NNES

- Frequencies of linguistic items or units in different texts or situations

Topic-042: Evaluating Needs Analysis

Needs analysis is a kind of assessment and thus can be evaluated by considering its reliability, validity and practicality. Reliable needs analysis involves using well-thought-out, standardized tools that are applied systematically. Instead of observing people performing tasks that learners will have to do after the course, it is better to systematize the observation by using a checklist or by recording and apply standardized analysis procedures.

Valid needs analysis involves looking at what is relevant and important. Consideration of the type of need that is being looked at and the type of information that is being gathered is important. Before needs analysis begins, it may be necessary to do a ranking activity to decide what type of need should get priority in the needs analysis investigation. The worst decision would be to let practicality dominate by deciding to investigate what is easiest to investigate.

Topic-043: Example in Need Analysis

The example is taken from Richards's book (2001) and it involves NNES (non-native English speaking students).. In Auckland University, New Zealand, a needs analysis was conducted and the purpose of this analysis was to understand whether the current courses meet the needs of the students. It is conducted in 1997 in the largest university of New Zealand where the population was roughly 26000. During that year the strength of non-native English speaking student was increasing and the university faced the challenge to enhance the language proficiency of newly arrived students. In order to conduct needs analysis, the university got insight from previous surveys as well as two new questionnaires were designed.

These questionnaires mainly addressed the issues and problems faced by the students. With the help of this survey, the university gathered information about the problems faced by ESL learners. The questionnaires were used to gather demographic information and information about different language skills. In the light of this survey, some suggestions were made which focused on developing reading habits among NNES. Some changes in the syllabus were also proposed in the light of this survey.

Question # 9 of 10 (start time: 03:20:55 PM, 15 May 2024)

Which of the following principle of language curriculum design deals with language-focused learning in the sound system, vocabulary, grammar and discourse areas?

Select the correct option

☐	Output
☐	Frequency
☒	Deliberate Learning
☐	Fluency

Click to Save Answer & Move to Next Question

focused lea

words or constructions and they can ask for a repetition of poorly heard material. They can also control the speed of the input by asking the speaker to speak more slowly. A course can usefully include material which trains the learners in such negotiation. This training can include learning the phrases which are needed to seek information about input, and which can control the speed and repetition of the input. Meaning-focused output involves learning through speaking and writing.

Learning by input alone is not sufficient because the knowledge needed to comprehend input does not include all the knowledge which is needed to produce output. A well-balanced language course spends about one quarter of the course time on meaning-focused speaking and writing.

Meaning-focused speaking should involve the learners in conversation and also in monologue. The conversation can have a largely social focus and can also be used for conveying important information. That is, there should be practice in both interactional and transactional language use. The conditions for meaning-focused output are similar to those for meaning-focused input. There should be a focus on the message (that is getting the listener or the reader to understand), the task should be demanding but not too demanding, and there should be plenty of opportunity for such activity.

Topic-093: The Four Strands: Language Focused Learning and Fluency Development

Language-focused learning involves a deliberate focus on language features such as pronunciation, spelling, word parts, vocabulary, collocations, grammatical constructions and discourse features. Language-focused learning is an efficient way of quickly learning language features. It is an important part of any language course and about one quarter of the course time should be spent on such learning. In most courses too much time is spent on such learning, and this means that there is less opportunity for learning through the other three strands of the course. The answer is not to completely

Question # 7 of 10 (Start time: 03:19:53 PM, 15 May 2024)

Which of the following principles deals with language-focused learning in the vocabulary and grammar?

Select the correct option

☐	none of the given options
☐	social learning
☒	deliberate learning
☐	logical learning

focused lea

difference as having to move "from a purely semantic analysis of the language to a syntactic analysis of it" (1985).

There are clearly other differences too. Speaking and writing require the retrieval of form and the development of productive skills. Biber's (1990) research shows the different occurrences and clustering of formal features in different text types. To gain a balanced coverage of the formal features of the language, it is necessary to make use of language across a representative range of discourse types.

Courses which aim at all four skills can be checked to see that about 25 per cent of the total learning time is given to activities involving language production. It is also worthwhile checking that either writing or speaking is not being neglected at the expense of the other. It is also worth checking that learners have to produce language in both formal and informal settings, for transactional and interactional purposes and in a variety of social roles and power relationships. Munby (1978) provides a useful list of equal and unequal relationships.

Principle 6: Deliberate Learning

The course should include language-focused learning in the sound system, vocabulary, grammar and discourse areas.

