 'the book good' by Spanish learners of English.

Lesson-22

SYNTAX I

Topic-123: Introduction

What does the word 'syntax' originally mean?

Syntax originally means 'a putting together' or arrangement.

In recent attempts to analyze syntactic structure, what is the greater focus on?

The greater focus is on the underlying rule system used to produce or 'generate' sentences.

Provide an example of a correct prepositional phrase in English.

'Near London' is a correct prepositional phrase.

Explain why 'with dog' is not a correct prepositional phrase.

'Dog' should have the article 'a' with it, making it 'a dog.'

Topic-124: Generative Grammar

What is generative grammar?

Generative grammar is a linguistic theory that sees grammar as a system of rules generating grammatical sentences.

Who opposed the idea that each language is different from the other?

Noam Chomsky opposed the idea.

How is a sentence represented in generative grammar?

A sentence is represented as a tree with branches denoting subordinate and superordinate elements.

Topic-125: Properties of Generative Grammar

According to Chomsky, what is the basis for many properties of generative grammar?

Many properties arise from an 'innate' universal grammar common to all languages.

What is the crucial property that rules of generative grammar need?

The crucial property is recursion.

Provide an example of how generative grammar reveals relationships between superficially distinct sentences.

Example: "Charlie broke the window" and "The window was broken by Charlie."

Topic-126: Well-Formed Syntactic Structures

Define well-formedness in linguistics.

Well-formedness is the quality of a linguistic element conforming to the grammar of the language.

Give an example where grammatical well-formedness and semantic well-formedness do not coincide.

Example: "Colorless green ideas sleep furiously."

Topic-127: Finite Number of Rules

What does the statement 'A small set of rules operating on a large but finite set of words generates an infinite number of sentences' assume?

It assumes a bound and discrete view of elements, including rules, lexical items, and sentences.

Does the set of possible expressions in a given language have to be infinite?

No, it may or may not be infinite; the practical set of expressions is finite.

Topic-128: Recursion

Define recursion in the context of generative grammar.

Recursion is the ability of rules to be applied more than once in generating a structure.

What are the facts that grammar needs to capture about recursion?

A sentence can have another sentence inside it, a phrase can be repeated, and recursion is an essential feature of grammar.

Lesson-23

SYNTAX II

Topic 129: Surface Structure

What is surface structure in transformational and generative grammar?

Surface structure is the outward form of a sentence derived from deep structures through transformations.

How are deep and surface structures used in binary opposition?

Deep structure represents meaning, while surface structure is the actual sentence observed.

What does the surface structure correspond to in the syntactic representation of a sentence?

It corresponds to the structure of the sentence articulated and heard, providing input to the phonological component.

Topic 130: Deep Structure

What is the distinction between surface and deep structures in a sentence?

Surface structure is the outward form, while deep structure is the underlying abstract representation.

What is the deep structure of the sentences "Charlie broke the window" and "The window was broken by Charlie"?

The deep structure is the same for both, representing the basic components (Noun Phrase + Verb + Noun Phrase).

What is the significance of the deep structure in grammar?

It serves as an abstract level where elements determining structural interpretation are represented.

Topic 131: Structural Ambiguity

Provide an example of structural ambiguity in a sentence.

"Annie bumped into a man with an umbrella" has two distinct underlying interpretations, expressing structural ambiguity.

How can phrases be structurally ambiguous?

Phrases like "small boys and girls" can have different structural distinctions, for example, "small boys and (small) girls" or "small boys and (all) girls."

Topic 132: Symbols Used in Syntactic Description

What do the symbols 'S,' 'NP,' 'N,' 'Art,' 'V,' 'VP,' 'PP' represent in syntactic description?

'S' represents sentence, 'NP' noun phrase, 'N' noun, 'Art' article, 'V' verb, 'VP' verb phrase, 'PP' prepositional phrase.

Explain the use of the arrow symbol ($\rightarrow$) in syntactic rules.

The arrow is used in rules like $NP \rightarrow \text{Art } N$, indicating that a noun phrase rewrites as an article and a noun.

What is the purpose of curly brackets $\{\}$ in syntactic notation?

Curly brackets indicate that only one of the elements enclosed within must be selected.

