

Paper Pattern for Mid Term Exams

Total marks: 36

12 MCQ'S (1 marks each)

3 SHORT QUESTIONS (3 marks each)

3 LONG QUESTIONS (5 marks each)

Time Duration: 1 hour (60 minutes)

Schumann Acculturation theory:

The basis of Schumann's 'Acculturation Theory' is a 'social theory' which considers social forces as the deriving factors that affect language learning and acquisition processes. It emphasizes that instead of internal mental activities, the external factors facilitate learning by providing the target language culture for specific language functions. Language being social phenomena does consider attitudes and stereotypes towards the target language as affective learning factors. Errors can be corrected.

Steps in Acculturation Model: (imp)

Acculturation Model was introduced by John Schumann, an American linguist (1986), who claimed that the extent of contact between L2 and L2 speaker affects the success of SLA. Social and psychological factors are key components of acculturation process. According to Brown (1980), the stages of acculturation in the target language are Euphoria, Culture-shock, Cultural stress, Gradual recovery, and Full-recovery. Language shock, culture shock, culture stress, motivation, and ego permeability are the factors that are responsible for creating psychological distance as claimed by Ushioda (1993). Domination of high culture causing low self-esteem among L2 learners and lack of explanation about the internal processes of SLA are the major points of the criticism of Acculturation Model.

The Competition Model and the Associative-Cognitive CREED Theory (Nick Ellis):

The Competition Model is a psycholinguistic theory of language acquisition and sentence processing developed by Elizabeth Bates and Brian MacWhinney which describes language development in formal and informal settings. It also looks into the role of cognitive mechanisms that occur in the learner's brain while processing language. MacWhinney (2002) considers the input, the learner, and the context as the three main components in the language learning process. Lexical Functionalism, Connectionism, Input-Driven Learning, and Capacity are the dominant features of the model.

The Associative-Cognitive CREED Theory in SLA was introduced by Nick Ellis which claims that language is learned in the same way as any other human skill. This theory is based on both the behavioral (associations) and cognitivist (cognitive) traditions.

Symbolic competence:

Kramsch and Whiteside (2008) defined Symbolic Competence as the ability to position oneself as a multilingual subject, to understand the cultural memories evoked by symbolic systems, to perform and create alternative realities, and to reframe and shape the multilingual game in which one invests. Kramsch believes that there are three dimensions of language as symbolic system, namely, symbolic representation, symbolic action, and symbolic power. Discourse plays important role in the interpretation of symbolic competence as it refers to language use beyond the sentence level. Relationship between language and contexts contribute in the understanding of symbolic competence. It is believed that ‘Symbolic Competence is also engaged in the symbolic power game of challenging established meanings and redefining the real.’

Mention any five levels of learning by Robert Gagne: (imp)

1. Gain attention
2. Inform of objectives
3. Stimulate prior knowledge recall
4. Present stimulus
5. Provide learning guideline

Q: Differentiate b/w deductive and inductive learning?

<u>Deductive Learning</u>	<u>Inductive learning</u>
Deductive Learning, being teacher centered approach, refers to providing learners with an understanding of the rules followed by examples and practice. The rules are of primary focus and the practice is encouraged through examples that inculcate rules.	Inductive Learning, being learner-centered, begins with examples first and requires learner to determine rules relevant to the examples. Determining the relevancy of rules appropriate to examples is a challenging task for the learner. It equips learners with the knowledge of the concepts

Q: write any three points of criticism and constructivism?

Criticism:

Check topic (56)

Constructivism:

- Learning must be started with the issues around which learners are actively trying to construct meaning.
- The learning process focuses on primary concepts, not isolated facts.
- Construction of the knowledge, and not the memorization, is encouraged.
- Learners must be provided with information on the quality of their learning

Q: what are the three aspects of linguistic competence?

- Assessment component
- Planning component
- Execution component (Bachman, 1990, pp. 84-108)

Q: Write the core components of sociolinguistic knowledge according to Bachman and Palmer's revised model (1995, 2010) of CLA?

In the revised model of Bachman and Palmer, nomenclature was changed from the term competence to knowledge and strategic competence being proposed as a set of met cognitive strategies.

Q: write any five points of H.H. Stern's language teaching method in the context of SLA.

- Practice, repeat, and practice in childhood as well as learning a foreign language (L1 and SLA)
- Language learning is mainly a matter of imitation (L1 and SLA)
- Practice the separate sounds, then words, then sentences (L1 and SLA)
- Understanding always precedes speaking (L1 and SLA)
- Natural learning order of four skills (L1 and SLA)

Q: Differentiate between the Characteristics of controlled and free techniques?