Language-focused learning can occur when the learners' attention is on language items not because the learner wants to receive or communicate a message in a normal way, but because the learner wants to learn some part of the language system. Language-focused attention can be directed towards the sound system, the spelling system, the vocabulary, the grammar system and discourse patterns.

Reviews of research on language-focused learning (Ellis, 1990; Spada, 1997) show that some language-focused learning in a language course has the following effects:

- It can speed up learning.
- It can help learners overcome barriers to their language development.
- It can have a positive effect on meaning-focused learning.

In general, courses containing appropriate amounts and types of language focused learning achieve better results than courses which do not include such learning.

The following activities are all examples of language-focused learning:

Curriculum Design-ENG519

VU

Topic-259: Evaluation of the Pakistani National English Language Curriculum 2006: Grades I-XII-IV

Overall, the curriculum appears to cater to the future academic and professional needs of the learners. First of all, it focuses on all aspects of language – structure, phonology, lexis, discourse and the four skills. Moreover, it suggests the use of a variety of activities and texts and introduces the concept of purposeful reading. It also aims to provide practice in real-life situations like interviews and group discussions in classrooms.

However, there is no mention of listening, audio-visual aids, lectures, and television. All these require emphasis on reading and writing. Research has shown that the use of oral English skills is necessary in the Pakistani job market – efficient conversational ability is the most important skill in high level jobs; and moreover, fluent spoken English was a requirement in 43% of the job advertisements that cite good English as criteria for recruitment. Finally half of the suggested themes (about 50%) recommended in the document are of a didactic nature like ethical values, peace/environment/population education, gender equality, and dignity of labor and may not cater to a wide variety of tastes.

In the same way, the stress at lower grade level is pre-dominantly on Pakistan as far as the cultural content is concerned, based on the premise that younger children have no interest in reading about other countries. If a comprehensive 'needs analysis' or fact-finding survey had preceded the preparation of the curriculum, these weaknesses could have been minimized [see section

rather than

Lesson-10

TWENTY PRINCIPLES -II

Topic-051: Second Group of Twenty Principles: Format and Presentation (Principle 1-2)**Principle 1: Motivation**

As much as possible, the learners should be interested and excited about learning the language and they should come to value this learning.

This principle stresses the importance of the learners' attitude to what they are studying. Motivation is a very important determinant of the amount of time, involvement and effect that learners give to learning. The best motivation is "intrinsic", springing from within the learner, rather than "extrinsic", coming from some outside integrative or instrumental reward.

Intrinsic motivation can develop as a result of extrinsic motivation. Learning for reasons of gain can result in a genuine love of learning and involvement in the activity. If learners are not interested in learning, it is worthwhile beginning by looking at ways to attract them and involve them in learning. The following ways can be considered in this context:

- Make the subject matter of the lessons relevant and interesting to them. Surveys of wants and attitudes can help gather information to guide this.
- Give the learners some control and decision-making over what they do. A negotiated or partly negotiated syllabus is one way to do this.
- Set tasks with clear outcomes and with a high possibility of the learners completing them successfully.
- Set many short achievement tests to encourage the learners to work and to show them that they can be successful learners.
- Show the learners how to keep records of their progress so that they can see their continuing success. These records can include speed reading graphs, standardised dictation scores, number of graded readers completed and movement through the levels, scores on split-information tasks and writing-accuracy graphs.

Question # 2 of 10 (Start time: 03:16:59 PM, 15 May 2024)

At smaller scale, scope and demands of needs analysis are _____.

Select the correct option

☐	limitless
☐	overflow
☐	boundless
☒	limited

demand

vocabulary and sentence patterns may be substantial (the result of several years' learning) but their ability to access and use this knowledge fluently is extremely low.

Fluency is often contrasted with accuracy (Brumfit, 1984), and is seen as a way of making consciously studied material become available for less conscious use. Ellis (1987) sees fluency activities as a way of making features of learners' "careful" style of language use become available in other less monitored styles.

Fluency activities depend on several conditions to achieve their goal. In various techniques, learners work in pairs with one acting as the speaker and the other as listener. The speaker talks for four minutes on a topic while her partner listens. Then the pairs change with each speaker giving the same information to a new partner in three minutes, followed by a further change and a two-minute talk.