Topic 133: Labelled Tree Diagrams

How are tree diagrams used to represent syntactic structures?

Tree diagrams visually represent syntactic structures, with labels (Art, N, NP) capturing the hierarchical organization.

What are the constituents at the top of a tree diagram for a sentence (S)?

At the top, a sentence (S) is divided into two constituents (NP and VP), with NP further divided into (Art and N) and VP into (V and NP).

Lesson-24

SYNTAX III (RULES OF SYNTACTIC DESCRIPTION)

Topic-134: Phrase Structure Rules

What are phrase structure rules?

Phrase structure rules are rules that form phrases of different types, such as noun phrase, verb phrase, and adjective phrase.

How can a tree diagram represent sentence structure?

A tree diagram can represent sentence structure either as a static representation at the bottom or dynamically to generate a large number of similar sentences.

What are phrase structure rules for NP, VP, and PP?

$NP \rightarrow \{\text{Art (Adj) N, Pro, PN}\}$

$VP \rightarrow V \text{ NP (PP) (Adv)}$

$PP \rightarrow \text{Prep NP}$

Topic-135: Lexical Rules

What do lexical rules do?

Lexical rules specify how words can rewrite constituents, such as N (nouns).

Provide examples of lexical rules.

$PN \rightarrow \{\text{Mary, George}\}$

$N \rightarrow \{\text{girl, dog, boy}\}$

$\text{Art} \rightarrow \{\text{a, the}\}$

$\text{Pro} \rightarrow \{\text{it, you}\}$

$V \rightarrow \{\text{followed, helped, saw}\}$

Topic-136: Back to Recursion

What is recursion in the context of phrase structure rules?

Recursion involves including sentence structures within other sentence structures, described traditionally as 'clauses.'

Give an example of a sentence with recursion.

John believed that [Cathy knew that [Mary helped George]].

Topic-137: Transformational Rules

What do transformational rules relate to?

Transformational rules (T-Rules) relate the spoken form of a sentence (surface structure) to its underlying meaning (deep structure).

Provide examples of transformations.

Deletion: A sentence undergoes transformation with the same meaning.

Imperative transformation: The meaning remains the same (e.g., You come home → Come home).

Insertion transformation.

Substitution transformation (e.g., Pronoun substitution).

Topic-138: Particle Movement

What is particle movement?

Particle movement involves relocating a particle in a construction made up of a verb and a particle.

Provide an example of obligatory movement with reflexes as objects.

Jane let herself out.

Topic-139: IC Analysis

What is Immediate Constituent (IC) analysis?

IC analysis is a method of sentence analysis that involves cutting a sentence into two until the smallest indivisible unit, morphemes, is reached.

How does expansion play a role in IC analysis?

Expansion refers to the substitution of one sequence of elements for another, aiding in making binary cuts during analysis.

What are some flaws of IC analysis?

It doesn't indicate the kind of elements in constituent parts.

It doesn't clearly show how phrases are built on specific elements.

It doesn't provide guidance on forming new sentences.

Lesson-25

SEMANTICS I

Topic 140: Definition

What is the origin of the word "semantics"?

The word "semantics" originates from the Greek word "sema," meaning 'symbol' or 'sign.'

According to Saussure, what does a linguistic sign consist of?

A linguistic sign consists of the signifier (sounds) and the signified (referent outside of language).

How does Halliday define "semantics"?

Halliday defines "semantics" as the entire system of meanings of a language, expressed by both grammar and vocabulary.

Topic 141: Types of Meaning

What does lexical meaning refer to?

Lexical meaning refers to the meaning of words in one of the four lexical word classes, usually found in dictionaries.

According to Geoffrey Leech, name two types of non-linguistic meanings.

Referential meaning and thematic meaning.

Topic 142: Conceptual or Denotative Meaning

What does conceptual or denotative meaning cover?

Conceptual or denotative meaning covers the basic, essential components of meaning conveyed by the literal use of a word.

How do poets and advertisers differ in their interest regarding word meanings?

Poets and advertisers are interested in associative meaning, while linguistic semantics focuses on analyzing conceptual meaning.

Topic 143: Associative or Connotative Meaning

What is connotative meaning?

Connotative meaning is the communicative value an expression has beyond its conceptual content and varies among individuals and societies.

