ENG513 - Language Teaching Methods (Quiz 4) Quiz St

Question # 1 of 10 (Start time: 03:23:57 PM, 23 January 2024)

A theory-based listening lesson is comprised of _____stages.

Select the correct option

- (●) three
- ( ) two
- ( ) one
- ( ) four

based listening

particular area, such as topical knowledge of a discipline or background knowledge of a particular culture. The general findings indicate that topic familiarity has a significant effect on listening comprehension (Chang &Read, 2006; Chiang & Dunkel, 1992; Jensen & Hansen, 1995; Long, 1990; Markham & Latham, 1987; Schmidt &Rinehart,1994). The strategy use concerns whether listeners are able to apply listening strategies that suit their language proficiency and listening purposes. For example, the most frequently mentioned metacognitive pedagogical model proposed by Vandergrift and Goh (2012) aims to help L2 listener to become self-regulated listeners.

Topic-144: Format of a Well-Designed Listening Lesson

In the above two sections, we have seen some unique features of spoken language, and found varying listening difficulties in the empirical studies. As previously mentioned, good listening skills can accelerate language acquisition. Therefore, an important task for language teachers is how to teach L2 listening efficiently? A theory-based listening lesson involved three stages: pre-listening, while-listening and post-listening.

The Pre-listening Phase

The pre-listening phase is a particularly important stage for beginner listeners. If a teacher can prepare students well before a listening task begins, then the students are more likely to experience feelings of success. The L2 teacher can use one or more of the following pre-listening activities.

1. Establish the purposes for listening activities: Conventionally, the teaching of L2 listening is to extract meaning from texts. Once meaning has been identified, then the task is over. This is also what L2 listeners usually consider listening to be. However, the teacher should tell students that listening is another way of facilitating language learning. Before a task begins, the teacher can tell the students the purpose of a listening activity: to comprehend a text only, to understand a joke, to complete a task, to learn a concept, or to learn a term that is explained by the input text.

ENG513 - Language Teaching Methods (Quiz 4) Quiz Start Ti

Question # 2 of 10 (Start time: 03:24:30 PM, 23 January 2024)

Which of the following theorist do not completely agree on the details of the Lingua Franca Core?

Select the correct option

- Jenkins and Walker
- Jenkins and Schmidt
- Schmidt and Wells
- Jenkins and Wells

agree on the

the ability to communicate with native and non-native speakers alike. Jenkins (2000) promotes the idea that, rather than adhering to an standard norm, be it Received Pronunciation (RP) or General American (GA), the teaching and learning of English should not be dictated by any of them as the sole model, because there seems to be little reason to base the L2 (English) teaching on an RP model, other than the fact that 'even in the inner circle only a specific elite group is considered as 'norm makers', or as models for emulation (Kachru, 1985) and that RP has altered over time (ibid). Wells (2005) agrees that it is not realistic to ask for a choice between EFL and EIL, our students need both (Wells, 2005). Indeed, learners learn English to interact with all speakers of English, not exclusively with RP or GA speakers. The most important theme of ELF in ELT is to realistically acknowledge the existence of variability in language use.

Although Jenkins (2000) and Wells (2005) do not completely agree on the details of the Lingua Franca Core, both emphasize on the importance of pronunciation features which impede intelligibility. As Jenkins has aptly pointed out that even when learners use a variant grammatical form or an inappropriate expression, they can still be understood. It is usually the wrong pronunciation that leads to communication breakdown (Jenkins, 2012). The decisive role of pronunciation in mutual intelligibility is evident. The effort of ELF researchers in advancing a paradigm shift in ELT is slowly paying off (Jenkins 2000, 2006; Seidlhofer, 2001; Walker, 2010). On the practical side, Wells (2005) provides a few principles to follow within such a paradigm. He suggests that the teaching of English pronunciation in an EFL/EIL context should focus on areas which impede communication and at the same time we should not undermine learners' confidence. While the importance of effectively communicating with NSs should be maintained, NSs should be educated too, so as to achieve mutual intelligibility from both sides.

Wells appeals to contrastive analysis (CA) as a way to locate areas of difficulty. Despite its rather simplistic approach, CA is a useful initial step to identifying potential areas of unintelligibility. It is through the careful comparison and contrast of L1 and English that teachers

ENG513 - Language Teaching Methods (Quiz 4) Quiz Start Time: 03

Question # 3 of 10 (Start time: 03:25:35 PM, 23 January 2024)

The aim of the_____ approach is to let the students' ideas decide the form of a piece of writing.

Select the correct option

- controlled writing
- focussed
- product
- process ✓

let the stud

writing. There have been paradigm shifts in approaches for teaching academic writing over the last few decades (Paltridge et al., 2009). From the mid-1940s to mid-1960s, controlled composition was widely practiced in writing classes. Such teaching approach aims to improve the students' written work's accuracy, based on behaviorist view that repetition and imitation will lead to habit formation (writing grammatically correct sentences). An example of controlled composition is to give sample sentences of chosen structure, and then students are asked to write few more sentences following that pattern. Later in the mid-1960s, English Language teachers realized that students needed to focus not only on grammatical accuracy of the sentences they produced, but also the functions of writing. Thus, teachers adopted a rhetorical function approach where they shifted the teaching focus from sentence level accuracy to a discourse level with the purposes of writing such as description, comparison, and contrast. Since 1970s, the process approach to writing has gained popularity. Instead of focusing primarily on the form/correctness of the writing, teachers now encourage students to pay attention to macro-level communicative purposes. The aim of the process approach is to let the students' ideas decide the form of a piece of writing (Silva, 1990). Another approach to writing instruction was introduced to help students acquire the mastery in order to succeed in writing about specific topics. Under this genre approach, through reading model texts from a subject area and guided practice, students master the language, text structure, and discourse practices for specific kinds of communication. We should note that understanding the genre approach depends on genre traditions, such as English for Specific Purposes (UK), New Rhetoric (USA), and Systemic Functional Linguistics (Australia). These three genre traditions differ in both form and function (Hyon,1996).

Despite the variety of writing approaches that teachers have developed and adopted in their classrooms, a common underlying objective is to make sure that students recognize what they write in order to accomplish deliberate functions. A practical approach to teaching writing manifests a socio-cognitive pedagogy that explicitly trains students in thinking processes that are conducive to develop and express idea considering their audiences.

Lesson-34

Designing Instructional Materials

Topic-166: Significance of Designing Instructional Materials

Global EFL courses are used by non-native speakers who will need to communicate in English with other non-native speakers outside of English speaking areas, which means they will need English not as a native speaker but as a lingua franca (Jenkins, 2012). Yet, most of these courses teaching English as a foreign language still seem to be developed as though their users need to communicate with the native speakers of English which means they interact with people in English speaking countries i.e. UK and USA. For example, Tomlinson and Masuhara (2013) reviewed six current EFL courses published in the UK and concluded that most of the texts illustrate a 'correct' version of English as it is written and spoken by native speakers interacting with each other. The courses are very little to helpful to prepare learners for the use of English as a global lingua franca in reality. They do find some dialogues in the courses, which are spoken by non-native speakers, but the language and strategies used in these dialogues seems indistinguishable from those that would have been used by native speakers interacting with each other. One of the evaluation criteria used by Tomlinson and Masuhara (2013, p. 244) is, "To what extent is the course likely to help learners to use English as a lingua franca?" Two of the courses score 2 out of 5 and the other four only manage 1 out of 5 each. Although some of the courses do acknowledge the participation of non-native speakers in the recording of the dialogues, Tomlinson and Masuhara concluded that the focus was exclusively on British English and the language 'taught' is contemporary British middle-class standard. Burns and Hill (2013, p. 241) also reviewed global course books and asked, "How far do speaking activities reflect the changing nature of English as a global language, and the fact that most

Lesson-29

TEACHING LISTENING IN A LANGUAGE CLASSROOM

Topic-141: The Importance of Developing L2 Listening Skills

The position of listening in second or foreign language programs has undergone a substantial change in recent years (Richards, 2005). The most fundamental change is in understanding of the role of listening in L2 acquisition. Listening had been considered a passive skill and its main purpose was to extract meaning from texts; however, listening is now also considered a skill that can support the growth of other aspects of language knowledge, such as speaking or reading speed (Chang & Millett, 2015). Some empirical studies have also shown that linguistic elements can be acquired through listening (Vidal, 2011; van Zeeland & Schmitt, 2013). This change is important because to acquire a language, a learner normally learns both written and spoken forms unless the language has only one form, with some dialects. If a learner knows one language form, s/he may not learn the language as efficiently as one who knows both forms because reading the written form and listening to the spoken form are equally important input channels and they can work complimentarily. More important, students spend more time on listening than reading, speaking or writing.

When learning first language, listening skill normally precedes reading skill, therefore, for L1 learners, the listening skill is usually used to support the reading skill. However, for L2 learners, due to lack of linguistic input environment, the two skills are often taught at the same time, though some learners may develop one skill faster than the other. Normally, the reading skill is considered easier to develop than the listening skill because a reader can control more variables during the reading process: for example, reading a text at their own pace, consulting unknown words in the dictionary,

Question # 6 of 10 (Start time: 03:27:21 PM, 23 January 2024)

SRL in reading skills stands for _____.

Select the correct option

- strategies of reading and learning
- self-regulated learning ✓
- sociocultural research of learning
- social research in language

SRL

Topic-150: Teaching Reading and Viewing Inside and Outside the Classroom

Developing Metacognitively-Strong Readers and Viewers

The self-regulated learning (SRL), has become an accepted pedagogical approach to SBI in reading/viewing on the basis of learners' knowledge, experiences, and strategies, metacognitive instruction. In North America and other parts of the world this approach is highly advocated in L2 reading for specific educational goals, classroom procedures, and assessment (Greene & Azevedo 2007). As an umbrella term referring to both the metacognitive and cognitive aspects of problem-solving in reading comprehension, SRL regards two main domains of human cognition. The first one is about learners' personal beliefs, including learners' self-efficacy, task value, and motivation, the prerequisites to develop self-regulation. The second one is a cluster of variables that includes learners' goal-setting, strategy selection, strategy use and monitoring, self-evaluation of the progress in reaching the target goals, and the success of strategy choice, use and monitoring. Reading researchers and educators both are interested in investigating learners' successes or failures through the lens of SRL. It is anticipated that scholarly work will also be devoted to investigating successes or failures in students' viewing.

A Proposed Pedagogical Cycle for Teaching Reading and Viewing

Modern technologies and reading have been connected more closely in recent times. As a result, there is a need developing highly competent skills and strategies to deal with texts that the reader or viewer encounters in daily experiences. For example, knowing how to view a media text on the CD-ROM, VCD, DVD, MP3/MP4, iPhone, iPad, Podcast, and other applications is just an illustration of such a literacy competence.

The concept of reading and literacy is no longer confined to the conventional notion of reading

- Narrow listening
- Simultaneous Listening

Click to Save Answer & Mo

narrow lis

teachers should balance their time in each phase. I would suggest the following proportions of time in each phase for low level students.

Topic-145: Suggested Approaches to Listening Practice

A number of listening difficulties have been revealed by researchers and many suggestions have been made to improve listening instruction efficiency; however, simply relying on teachers' instruction in the classroom is not sufficient to improve one's listening competence. Therefore, teachers should give their students guidance on doing listening practice outside class. Three approaches: narrow listening, repeated listening, and reading while listening, are suggested.

Narrow Listening

Narrow listening originates from narrow reading, and has been found to be helpful for language acquisition (Krashen, 1981). Narrow listening means that learners focus on one topic, e.g., weather or sports, or one author, like Conan Doyle or Agatha Christie, and do a great deal of listening in the area they choose. This approach is suitable for learners across all proficiencies and is definitely interesting for the L2 learner because the learners themselves choose the topics. In 1996, Krashen provided some guidelines for doing narrow listening; however, over the years, advancing technology has made this learning approach much easier than previously.

Nowadays, many original classics have been adapted and graded to help L2 learners expose themselves to reading literature in the target language as early as possible. Some websites, for example, https://www.ted.com, provide all sorts of modern topics for learners, like technology, education, entertainment, and so forth.

Not only can learners select the kinds of material they want to view and to which they want to

ENG513 - Language Teaching Methods (Quiz 4) Quiz Start Time

Question # 8 of 10 (Start time: 03:28:38 PM, 23 January 2024)

Who classified L1 listening comprehension difficulties into external, medium, and internal factors?

Select the correct option

- Boyle (1984)
- Rost (1994)
- Lynch (1988)
- Samuels (1984) ✓

into external

Factors affecting listening difficulties have been widely discussed both in first language (Wolvin & Coakely, 1996) and second language (L2) listening (Anderson & Lynch, 1988; Boyle, 1984; Goh 1999, 2000; Hasan, 2000; Huang, 2004 ; Miller, 2009; Rost, 2005). Theoretically, comprehension takes place when listeners can infer what is said based on their linguistic background and contextual knowledge (Buck, 1995, 2001). However, unlike written language, which tends to be more stable, variations in spoken linguistic features may occur from person to person or region to region (Biber, 1988; Chafe, 1985). Accordingly, listeners face a number of challenges, e.g., fast speech rates, unfamiliar accents, transient information, or colloquial usages and slang, which seldom appear in formal L2 textbooks.

Samuels (1984) classified L1 listening comprehension difficulties into external, medium, and internal factors. External factors refer to the learning environment (Rost 1994, 2005), practice opportunities (Boyle, 1984), and speaker factors, such as speech rate, accent and pronunciation, and effectiveness of a speaker's talk (Samuels, 1984). Medium factors relate to text type, task type and the context in which listening takes place (Anderson& Lynch, 1988). Internal factors are about listeners themselves, for example, their listening proficiency, motivation, background knowledge, physical condition.

L.Q External & interal factors

External Factors: The Opportunities of Input and Speaker Factors

The Opportunities of Input: Two most important external factors are opportunities of input and speaker factors. Understanding our first language requires considerable cognitive development and

- Reading model
- Bottom-up models
- Top-down models
- Interactive model

Click to Save Answer & Move to Next

more linear fash

the reader, who needs to interpret the text to derive it. He argues that readers' top-down processing is essential to successful reading, and that in many instances, reading involves readers' existing schematic knowledge. Such a view is also widely shared among L2 researchers on bilingual readers because there are non-decoding factors that contribute to reading success (Yorio, 1971; Zhang, Gu, and Hu, 2008).

'Bottom-up' models view reading as a process in which the reader has to go through the text in a more linear fashion, starting from the smallest unit in print. Frequently, such a process is mainly text-bound, without any opportunity of the reader actively interpreting the text meaning. In this view, meaning is self-evident as soon as you are able to decode all the words. Bottom-up and top-down models of reading are two polarities of the reading models mentioned above (Ehrich et al., 2013).

Interactive Models

In his 'interactive-compensatory model' Stanovich (2000) argues that, although top-down processing is necessary, bottom-up processes play a significant role in reading, especially for beginning readers. In fact, both processes are very important in learning how to read. He points the reason why poor readers do not guess as accurately as skilled readers. The skilled readers possess accurate and automatic perceptual abilities in word recognition that they do not usually need to guess; whereas poor readers usually guess, and their guessing is frequently short circuited by their limited linguistic proficiency. Following this line of explication, one can see clearly that learning to read becomes a matter of developing highly accurate decoding skills. This means that there is a 'short-circuit' effect for L2 learners whose linguistic proficiency is too low to make efficient reading activity (Yorio, 1971). Interactive models of reading in their broad sense have also been advocated

Question # 10 of 10 (Start time: 03:29:52 PM, 23 January 2024)

Wells (2005)appeals to _____as a way to locate areas of difficulty in vocabulary teaching.