From the point of view of fluency, this activity has these important features. First, the user is encouraged to process a large quantity of language. This is done by allowing the speaker to perform without interruption and by having the speaker make three deliveries of the talk. Second, the demands of the activity are limited to a much smaller set than would occur in most uncontrolled learning activities. This can be done by the teacher's control as is the case in most receptive fluency activities such as reading graded readers or listening to stories, or can be done by choice, planning or repetition by the learner. In activity the speaker choose the ideas, language items and way of organizing the talk. The four- and three-minute deliveries allow the speaker to bring these aspects well under control, so that fluency can become the learning goal of the activity. Third, the learner is helped to reach a high level of performance.

Topic-054: Second Group of Twenty Principles: Format and Presentation (Principle 5-6)

Principle 5: Output

The learners should be pushed to produce the language in both speaking and writing over a range of discourse types.

Question # 1 of 10 (Start time: 03:16:37 PM, 15 May 2024)

Which of the following principle deals with the inclusion of items that occur frequently in the language so that learner their learning effort?

occur fre

concerned with what actually happens in the classroom and during the learning. Most practically, they relate to the kinds of activities used in the course and the ways in which learners' process the course material. It is in this aspect of curriculum design that teachers may have their greatest influence on the course.

The third group of principles deals with **monitoring and assessment** and to some degree **evaluation**. In each of these groups, the principles have been ranked in order of their importance i.e. the first principle in the group is the most important of that group; the second principle is the next most important and so on.

Topic-047: First Group of Twenty Principles: Content and Sequencing (Principles 1-2)

Content and sequencing

Principle 1: Frequency

A language course should provide the best possible coverage of language in use through the inclusion of items that occur frequently in the language so that learners get the best return for their learning effort.

Many years of research on vocabulary frequency, the frequency of grammatical structures, and English for Special Purposes (ESP) has resulted in a substantial amount of information about the frequency of occurrence of various types of items and of the coverage of text provided by knowledge of the most frequent items. The most striking feature of vocabulary is that the data on vocabulary guide us that

Which of the following principle does not imply that all of the attention of the teacher and learners is directed towards formal language?

Select the correct option

☐	Spaced retrieval
☒	Language System
☐	Frequency
☐	Teach-ability

Click to Save Answer & Move

directed tow

such checking. The simplest and possibly the most useful way to check is to test frequently whether wanted items are learned.

Another possibility is to choose a small group of very useful, but likely to be neglected items and to keep a note of the repetition of these. The group should probably not contain more than 20 items to make checking manageable.

Principle 4: Language System

The language focus of a course needs to be on generalizable features of the language system.

This principle does not imply that all of the attention of the teacher and learners is directed towards formal features of the language. What it means is that where attention is directed to language features these features should be predominantly regular features. A good command over these features will enable the learners to make "creative" use of the language. That is, to say or write and understand things that they have not met or produced before, and to understand things that they have not met or produced before. If the teacher wants to check that this principle is being applied in a particular lesson, then the teacher should ask this question, "Will today's work help the learners to deal with tomorrow's task?" If the answer is yes, then the principle is being applied.

To check if the principle is being applied in a course, a teacher needs to look at the learning goal of a particular lesson and then to evaluate that goal in terms of the uses that the learners will make of the language. This evaluation needs to check that the goal of the lesson is allowing the learner to make the widest possible use of the language features involved. If a course does not do this well, teachers can change the focus of the course by adapting the exercises and activities.

Topic-049: First Group of Twenty Principles: Content and Sequencing (Principle -5-6)**Principle 5: Keep moving forward**

Question # 7 of 10 (Start time: 11:24:46 AM, 14 May 2024)

Question # 4 of 10 (Start time: 11:21:13 AM, 14 May 2024)

The previous knowledge that is brought to second-language learning comes from the learners' _____ language.

Select the correct option

☒	first
☐	native
☐	nonnative
☐	second

Click to Save Answer

brought to sec

that the order of ideas in the message is: "John arrives when?" Between this order and "When will John arrive?" two rearrangements are needed. This means that the sentence "When will John arrive?" is more psychologically complex than "Will John come?" Notice also that the rearrangement needed to produce "Will John come?" is also needed, along with another rearrangement, to produce "When will John come?" The learning of the rearrangement to produce "Will John come?" can be considered a prerequisite to learning "When will John come?"

On the basis of this kind of analysis and on evidence from second language acquisition studies, Pienemann and Johnston (1987) have made a sequenced list of structures. The sequence of the items in the list is the same as the sequence in which second-language learners learn them.