Why is connotative meaning considered subjective?

Connotative meaning is subjective because it depends on personal interpretation and can vary among individuals.

Topic 144: Propositional Meaning

How is propositional meaning different from linguistic meaning?

Propositional meaning comes from the context of sentence use and is distinct from linguistic meaning, which does not carry truth-value.

Give an example of a factive sentence and a non-factive sentence.

Factive: "Sarah realizes that a jeep crashed into a barrier." Non-factive: "Sarah thinks that a jeep crashed into the barrier."

Topic 145: The Prosodic Meaning

What is prosody in linguistics?

Prosody is the study of the tune and rhythm of speech and how these features contribute to meaning.

Name one linguistic function of prosody.

Intonation, tone, stress, and rhythm are linguistic functions of prosody.

What does paralinguistic information in prosody indicate?

Paralinguistic information in prosody may indicate attitude or membership of a speech community.

Lesson-26

SEMANTICS II (SEMANTIC FEATURES and SEMANTIC ROLES)

Topic 146: Semantic Features

What is one way the study of basic conceptual meaning can be helpful?

It can help account for the 'oddness' experienced in sentences.

What is the oddness in sentences like "The hamburger ate the boy"?

It is not due to syntactic structure.

What must be significantly different for nouns like "hamburger" and "boy"?

The conceptual meaning or features of the nouns.

What is the crucial element for a noun to be the subject of the verb "ate"?

Animate being or a specific feature like '+animate'.

What does the approach of viewing words as 'containers' involve?

It involves considering words as carriers of basic types of meaning features.

Topic 147: Semantic Roles

What is a semantic role?

It's the underlying relationship a participant has with the main verb in a clause.

What do semantic roles indicate in a sentence?

They indicate the role played by each entity in a situation described by the sentence.

What is a drawback of the semantic role approach?

There is no agreement on which and how many roles are needed.

Topic 148: Agent

Define "Agent" in terms of semantic roles.

It is the doer of an event, typically the grammatical subject of the verb in an active clause.

What are the characteristics of a prototypical agent?

Conscious, acts with volition, and performs an action with a visible effect.

Topic 149: Theme

What is the theme in semantic roles?

It's the entity involved in or affected by the action.

Give an example of a sentence with a theme.

"The ball was red."

Can a theme be human?

Yes, for example, "The boy kicked the ball."

Topic 150: Instrument

What is the role of "Instrument" in semantic roles?

It is another entity used by an agent to perform an action.

Provide an example sentence with an instrument.

"The boy cut the rope with an old razor."

Topic 151: Experiencer, Location, Source, and Goal

Define "Experiencer" in semantic roles.

It's an entity that receives, accepts, experiences, or undergoes the effect of an action.

Give an example of a sentence with an experiencer.

"The boy feels sad."

What does "Location" represent in semantic roles?

It designates where an entity is in the description of an event.

Differentiate between "Source" and "Goal" in semantic roles.

Source is where the entity moves from, and Goal is where it moves to.

Provide an example sentence with both source and goal.

"We drove from Chicago to New Lahore."

Lesson-27

SEMANTICS III (LEXICAL RELATIONS)

Topic-152: Synonymy

What are words with very closely related meanings called?

Synonyms.

Provide examples of synonym pairs.

almost/nearly, big/large, broad/wide, buy/purchase, cab/taxi, car/automobile, couch/sofa, freedom/liberty.

Can synonyms always be substituted for each other in sentences?

Not always, it depends on formal versus informal uses and context.

Explain the concept of 'sameness' in synonymy.

The 'sameness' in synonymy doesn't necessarily mean total sameness; it varies in degrees.

Give an example of how synonymous forms may differ in formality.

"My father purchased a large automobile" vs. "My dad bought a big car."

Topic-153: Antonymy

What is antonymy?

Antonymy refers to the pair-wise relation of lexical items with semantically opposite meanings.

Provide examples of antonym pairs.

Alive/dead, big/small, fast/slow, happy/sad, hot/cold, long/short, male/female, married/single, old/new, rich/poor.

What are gradable antonyms?

Opposites along a scale, like big/small, allowing comparative constructions.

Explain non-gradable antonyms.

Direct opposites, not normally used in comparative constructions.