Controlled Techniques	Free Techniques
Teacher Centered	Student Centered
Manipulative Structure	Communicated Open Ended
Predicted Response	Unpredicted Response
Pre-planned Objectives	Negotiated Objectives

1-Mediation theory (3 marks):

The ‘Mediation Theory’ was introduced by Charles Osgood (1953, 1957). It claims that the linguistic stimulus (a word or sentence) elicits a ‘mediating’ response that is self-stimulating. Mediation process is viewed as covert and invisible, acting within the learner. This makes it a cognitive theory which rationalizes internal and external processes for developing behavioral association.

2- Write Arguments in support of Universal Grammar. (3 marks)

The arguments in support of UG are primarily concerned with its universality, convergence, poverty of the stimulus, no negative evidence, child’s easy acquisition, uniformity, maturational effects, dissociation between language and cognition, and neurological separation. Chomsky’s UG attempts to explain what constitutes knowledge of language, how it is acquired, and put to use.

3- Competition Model (3 marks) (imp) repeated thrice

The Competition Model is a psycholinguistic theory of language acquisition and sentence processing developed by Elizabeth Bates and Brian MacWhinney which describes language development in formal and informal settings. It also looks into the role of cognitive mechanisms that occur in the learner’s brain while processing language. MacWhinney (2002) considers the input, the learner, and the context as the three main components in the language learning process. Lexical Functionalism, Connectionism, Input-Driven Learning, and Capacity are the dominant features of the model.

4- Usage base theory verses UG. (5 marks)

Usage- Based	UG
At the level of brain, UG approach assumes that linguistic representation is localized in a language-specific module with its own rules of processing	Usage-based approach assumes ‘plasticity’ to a great extent. Linguistic representation in brain can change in the course of L1 as well as L2 acquisition and development. •
Children are creative and productive to start with innate UG.	In usage-based approach, children are conservative and unproductive to start with and only gradually become productive by induction through experience.
In UG approach, the role of input is underdetermined because of ‘poverty of the stimulus’ with lack of negative evidence (ungrammatical sentences).	In usage-based approach, all linguistic structures emerge from generalization of the input through induction
In UG approach, innate core grammar needs mechanism such as maturation, triggering, and linking rules to activate it. In contrast	the usage-based approach requires children to figure out linguistic system by adaptive social-communicative behaviors

5- The child series activities etc {don't know exactly it might be receptive and productive activities.}(5 marks)

Receptive Activities:

Receptive Activities are designed to develop the receptive skills. Listening and Reading are called receptive skills as the learner receives the input and does not produce the language. They are sometime referred to as passive skills, but the learner is still required to participate in the process by comprehending the input to create meaningful learning. Reading, as a receptive skill provides the learner with knowledge of technological developments, world news, and scientific discoveries etc.

Productive Activities:

Productive Activities are designed for the development of the productive skills. Speaking and writing are known as productive skills as they produce language. Writing is the most important productive activity for L2 learners to express themselves for developing relevant texts according to the target situation requirements.

6- Generative grammar (5 marks)

The Generative School of thought derived its concepts from the Generative Grammar theory of Chomsky. It focuses on the study of syntax, but does include semantics, phonology, and morphology. Generative Grammar theory provides the set of rules that can accurately predict which combinations of words make grammatically correct sentences. Transformational-Generative Grammar was driven from Generative Grammar as a process of language creativity, whereby, a learner can transform rules from one structure. In TG theory, phrase structure rules explain, mathematically, our knowledge to assemble the basic units of a sentence.

$$S \rightarrow NP + VP$$

In the above formula, 'a sentence consists of a noun phrase followed by a verb phrase'. TG has set forth, two levels of syntactic structure: deep structure (an abstract underlying structure of a sentence) and surface structure (outward form of a sentence)

Explain multi store model.

The Atkinson-Schiffrin model is a theory of human memory that was proposed by Richard Atkinson and Richard Schiffrin (1968) and explains how our senses experience different things in terms of sight, hearing, touch, feeling, and taste, but only a fraction of this is remembered. The model of Atkinson-Schiffrin proposed that the human memory could be broken down into three different memory stores:

Sensory Memory

- Duration: $\frac{1}{4}$ to $\frac{1}{2}$ second
- Capacity: all sensory experience
- Encoding: sense specific (e.g. different stores for each sense)

Short Term Memory

1. Duration: 0-18 seconds
2. Capacity: 7 +/-2 items
3. Encoding: mainly auditory

Long Term Memory

1. Duration: unlimited
2. Capacity: unlimited
3. Encoding: mainly semantic (but can be visual and auditory)

Characteristics of Free techniques.