Select the correct option

- fossilization
- contrastive analysis ✓
- language awareness
- language transfer

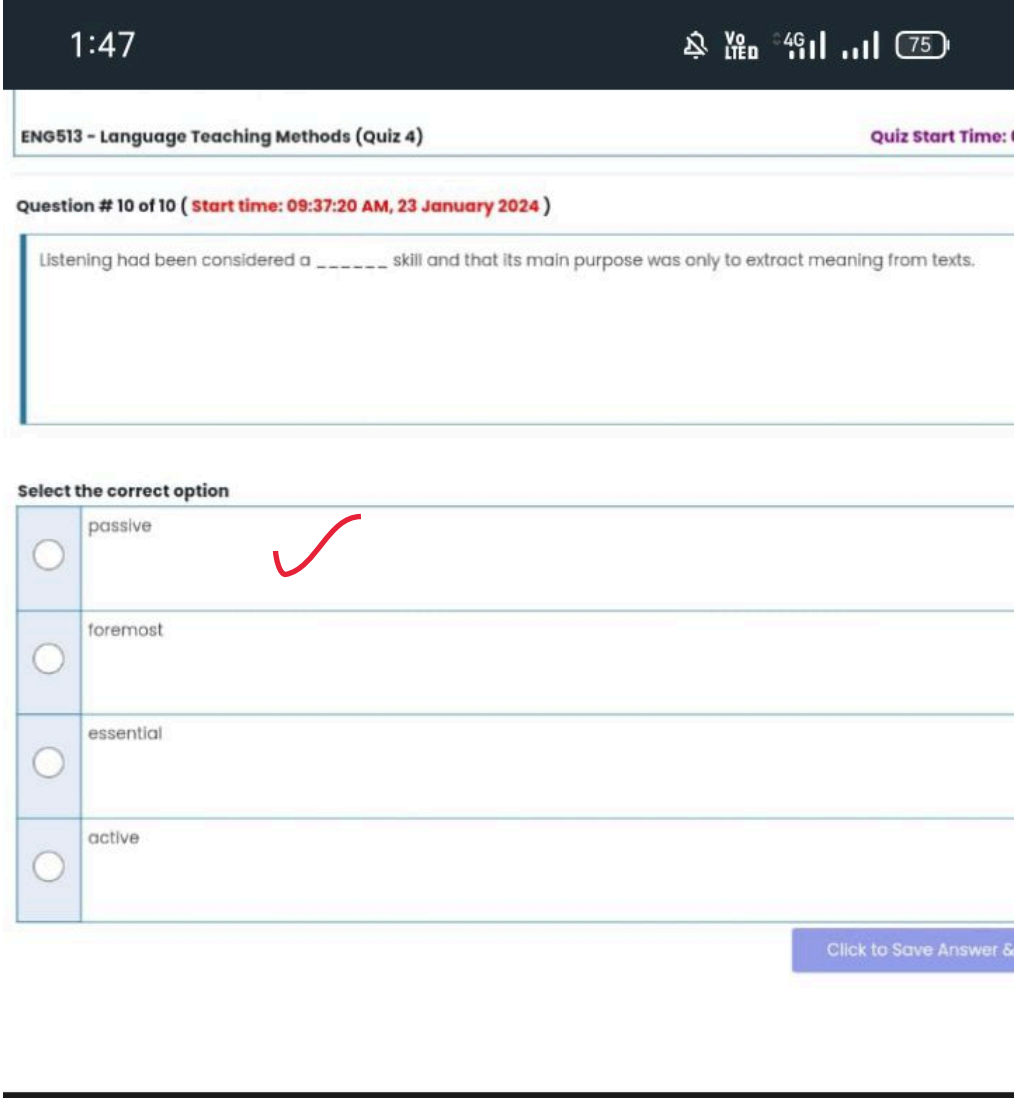

appeals to

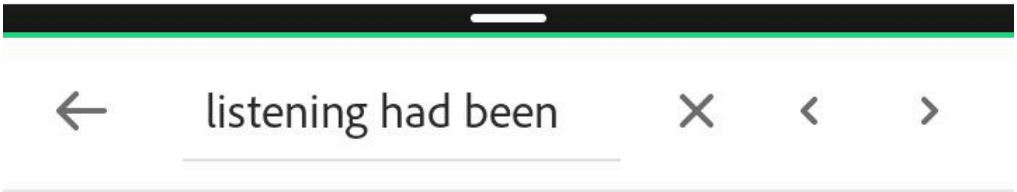

Although Jenkins (2000) and Wells (2005) do not completely agree on the details of the Lingua Franca Core, both emphasize on the importance of pronunciation features which impede intelligibility. As Jenkins has aptly pointed out that even when learners use a variant grammatical form or an inappropriate expression, they can still be understood. It is usually the wrong pronunciation that leads to communication breakdown (Jenkins, 2012). The decisive role of pronunciation in mutual intelligibility is evident. The effort of ELF researchers in advancing a paradigm shift in ELT is slowly paying off (Jenkins 2000, 2006; Seidlhofer, 2001; Walker, 2010). On the practical side, Wells (2005) provides a few principles to follow within such a paradigm. He suggests that the teaching of English pronunciation in an EFL/EIL context should focus on areas which impede communication and at the same time we should not undermine learners' confidence. While the importance of effectively communicating with NSs should be maintained, NSs should be educated too, so as to achieve mutual intelligibility from both sides.

Wells appeals to contrastive analysis (CA) as a way to locate areas of difficulty. Despite its rather simplistic approach, CA is a useful initial step to identifying potential areas of unintelligibility. It is through the careful comparison and contrast of L1 and English that teachers and learners of different language backgrounds can be made aware of the pronunciation features that cause problems in understanding speakers of different varieties. Such awareness is crucial in language learning and is of primary importance in language teaching.

Raising Awareness in Pronunciation Teaching

In teaching and learning of pronunciation, two factors are crucial: awareness raising (Burgess and Spencer 2000; Jenkins 2004; Jones 1997) and self-monitoring (Arteaga 2000; Hinkel 2006; Scarcella and Oxford 1994). If learners are unaware of their spoken English, unintelligible to other speakers; they will not take the initiative to change. This refers to Schmidt's (1990, 2001) 'noticing hypothesis'. It is especially applicable in the teaching and learning of pronunciation. If a learner is not able to notice the distinction between /i:/ and /ɪ/ in beach and bitch, how do we expect the learner to take initiative to produce the different vowel sounds? At the same time, if a teacher is ignorant of

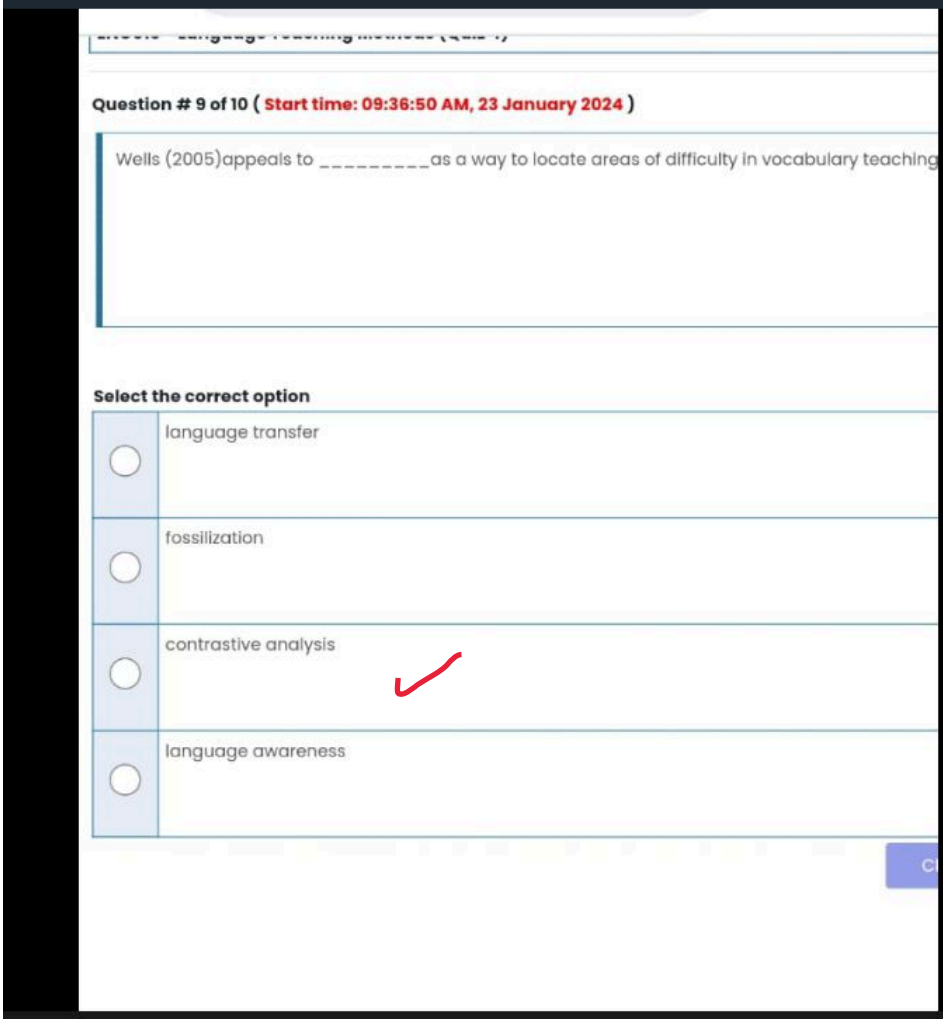

Lesson-29

TEACHING LISTENING IN A LANGUAGE CLASSROOM

Topic-141: The Importance of Developing L2 Listening Skills

The position of listening in second or foreign language programs has undergone a substantial change in recent years (Richards, 2005). The most fundamental change is in understanding of the role of listening in L2 acquisition. Listening had been considered a passive skill and its main purpose was to extract meaning from texts; however, listening is now also considered a skill that can support the growth of other aspects of language knowledge, such as speaking or reading speed (Chang & Millett, 2015). Some empirical studies have also shown that linguistic elements can be acquired through listening (Vidal, 2011; van Zeeland & Schmitt, 2013). This change is important because to acquire a language, a learner normally learns both written and spoken forms unless the language has only one form, with some dialects. If a learner knows one language form, s/he may not learn the language as efficiently as one who knows both forms because reading the written form and listening to the spoken form are equally important input channels and they can work complimentarily. More important, students spend more time on listening than reading, speaking or writing.

When learning first language, listening skill normally precedes reading skill, therefore, for L1 learners, the listening skill is usually used to support the reading skill. However, for L2 learners, due to lack of linguistic input environment, the two skills are often taught at the same time, though some learners may develop one skill faster than the other. Normally, the reading skill is considered easier to develop than the listening skill because a reader can control more variables during the reading process; for example, reading a text at their own pace, consulting unknown words in the dictionary, and rereading the text if not comprehending. These controllable conditions while reading are not available for real-life listening, such as listening to radio broadcasting. Therefore, listeners often face more challenges than readers. Here, some features of the spoken language will first be briefly

Such awareness is crucial in

developing argument at the macro level, the Toulmin Model of Argumentation highlighted to structure arguments at the micro level. The elements in this model of argumentation include (i) claim – a statement that the arguer wants to show is true; (ii) data – the evidence offered in support of the claim; (iii) warrant – an assumption that underlies the claim; (iv) backing – evidence for the warrant; (v) qualifier – something which is added that in some way limits the applicability of scope of the claim; and (vi) reservation – a statement or a situation which, if true, renders the claim invalid (Toulmin, 1958). Teachers need to teach students explicitly how to structure and develop arguments at both macro and micro levels in their essays.

Topic-153: Writing Process and LTM in a Classroom

Traditionally, writing teachers explain the writing process as a linear process (Grabe and Kaplan, 1996). Paltridge et al., (2009) identifies four distinct sub-processes in writing. First, in the conceptualizing stage, writers generate and select ideas that can be used in their writing, and then organize the ideas in an ordered way (e.g., an essay must have an introduction, body, and a conclusion). The second sub-process is called formulating, putting ideas into sentences. The third sub-process is revising, where writers rewrite and improve the essays. The revisions can be related to the content, grammar, and mechanics. The fourth sub-process is reading. Writers read the essay's instruction and gather information for the essay topic. They're read their writing to make sure that they are answering the essay's prompts. The linear process model may under-conceptualize and oversimplify the writing process (Emig, 1971, p. 98). This oversimplification may be problematic because it can be inflexible and limits the freedom to explore, whereas writing in practice could be an unstructured process of self-discovery. Recently, some writing scholars suggest that writing is a recursive, nonlinear activity. Clark and Ivanič's (1991) highlighted that both novice and experienced writers go through various stages of the writing process several times and may not follow a fixed and particular order. Clark and Ivanič (1991) identify 16 (equally important and inter-related) stages of the writing process, involving the following: accumulating knowledge and opinions (e.g., doing the necessary reading to gather information about a particular topic, or gathering primary data through

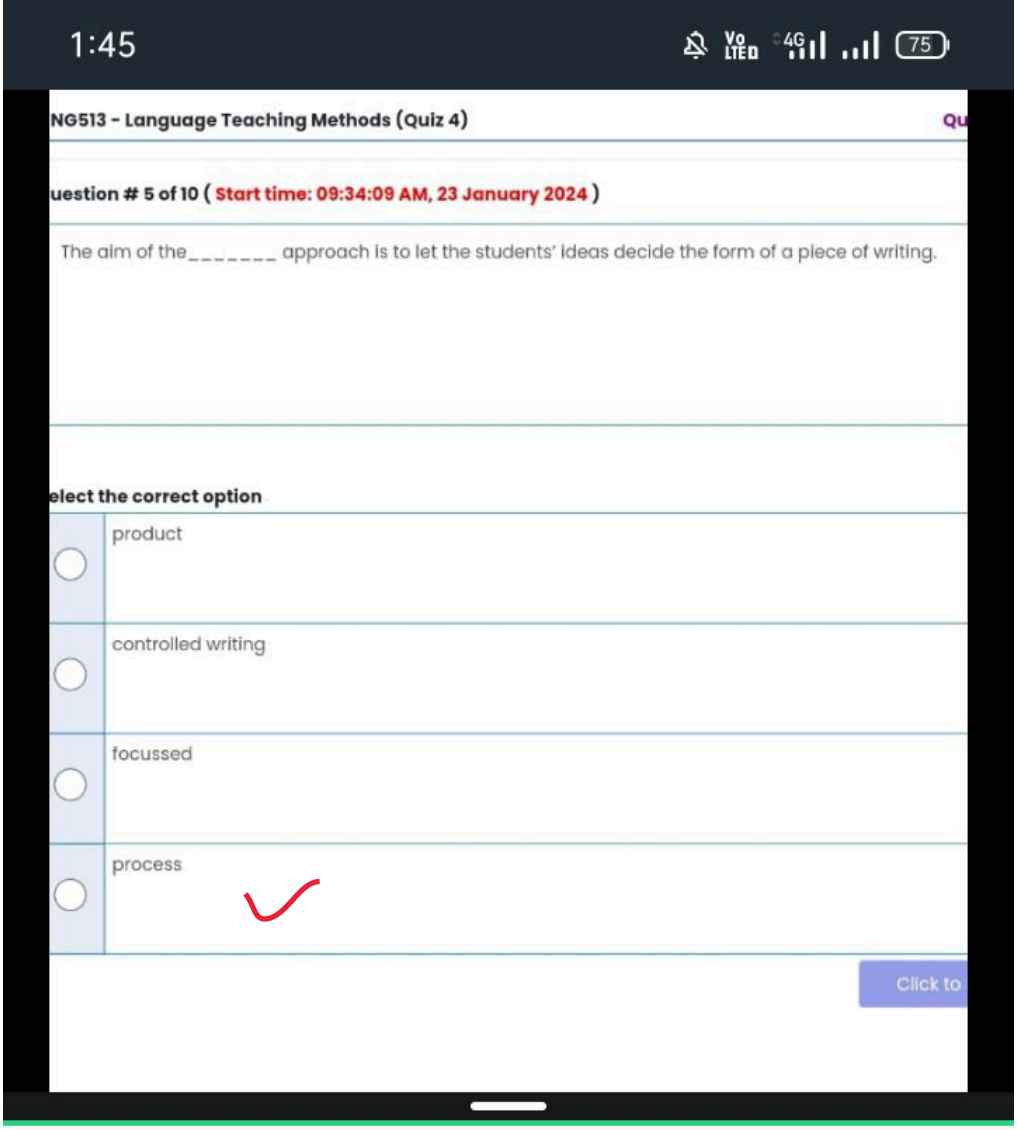

spoken language is

©Copyright Virtual University of Pakistan

be silent in some words. For example, we do not hear the sound /h/ in hour or /gh/ in though.

- Often a foreign language learner may just hear a string of sounds linked together; for example, the phrase first of all may become 'firsdavall'. Word boundaries become indistinct due to phonological change; some sounds may be dropped or changed, and others may be added.
- Spoken language is syntactically simpler than written language and may contain incomplete sentences; idea units are shorter, and generally joined by coordinators, such as and, but, or so.
- Spoken language, particularly spontaneous speech, contains various disfluencies, such as fillers (you know, well, ok …), hesitations, false starts, and self- corrections, which give the listeners more time to think about what has just been said if listeners understand those are fillers. If listeners cannot identify them, it may cause more difficulties.
- Compared to written language, spoken language contains more colloquial expressions, slang, and nonstandard grammar, which are considered unacceptable in writing.

The features listed above are just the tendencies of spoken language that listeners should be aware of. However, from a linguistic perspective, spoken and written language does not have clear cut divisions (Biber 1988). Also, language use depends very much on the situation in which it takes place, whether the speaker is educated or not, or whether the speech is prepared in advance. All of these variables pose significant challenges to L2 listeners. These factors need to be kept in mind

piece of writing

few decades (Paltridge et al., 2009). From the mid-1940s to mid-1960s, controlled composition was widely practiced in writing classes. Such teaching approach aims to improve the students' written work's accuracy, based on behaviorist view that repetition and imitation will lead to habit formation (writing grammatically correct sentences). An example of controlled composition is to give sample sentences of chosen structure, and then students are asked to write few more sentences following that pattern. Later in the mid-1960s, English Language teachers realized that students needed to focus not only on grammatical accuracy of the sentences they produced, but also the functions of writing. Thus, teachers adopted a rhetorical function approach where they shifted the teaching focus from sentence level accuracy to a discourse level with the purposes of writing such as description, comparison, and contrast. Since 1970s, the process approach to writing has gained popularity. Instead of focusing primarily on the form/correctness of the writing, teachers now encourage students to pay attention to macro-level communicative purposes. The aim of the process approach is to let the students' ideas decide the form of a piece of writing (Silva, 1990). Another approach to writing instruction was introduced to help students acquire the mastery in order to succeed in writing about specific topics. Under this genre approach, through reading model texts from a subject area and guided practice, students master the language, text structure, and discourse practices for specific kinds of communication. We should note that understanding the genre approach depends on genre traditions, such as English for Specific Purposes (UK), New Rhetoric (USA), and Systemic Functional Linguistics (Australia). These three genre traditions differ in both form and function (Hyon,1996).

Despite the variety of writing approaches that teachers have developed and adopted in their classrooms, a common underlying objective is to make sure that students recognize what they write in order to accomplish deliberate functions. A practical approach to teaching writing manifests a socio-cognitive pedagogy that explicitly trains students in thinking processes that are conducive to develop and express idea considering their audiences.

Topic-135: Role of the Internet in Teaching and Learning Pronunciation

In the twenty-first century, the revolution in learning takes place by the use of computer and internet. Language learning has progressed from computer-assisted language learning (CALL) to web-enhanced language learning (WELL) and mobile learning. As computer technology advances, the modes of language learning vary accordingly from online language games, practice exercises, multi-media courses and materials, to chat room exchanges, and blogging. Dudeney and Hockly (2012) believe that mobile technology will definitely impact ELT in the future.

