EDU430 – Mid Term Past Papers File 2 by Tanveer Online Academy

(Subjective)

Question: What is the meaning, definition, or functions of teaching?

Answer: Teaching is the process of imparting knowledge, skills, and values to learners. It involves planning, instruction, and assessment to facilitate learning.

Question: Subjects integrated with ICT and compare it with other subjects.

Answer: Subjects like computer science, mathematics, and science are more integrated with ICT due to their reliance on digital tools. In contrast, subjects like history and literature are less integrated but benefit from ICT through research tools and multimedia resources.

Question: What is technology integration?

Answer: Technology integration refers to the effective use of digital tools and resources in teaching and learning to enhance educational experiences.

Question: What is RAM and ROM?

Answer: RAM (Random Access Memory) is volatile memory used for temporary data storage during active tasks, while ROM (Read-Only Memory) is non-volatile and stores essential instructions for booting the system.

Question: What is a remote system?

Answer: A remote system allows users to access and control a computer or network from a distant location, often using the internet or other communication technologies.

Question: What are the merits and demerits of HTML?

Answer: Merits of HTML include simplicity, compatibility, and flexibility in web

development. Demerits include limitations in design features and dependency on additional technologies for advanced functionality.

Question: What is an operating system?

Answer: An operating system (OS) is software that manages hardware and software resources in a computer, providing services like task scheduling, file management, and user interface.

Question: What are the uses of 3-dimensional aids in the classroom?

Answer: 3D aids enhance learning by providing visual and tactile representations of complex concepts, fostering better understanding and engagement among students.

Question: Define learning briefly.

Answer: Learning is the acquisition of knowledge, skills, or behaviors through study, experience, or teaching.

Question: What is a search engine?

Answer: A search engine is a web-based tool that allows users to search for information on the internet using keywords or phrases.

Question: What are the advantages of teaching aids?

Answer: Teaching aids enhance understanding, increase engagement, cater to different learning styles, simplify complex concepts, and make learning more interactive.

Question: What is the meaning of the Central Processing Unit (CPU)?

Answer: The CPU is the primary component of a computer that performs calculations and executes instructions to run programs.

Question: What is the meaning of fonts?

Answer: Fonts refer to the style and appearance of text characters used in digital and print media.

Question: What is Assistive Technology?

Answer: Assistive technology includes devices and software that help individuals with disabilities perform tasks they might otherwise find challenging, such as communication and learning.

Question: What are the uses of computer networks?

Answer: Computer networks allow for resource sharing, communication, data transfer, and remote access between connected devices.

Question: What are different types of charts and explain each of them?

Answer: Types of charts include bar charts (used to compare data), pie charts (showing proportions), line charts (tracking changes over time), and flowcharts (visualizing processes).

Question: What are the differences between download and upload?

Answer: Downloading refers to receiving data from a remote system to your device, while uploading involves sending data from your device to a remote system.

Question: Define and explain cache.

Answer: Cache is a small, high-speed memory that stores frequently accessed data to speed up processing tasks.

Question: What is the difference between external and internal hard drives?

Answer: Internal hard drives are built into a computer for storage, while external hard drives are portable devices connected externally to store additional data.

Question: What is the difference between CMS and LMS?

Answer: A CMS (Content Management System) manages digital content, while an LMS (Learning Management System) manages educational courses and training programs.

Question: What are the types of charts?

Answer: Types of charts include bar charts, pie charts, line charts, scatter plots, and flowcharts, each serving different purposes in data visualization.

Question: What are the advantages of teaching aids?

Answer: Teaching aids make lessons more interactive, help visualize abstract concepts, support different learning styles, and increase student engagement.

Question: What is the meaning of CPU?

Answer: CPU stands for Central Processing Unit, the brain of the computer that processes data and executes instructions.

Question: What is data?

Answer: Data refers to raw facts and figures that can be processed or analyzed to extract useful information.

Question: What is the difference between a laser and dot printer?

Answer: Laser printers use laser technology for high-quality, fast printing, while dot matrix printers use impact printing with dots to form characters and are typically slower.

Question: What is the abbreviation of VoIP?

Answer: VoIP stands for Voice over Internet Protocol.

Question: What does CD-ROM stand for?

Answer: CD-ROM stands for Compact Disc Read-Only Memory.