- Student Centered
- Communicated Open Ended
- Unpredicted Response
- Negotiated Objectives

Names the types of Proficiency Assessments.

- Discrete-point versus integrative assessment
- Direct versus indirect assessment
- Objective versus subjective assessment
- Group testing versus individual assessment

Describe Behaviorism

The behaviorist movement began with John Watson in 1913. It is also known as a psychological approach which emphasizes scientific and objective methods of investigation. The behaviorists claim that knowledge is external, and humans are born with blank slate. Learning takes place through association between stimuli-response processes resulting into specific habit formation.

Describe language universe

The theory advocates that children are born with Language Acquisition Device (Hadley, 2001, p. 58) and are innately programmed to learn language. The presence of language universals is seen to be the key characteristic which contains parameters setting. UG emphasizes that biological mechanism determines the language learning process supported by the representation of 'core grammar.'

Symbolic power

Kramsch believes that there are three dimensions of language as symbolic system, namely, symbolic representation, symbolic action, and symbolic power. Discourse plays important role in the interpretation of symbolic competence as it refers to language use beyond the sentence level. Relationship between language and contexts contribute in the understanding of symbolic competence. It is believed that 'Symbolic Competence is also engaged in the symbolic power game of challenging established meanings and redefining the real.'

Define language learning

Learning belongs to behaviorist approach and deals with a mechanical process of habit formation. As opposed to acquisition which is a subconscious process, learning involves both explicit (learner's is aware of modification of his/her knowledge base) as well as implicit (change in the learner's knowledge base but outside his/her conscious introspection) learning processes. Drill, imitation, and repetition are the basic elements of learning.

Bandore mediating Process.

The concept of Reciprocal Determinism was proposed by Albert Bandura in 1977. He introduced Social Learning Theory which advocated that behavior is not a single phenomenon, rather a result of the interaction between cognitive, behavioral, and environmental determinants. Since external and internal both factors were considered vital for developing a particular behavior; therefore, Meditating and Observational learning were emphasized by Bandura.

Mediating processes occur between stimuli and responses

What Skinner says about verbal Behaviour?

B.F Skinner proposed the concept of 'Operant Conditioning.' He introduced the theory of Verbal Behavior in 1957. According to this theory, a person's behavior gets reinforced through the mediation of other persons. Any change that occurs in one's behavior is a result of others' reinforcement. Skinner identified following three types of responses that can follow behavior:

1. Neutral Operant
2. Reinforcer
3. Punisher

Long Term Memories and Short Term Memories: (imp)

Long Term	Short Term
Duration: unlimited	Duration: 0-18 seconds
Capacity: unlimited	Capacity: 7 +/-2 items
Encoding: mainly semantic (but can be visual and auditory)	Encoding: mainly auditory

Law of effect:

‘Law of Effect’ was introduced by Edward Thorndike (1898). It proposed that pleasant feedback leads to the repetition of a particular behavior and unpleasant feedback ceases it. The theory views learning as a process of developing association between a certain situation and its resultant pleasant.

Mac Neill four rules for LAD (5 marks)

MacNeill (1966) supported appropriateness of LAD and justified its existence based on the following:

- The ability to distinguish speech sounds from other sounds in the environment
- The ability to organize linguistic data into various classes that can later be refined
- Knowledge that only a certain kind of linguistic system is possible
- The ability to engage in constant evaluation of the developing linguistic system to construct the simplest possible system out of the available linguistic input

5. McClelland on Connectionism (1986) long

McClelland (1986) state that there are 8 major components of the PDP model framework:

- 1) a set of processing units,
- 2) a state of activation,
- 3) an output function for each unit,
- 4) a pattern of connectivity among units,
- 5) a propagation rule for propagating patterns of activities through the network of connectivities,
- 6) an activation rule for combining the inputs impinging on a unit with the current state of that unit to produce a new level of activation for the unit,
- 7) a learning rule whereby patterns of connectivity are modified by experience, and

8) an environment within which the system must operate.

Brown taxonomy

Analysis of 'Language Learning Theories' requires understanding of the terms 'Technique, Activity and Procedure.' 'Technique' is a broader term for specific tasks and refers to Brown's taxonomy of techniques: controlled, semi-controlled and free techniques. However, 'Activity' and 'Procedure' deal with learner's performance and practices/behaviors in teaching respectively.