The learning of pronunciation should also incorporate advanced technology. The age of WELL,

which makes use of the world-wide web emphasizes the cognitive development of the learners (Warschauer, 2004). Internet has almost become the default platform for learning among the e-generation. One of the powerful features of the Internet, which greatly enhances the effective learning of pronunciation, is its multimedia capability. Learners can not only get easy access to audio files but they can also have access to animated video clips demonstrating how certain sounds are articulated. As far as pronunciation is concerned, the following types of resources, which

his or her word

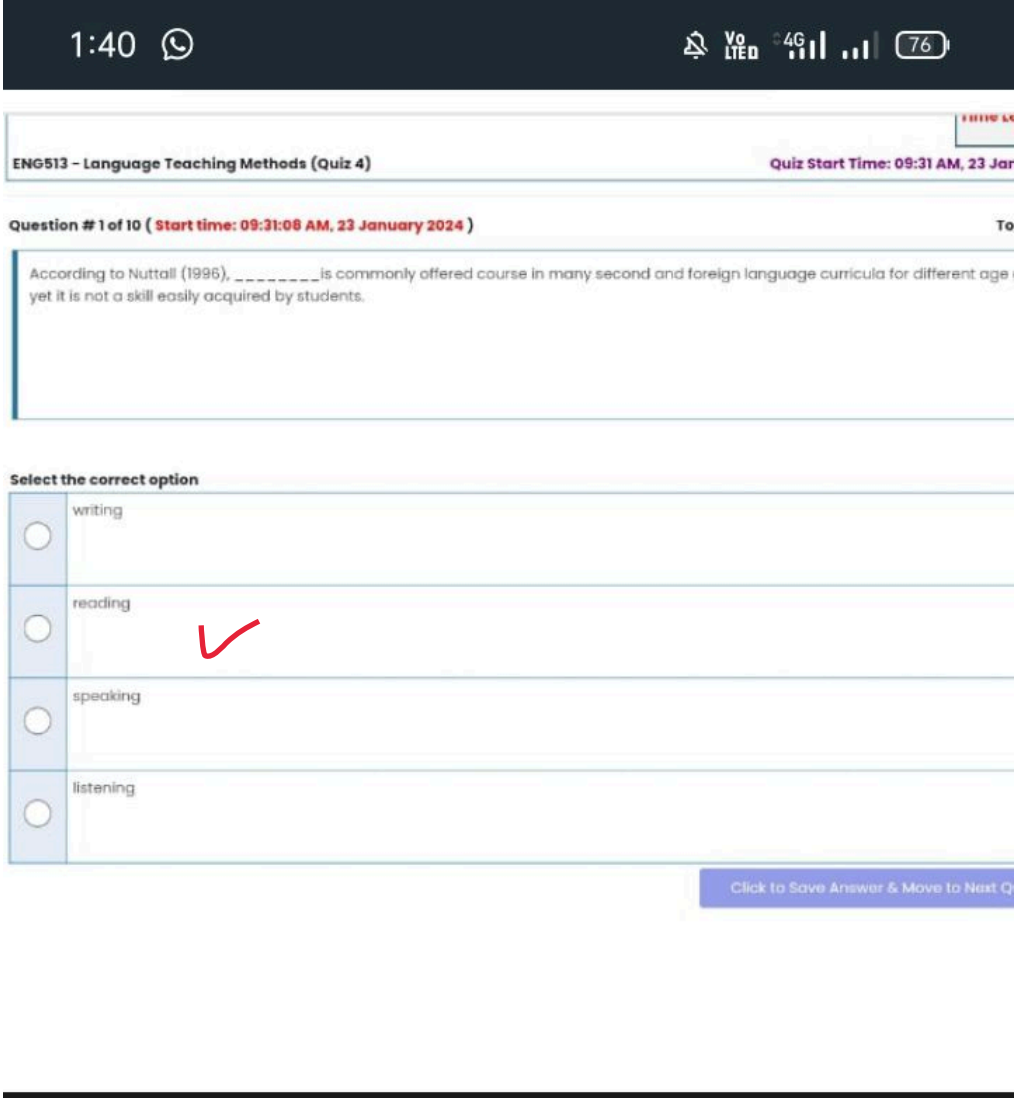

Taking the pedagogical landscape for speaking instruction into consideration, it is proposed that a comprehensive and holistic approach, which integrates the combined strengths of direct and indirect instruction with the power of learners' metacognition. This approach is further proposed by recent research findings on pedagogical processes that can scaffold the development of L2 speaking. So, the construct of speaking and highlight pedagogical procedures can contribute positively to speaking performance and the implications of such understandings suggest pedagogical principles that can enhance current practices to facilitate second language speaking development in and outside the language classroom.

Topic-137: Second Language: Speaking Activities

Understanding the speaking skill a good speaker is the person who speaks L2 confidently, fluently and grammatically correct. In some learning contexts, a person may be considered a good speaker if he or she sounds like a native-speaker countries of UK or USA. Some people may say that a good speaker is someone who is able to influence others with his or her words. While 'good' speaking may seem a self-evident phenomenon, the construct of speaking is simple. Let us examine L2 speaking by discussing the concept of speaking competence and the processes involved in speech

production. There are research highlights that offer pedagogical procedures for enhancing L2

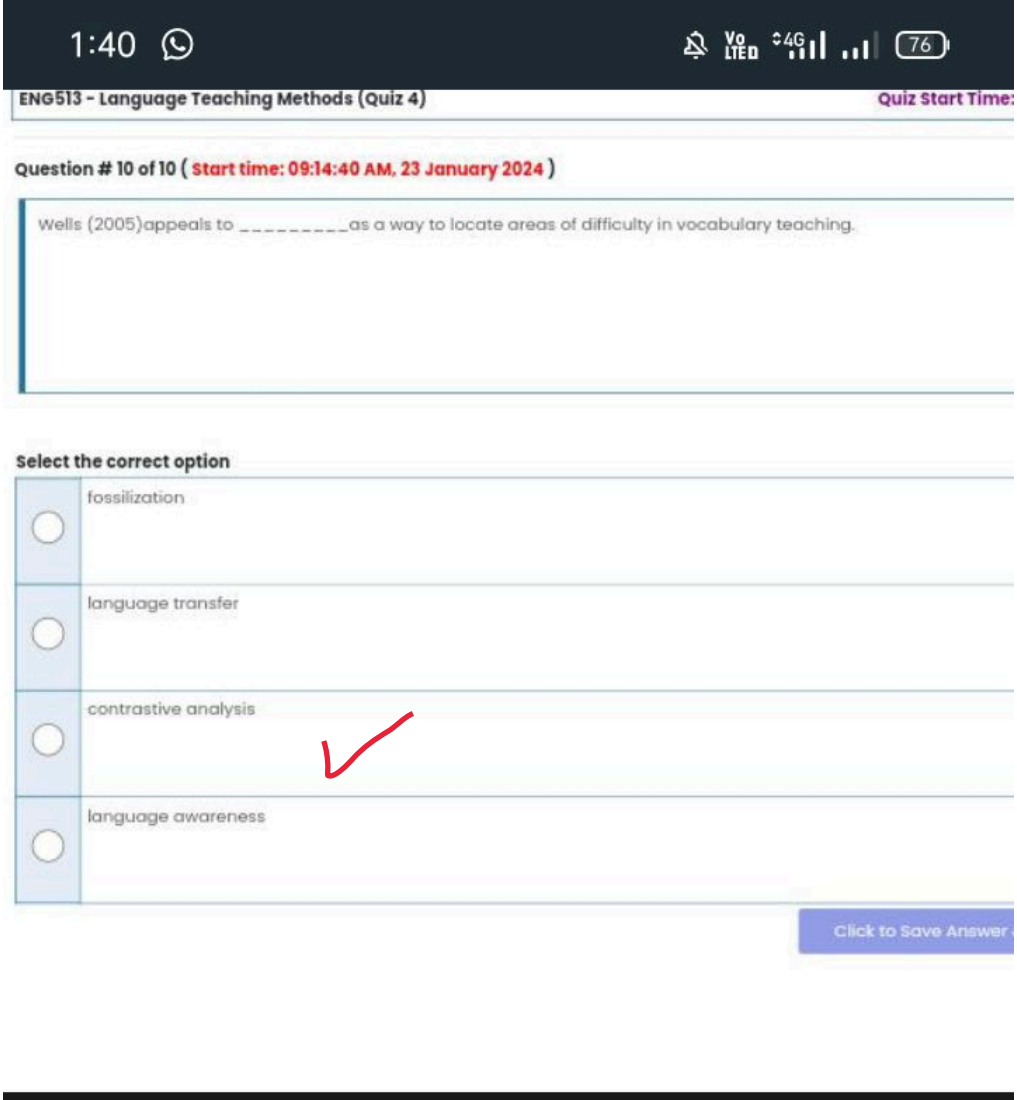

Lesson-30

TEACHING READING IN A LANGUAGE CLASSROOM

Topic-146: Introduction to Teaching Reading in a Language Classroom

Reading is a commonly offered in many second and foreign language curricula for different age groups, yet it is not a skill easily acquired by the learners (Nuttall, 1996). Keeping in mind the significance of reading and viewing in real life and in the curriculum for assisting the development of other language skills (speaking, listening, vocabulary, and writing), teachers' instruction is crucial for students' success. In traditional reading lessons, teachers seldom consider blending reading into viewing and viewing into reading to make the lesson dynamic and interactive. The researches provide framework for teachers to develop not only students' language skills but also strategies for further skill development through reading and viewing. Such a framework takes an inclusive approach to instructional design, which brings forth the theoretical perspectives on such instruction as well as practical strategies for teaching reading and viewing. Strategies such as activating schemata, previewing, predicting, skimming, scanning, reading and linking, viewing and connecting, using packaged instructional procedures such as D-R-T-A, K-W-L, among others, which are the bases of classroom instruction, are elaborated with reference to reading and viewing activities as an organic combination of extensive and intensive reading and viewing.

Reading and viewing as language skills are multifaceted processes and involve multiple aspects related to the ultimate goal of comprehension. Reading is usually understood as a process of deriving

wells

Although Jenkins (2000) and Wells (2005) do not completely agree on the details of the Lingua Franca Core, both emphasize on the importance of pronunciation features which impede intelligibility. As Jenkins has aptly pointed out that even when learners use a variant grammatical form or an inappropriate expression, they can still be understood. It is usually the wrong pronunciation that leads to communication breakdown (Jenkins, 2012). The decisive role of pronunciation in mutual intelligibility is evident. The effort of ELF researchers in advancing a paradigm shift in ELT is slowly paying off (Jenkins 2000, 2006; Seidlhofer, 2001; Walker, 2010). On the practical side, Wells (2005) provides a few principles to follow within such a paradigm. He suggests that the teaching of English pronunciation in an EFL/EIL context should focus on areas which impede communication and at the same time we should not undermine learners' confidence. While the importance of effectively communicating with NSs should be maintained, NSs should be educated too, so as to achieve mutual intelligibility from both sides.

Wells appeals to contrastive analysis (CA) as a way to locate areas of difficulty. Despite its rather simplistic approach, CA is a useful initial step to identifying potential areas of unintelligibility. It is through the careful comparison and contrast of L1 and English that teachers and learners of different language backgrounds can be made aware of the pronunciation features that cause problems in understanding speakers of different varieties. Such awareness is crucial in language learning and is of primary importance in language teaching.

Raising Awareness in Pronunciation Teaching

In teaching and learning of pronunciation, two factors are crucial: awareness raising (Burgess and Spencer 2000; Jenkins 2004; Jones 1997) and self-monitoring (Arteaga 2000; Hinkel 2006; Scarcella and Oxford 1994). If learners are unaware of their spoken English, unintelligible to other speakers; they will not take the initiative to change. This refers to Schmidt's (1990, 2001) 'noticing hypothesis'. It is especially applicable in the teaching and learning of pronunciation. If a learner is not able to notice the distinction between /i:/ and /ɪ/ in beach and bitch, how do we expect the learner

ENG513 - Language Teaching Methods (Quiz 4)

Question # 9 of 10 (start time: 09:13:25 AM, 23 January 2024)

While teaching vocabulary, the teachers are advised to avoid teaching all the jargons related to ___

Select the correct option

- phonetics and grammar
- All the given options
- phonetics and phonology
- phonetics and semantics

jargons rela

idealized target 'standard' norm, their speech is still expected to be understood by the majority of ELF speakers. Who else has the best clues about whether one's speech is intelligible or not other than the learners themselves and their teachers? Learners should be reminded to self-monitor their speech, whenever they can, in order to identify features that tend to impede communication. Then they should reflect on what these features are and be instructed as how their automatic skills learned from their L1s can be modified so their spoken English becomes more intelligible.

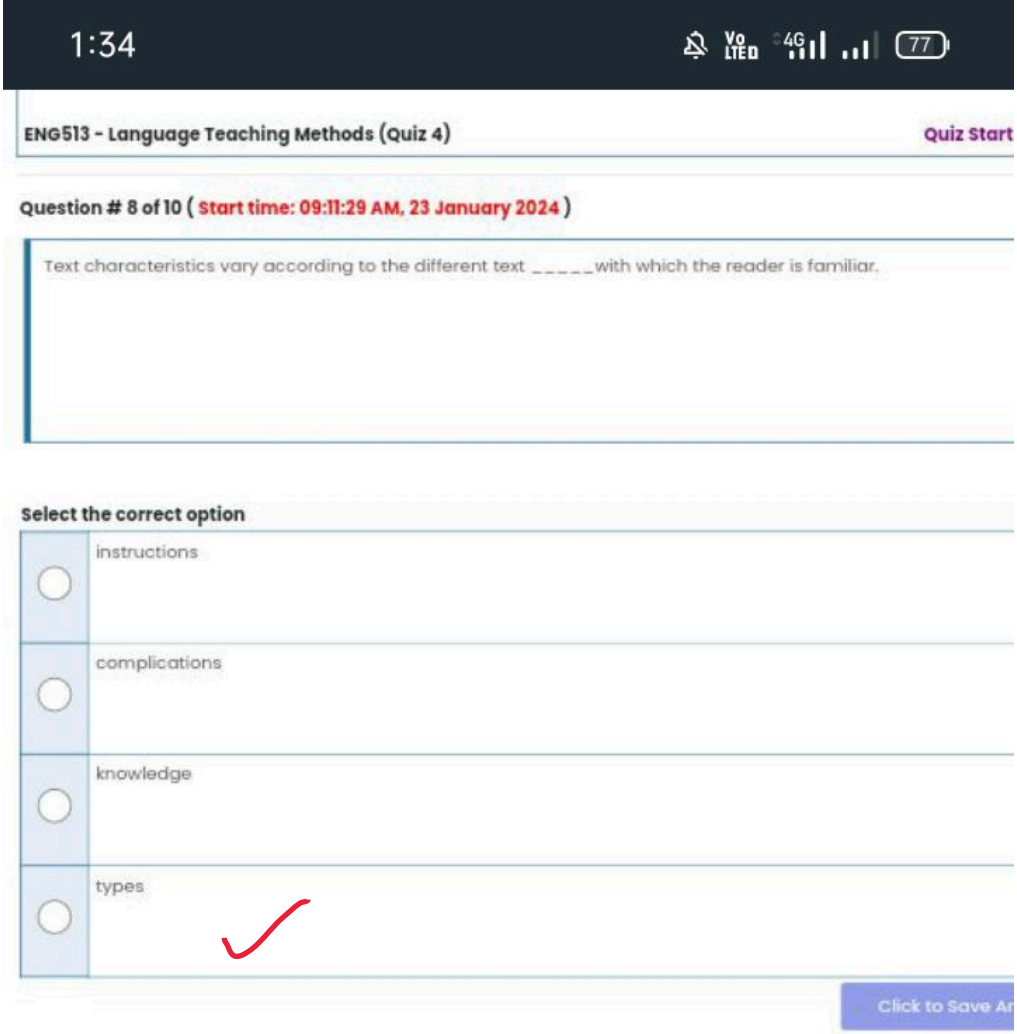

Topic-134: The Basis for Pronunciation: Phonetics and Phonology

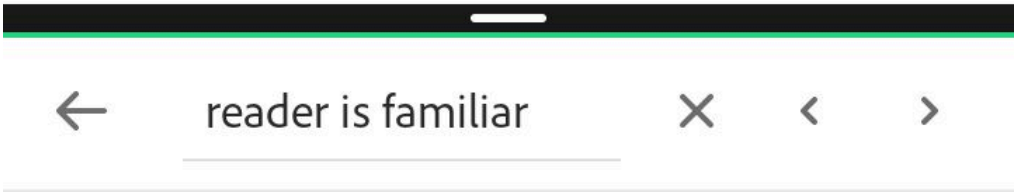

It is not recommended to turning pronunciation teaching into the teaching of phonetics and phonology. It is advised to avoid teaching all the jargons related to phonetics and phonology. However, an understanding of the knowledge and research in phonetics and phonology can facilitate the teaching of pronunciation. For example, the phonetic knowledge of the fact that the voicing distinction between /s/ and /z/ is caused by the vibration of the vocal cords can be very useful. In pronunciation teaching, it is important to make the learners become aware of such difference whose L1 does not have voicing contrast.

Topic-135: Role of the Internet in Teaching and Learning Pronunciation

In the twenty-first century, the revolution in learning takes place by the use of computer and internet. Language learning has progressed from computer-assisted language learning (CALL) to web-enhanced language learning (WELL) and mobile learning. As computer technology advances, the modes of language learning vary accordingly from online language games, practice exercises, multi-media courses and materials, to chat room exchanges, and blogging. Dudeney and Hockly (2012) believe that mobile technology will definitely impact ELT in the future.

The learning of pronunciation should also incorporate advanced technology. The age of WELL,

©Copyright Virtual University of Pakistan

Topic-148: Factors Affecting Reading and Viewing Success in a Language Classroom

Three important variables affect reading or viewing in both L1 and L2 contexts are: (1) text characteristics; (2) reader/viewer characteristics; and (3) social context. Text characteristics vary according to the different text types with which a reader is familiar. If the text is a narrative, its specific characteristics include organizational structure (e.g., orientation, events description ,complication, resolution, conclusion and linguistic features (dominant past tense use, descriptive adjectives, action verbs, sentence structures that are different from those used in argumentative texts, use of indirect and direct speech). Expository text has plainly dissimilar structure as compare to the narrative text. Its major exposition moves are compare-contrast, problem-solution, listing, cause-effect, and so on.

Different readers and viewers approach the same text in different ways due to diverse metacognition, repertoires of reading/viewing strategies, lived experiences, social and world knowledge, linguistic proficiency, reading competencies, gender, and attitudes toward reading/viewing and socioeconomic backgrounds. Because of the different reader/viewer characteristics, teachers' instruction in reading/viewing needs to take into account such diversity when designing lesson plans.

ENG513 - Language Teaching Methods (Quiz 4)

Question # 7 of 10 (Start time: 09:10:41 AM, 23 January 2024)

Which of the following theorist do not completely agree on the details of the Lingua Franca Core?