Question: What is volatile memory?

Answer: Volatile memory is temporary memory, like RAM, that loses its data when the computer is turned off.

Question: What is WAN?

Answer: WAN stands for Wide Area Network, a network that spans large geographical areas.

Question: What is the difference between LAN, WLAN, and WAN?

Answer: LAN (Local Area Network) covers a small area, WLAN (Wireless Local Area Network) provides wireless networking, and WAN (Wide Area Network) connects devices over large distances.

Question: What is distance learning?

Answer: Distance learning is a method of education where students and instructors are separated by physical distance, and teaching is delivered via digital platforms or correspondence.

Question: Explain technology integration in detail.

Answer: Technology integration involves incorporating digital tools and resources into teaching and learning processes. This includes the use of computers, software, internet resources, and multimedia to enhance classroom experiences, making education more interactive, engaging, and effective. Successful integration requires aligning technology with curriculum goals.

Question: What is the impact of "computer literacy" in instructions in school?

Answer: Computer literacy equips students and teachers with the skills needed to effectively use technology in education. It enhances learning, promotes independent research, and

improves engagement. It also prepares students for a digital world by fostering essential skills for future careers.

Question: Differentiate between teaching, training, and instruction.

Answer: Teaching involves imparting knowledge or skills in an academic setting, focusing on intellectual and personal growth. Training is skill-specific, preparing individuals for practical tasks or jobs. Instruction refers to guiding learners on how to perform particular tasks, often with a step-by-step approach.

Question: What are the merits and demerits of HTML?

Answer: Merits of HTML include its simplicity, platform independence, and ease of use for web development. Demerits include limited design capabilities and reliance on external resources for advanced functionality like interactivity and dynamic content.

Question: What is an operating system?

Answer: An operating system (OS) is software that manages hardware resources and provides services for applications. It controls tasks like file management, memory allocation, and user interaction with the system.

Question: What are the uses of 3-dimensional aids in the classroom?

Answer: 3D aids in classrooms help students visualize complex concepts, making learning more engaging. They improve comprehension by providing tangible models of abstract ideas, like geometric shapes or biological structures.

Question: Define learning briefly.

Answer: Learning is the process of acquiring new knowledge, skills, or behaviors through study, experience, or instruction.

Question: What is the difference between a website and a webpage?

Answer: A webpage is a single document on the internet, while a website is a collection of related webpages under one domain.

Question: What is Crash?

Answer: A crash is the sudden failure of a computer system or application, causing it to stop working or become unresponsive.

Question: What is internet, intranet, and extranet?

Answer: The internet is a global network that connects millions of computers. An intranet is a private network accessible only within an organization. An extranet is an extension of an intranet, allowing controlled access to external users.

Question: Write five uses of computer networking.

Answer:

1. File sharing
2. Communication (email, messaging)
3. Resource sharing (printers, servers)
4. Data backup and recovery
5. Remote access to systems

Question: Difference between text and spreadsheet calculation.

Answer: Text processing involves creating and editing text-based documents, while spreadsheet calculation is used for data analysis and manipulation using rows, columns, and formulas.

Question: Some subjects relate to CTI.

Answer: Subjects like computer science, engineering, and digital communication are closely related to Computer Telephony Integration (CTI).

Question: Difference between external and internal hard drive.

Answer: An internal hard drive is fixed inside a computer for permanent storage, while an external hard drive is portable and connects externally via USB or other ports.

Question: Difference between CMS and LMS.

Answer: CMS (Content Management System) is used to manage digital content, while LMS (Learning Management System) is used to manage and deliver educational courses.

Question: Types of charts.

Answer:

1. Bar chart
2. Pie chart
3. Line chart
4. Scatter plot
5. Flowchart

Question: Advantages of teaching aids.

Answer: Teaching aids enhance understanding, engage students, simplify complex concepts, cater to different learning styles, and make learning more interactive.

Question: Usage of core in different countries.

Answer: Core curriculum elements or technology standards vary by country, with countries

like the US, UK, and Australia implementing different approaches to core educational content.

Question: Difference between dot printer and laser printer.

Answer: Dot matrix printers use impact technology to print by striking dots, while laser printers use toner to produce high-quality prints quickly and quietly.

Question: Difference between VGA and video card.