Topic-050: First Group of Twenty Principles: Content and Sequencing (Principle 7-8)

Principle 7: Learning Burden

The course should help the learners to make the most effective use of previous knowledge.

Much of the previous knowledge that is brought to second-language learning comes from the learners' first language. The effect of this knowledge on second-language learning has been a matter of debate with some arguing that the first language has a major effect on second-language learning (Lado, 1957; Ringbom, 1987) and others arguing that second-language learning like first-language learning occur without the influence of other languages.

Part of the reason for the debate has been that second-language learning occurs in a variety of circumstances. Where the language is learned as a foreign language with little opportunity for contact and

Question # 3 of 10 (Start time: 11:19:56 AM, 14 May 2024)

English as

**Topic-053: Second Group of Twenty Principles: Format and Presentation (Principle 4)****Principle 4: Fluency**

A language course should provide activities aimed at increasing the fluency with which the learners can use the language they already know, both receptively and productively.

Fluency is a part of the skill goal of language learning. Fluency activities do not aim to teach new language items but aim to give the learner ready access to what is already known.

The importance of fluency in language use is highlighted in first-language research on the relationship between vocabulary learning and reading comprehension. One of the several possible explanations for a lack of success of many studies is showing that pre-teaching vocabulary results in improved comprehension that is not sufficient just to know the meanings of new words in a text. It is also necessary to be able to retrieve these meanings quickly and fluently when their forms are met in the text. Many learners of **English as** a foreign language experience this difficulty. Their language knowledge of vocabulary and sentence patterns may be substantial (the result of several years' learning) but their ability to access and use this knowledge fluently is extremely low.

Fluency is often contrasted with accuracy (Brumfit, 1984), and is seen as a way of making consciously studied material become available for less conscious use. Ellis (1987) sees fluency activities as a way of making features of learners' "careful" style of language use become available in other less monitored styles.

Fluency activities depend on several conditions to achieve their goal. In various techniques, learners work in pairs with one acting as the speaker and the other as listener. The speaker talks for four minutes on a topic while her partner listens. Then the pairs change with each speaker giving the same information to a new partner in three minutes, followed by a further change and a two-minute talk.

From the point of view of fluency, this activity has these important features. First, the user is encouraged to process a large quantity of language. This is done by allowing the speaker to perform

Question # 2 of 10 (Start time: 11:19:22 AM, 14 May 2024)

sound sys

Courses which aim at all four skills can be checked to see that about 25 per cent of the total learning time is given to activities involving language production. It is also worthwhile checking that either writing or speaking is not being neglected at the expense of the other. It is also worth checking that learners have to produce language in both formal and informal settings, for transactional and interactional purposes and in a variety of social roles and power relationships. Munby (1978) provides a useful list of equal and unequal relationships.

Principle 6: Deliberate Learning

The course should include language-focused learning in the sound system, vocabulary, grammar and discourse areas.

Language-focused learning can occur when the learners' attention is on language items not because the learner wants to receive or communicate a message in a normal way, but because the learner wants to learn some part of the language system. Language-focused attention can be directed towards the sound system, the spelling system, the vocabulary, the grammar system and discourse patterns.

Reviews of research on language-focused learning (Ellis, 1990; Spada, 1997) show that some language-focused learning in a language course has the following effects:

- It can speed up learning.
- It can help learners overcome barriers to their language development.
- It can have a positive effect on meaning-focused learning.

In general, courses containing appropriate amounts and types of language focused learning achieve better results than courses which do not include such learning.

The following activities are all examples of language-focused learning:

While doing needs analysis, it is important to be cautious about the _____ overload.

Select the correct option

☐	files
☐	records
☐	material
☐	information

overlo

Topic-040: Designing the Needs Analysis

Designing a needs analysis involves choosing from among various options discussed above and selecting those that are likely to give a comprehensive view of learners' needs and that represent the interests of the different stakeholders involved. Decisions have to be made on the practical procedures involved in collecting, organizing, analyzing, and reporting the information collected. It is important to make sure that the needs analysis does not produce an information overload. There needs to be a clear rationale for collecting different kinds of information that will actually be used. The procedures of needs analysis are:

- Literature survey
- Analysis of a wide range of survey questionnaires
- Contact with others who had conducted similar surveys
- Interviews with teachers to determine goals
- Identification of participating departments
- Presentation of project proposal to participating departments and identification of liaison person in

Topic-042: Evaluating Needs Analysis

Needs analysis is a kind of assessment and thus can be evaluated by considering its reliability, validity and practicality. Reliable needs analysis involves using well-thought-out, standardized tools that are applied systematically. Instead of observing people performing tasks that learners will have to do after the course, it is better to systematize the observation by using a checklist or by recording and apply standardized analysis procedures.