Select the correct option

- Jenkins and Schmidt
- Schmidt and Wells
- Jenkins and Wells
- Jenkins and Walker

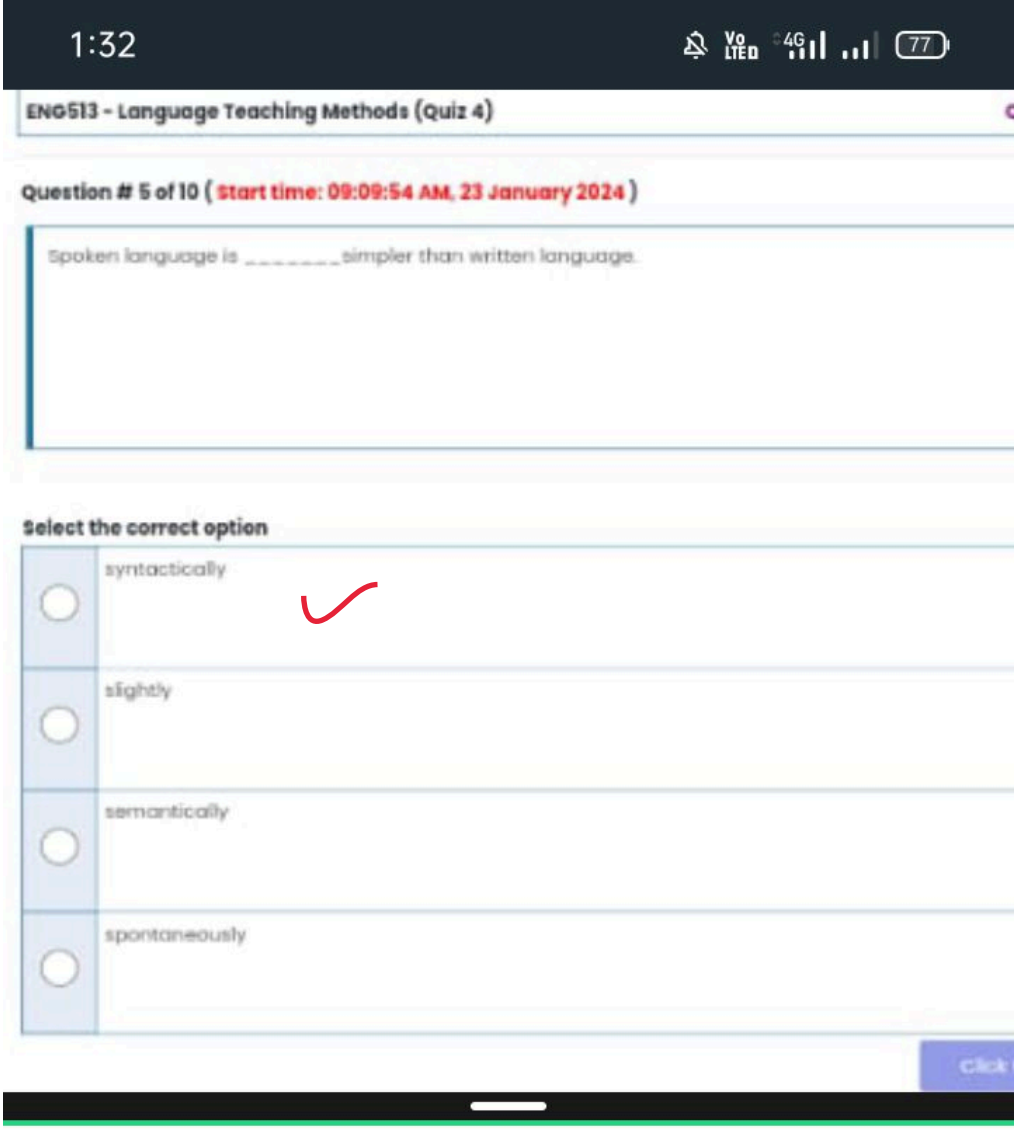

Click t

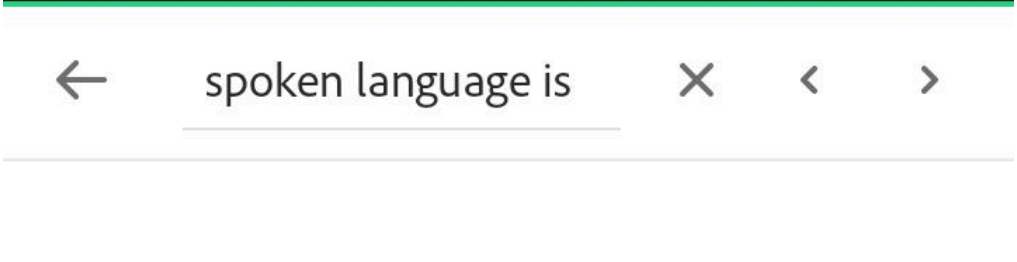

agree on the

the ability to communicate with native and non-native speakers alike. Jenkins (2000) promotes the idea that, rather than adhering to an standard norm, be it Received Pronunciation (RP) or General American (GA), the teaching and learning of English should not be dictated by any of them as the sole model, because there seems to be little reason to base the L2 (English) teaching on an RP model, other than the fact that 'even in the inner circle only a specific elite group is considered as 'norm makers', or as models for emulation (Kachru, 1985) and that RP has altered over time (ibid). Wells (2005) agrees that it is not realistic to ask for a choice between EFL and EIL, our students need both (Wells, 2005). Indeed, learners learn English to interact with all speakers of English, not exclusively with RP or GA speakers. The most important theme of ELF in ELT is to realistically acknowledge the existence of variability in language use.

Although Jenkins (2000) and Wells (2005) do not completely agree on the details of the Lingua Franca Core, both emphasize on the importance of pronunciation features which impede intelligibility. As Jenkins has aptly pointed out that even when learners use a variant grammatical form or an inappropriate expression, they can still be understood. It is usually the wrong pronunciation that leads to communication breakdown (Jenkins, 2012). The decisive role of pronunciation in mutual intelligibility is evident. The effort of ELF researchers in advancing a paradigm shift in ELT is slowly paying off (Jenkins 2000, 2006; Seidlhofer, 2001; Walker, 2010). On the practical side, Wells (2005) provides a few principles to follow within such a paradigm. He suggests that the teaching of English pronunciation in an EFL/EIL context should focus on areas which impede communication and at the same time we should not undermine learners' confidence. While the importance of effectively communicating with NSs should be maintained, NSs should be educated too, so as to achieve mutual intelligibility from both sides.

Wells appeals to contrastive analysis (CA) as a way to locate areas of difficulty. Despite its rather simplistic approach, CA is a useful initial step to identifying potential areas of unintelligibility. It is through the careful comparison and contrast of L1 and English that teachers and learners of different language backgrounds can be made aware of the pronunciation features that cause problems in understanding speakers of different varieties. Such awareness is crucial in

be silent in some words. For example, we do not hear the sound /h/ in hour or /gh/ in though.

- Often a foreign language learner may just hear a string of sounds linked together; for example, the phrase first of all may become 'firsdavall'. Word boundaries become indistinct due to phonological change; some sounds may be dropped or changed, and others may be added.
- Spoken language is syntactically simpler than written language and may contain incomplete sentences; idea units are shorter, and generally joined by coordinators, such as and, but, or so.
- Spoken language, particularly spontaneous speech, contains various disfluencies, such as fillers (you know, well, ok …), hesitations, false starts, and self- corrections, which give the listeners more time to think about what has just been said if listeners understand those are fillers. If listeners cannot identify them, it may cause more difficulties.
- Compared to written language, spoken language contains more colloquial expressions, slang, and nonstandard grammar, which are considered unacceptable in writing.

The features listed above are just the tendencies of spoken language that listeners should be aware of. However, from a linguistic perspective, spoken and written language does not have clear cut divisions (Biber 1988). Also, language use depends very much on the situation in which it takes place, whether the speaker is educated or not, or whether the speech is prepared in advance. All of these variables pose significant challenges to L2 listeners. These factors need to be kept in mind while designing classroom activities.

Question # 6 of 10 (Start time: 09:09:55 AM, 23 January 2024)

SRL in reading skills stands for _____

Select the correct option

- social research in language
- sociocultural research of learning
- self-regulated learning ✓
- strategies of reading and learning

SRL

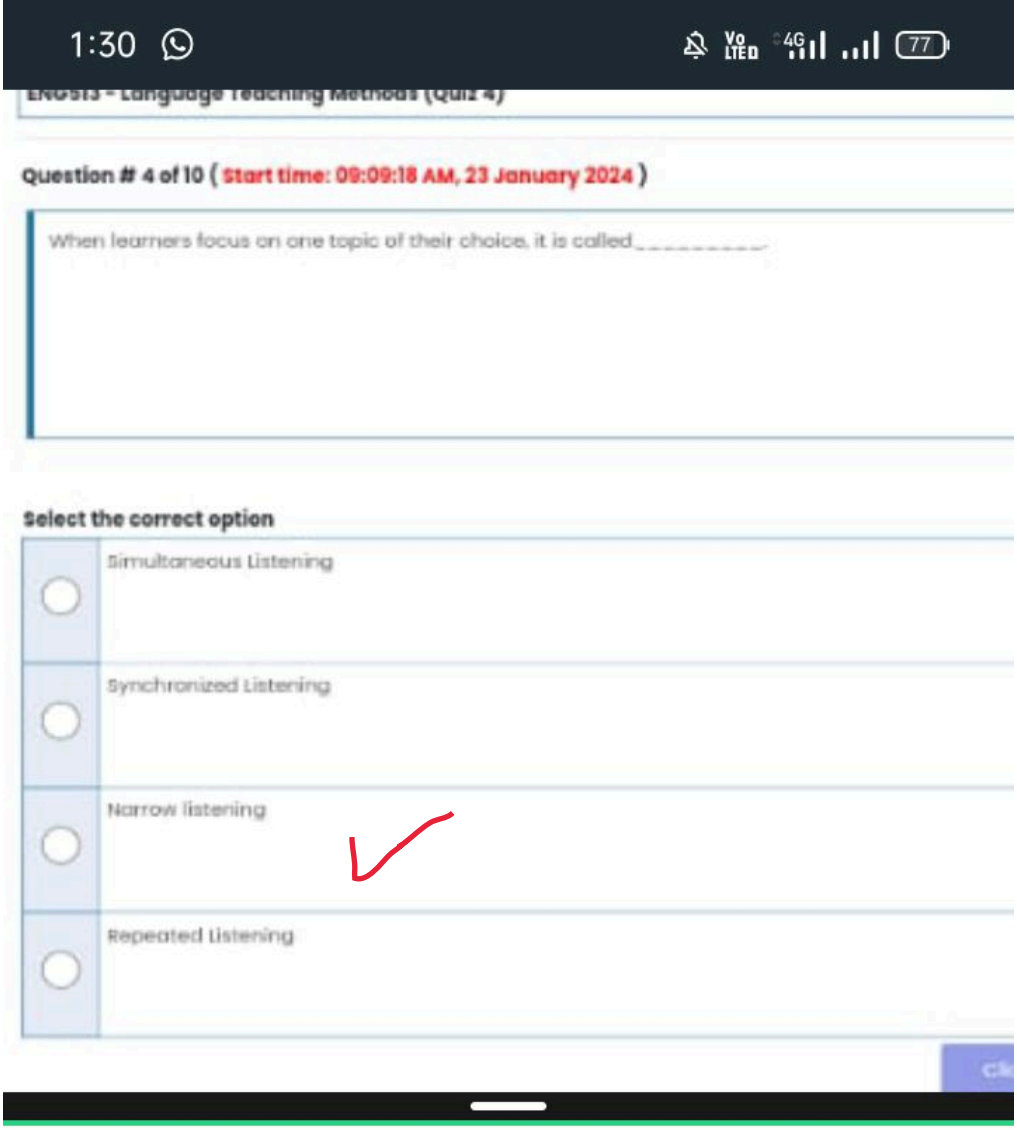

Development (ZPD) through the co-construction of knowledge (Vygotsky, 1986). Dialogic learning is crucial to success in reading, as is the case of instruction in viewing.

Topic-150: Teaching Reading and Viewing Inside and Outside the Classroom

Developing Metacognitively-Strong Readers and Viewers

The self-regulated learning (SRL), has become an accepted pedagogical approach to SBI in reading/viewing on the basis of learners' knowledge, experiences, and strategies, metacognitive instruction. In North America and other parts of the world this approach is highly advocated in L2 reading for specific educational goals, classroom procedures, and assessment (Greene & Azevedo 2007). As an umbrella term referring to both the metacognitive and cognitive aspects of problem-solving in reading comprehension, SRL regards two main domains of human cognition. The first one is about learners' personal beliefs, including learners' self-efficacy, task value, and motivation, the prerequisites to develop self-regulation. The second one is a cluster of variables that includes learners' goal-setting, strategy selection, strategy use and monitoring, self-evaluation of the progress in reaching the target goals, and the success of strategy choice, use and monitoring. Reading researchers and educators both are interested in investigating learners' successes or failures through the lens of SRL. It is anticipated that scholarly work will also be devoted to investigating successes or failures in students' viewing.

A Proposed Pedagogical Cycle for Teaching Reading and Viewing

narrow list

Although a number of suggestions have been made about formats of listening lessons, this does not mean that all the suggestions in each phase have to be included in every lesson. Language teachers must be cautious not to spend too much time on the pre-listening stage and so sacrifice opportunities for listening or for remedial work in the post-listening stage. Therefore, language teachers should balance their time in each phase. I would suggest the following proportions of time in each phase for low level students.

Topic-145: Suggested Approaches to Listening Practice

A number of listening difficulties have been revealed by researchers and many suggestions have been made to improve listening instruction efficiency; however, simply relying on teachers' instruction in the classroom is not sufficient to improve one's listening competence. Therefore, teachers should give their students guidance on doing listening practice outside class. Three approaches: narrow listening, repeated listening, and reading while listening, are suggested.

Narrow Listening

Narrow listening originates from narrow reading, and has been found to be helpful for language acquisition (Krashen, 1981). Narrow listening means that learners focus on one topic, e.g., weather or sports, or one author, like Conan Doyle or Agatha Christie, and do a great deal of listening in the area they choose. This approach is suitable for learners across all proficiencies and is definitely interesting for the L2 learner because the learners themselves choose the topics. In 1996, Krashen provided some guidelines for doing narrow listening; however, over the years, advancing technology has made this learning approach much easier than previously.

Nowadays, many original classics have been adapted and graded to help L2 learners expose themselves to reading literature in the target language as early as possible. Some websites, for example, https://www.ted.com, provide all sorts of modern topics for learners, like technology, education, entertainment, and so forth.

- methods
- internet
- techniques
- technology

learning of pro

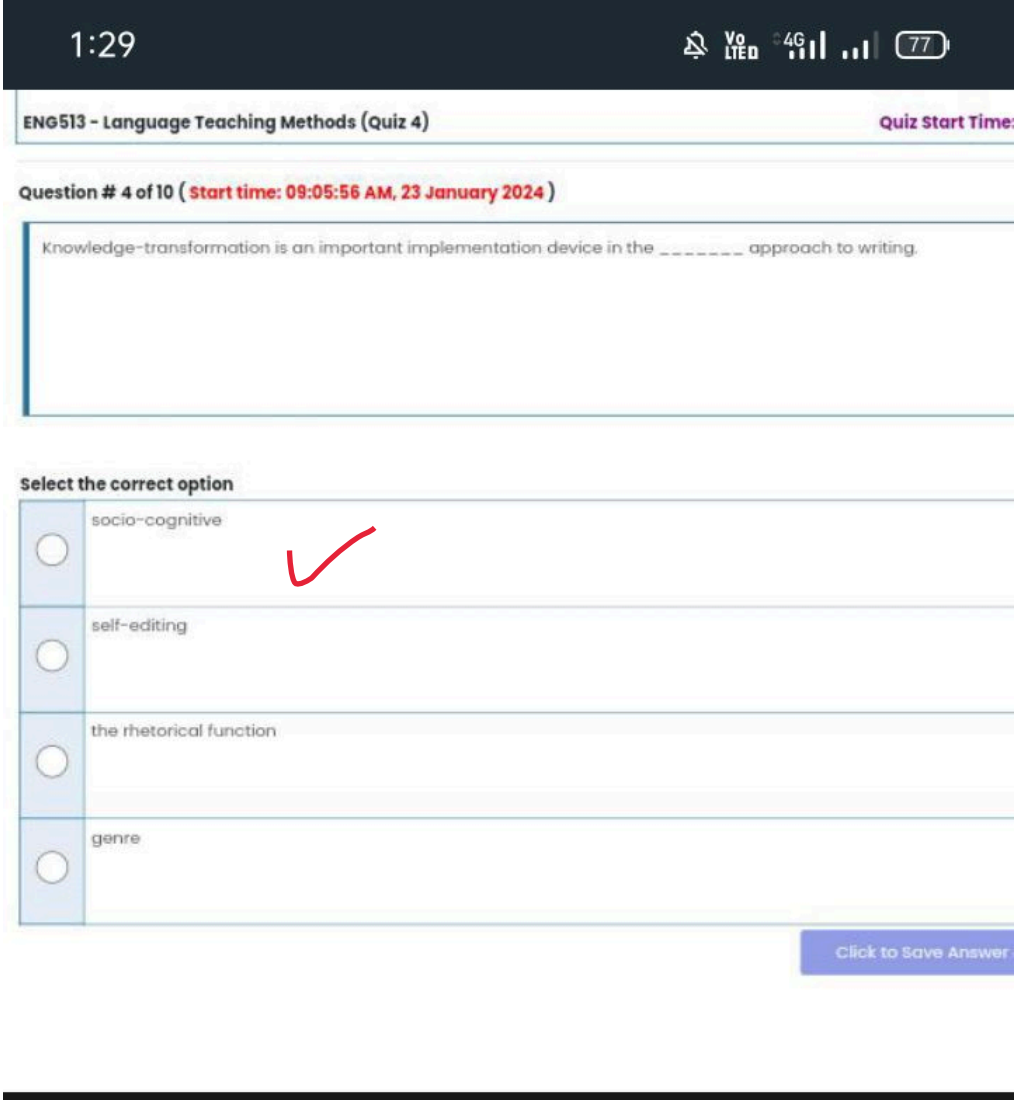

pronunciation teaching, it is important to make the learners become aware of such difference whose L1 does not have voicing contrast.