Criticism on Behaviorism:

Chomsky, in A Review of B F Skinner's Verbal Behavior (1959), used language as a tool for critique of Skinner's behaviorism. According to Chomsky, learning is not possible only through repetition and reinforcement as advocated by Skinner. Chomsky believes that a child has the ability to use finite set of rules to construct infinite sentences, and s/he can create phrases which they have never heard before.

Edward Anthony Model:

Edward Anthony proposed a 'three-level framework' (1965) based on 'Approach, Methods, and Techniques.' 'Approach' is a set of principles or ideas about the nature of language learning; 'Method' is an overall mechanism; 'Technique' is a specific strategy/way. Researchers vary in terms of design, procedure and approach; Anthony's framework emphasized 'Approach,' whereas Richards and Rogers considered 'Method' as a broader term in comparison to approach. Repka and Stern claim that 'method or methodology' is a broader term that covers the rest. Goal orientation, organization, progressiveness, and linking of age to content and successiveness are the general characteristics of methods. However, methods and methodology are related to planning of a specific task, content, procedure, and assessment.

Vygotsky theory (imp)

(Answer is same as sociocultural Theory)

What is the basic of BLC theory?

BLC Theory was proposed by Hulstijn in 2015. The bases of the theory are the understanding of individual differences in monolingual and bilingual people and the matters of L2 proficiency assessment. Hulstijn believes that cognition is a term that refers to neural network which consists of the representation and use of information for both knowledge and skills; whereas, 'Basic' is concerned with what native speakers have common related to language cognition. The term 'Higher' is used here as an extended language cognition. The core linguistic cognition includes: phonetic-phonological, morphonological, morpho-syntactic, and lexical domains of

linguistic knowledge. It also looks into how to use language forms as appropriate to the communicative situation. BLC focuses more on reading and writing rather speech reception and speech production.

In the words of Hulstijn (2015): ‘BLC pertains to: 1) the largely implicit, unconscious knowledge in the domains of phonetics, prosody, phonology, morphology, and syntax, 2) the largely explicit, conscious knowledge in the lexical domain (form-meaning mappings), in combination with, 3) the automaticity with which these types of knowledges can be processed.

List 4 types of proficiency assessment?

- Discrete-point versus integrative assessment
- Direct versus indirect assessment
- Objective versus subjective assessment
- Group testing versus individual assessment

3. Jerome Bruner contribution in education. 3 marks

- The modes of representation
- The importance of teaching and learning ‘optimal structure,’
- The spiral curriculum,
- Learning through the acts of discovery

4. Difference b/t monitor over user and under user Krashen 5 marks

Stephen Krashen’s ‘Monitor Model’ distinguishes acquisition (subconscious learning) and learning (conscious learning) as responsible factors for developing competence in the second language acquisition. The monitor hypothesis claims that the acquisition process is responsible for all second language utterances and fluency. On the contrary, learning is the ‘editor’ and ‘monitor’ for the output (Hadley, 2001). The input hypothesis states that speaking fluency emerges over time and that acquisition process is subject to our exposure to the language, which is beyond our current level of comprehension.

Key principles of cognitivism. 5 marks

- Construction Grammar
- Rational Language Processing

- Exemplar-Based Abstraction and Attraction
- Emergent Relations and Patterns
- Dialectic

6. Pavlovian conditioning key features. 5 marks

Key features of Pavlovian conditioning are: • Stimulus • Response • Unconditioned Stimulus • Conditioned Stimulus • Conditioned Response • Extinction • Spontaneous Recovery • Generalization • Discrimination

What is meant by input hypothesis?

Krashen's theory of Input Hypothesis advocates that the acquisition of second language is highly dependent on the learner's comprehension of the input. He suggested the following techniques for comprehensible input:

- Use expression and body language • Provide thinking time • Pauses between phrases • Shorter sentences • Stress high frequency words • Repeat/review vocabulary • Repeat/restate for understanding • Be supportive

Key features of constructivism.

- Learner-centeredness
- Environment awareness

According to Jonassen and Land (2002), context, construction and collaboration are the basis of the constructivist learning

Operant conditioning:

B.F Skinner proposed the concept of 'Operant Conditioning.' He introduced the theory of Verbal Behavior in 1957. According to this theory, a person's behavior gets reinforced through the mediation of other persons. Any change that occurs in one's behavior is a result of others' reinforcement. Skinner identified following three types of responses that can follow behavior:

1. Neutral Operant
2. Reinforcer
3. Punisher

***Five factors of psychology distances**

1. Methods based on the behaviorist theory of language learning lay emphasis on accuracy and form and do not allow errors.
2. Methods based on the interactionist theory give learners the opportunity for conversation where they receive meaningful input from teachers and students.