Valid needs analysis involves looking at what is relevant and important. Consideration of the type of need that is being looked at and the type of information that is being gathered is important. Before needs analysis begins, it may be necessary to do a ranking activity to decide what type of need should get priority in the needs analysis investigation. The worst decision would be to let practicality dominate by deciding to investigate what is easiest to investigate.

Topic-043: Example in Need Analysis

ENG519 - Curriculum Design (Quiz No.2)

Question # 5 of 10 (Start time: 09:46:35 AM, 15 May 2024)

In needs analysis, the information obtained is often dependent on the type of the _____ selecte

Select the correct option

☒	procedure
☐	diagram
☐	plan
☐	design

dependent

teacher's ongoing responsibilities.

Topic-038: Procedures for Conducting Needs Analysis

A variety of procedures can be used in conducting needs analysis and the kind of information obtained is often **dependent** on the type of procedure selected. Since, any one source of information is likely to be incomplete or partial, a triangular approach (i.e., for collecting information two or more different sources of information should be sought). For example, **when a needs analysis of the writing problems encountered by foreign students enrolled in American universities is conducted, information could be obtained from the following sources:**

- Samples of student writing
- Test data on student performance
- Reports by teachers on typical problems students face
- Opinions of experts
- Information from students via interviews and questionnaires

EN0519 - Curriculum Design (Quiz No.2)

Question # 6 of 10 (Start time: 09:47:49 AM, 15 May 2024)

Which of the following principle deals with the inclusion of items that occur frequently in the language so that their learning effort?

Select the correct option

- | | |
|----------------------------------|-------------------------|
| ☒ | Frequency |
| ☐ | Strategies and autonomy |
| ☐ | Spaced retrieval |
| ☐ | Language System |

inclusion

important and so on.

Topic-047: First Group of Twenty Principles: Content and Sequencing (Principles 1-2)**Content and sequencing****Principle 1: Frequency**

A language course should provide the best possible coverage of language in use through the inclusion of items that occur frequently in the language so that learners get the best return for their learning effort.

NO519 - Curriculum Design (Quiz No.2)

Question # 7 of 10 (Start time: 09:49:04 AM, 15 May 2024)

Which of the following principle does not imply that all of the attention of the teacher and learners is directed towards language?

Select the correct option

- ☐ Spaced retrieval
- ☒ Language System
- ☐ Teach-ability
- ☐ Frequency

attention

to keep a note of the repetition of these. The group should probably not contain more than 20 items to make checking manageable.

Principle 4: Language System

The language focus of a course needs to be on generalizable features of the language system.

This principle does not imply that all of the **attention** of the teacher and learners is directed towards formal features of the language. What it means is that where attention is directed to language features these features should be predominantly regular features. A good command over these features will enable the learners to make "creative" use of the language. That is, to say or write and understand things that they have not met or produced before, and to understand things that they have not met or produced before. If the teacher wants to check that this principle is being applied in a particular lesson, then the teacher should ask this question, "Will today's work help the learners to deal with tomorrow's task?" If the answer is yes, then the principle is being applied.

To check if the principle is being applied in a course, a teacher needs to look at the learning goal of a particular lesson and then to evaluate that goal in terms of the uses that the learners will make of the language. This evaluation needs to check that the goal of the lesson is allowing the learner to make the

EN0519 - Curriculum Design (Quiz No.2)

Question # 8 of 10 (start time: 09:50:19 AM, 15 May 2024)

Which of the following principle of language curriculum design projects that students should be expose activity in both listening and reading?

Select the correct option

☐	Four strands
☐	Frequency
☐	Comprehensible input
☐	Fluency

comprehensi

language-focused learning, meaning-focused output and fluency development.

Topic-052: Second Group of Twenty Principles: Format and Presentation (Principle 3)

Principle 3: Comprehensible input

There should be substantial quantities of interesting comprehensible receptive activity in both listening and reading.