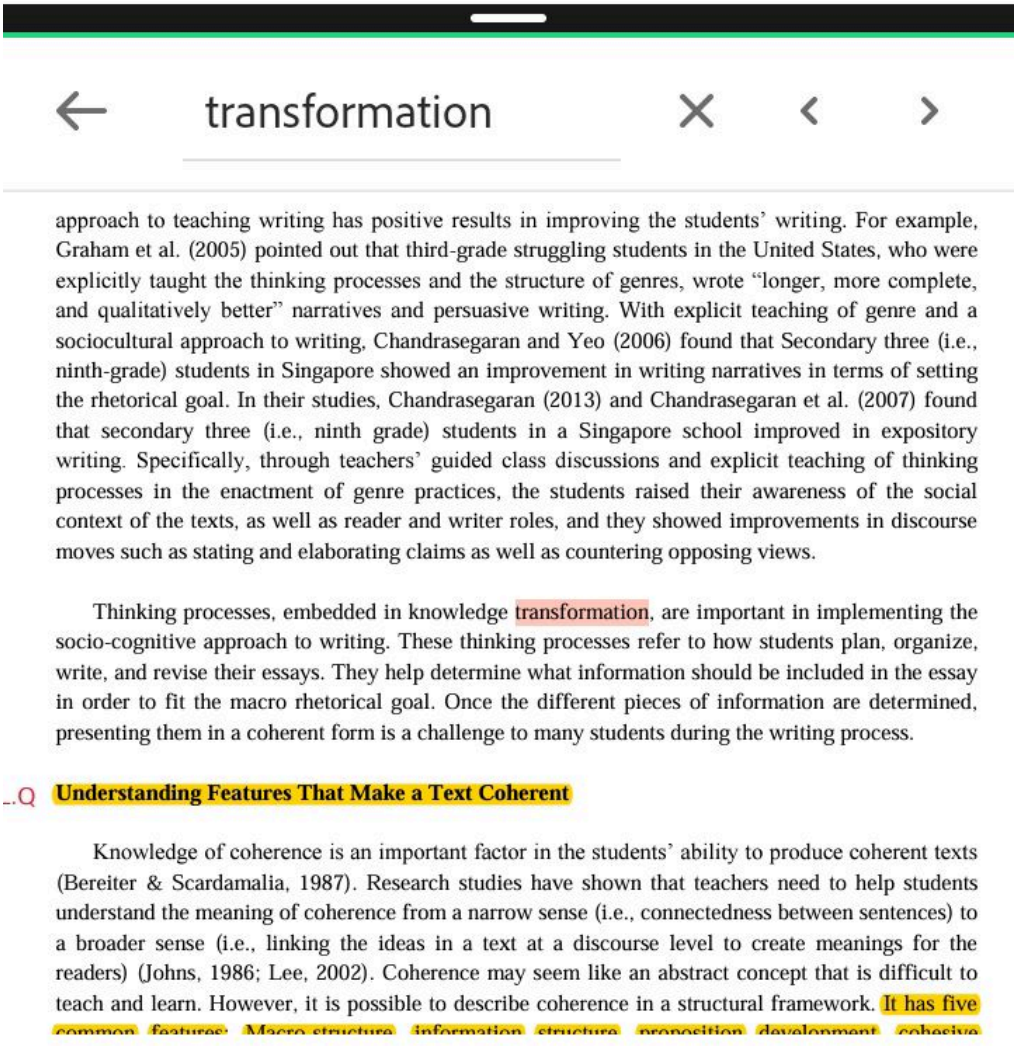

Topic-135: Role of the Internet in Teaching and Learning Pronunciation

In the twenty-first century, the revolution in learning takes place by the use of computer and internet. Language learning has progressed from computer-assisted language learning (CALL) to web-enhanced language learning (WELL) and mobile learning. As computer technology advances, the modes of language learning vary accordingly from online language games, practice exercises, multi-media courses and materials, to chat room exchanges, and blogging. Dudeney and Hockly (2012) believe that mobile technology will definitely impact ELT in the future.

The learning of pronunciation should also incorporate advanced technology. The age of WELL,

which makes use of the world-wide web emphasizes the cognitive development of the learners (Warschauer, 2004). Internet has almost become the default platform for learning among the e-generation. One of the powerful features of the Internet, which greatly enhances the effective learning of pronunciation, is its multimedia capability. Learners can not only get easy access to

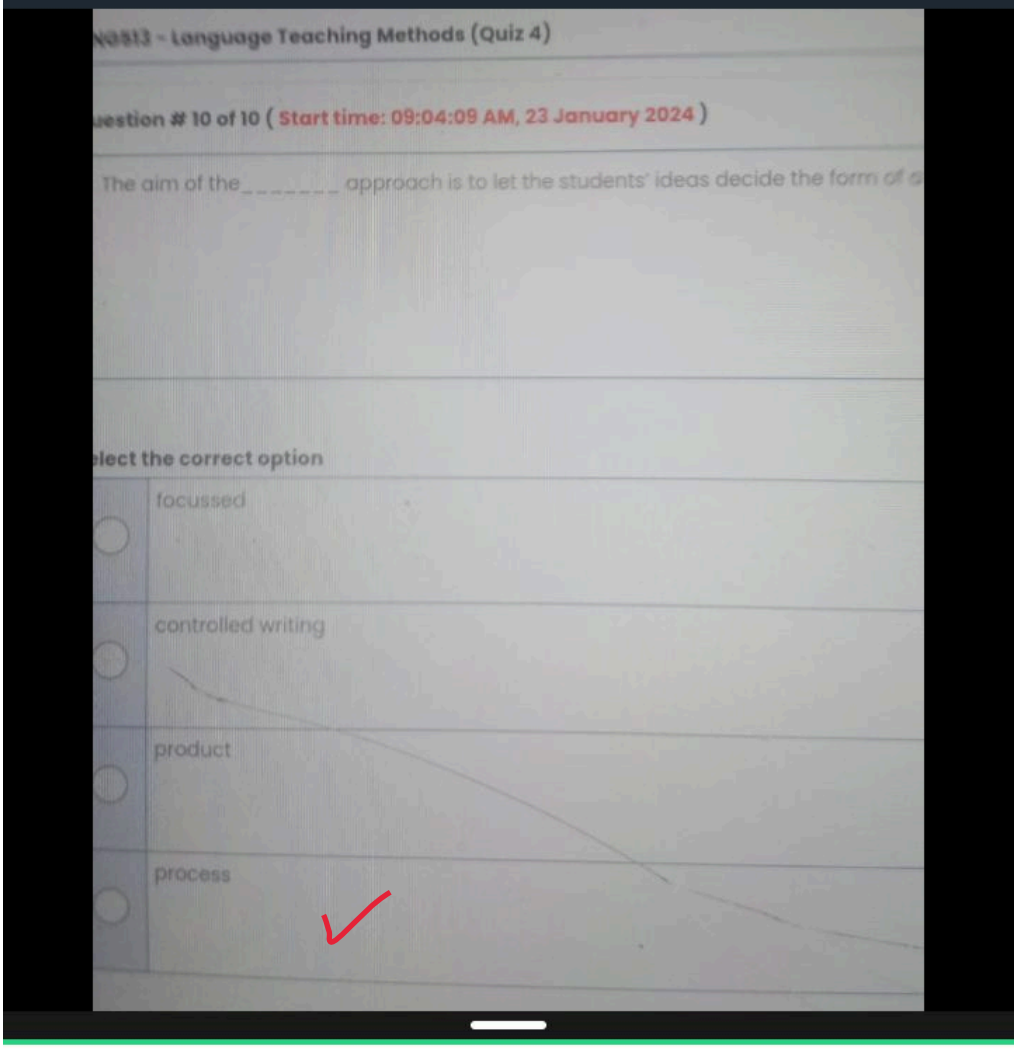

approach to teaching writing has positive results in improving the students' writing. For example, Graham et al. (2005) pointed out that third-grade struggling students in the United States, who were explicitly taught the thinking processes and the structure of genres, wrote "longer, more complete, and qualitatively better" narratives and persuasive writing. With explicit teaching of genre and a sociocultural approach to writing, Chandrasegaran and Yeo (2006) found that Secondary three (i.e., ninth-grade) students in Singapore showed an improvement in writing narratives in terms of setting the rhetorical goal. In their studies, Chandrasegaran (2013) and Chandrasegaran et al. (2007) found that secondary three (i.e., ninth grade) students in a Singapore school improved in expository writing. Specifically, through teachers' guided class discussions and explicit teaching of thinking processes in the enactment of genre practices, the students raised their awareness of the social context of the texts, as well as reader and writer roles, and they showed improvements in discourse moves such as stating and elaborating claims as well as countering opposing views.

Thinking processes, embedded in knowledge transformation, are important in implementing the socio-cognitive approach to writing. These thinking processes refer to how students plan, organize, write, and revise their essays. They help determine what information should be included in the essay in order to fit the macro rhetorical goal. Once the different pieces of information are determined, presenting them in a coherent form is a challenge to many students during the writing process.

Understanding Features That Make a Text Coherent

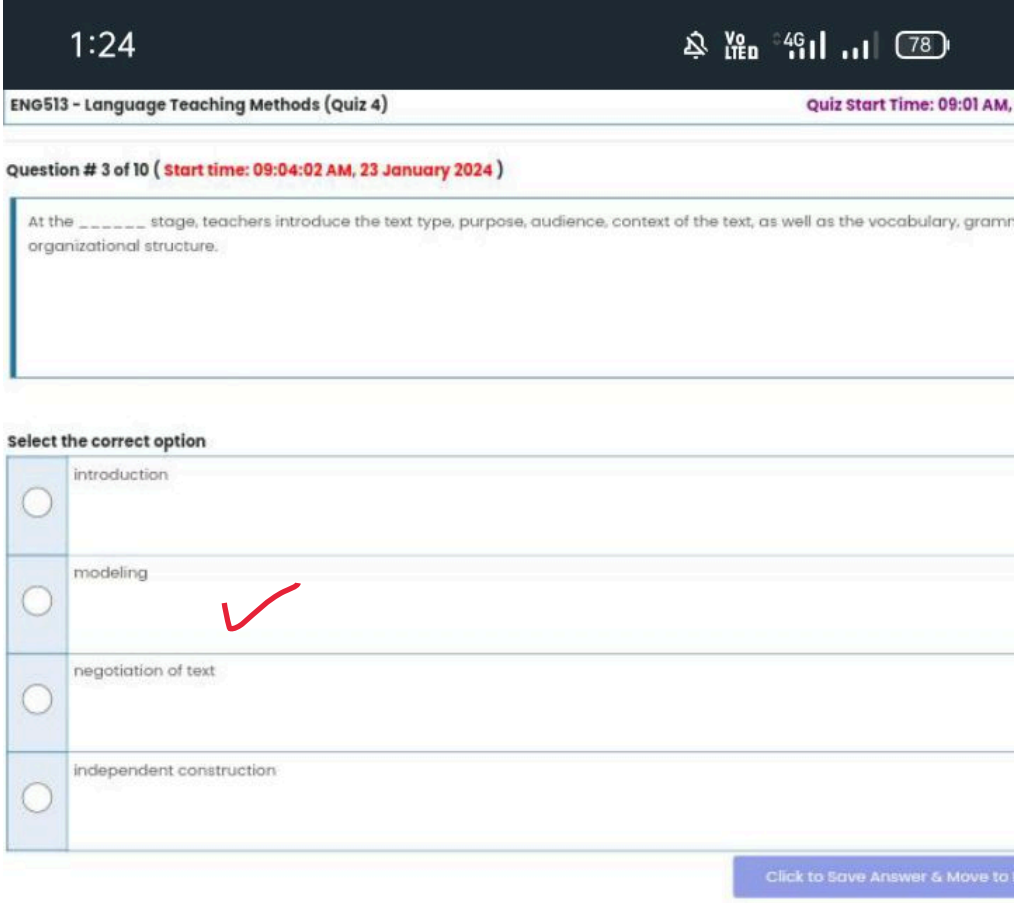

Knowledge of coherence is an important factor in the students' ability to produce coherent texts (Bereiter & Scardamalia, 1987). Research studies have shown that teachers need to help students understand the meaning of coherence from a narrow sense (i.e., connectedness between sentences) to a broader sense (i.e., linking the ideas in a text at a discourse level to create meanings for the readers) (Johns, 1986; Lee, 2002). Coherence may seem like an abstract concept that is difficult to teach and learn. However, it is possible to describe coherence in a structural framework. It has five common features: Macro structure, information structure, proposition development, cohesive

let the studen

writing. There have been paradigm shifts in approaches for teaching academic writing over the last few decades (Paltridge et al., 2009). From the mid-1940s to mid-1960s, controlled composition was widely practiced in writing classes. Such teaching approach aims to improve the students' written work's accuracy, based on behaviorist view that repetition and imitation will lead to habit formation (writing grammatically correct sentences). An example of controlled composition is to give sample sentences of chosen structure, and then students are asked to write few more sentences following that pattern. Later in the mid-1960s, English Language teachers realized that students needed to focus not only on grammatical accuracy of the sentences they produced, but also the functions of writing. Thus, teachers adopted a rhetorical function approach where they shifted the teaching focus from sentence level accuracy to a discourse level with the purposes of writing such as description, comparison, and contrast. Since 1970s, the process approach to writing has gained popularity. Instead of focusing primarily on the form/correctness of the writing, teachers now encourage students to pay attention to macro-level communicative purposes. The aim of the process approach is to let the students' ideas decide the form of a piece of writing (Silva, 1990). Another approach to writing instruction was introduced to help students acquire the mastery in order to succeed in writing about specific topics. Under this genre approach, through reading model texts from a subject area and guided practice, students master the language, text structure, and discourse practices for specific kinds of communication. We should note that understanding the genre approach depends on genre traditions, such as English for Specific Purposes (UK), New Rhetoric (USA), and Systemic Functional Linguistics (Australia). These three genre traditions differ in both form and function (Hyon,1996).

Despite the variety of writing approaches that teachers have developed and adopted in their classrooms, a common underlying objective is to make sure that students recognize what they write in order to accomplish deliberate functions. A practical approach to teaching writing manifests a socio-cognitive pedagogy that explicitly trains students in thinking processes that are conducive to develop and express idea considering their audiences.

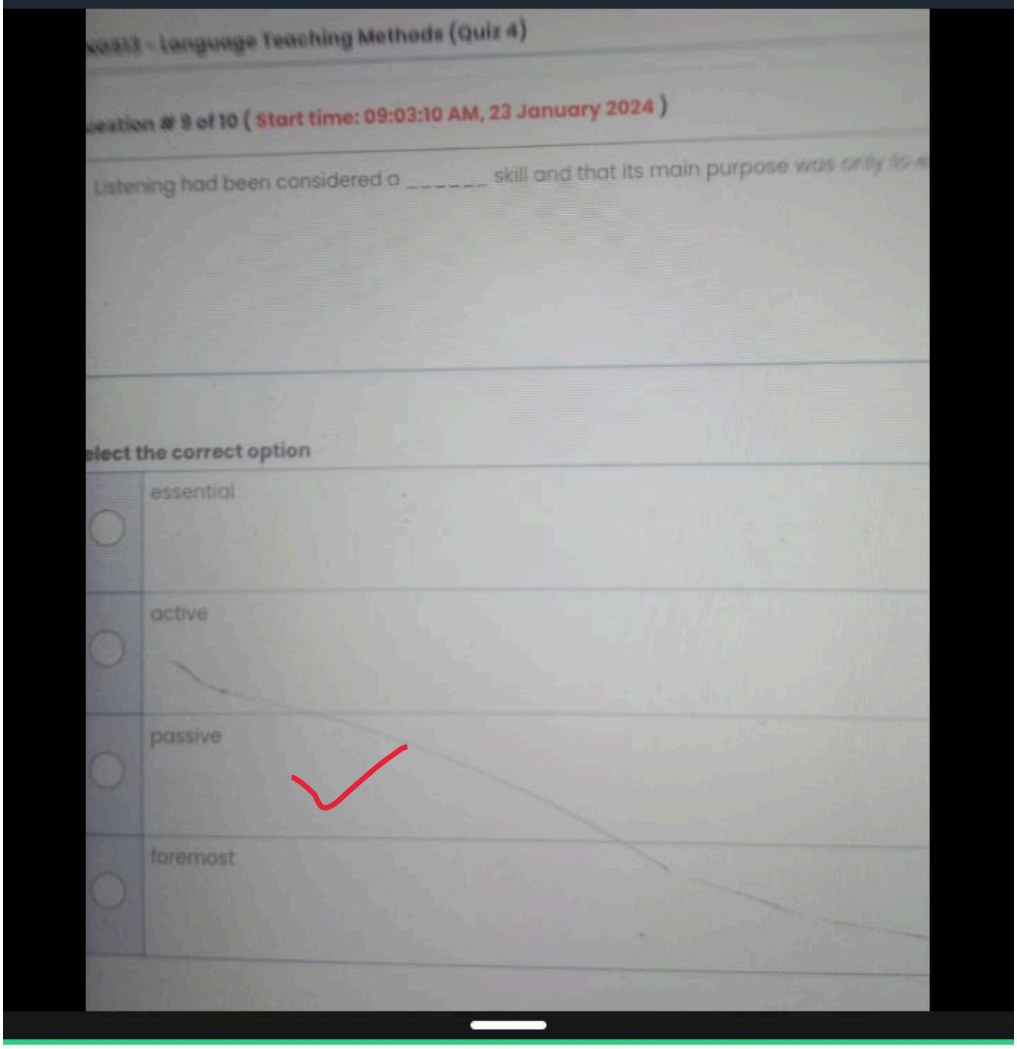

something new from the writing experience); revising (e.g., making sure that the arguments are persuasive, and the macro-rhetorical goal is achieved); considering the reader (e.g., making the writing reader-friendly and anticipating possible counter-arguments from the reader); clarifying writer commitment to his/her idea (e.g., confirming the writer's stance about a particular issue); putting knowledge of the language to use (e.g., choosing language that can help the writer achieve the macro-rhetorical goal of the paper); and making the copy neat (e.g., checking the overall presentation of the paper).