Answer: VGA is a display standard used for analog video signals, while a video card is a hardware component responsible for rendering images and video on a monitor.

Question: Describe firewall.

Answer: A firewall is a security system that monitors and controls incoming and outgoing network traffic to protect a computer or network from unauthorized access.

Question: Limitation of ICT.

Answer: Limitations of ICT include high costs of infrastructure, digital divide issues, security risks, and the need for constant updates and training.

Question: Map is a cheap source of discussion in the classroom.

Answer: Maps are cost-effective teaching tools that visually represent geographical data, making it easier for students to understand locations, environments, and spatial relationships.

Question: Explain term client and font.

Answer: A client is a computer or software that requests services from a server. A font refers to the design and style of text characters used in documents and digital content.

Question: Explain advantages of a computer network.

Answer: Advantages of computer networks include easy file sharing, resource sharing, centralized data management, communication, and remote access.

Question: Explain hypertext.

Answer: Hypertext is text displayed on a computer or device that contains links to other text, allowing users to navigate to different pages or sections of a document.

Question: Disadvantages of projected aids.

Answer: Projected aids can be costly, require technical expertise, may malfunction, and sometimes create passive learning environments if not used interactively.

Question: What is client and microcomputer?

Answer: A client is a computer that accesses services from a server. A microcomputer is a small, personal computer typically used by individuals or small businesses.

Question: Uses of computer networks.

Answer: Computer networks are used for data sharing, communication, collaborative work, resource sharing, and centralized management.

Question: Difference between text processor and spreadsheet calculation software.

Answer: A text processor is used for creating and editing written documents, while spreadsheet software is designed for numerical data organization and complex calculations.

Question: Define effective learning.

Answer: Effective learning occurs when students understand and retain information, apply it to real-life situations, and develop critical thinking and problem-solving skills.

Question: Why is teaching a profession? Justify with an example and define phronesis.

Answer: Teaching is a profession because it requires specialized knowledge, training, and ethical standards. Phronesis refers to practical wisdom, enabling teachers to make sound decisions based on experience and moral values.

Question: What is the meaning of central processing unit (CPU)?

Answer: The CPU is the brain of the computer, responsible for executing instructions and performing calculations for various tasks.

Question: What is the meaning of fonts?

Answer: Fonts are the styles and appearances of text characters used in digital and printed documents.

Question: Explain assistive technology.

Answer: Assistive technology includes devices or software designed to help individuals with disabilities perform tasks, such as screen readers for the visually impaired or speech-to-text software for those with mobility issues.

Question: Uses of computer networks.

Answer:

1. File sharing
2. Communication
3. Remote access
4. Collaborative work
5. Data storage and backup

Question: Different types of charts and explain each of them.

Answer:

1. Bar chart: Used to compare quantities across categories.
2. Pie chart: Represents data as proportional slices of a circle.
3. Line chart: Shows trends over time.
4. Scatter plot: Displays relationships between two variables.
5. Flowchart: Visualizes a process or workflow.

Question: Some subjects are more integrated into ICT while some subjects are not.

Explain.

Answer: Subjects like computer science, mathematics, and science are more integrated into ICT due to their reliance on technology for simulations, calculations, and experiments, while subjects like physical education and art may have less direct ICT integration.

Question: Difference between website and web page.

Answer: A website is a collection of related web pages under a single domain, while a web page is a single document within a website.

Question: Briefly explain the term file.

Answer: A file is a digital container that stores data, such as documents, images, or programs, on a computer or other devices.

Question: Difference between video disc, video player, and video memory.

Answer: A video disc is a physical medium for storing video data, a video player is a device or software used to play video content, and video memory is a part of a computer's graphics card used to store images and videos for display.

Question: Explain types of boards.

Answer:

1. Whiteboard: A dry-erase surface used for writing with markers.
2. Chalkboard: A reusable surface for writing with chalk.
3. Interactive board: A digital surface that connects to a computer for interactive learning.

Question: Advantages of teaching aids.

Answer:

1. Enhance understanding
2. Engage students
3. Cater to different learning styles
4. Simplify complex concepts
5. Make learning interactive

Question: What are projected aids? Also, write advantages.

Answer: Projected aids are visual aids like slides or videos shown using projectors.

Advantages include increased engagement, clearer visual representation, and the ability to present complex information effectively.