What are reversives in antonymy?

Pairs like enter/exit, pack/unpack, where one is not the negative of the other.

Topic-154: Hyponymy

What is hyponymy?

When the meaning of one word is included in the meaning of another.

Provide examples of hyponym pairs.

Animal/dog, flower/rose, tree/banyan.

What is co-hyponymy?

Two or more words sharing the same superordinate term, indicating 'is a kind of' relationship.

Explain the concept of prototypes.

Prototypes represent the most characteristic instance of a category, helping explain word meanings.

Give examples of prototype categories.

Furniture (chair), clothing (shirts), vegetable (carrot).

Topic-155: Prototypes

What determines our interpretation of word meaning in prototypes?

Categorization process based on prototypes, considering resemblance to clear examples.

How can individual experience affect categorization?

It may lead to variation, such as deciding if avocado or tomato is a fruit or vegetable.

Topic-156: Homophony, Homonymy, and Polysemy

What are homophones?

Different written forms with the same pronunciation, e.g., bare/bear.

Define homonyms.

Words with the same form but unrelated meanings, e.g., bank (of a river) and bank (financial institution).

What is polysemy?

A word having multiple, related meanings, like 'head' meaning the object on top of a body or a company's leader.

Distinguish between homonymy and polysemy.

Homonymy involves unrelated meanings, while polysemy has related senses for a single word form.

Topic-157: Metonymy

What is metonymy?

A relationship between words based on close connections in everyday experience.

Give examples of metonymy.

Using "White House" to refer to the President, or "can" for the contents it holds.

Are metonymic meanings easy to interpret?

Yes, they are highly conventionalized and depend on context, background knowledge, and inference.

Lesson-28

PRAGMATICS I

Topic- 158: Definition

What is pragmatics?

Pragmatics is the study of meaning in context, specifically the relationship of sentences to the environment in which they occur.

Topic- 159: Invisible Meaning

What does pragmatics study in terms of meaning?

Pragmatics studies "invisible" meaning, or how we recognize intended meaning even when it isn't explicitly stated.

How does interpretation in pragmatics go beyond words?

Interpretation involves shared assumptions and expectations, actively creating meaning from what is read or heard.

Topic- 160: No Text Without Context

Why is context crucial in understanding some words?

Context, especially the physical context of the speaker, is essential for interpreting words like here, there, this, that, now, then, yesterday, today, tomorrow, and pronouns.

Give an example of a sentence requiring physical context for interpretation.

"You'll have to bring it back tomorrow because she isn't here today."

Topic- 161: Linguistic Context

What is linguistic context?

Linguistic context, or co-text, refers to the set of other words used in the same phrase or sentence, influencing the meaning of a word.

How does linguistic context help in interpreting homonyms?

Linguistic context assists in distinguishing the intended meaning of homonyms, like the word 'bank,' based on surrounding words.

Topic- 162: Physical Context

What is physical context in pragmatics?

Physical context involves the location, situation, and timing in which a word is used, influencing its interpretation.

Give an example of physical context influencing interpretation.

Seeing the word 'BANK' on a city building; the physical context affects how we interpret it.

Topic- 163: Social Cultural Context

What does socio-cultural context in pragmatics refer to?

Socio-cultural context is the link between language and the culture and society in which it is used.

How can socio-cultural factors influence language learning?

Factors like illiteracy rate, population distribution, education level, and ethnic composition can impact language learning and usage.

Give examples of social and cultural context.

Social context includes particular social backgrounds and status, while cultural context involves setting, backgrounds, style, subject matter, and attitudes.

Lesson-29

PRAGMATICS II

Topic 164: Deixis/Deictic Expressions

What is deixis?

Deixis is a word or phrase pointing to the time, place, or situation in which a speaker is speaking.

Define deictic expressions.

Deictic expressions are words like "this," "that," "here," and "now" that require contextual information for understanding.

What are the three types of deixis mentioned in the lesson?

Person deixis, spatial deixis, and temporal deixis.

Explain person deixis.

Person deixis points to things and people, involving first person, second person, and third person distinctions.

Give examples of spatial deixis.

Examples include "here," "there," and demonstratives like "this" and "that."

What does movement refer to in deixis?