Topic-154: The Use of Technologies to Enhance the Teaching of Writing

The Australian 'teaching and learning cycle' for genre instruction outlines the teaching of writing in three distinct stages: modeling, joint construction of text, and independent construction of text (Cope & Kalantzis, 1993). At the modeling stage, teachers introduce the text type, purpose, audience, context of the text, as well as the vocabulary, grammar, and organizational structure, which are used in realizing that particular text type. For example, when teaching the genre of a complaint letter, teachers can make use of a short authentic letter from a local newspaper. Teachers can jumble the paragraphs, and then ask the students to rearrange the paragraphs and write down the proper order of a jumbled text following the situation-problem-solution- evaluation structure. Students can undertake this task individually if the class size is small, or in small groups with large class size. At this stage, teachers may also introduce the Michigan corpus of upper-level student papers http:// micuspelicorpora.info, an online database of successful writing that can be used by students to improve their writing. Students can directly interact with the database to learn about features of academic writing in an original way. After the modeling phase, teachers move on to another stage called the joint negotiation of text. This stage includes negotiation of ideas between teachers and students. Teachers can include activities such as class discussions and role plays, so as to help students brainstorm and gather possible ideas for writing.

Lesson-29

TEACHING LISTENING IN A LANGUAGE CLASSROOM

Topic-141: The Importance of Developing L2 Listening Skills

The position of listening in second or foreign language programs has undergone a substantial change in recent years (Richards, 2005). The most fundamental change is in understanding of the role of listening in L2 acquisition. Listening had been considered a passive skill and its main purpose was to extract meaning from texts; however, listening is now also considered a skill that can support the growth of other aspects of language knowledge, such as speaking or reading speed (Chang & Millett, 2015). Some empirical studies have also shown that linguistic elements can be acquired through listening (Vidal, 2011; van Zeeland & Schmitt, 2013). This change is important because to acquire a language, a learner normally learns both written and spoken forms unless the language has only one form, with some dialects. If a learner knows one language form, s/he may not learn the language as efficiently as one who knows both forms because reading the written form and listening to the spoken form are equally important input channels and they can work complimentarily. More important, students spend more time on listening than reading, speaking or writing.

When learning first language, listening skill normally precedes reading skill, therefore, for L1 learners, the listening skill is usually used to support the reading skill. However, for L2 learners, due to lack of linguistic input environment, the two skills are often taught at the same time, though some learners may develop one skill faster than the other. Normally, the reading skill is considered easier

ENG513 - Language Teaching Methods (Quiz 4)

Question # 2 of 10 (Start time: 09:02:28 AM, 23 January 2024)

Spoken language is _____simpler than written language.

Select the correct option

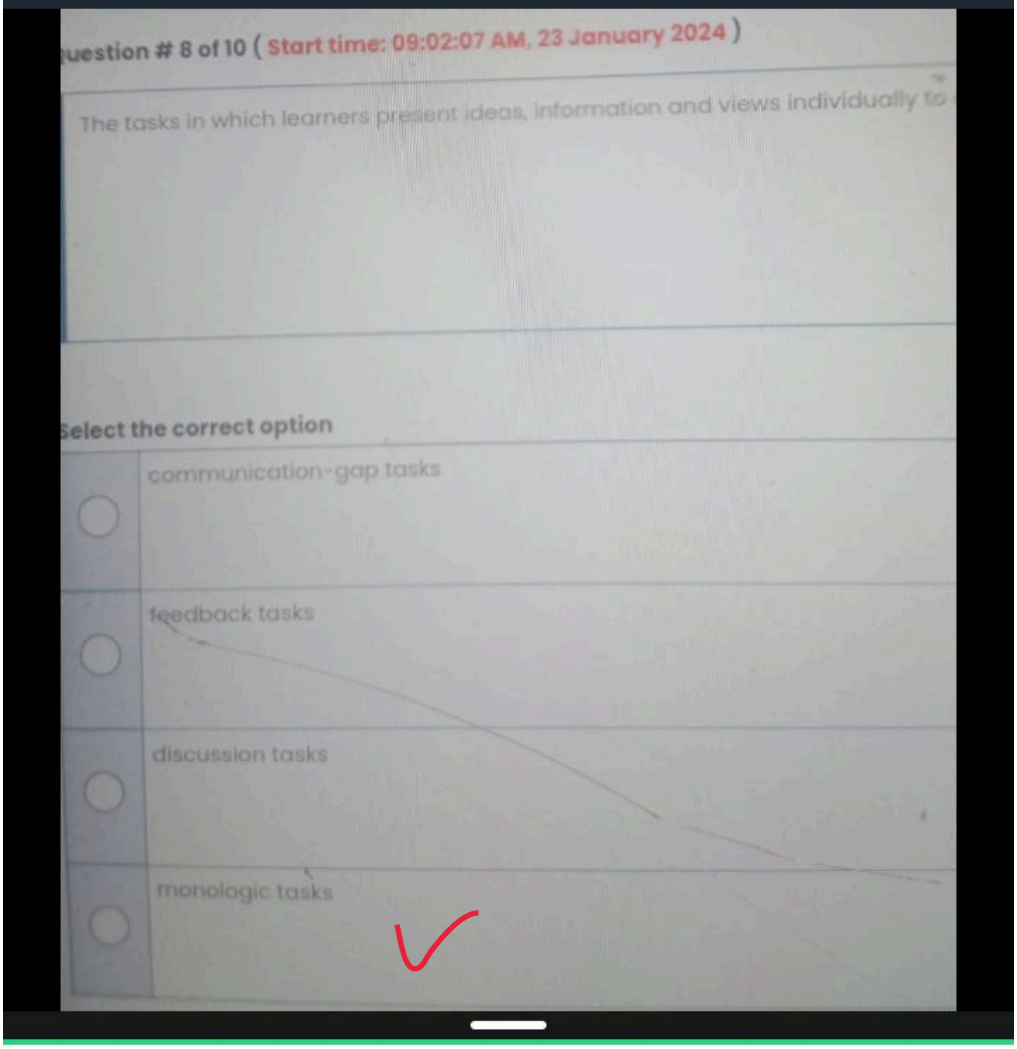

- semantically
- slightly
- syntactically ✓
- spontaneously

spoken language is

be silent in some words. For example, we do not hear the sound /h/ in hour or /gh/ in though.

- Often a foreign language learner may just hear a string of sounds linked together; for example, the phrase first of all may become 'firsdavall'. Word boundaries become indistinct due to phonological change; some sounds may be dropped or changed, and others may be added.
- Spoken language is syntactically simpler than written language and may contain incomplete sentences; idea units are shorter, and generally joined by coordinators, such as and, but, or so.
- Spoken language, particularly spontaneous speech, contains various disfluencies, such as fillers (you know, well, ok …), hesitations, false starts, and self- corrections, which give the listeners more time to think about what has just been said if listeners understand those are fillers. If listeners cannot identify them, it may cause more difficulties.
- Compared to written language, spoken language contains more colloquial expressions, slang, and nonstandard grammar, which are considered unacceptable in writing.

The features listed above are just the tendencies of spoken language that listeners should be aware of. However, from a linguistic perspective, spoken and written language does not have clear cut divisions (Biber 1988). Also, language use depends very much on the situation in which it takes place, whether the speaker is educated or not, or whether the speech is prepared in advance. All of these variables pose significant challenges to L2 listeners. These factors need to be kept in mind while designing classroom activities.

views individual

learner will have to describe, narrate or explain to their partner.

In comparison, discussion tasks create an even more authentic context for speaking and interaction because learners share their personal views with one another. When they have to discuss an open or controversial topic, for example, learners can draw on their own background knowledge, experience and beliefs. When a consensus or solution is required, they will have to negotiate with one another for an outcome that everyone can agree on. Sometimes, group discussions can also occur through simulations, which are classroom activities that reproduce or create a situation that is close to real life concerns. In simulations, learners are given scenarios in which they take on a role, such as a doctor, a Member of Parliament, a school counselor, and a parent to discuss an issue with others taking on other roles.

In contrast to these two kinds of tasks, monologic tasks require learners to present ideas, information and views individually to a single listener or a group of listeners. For example, they may give a talk, tell a story or present a report. They may also speak extensively on a topic or a theme without interruptions. They may be asked to give spontaneous and unedited talks or planned and rehearsed ones. These 'performances' can be done in front of the whole class, but doing them in small groups is preferable because it reduces anxiety for the speakers and enables peers to ask questions and give feedback in a less threatening environment. Teachers can plan different kinds of

Lesson-34

Designing Instructional Materials

Topic-166: Significance of Designing Instructional Materials

Global EFL courses are used by non-native speakers who will need to communicate in English with other non-native speakers outside of English speaking areas, which means they will need English not as a native speaker but as a lingua franca (Jenkins, 2012). Yet, most of these courses teaching English as a foreign language still seem to be developed as though their users need to communicate with the native speakers of English which means they interact with people in English speaking countries i.e. UK and USA. For example, Tomlinson and Masuhara (2013) reviewed six current EFL courses published in the UK and concluded that most of the texts illustrate a 'correct' version of English as it is written and spoken by native speakers interacting with each other. The courses are very little to helpful to prepare learners for the use of English as a global lingua franca in reality. They do find some dialogues in the courses, which are spoken by non-native speakers, but the language and strategies used in these dialogues seems indistinguishable from those that would have been used by native speakers interacting with each other. One of the evaluation criteria used by Tomlinson and Masuhara (2013, p. 244) is, "To what extent is the course likely to help learners to use English as a lingua franca?" Two of the courses score 2 out of 5 and the other four only manage 1 out of 5 each. Although some of the courses do acknowledge the participation of non-native speakers in the recording of the dialogues, Tomlinson and Masuhara concluded that the focus was exclusively on British English and the language 'taught' is contemporary British middle-class standard. Burns and Hill (2013, p. 241) also reviewed global course books and asked, "How far do speaking activities reflect the changing nature of English as a global language, and the fact that most interactions in English in the world today are not restricted to two Native Speakers". They found the

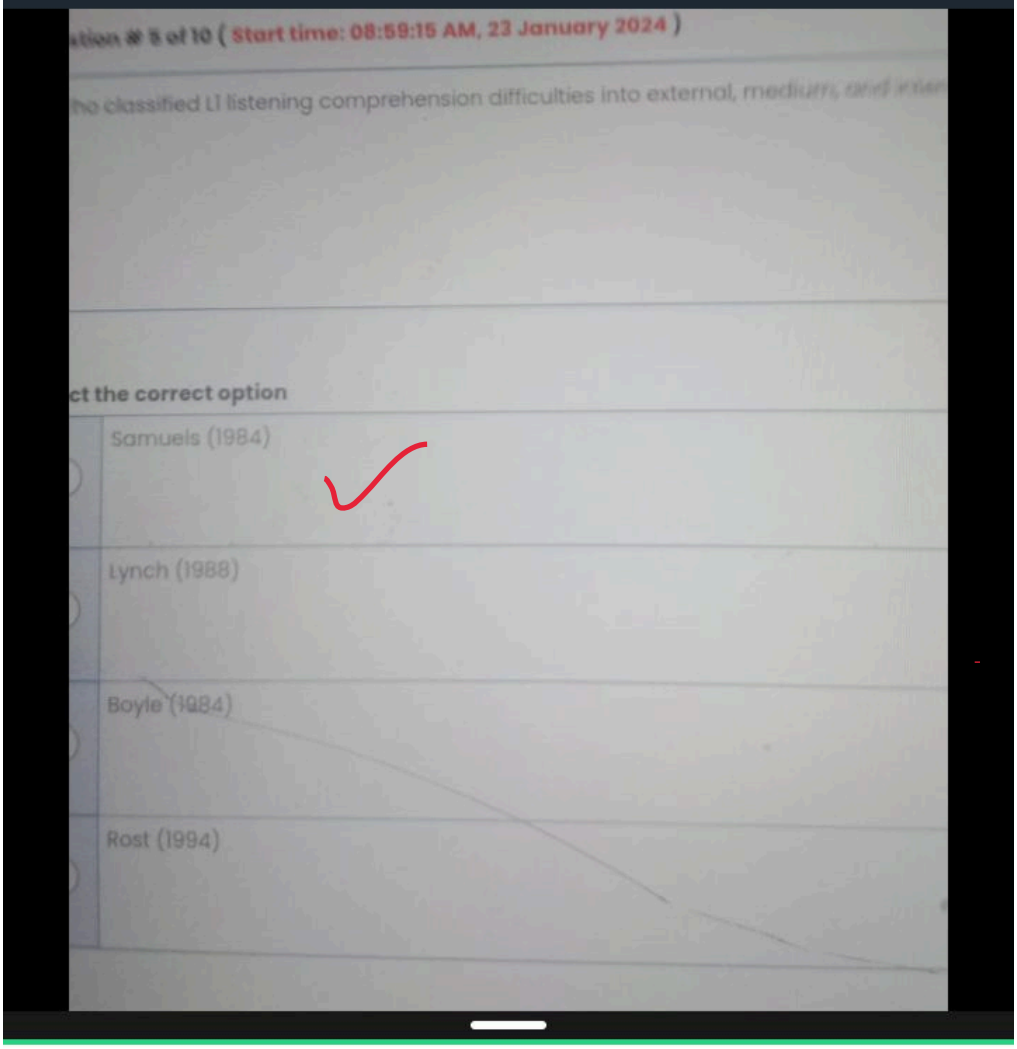

generate and select

structure arguments at the micro level. The elements in this model of argumentation include (i) claim – a statement that the arguer wants to show is true; (ii) data – the evidence offered in support of the claim; (iii) warrant – an assumption that underlies the claim; (iv) backing – evidence for the warrant; (v) qualifier – something which is added that in some way limits the applicability of scope of the claim; and (vi) reservation – a statement or a situation which, if true, renders the claim invalid (Toulmin, 1958). Teachers need to teach students explicitly how to structure and develop arguments at both macro and micro levels in their essays.

Topic-153: Writing Process and LTM in a Classroom

Traditionally, writing teachers explain the writing process as a linear process (Grabe and Kaplan, 1996). Paltridge et al., (2009) identifies four distinct sub-processes in writing. First, in the conceptualizing stage, writers generate and select ideas that can be used in their writing, and then organize the ideas in an ordered way (e.g., an essay must have an introduction, body, and a conclusion). The second sub-process is called formulating, putting ideas into sentences. The third sub-process is revising, where writers rewrite and improve the essays. The revisions can be related to the content, grammar, and mechanics. The fourth sub-process is reading. Writers read the essay's instruction and gather information for the essay topic. They're read their writing to make sure that they are answering the essay's prompts. The linear process model may under-conceptualize and oversimplify the writing process (Emig, 1971, p. 98). This oversimplification may be problematic because it can be inflexible and limits the freedom to explore, whereas writing in practice could be an unstructured process of self-discovery. Recently, some writing scholars suggest that writing is a recursive, nonlinear activity. Clark and Ivanič's (1991) highlighted that both novice and experienced writers go through various stages of the writing process several times and may not follow a fixed and particular order. Clark and Ivanič (1991) identify 16 (equally important and inter-related) stages of the writing process, involving the following: accumulating knowledge and opinions (e.g., doing the necessary reading to gather information about a particular topic, or gathering primary data through surveys and interviews to find out the participants' opinions on a particular topic); decide how to

Topic-143: Factors Affecting L2 Comprehension

Factors affecting listening difficulties have been widely discussed both in first language (Wolvin & Coakely, 1996) and second language (L2) listening (Anderson & Lynch, 1988; Boyle, 1984; Goh 1999, 2000; Hasan, 2000; Huang, 2004 ; Miller, 2009; Rost, 2005). Theoretically, comprehension takes place when listeners can infer what is said based on their linguistic background and contextual knowledge (Buck, 1995, 2001). However, unlike written language, which tends to be more stable, variations in spoken linguistic features may occur from person to person or region to region (Biber, 1988; Chafe, 1985). Accordingly, listeners face a number of challenges, e.g., fast speech rates, unfamiliar accents, transient information, or colloquial usages and slang, which seldom appear in formal L2 textbooks.

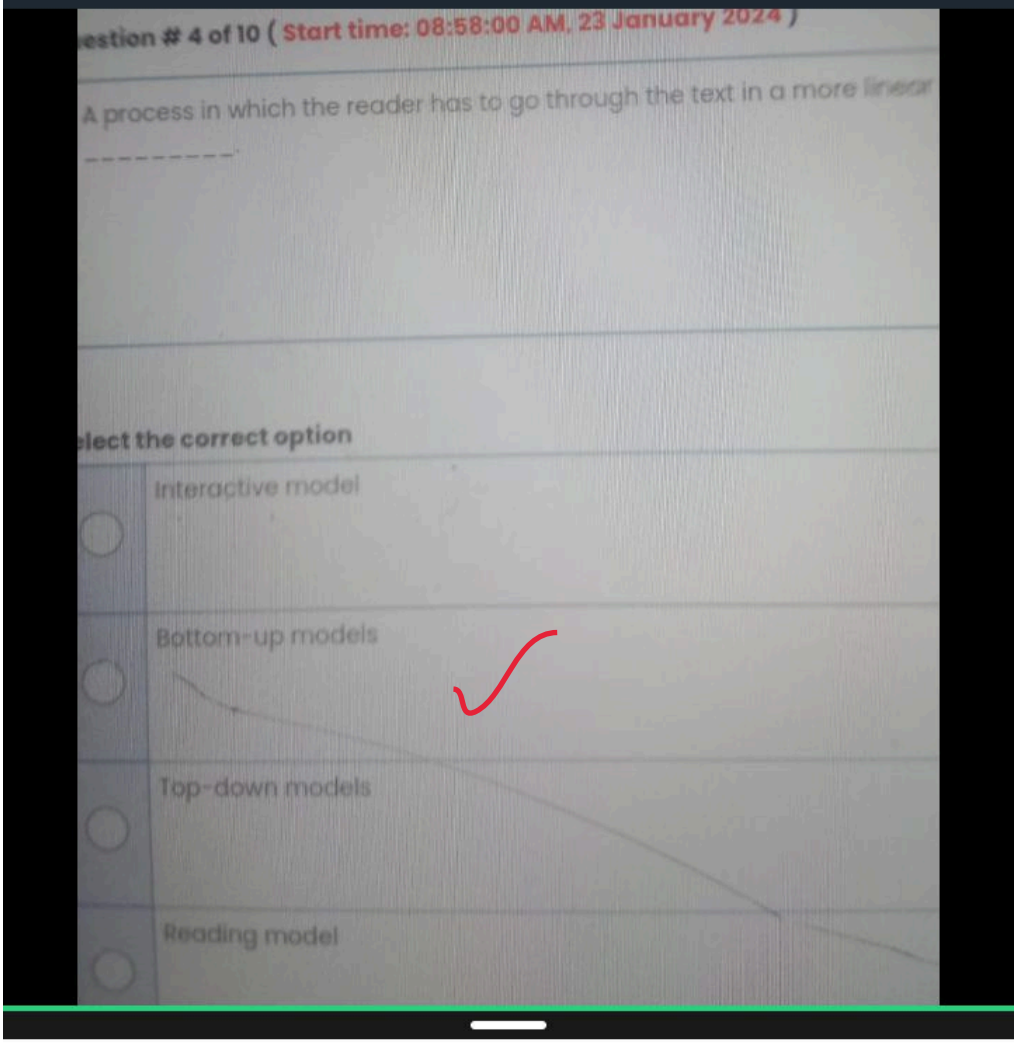

Samuels (1984) classified L1 listening comprehension difficulties into external, medium, and internal factors. External factors refer to the learning environment (Rost 1994, 2005), practice opportunities (Boyle, 1984), and speaker factors, such as speech rate, accent and pronunciation, and effectiveness of a speaker's talk (Samuels, 1984). Medium factors relate to text type, task type and the context in which listening takes place (Anderson& Lynch, 1988). Internal factors are about listeners themselves, for example, their listening proficiency, motivation, background knowledge, physical condition.

the reader, who needs to interpret the text to derive it. He argues that readers' top-down processing is essential to successful reading, and that in many instances, reading involves readers' existing schematic knowledge. Such a view is also widely shared among L2 researchers on bilingual readers because there are non-decoding factors that contribute to reading success (Yorio, 1971; Zhang, Gu, and Hu, 2008).