3. Methods based on the 'comprehensible input' theory, most closely associated with Stephen Krashen, do not put emphasis on interaction, but on providing input through listening and/or reading.
4. Methods based on teaching what the learner is ready to learn.
5. Methods that not only 'recognize the role for instruction, but also assume that not everything has to be taught' (Lightbown & Spada, 1993, p. 97).

Give the levels where the theory functions.

- **Sensational Level:** basic stimulus response reaction occurs
- **Perception Level:** input occurs relating it to the past experiences
- **Representational Level:** outward reaction, overt behavioral response to the word

***Define social cultural theory**

It is based on the developmental analysis, the role of language, and the social relation.

Vygotsky believed that learning takes place at two levels:

- through interaction with others
- integrated into the individual's mental structure

Write down 3 basic components of Piaget's cognitive Theory.

1. **Schema:** the basic building block of intelligent behavior – a way of organizing knowledge.

2. **Adaptation processes**

Assimilation: using an existing schema to deal with a new object or situation.

Accommodation: existing schema needs to be changed to deal with a new object or situation.

Equilibrium: Equilibrium occurs when a child's schemas deals with new information in Schema.

3. **Stages of cognitive development**

Phrase structure basic formula of sentence, gives an example and explains each part. (3)

In TG theory, phrase structure rules explain, mathematically, our knowledge to assemble the basic units of a sentence.

$$S \rightarrow NP + VP$$

In the above formula, 'a sentence consists of a noun phrase followed by a verb phrase'. TG has set forth, two levels of syntactic structure:

Deep structure (an abstract underlying structure of a sentence) and

Surface structure (outward form of a sentence).

Define constructivism. (3)

Constructivism Theory is based on observation (learning philosophy) and scientific study about how people learn (teaching philosophy). The assertion is that the experiences enable people to construct the knowledge of the world around them.

Constructivism has two branches, Cognitive Constructivism and Social Constructivism, and emphasizes learner differences, integration of linguistic, psychological, and sociological paradigms.

Define nativism. (3)

Chomsky's (1965) idea of innateness has been a hallmark of language learning mechanism. It attempts to explain the child's mastery of a native language in such a short time despite the highly abstract nature of the rules of language.

Five assumptions of behaviorism. (5) (Not sure about the answer)

1. Multiple or varied response
2. Set of behaviors or attitude
3. Partial activity or prepotency of elements
4. Assimilation
5. Associative shifting

Five characters of communicative competence. (5)

Five characteristics of communicative competence proposed by Savignon (1983, pp. 8-9) are:

- Dynamic nature of communicative competence.
- Communicative competence applies to both written and spoken language, as well as too many other symbolic systems.
- Communicative competence is context specific.
- Competence is what one knows. Performance is what one does.
- Communicative competence is relative, not absolute

Briefly discuss the theory of universal grammar

UG refers to the mentalist approach that supports nativism and cognitivism. The theory advocates that children are born with Language Acquisition Device (Hadley, 2001, p. 58) and are innately programmed to learn language. The presence of language universals is seen to be the key characteristic which contains parameters setting. UG emphasizes that biological mechanism determines the language learning process supported by the representation of ‘core grammar.’

Discuss criticism on communicative language teaching approach (imp)

According to Stern (1992), CLT has become more successful in ESL (English as a second language) settings, but failed to show successful results in EFL (English as a foreign language) contexts. Some CLT proponents, e.g. Littlewoods even proposed to treat it as an umbrella term which the opponents of CLT considered the renaming of the existing old approaches and nothing new or revolutionary. CLT focuses more on developing fluency while accuracy is neglected. It does overburden teachers as it demands developing of functional syllabus for effective classroom activities.

Describe the term legitimate peripheral participation.

Inspired by the works of Vygotsky and Dewey, Jean Lave and Etienne Wenger introduced the theory of Situated Learning as an instructional approach in the early 1990s. The theory laid down great emphasis on the learning as a social process and encouraged to maximize social interaction for the purpose of meaningful learning. They proposed Legitimate Peripheral Participation, Peripherality, Full Participation, and Community of Practice as key factors of Situated Learning theory.

Compiled by Maha Malik