Movement indicates whether it is away from or toward the speaker's location.

How can deixis be used for humor?

Examples like "Free drink tomorrow" illustrate playful use of deixis.

Topic 165: Person Deixis

Define deixis in the context of this lesson.

Deixis requires contextual information to give meaning to a phrase, referring directly to the situation.

What is the deictic center?

The deictic center is the reference point for interpreting deictic expressions, often the present time, location, and participant role of the speaker.

Explain participant role in person deixis.

Participant role highlights the relation of people involved in a speech event, including the speaker, addressee, and referents.

Name the basic three-part divisions in person deixis.

First person, second person, and third person.

How is deixis used in a dialogue exchange?

Deictic reference in a dialogue depends on the context, such as identifying a person, place, or time.

Topic 166: Place Deixis

What does place deixis concern itself with?

Place deixis deals with spatial locations relevant to an utterance.

Give examples of place deixis terms.

Examples include adverbs like "here" and "there" and demonstratives like "this" and "that."

How are place deictic terms understood in relation to the speaker's location?

Place deictic terms are generally relative to the location of the speaker.

Explain deictic projection in place deixis.

Deictic projection involves using spatial deixis metaphorically rather than physically.

Topic 167: Time Deixis

What does time deixis concern itself with?

Time deixis deals with various times involved in and referred to in an utterance.

Give examples of time adverbs in English.

Examples include "now," "then," "soon," as well as different tenses.

What is the basic time of temporal deixis in English?

The choice of verb tense represents the basic time in temporal deixis.

How is time deixis expressed in relation to the utterance?

Time deixis expresses a relation to the specific point in time when the speaker produces the utterance.

Topic 168: Reference

What is reference in language?

Reference is the act of using language to enable a listener to identify someone or something.

How can words be used for reference?

Words like proper nouns, other nouns, pronouns, and even invented names can be used for reference.

Is reference unique or does it have a range?

Reference has a range; words like "she" or "friend" can refer to multiple entities.

Topic 169: Inference

What does a successful act of reference depend on?

It depends more on the listener's ability to recognize the speaker's intended meaning than on dictionary knowledge.

Explain the concept of inference.

Inference is additional information used by the listener to connect what is said with what must be meant.

Give an example of inference in language.

Understanding that names associated with things may refer to people or names of people may refer to things involves inference.

Lesson-30

PRAGMATICS III

Topic 170: Anaphora

What is anaphora?

Answer: Anaphora is the use of a word referring back to a word used earlier in a text or conversation to avoid repetition.

What is the role of pronouns like he, she, it, and they in anaphora?

Answer: Pronouns like he, she, it, and they serve as anaphoric expressions, referring back to antecedents.

Define referential relationship in the context of anaphora.

Answer: Referential relationship involves subsequent references to an already introduced entity, where the first mention is called the antecedent.

Topic 171: Presupposition

How can presupposition be described?

Answer: Presupposition is what a speaker assumes to be true or known by a listener, taken for granted in discourse.

Provide an example of presupposition.

Answer: "Did you eat the cheese?" presupposes the existence of some cheese.

Topic 172: Constancy under Negation Test

What is the 'constancy under negation' test used for?

Answer: The test is used to identify presuppositions by checking if they remain true when a sentence and its negation are considered.

Give an example of the constancy under negation test.

Answer: "Your dog is not lovely." still presupposes the existence of a dog.

Topic 173: Speech Acts

What is a speech act?

Answer: A speech act is an utterance that performs a function in language and communication, such as requesting, commanding, questioning, or informing.

What are the three levels on which speech acts can be analyzed?

Answer: Locutionary act, illocutionary act, and perlocutionary act.

Topic 174: Direct Speech Acts

What characterizes a direct speech act?

Answer: A direct speech act has a direct relationship between the structure of the utterance and its communicative function.

Topic 175: Indirect Speech Acts

How is an indirect speech act defined?

Answer: An indirect speech act involves an indirect relationship between the form and function of the utterance.

Provide an example of an indirect speech act.

Answer: "Can you pass the salt?" is an indirect speech act functioning as a request for the salt.

Why might indirect speech acts be considered more polite?

Answer: Actions presented indirectly, like requests, are often considered gentler or more polite than direct speech acts in society.