'Bottom-up' models view reading as a process in which the reader has to go through the text in a more linear fashion, starting from the smallest unit in print. Frequently, such a process is mainly text-bound, without any opportunity of the reader actively interpreting the text meaning. In this view, meaning is self-evident as soon as you are able to decode all the words. Bottom-up and top-down models of reading are two polarities of the reading models mentioned above (Ehrich et al., 2013).

Interactive Models

In his 'interactive-compensatory model' Stanovich (2000) argues that, although top-down processing is necessary, bottom-up processes play a significant role in reading, especially for beginning readers. In fact, both processes are very important in learning how to read. He points the reason why poor readers do not guess as accurately as skilled readers. The skilled readers possess accurate and automatic perceptual abilities in word recognition that they do not usually need to guess; whereas poor readers usually guess, and their guessing is frequently short circuited by their limited linguistic proficiency. Following this line of explication, one can see clearly that learning to

pronunciation teaching, it is important to make the learners become aware of such difference whose L1 does not have voicing contrast.

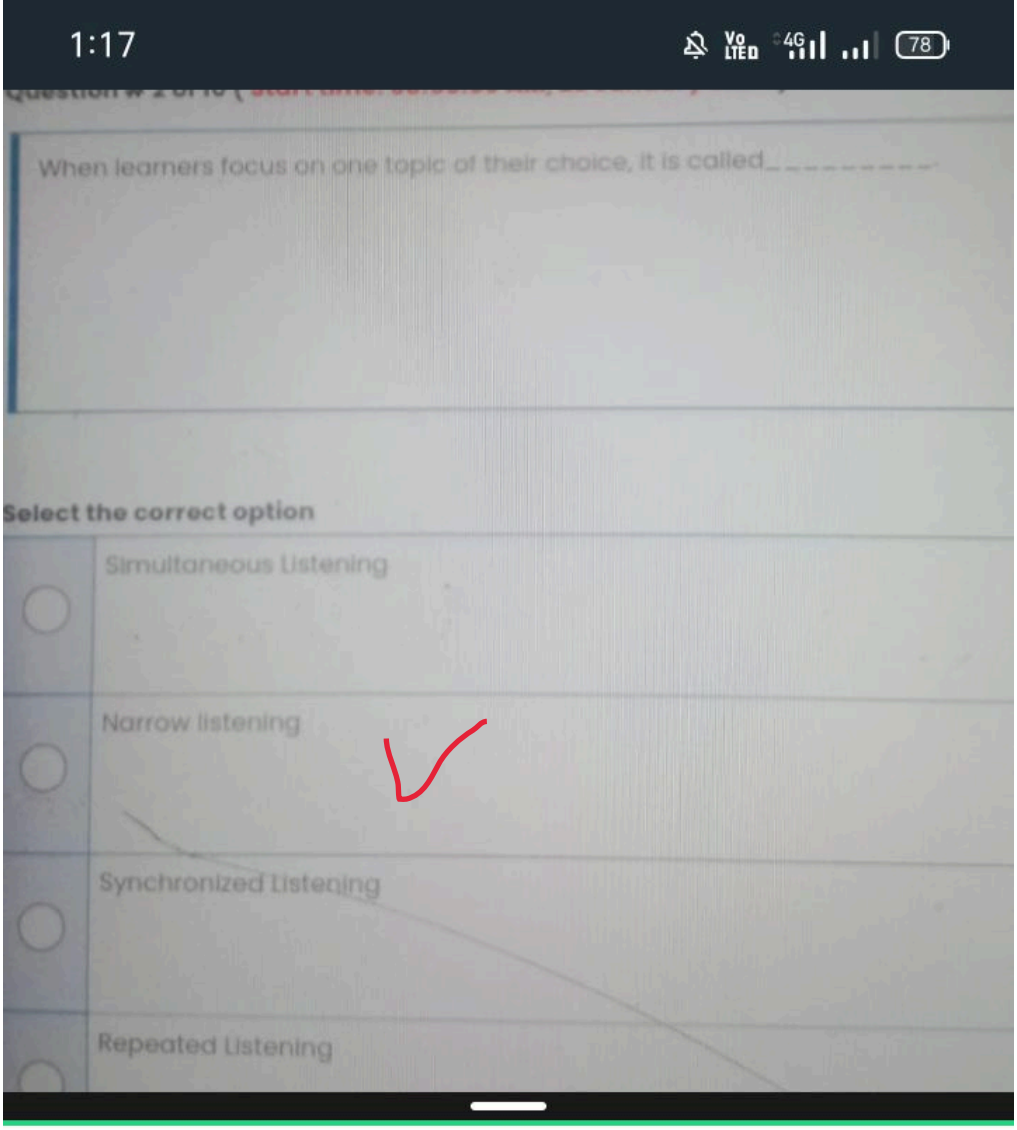

Topic-135: Role of the Internet in Teaching and Learning Pronunciation

In the twenty-first century, the revolution in learning takes place by the use of computer and internet. Language learning has progressed from computer-assisted language learning (CALL) to web-enhanced language learning (WELL) and mobile learning. As computer technology advances, the modes of language learning vary accordingly from online language games, practice exercises, multi-media courses and materials, to chat room exchanges, and blogging. Dudeney and Hockly (2012) believe that mobile technology will definitely impact ELT in the future.

The learning of pronunciation should also incorporate advanced technology. The age of WELL,

©Copyright Virtual University of Pakistan

which makes use of the world-wide web emphasizes the cognitive development of the learners (Warschauer, 2004). Internet has almost become the default platform for learning among the e-generation. One of the powerful features of the Internet, which greatly enhances the effective learning of pronunciation, is its multimedia capability. Learners can not only get easy access to audio files but they can also have access to animated video clips demonstrating how certain sounds

one topic

A number of listening difficulties have been revealed by researchers and many suggestions have been made to improve listening instruction efficiency; however, simply relying on teachers' instruction in the classroom is not sufficient to improve one's listening competence. Therefore, teachers should give their students guidance on doing listening practice outside class. Three approaches: narrow listening, repeated listening, and reading while listening, are suggested.

Narrow Listening

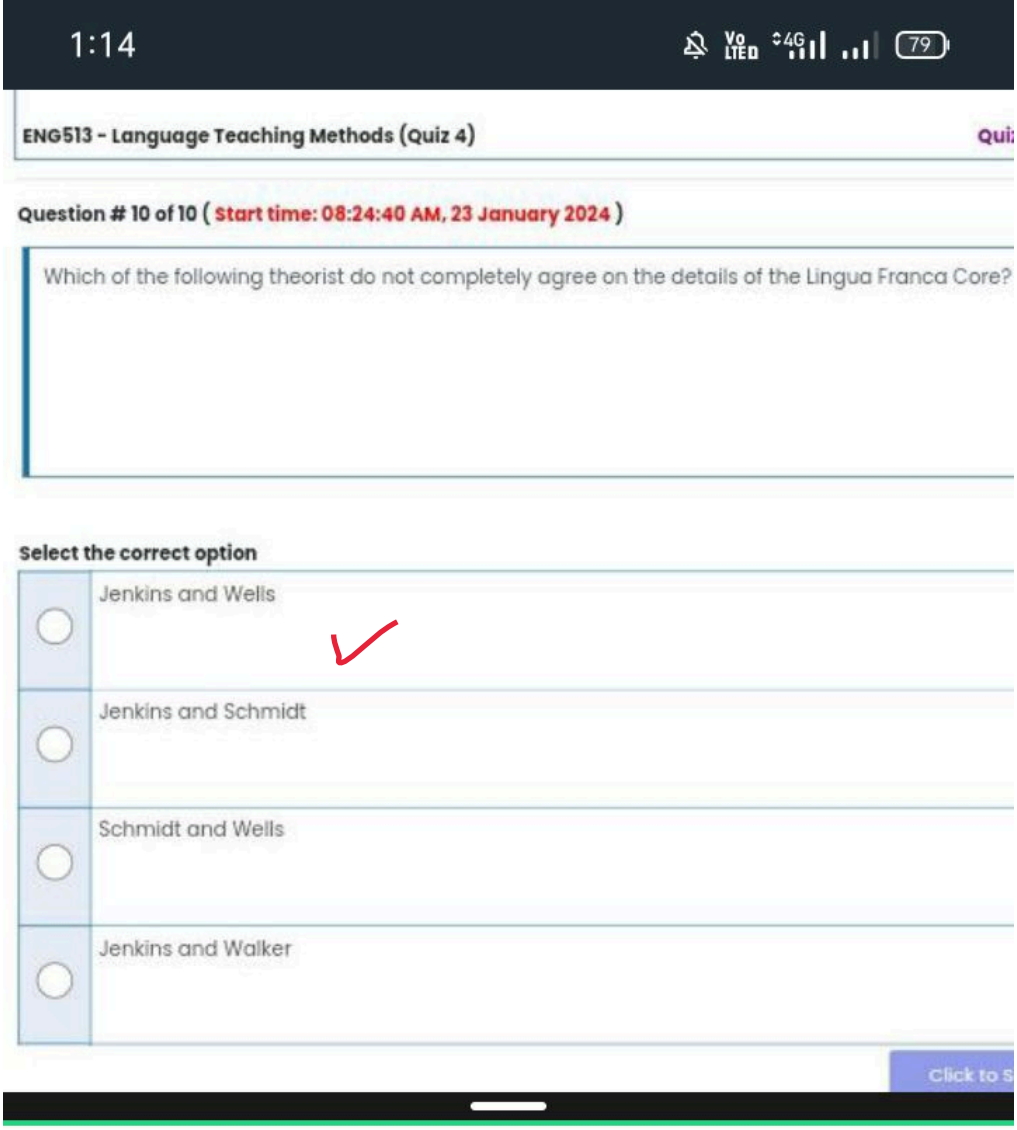

Narrow listening originates from narrow reading, and has been found to be helpful for language acquisition (Krashen, 1981). Narrow listening means that learners focus on one topic, e.g., weather or sports, or one author, like Conan Doyle or Agatha Christie, and do a great deal of listening in the area they choose. This approach is suitable for learners across all proficiencies and is definitely interesting for the L2 learner because the learners themselves choose the topics. In 1996, Krashen provided some guidelines for doing narrow listening; however, over the years, advancing technology has made this learning approach much easier than previously.

Nowadays, many original classics have been adapted and graded to help L2 learners expose themselves to reading literature in the target language as early as possible. Some websites, for example, https://www.ted.com, provide all sorts of modern topics for learners, like technology, education, entertainment, and so forth.

Not only can learners select the kinds of material they want to view and to which they want to listen, but they can also determine the duration of these videos that they want to watch.

Repeated Listening

Repeated listening also derives from an L1 source, repeated reading. Repeated reading is one of

lingua franca core

idea that, rather than adhering to an standard norm, be it Received Pronunciation (RP) or General American (GA), the teaching and learning of English should not be dictated by any of them as the sole model, because there seems to be little reason to base the L2 (English) teaching on an RP model, other than the fact that 'even in the inner circle only a specific elite group is considered as 'norm makers', or as models for emulation (Kachru, 1985) and that RP has altered over time (ibid). Wells (2005) agrees that it is not realistic to ask for a choice between EFL and EIL, our students need both (Wells, 2005). Indeed, learners learn English to interact with all speakers of English, not exclusively with RP or GA speakers. The most important theme of ELF in ELT is to realistically acknowledge the existence of variability in language use.

Although Jenkins (2000) and Wells (2005) do not completely agree on the details of the Lingua Franca Core, both emphasize on the importance of pronunciation features which impede intelligibility. As Jenkins has aptly pointed out that even when learners use a variant grammatical form or an inappropriate expression, they can still be understood. It is usually the wrong pronunciation that leads to communication breakdown (Jenkins, 2012). The decisive role of pronunciation in mutual intelligibility is evident. The effort of ELF researchers in advancing a paradigm shift in ELT is slowly paying off (Jenkins 2000, 2006; Seidlhofer, 2001; Walker, 2010). On the practical side, Wells (2005) provides a few principles to follow within such a paradigm. He suggests that the teaching of English pronunciation in an EFL/EIL context should focus on areas which impede communication and at the same time we should not undermine learners' confidence. While the importance of effectively communicating with NSs should be maintained, NSs should be educated too, so as to achieve mutual intelligibility from both sides.

Wells appeals to contrastive analysis (CA) as a way to locate areas of difficulty. Despite its rather simplistic approach, CA is a useful initial step to identifying potential areas of unintelligibility. It is through the careful comparison and contrast of L1 and English that teachers and learners of different language backgrounds can be made aware of the pronunciation features that cause problems in understanding speakers of different varieties. Such awareness is crucial in

Topic-144: Format of a Well-Designed Listening Lesson

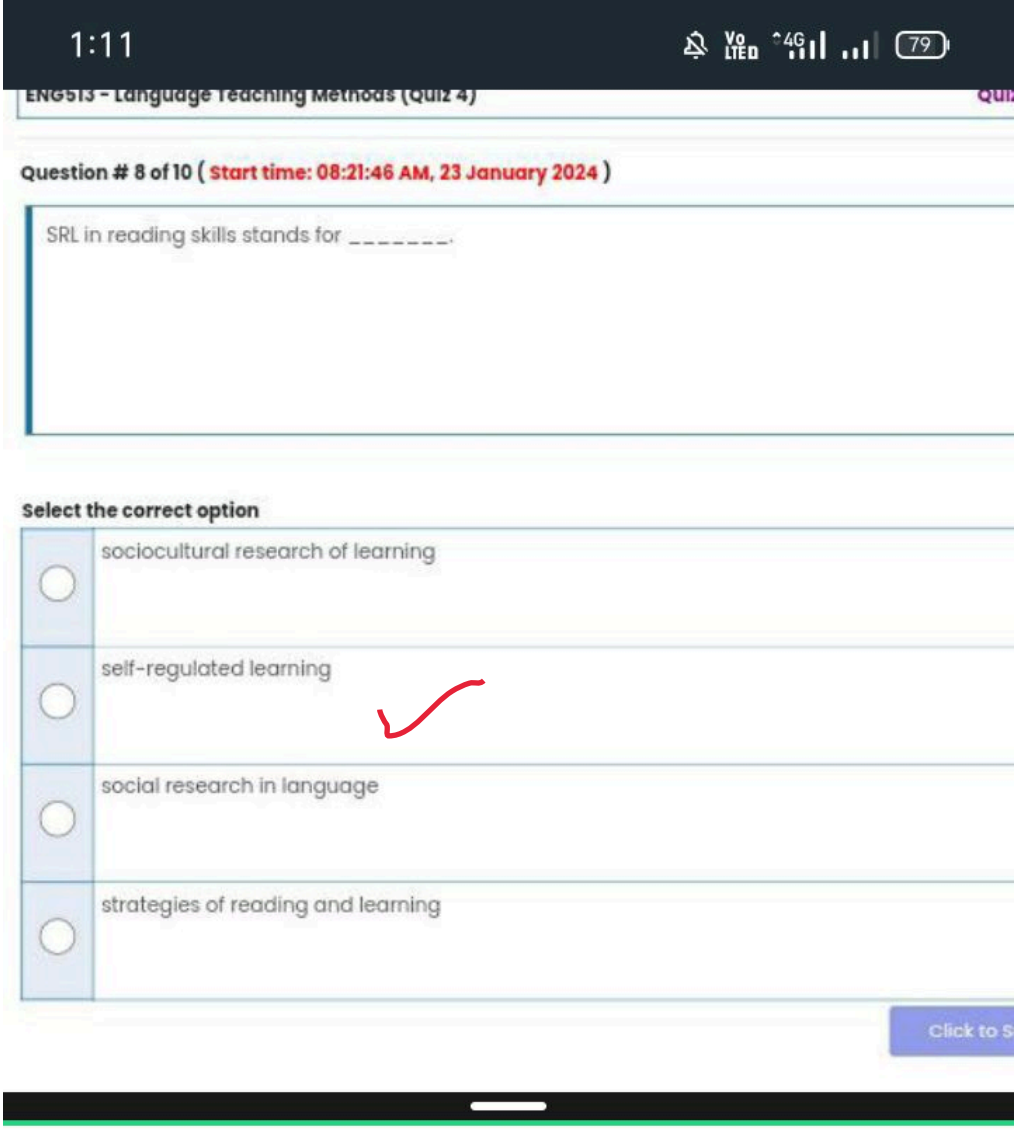

In the above two sections, we have seen some unique features of spoken language, and found varying listening difficulties in the empirical studies. As previously mentioned, good listening skills can accelerate language acquisition. Therefore, an important task for language teachers is how to teach L2 listening efficiently? A theory-based listening lesson involved three stages: pre-listening, while-listening and post-listening.

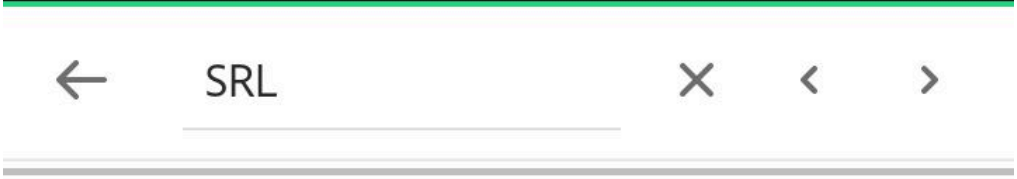

The Pre-listening Phase

The pre-listening phase is a particularly important stage for beginner listeners. If a teacher can prepare students well before a listening task begins, then the students are more likely to experience feelings of success. The L2 teacher can use one or more of the following pre-listening activities.

1. Establish the purposes for listening activities: Conventionally, the teaching of L2 listening is to extract meaning from texts. Once meaning has been identified, then the task is over. This is also what L2 listeners usually consider listening to be. However, the teacher should tell students that listening is another way of facilitating language learning. Before a task begins, the teacher can tell the students the purpose of a listening activity: to comprehend a text only, to understand a joke, to complete a task, to learn a concept, or to learn a term that is explained by the input text.

©Copyright Virtual University of Pakistan

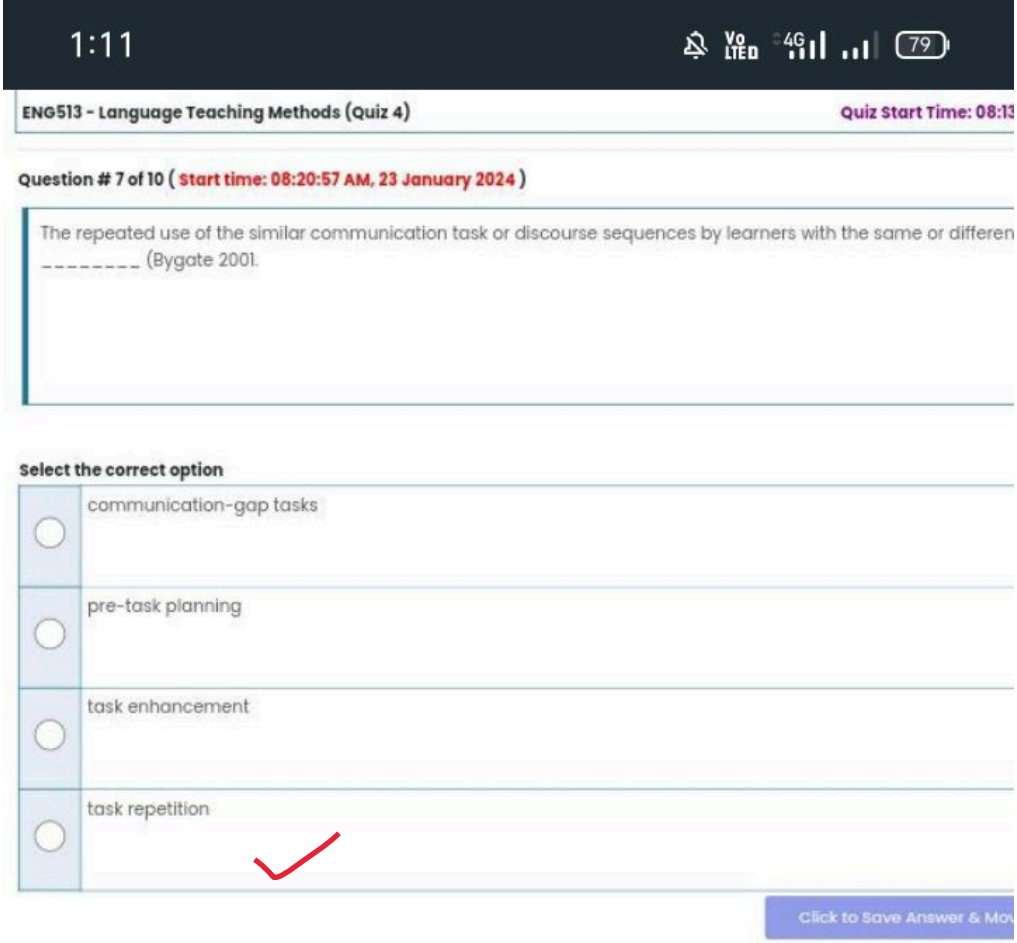

Development (ZPD) through the co-construction of knowledge (Vygotsky, 1986). Dialogic learning is crucial to success in reading, as is the case of instruction in viewing.

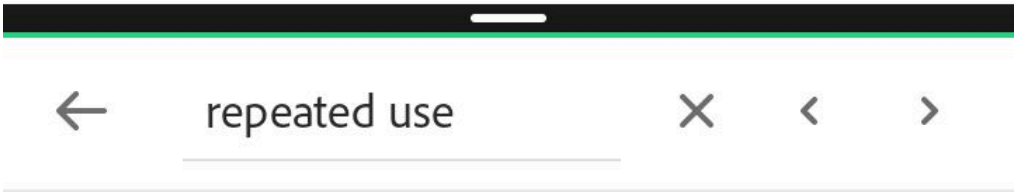

Topic-150: Teaching Reading and Viewing Inside and Outside the Classroom

Developing Metacognitively-Strong Readers and Viewers

The self-regulated learning (SRL), has become an accepted pedagogical approach to SBI in reading/viewing on the basis of learners' knowledge, experiences, and strategies, metacognitive instruction. In North America and other parts of the world this approach is highly advocated in L2 reading for specific educational goals, classroom procedures, and assessment (Greene & Azevedo 2007). As an umbrella term referring to both the metacognitive and cognitive aspects of problem-solving in reading comprehension, SRL regards two main domains of human cognition. The first one is about learners' personal beliefs, including learners' self-efficacy, task value, and motivation, the prerequisites to develop self-regulation. The second one is a cluster of variables that includes learners' goal-setting, strategy selection, strategy use and monitoring, self-evaluation of the progress in reaching the target goals, and the success of strategy choice, use and monitoring. Reading researchers and educators both are interested in investigating learners' successes or failures through the lens of SRL. It is anticipated that scholarly work will also be devoted to investigating successes or failures in students' viewing.

A Proposed Pedagogical Cycle for Teaching Reading and Viewing

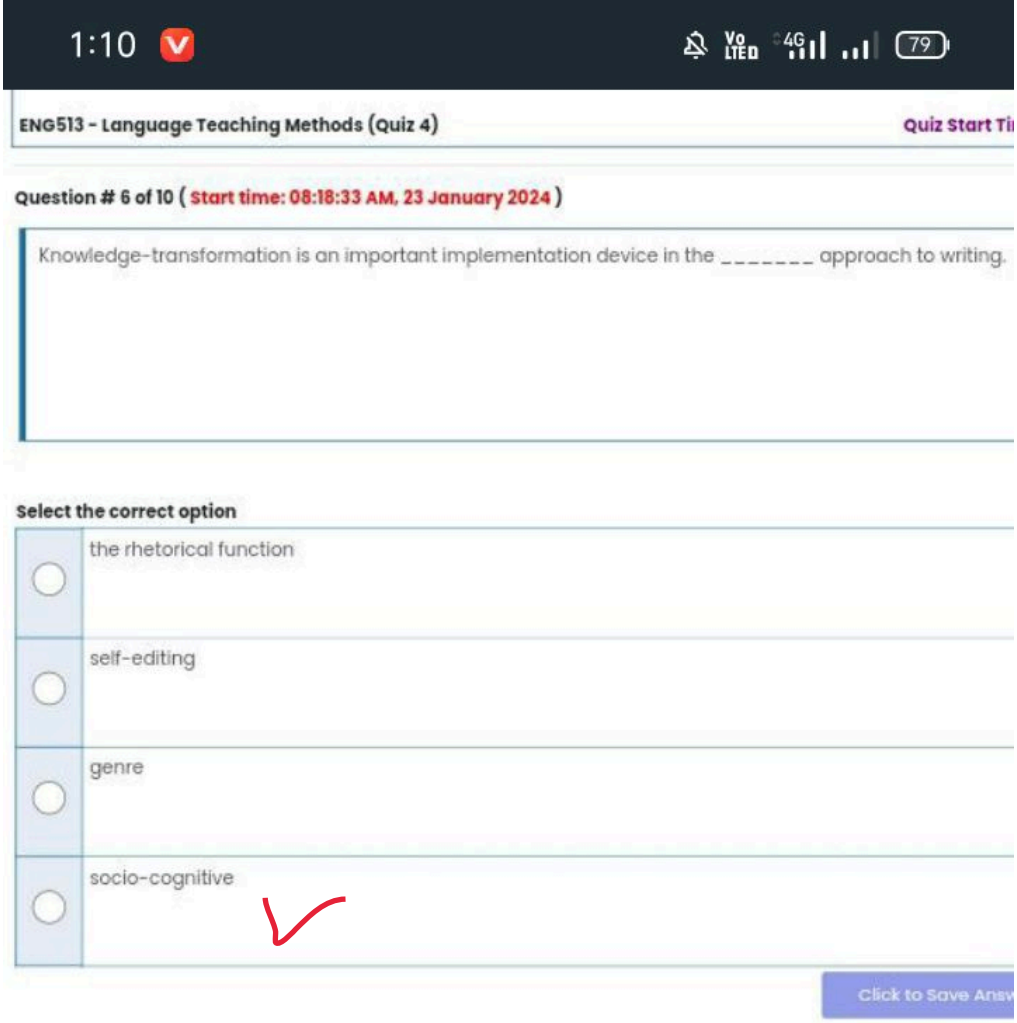

Another type of pre-task planning focuses on the strategies that learners could use during the task to facilitate communication and intelligibility. Strategy training conducted at the pre-task stage enabled some learners to apply strategies during speaking and produce speech that was significantly more fluent than that of learners who did not receive any training. In addition, pre-task planning time has allowed some test-takers to prepare themselves for a speaking test by using language-related strategies as well as strategies for content and discourse organization (Wigglesworth & Elder,2010). Some researchers speculated that pre-task planning was helpful for learners but individual differences such as the ability for self-monitoring and repairs could confound the effects of pre-task planning, so other ways of helping learners improve their speech production such as task repetition should be explored.

Task Repetition

Task repetition is the repeated use of the same or similar communication task or discourse sequences by learners with the same or different people (Bygate, 2001). Research has shown that when learners repeated a speaking task they produced more accurate and natural speech and demonstrated better framing of their narratives (Bygate & Samuda, 2005). When repeating presentations to different audiences, the learners' integrated lexical knowledge generated from the

transformation is an

- Plan group activities that heighten students' awareness of the nature of writing.

Traditional approaches to teaching L2 writing – the controlled composition approach, the rhetorical function approach, the process-approach, and the genre approach – have strengths but may not be sufficiently effective as writing pedagogy. Teaching students the rhetorical moves and organization structure as well as helping students in idea generation and planning is necessary but not sufficient in writing classrooms. The reason is that these devices alone do not consider reader expectations, socio-cultural factors, and key thinking processes involved in the writing. The more recent socio-cognitive approach is a comparatively strategic approach to teaching writing, which highlights the importance of explaining the purpose of writing to the students in terms of social impact. This is to say, students write not only because they are told to write, but they write in order to fulfill a social function through the writing. For example, the function for writing a story is to entertain the readers or make the readers admire the characters of the story. Knowledge-transformation is an important implementation device in the sociocognitive approach to writing. Teachers need to explicitly teach students how to establish the macro-rhetorical goal of an essay.

When students plan, organize, write/ revise, they need to ensure that the relevant information helps them achieve the macro-rhetorical goal. By adopting the socio-cognitive approach to writing, students consciously define their goal as impact on the intended readers. In organizing and presenting their ideas, they need to learn how to make a text coherent, which includes but goes beyond using cohesive devices. In this regard, they need to have a good understanding of the macrostructure of the genre, information structure, proposition development, and the appropriate use

Designing Instructional Materials

Topic-166: Significance of Designing Instructional Materials

Global EFL courses are used by non-native speakers who will need to communicate in English with other non-native speakers outside of English speaking areas, which means they will need English not as a native speaker but as a lingua franca (Jenkins, 2012). Yet, most of these courses teaching English as a foreign language still seem to be developed as though their users need to communicate with the native speakers of English which means they interact with people in English speaking countries i.e. UK and USA. For example, Tomlinson and Masuhara (2013) reviewed six current EFL courses published in the UK and concluded that most of the texts illustrate a 'correct' version of English as it is written and spoken by native speakers interacting with each other. The courses are very little to helpful to prepare learners for the use of English as a global lingua franca in reality. They do find some dialogues in the courses, which are spoken by non-native speakers, but the language and strategies used in these dialogues seems indistinguishable from those that would have been used by native speakers interacting with each other. One of the evaluation criteria used by Tomlinson and Masuhara (2013, p. 244) is, "To what extent is the course likely to help learners to use English as a lingua franca?" Two of the courses score 2 out of 5 and the other four only manage 1 out of 5 each. Although some of the courses do acknowledge the participation of non-native speakers in the recording of the dialogues, Tomlinson and Masuhara concluded that the focus was exclusively on British English and the language 'taught' is contemporary British middle-class standard. Burns and Hill (2013, p. 241) also reviewed global course books and asked, "How far do speaking activities reflect the changing nature of English as a global language, and the fact that most interactions in English in the world today are not restricted to two Native Speakers". They found the occasional non-native speaker but concluded that, "their impact is minimal and the purpose is not for exploration of communication between different speakers of English."

Lesson-30

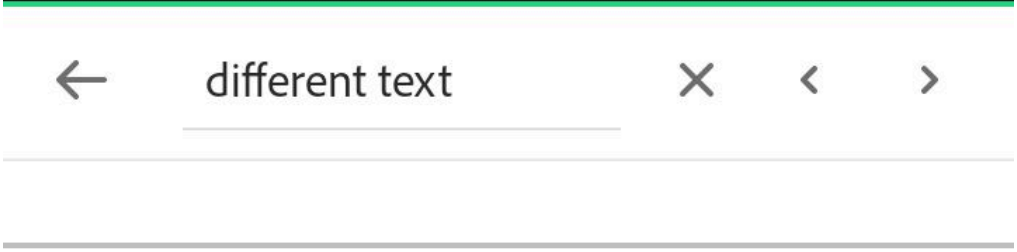

TEACHING READING IN A LANGUAGE CLASSROOM

Topic-146: Introduction to Teaching Reading in a Language Classroom

Reading is a commonly offered in many second and foreign language curricula for different age groups, yet it is not a skill easily acquired by the learners (Nuttall, 1996). Keeping in mind the significance of reading and viewing in real life and in the curriculum for assisting the development of other language skills (speaking, listening, vocabulary, and writing), teachers' instruction is crucial for students' success. In traditional reading lessons, teachers seldom consider blending reading into viewing and viewing into reading to make the lesson dynamic and interactive. The researches provide framework for teachers to develop not only students' language skills but also strategies for further skill development through reading and viewing. Such a framework takes an inclusive approach to instructional design, which brings forth the theoretical perspectives on such instruction as well as practical strategies for teaching reading and viewing. Strategies such as activating schemata, previewing, predicting, skimming, scanning, reading and linking, viewing and connecting, using packaged instructional procedures such as D-R-T-A, K-W-L, among others, which are the bases of classroom instruction, are elaborated with reference to reading and viewing activities as an organic combination of extensive and intensive reading and viewing.

Reading and viewing as language skills are multifaceted processes and involve multiple aspects related to the ultimate goal of comprehension. Reading is usually understood as a process of deriving meaning from the printed words, sentences, paragraphs, or a whole text. Similar to reading in terms of the goals students have, viewing, as a processing skill, can be defined as the viewer's effort for

Topic-148: Factors Affecting Reading and Viewing Success in a Language Classroom

Three important variables affect reading or viewing in both L1 and L2 contexts are: (1) text characteristics; (2) reader/viewer characteristics; and (3) social context. Text characteristics vary according to the different text types with which a reader is familiar. If the text is a narrative, its specific characteristics include organizational structure (e.g., orientation, events description ,complication, resolution, conclusion and linguistic features (dominant past tense use, descriptive adjectives, action verbs, sentence structures that are different from those used in argumentative texts, use of indirect and direct speech). Expository text has plainly dissimilar structure as compare to the narrative text. Its major exposition moves are compare-contrast, problem-solution, listing, cause-effect, and so on.

Different readers and viewers approach the same text in different ways due to diverse metacognition, repertoires of reading/viewing strategies, lived experiences, social and world knowledge, linguistic proficiency, reading competencies, gender, and attitudes toward reading/viewing and socioeconomic backgrounds. Because of the different reader/viewer characteristics, teachers' instruction in reading/viewing needs to take into account such diversity when designing lesson plans.

The studies highlighted that different sociocultural contexts in which students learn to read and

influence other

So, the construct of speaking and highlight pedagogical procedures can contribute positively to speaking performance and the implications of such understandings suggest pedagogical principles that can enhance current practices to facilitate second language speaking development in and outside the language classroom.

Topic-137: Second Language: Speaking Activities

Understanding the speaking skill a good speaker is the person who speaks L2 confidently, fluently and grammatically correct. In some learning contexts, a person may be considered a good speaker if he or she sounds like a native-speaker countries of UK or USA. Some people may say that a good speaker is someone who is able to influence others with his or her words. While 'good' speaking may seem a self-evident phenomenon, the construct of speaking is simple. Let us examine L2 speaking by discussing the concept of speaking competence and the processes involved in speech

production. There are research highlights that offer pedagogical procedures for enhancing L2 learners' speaking performance.

Speaking Competence