In a very practical and well-conducted experiment, Elley and Mangubhai (1981) replaced part of drill-based English lessons for Fijian learners of English with self-directed reading of interesting children's books. Eight months later, with four English classes per week, it was found that the learners in the experimental group had made 15 months' progress on a variety of proficiency measures of English. The large amounts of reading that the learners did were not in addition to their usual English course. It replaced about one-third of the usual course. Other experiments, although not as large-scale or as well-designed as the Elley and Mangubhai study, indicate a similar effect for large quantities of listening. The theoretical justification for such an approach to language learning rests on the idea that learners need to build up and are capable of building up an understanding of the language system before they are called on

Question # 9 of 10 (Start time: 09:51:19 AM, 15 May 2024)

Which of the following types of motivation comes from the learner rather than from the outside reward?

Select the correct option

☐	Power-based
☐	Fear-based
☐	Extrinsic
☒	Intrinsic

outside

Topic-091: Second Group of Twenty Principles: Format and Presentation (Principle 1-6)

Principle 1: Motivation

As much as possible, the learners should be interested and excited about learning the language and they should come to value this learning.

This principle stresses the importance of the learners' attitude to what they are studying. Motivation is a very important determinant of the amount of time, involvement and effect that learners give to learning. The best motivation is "intrinsic", springing from within the learner, rather than "extrinsic", coming from some outside integrative or instrumental reward.

Intrinsic motivation can develop as a result of extrinsic motivation. Learning for reasons of gain can result in a genuine love of learning and involvement in the activity. If learners are not interested in learning, it is worthwhile beginning by looking at ways to attract them and involve them in learning. The following ways can be considered in this context:

- Make the subject matter of the lessons relevant and interesting to them. Surveys of wants and attitudes can help gather information to guide this.

ENG519 - Curriculum Design (Quiz No.2)

Question # 10 of 10 (start time: 09:52:41 AM, 15 May 2024)

Which of the following principle of language curriculum design analyzes that how well a language program caters learners?

Select the correct option

☐	fluency
☐	feedback
☐	Comprehensible input
☐	Ongoing Needs and Environment Analysis

cater

**Principle 1: Ongoing Needs and Environment Analysis**

The selection, gradation, presentation and assessment of the material in a language course should be based on a careful consideration of the learners and their needs, the teaching conditions, and the time and resources available.

This principle stresses the importance of doing environment analysis and needs analysis during the planning of a course. It emphasizes various aspects of language teaching. These aspects are how to select and grade lexical or grammatical material. Overall, this principle analyzes that how well a language program caters various needs of the learners. It also touches upon the element of time and resources. In order to monitor a program, we, as language teachers, need to ensure the time and resource element.

Principle 2: Feedback

Question # 3 of 10 (Start time: 01:49:07 PM, 13 May 2024)

Which of the following principles deals with language-focused learning in the vocabulary and grammar

Select the correct option

social learning

none of the given options

logical learning

deliberate learning

Click to S

delibera

**Meaning-focused speaking should involve the learners in conversation and also in monologue.**

The conversation can have a largely social focus and can also be used for conveying important information. That is, there should be practice in both interactional and transactional language use. The conditions for meaning-focused output are similar to those for meaning-focused input. There should be a focus on the message (that is getting the listener or the reader to understand), the task should be demanding but not too demanding, and there should be plenty of opportunity for such activity.

Topic-093: The Four Strands: Language Focused Learning and Fluency Development

Language-focused learning involves a deliberate focus on language features such as pronunciation, spelling, word parts, vocabulary, collocations, grammatical constructions and discourse features. Language-focused learning is an efficient way of quickly learning language features. It is an important part of any language course and about one quarter of the course time should be spent on such learning. In most courses too much time is spent on such learning, and this means that there is less opportunity for learning through the other three strands of the course. The answer is not to completely

vulms.vu.edu.pk/

While doing needs analysis, it is important to be cautious about the _____ overload.

Select the correct option

☐	files
☐	material
☐	information
☐	records

overlo

performance can be gauged. Once target tasks have been identified, their linguistic characteristics are determined as a basis for designing a language course or training materials.

Topic-040: Designing the Needs Analysis

Designing a needs analysis involves choosing from among various options discussed above and selecting those that are likely to give a comprehensive view of learners' needs and that represent the interests of the different stakeholders involved. Decisions have to be made on the practical procedures involved in collecting, organizing, analyzing, and reporting the information collected. It is important to make sure that the needs analysis does not produce an information overload. There needs to be a clear rationale for collecting different kinds of information that will actually be used. The procedures of needs analysis are:

- Literature survey
- Analysis of a wide range of survey questionnaires
- Contact with others who had conducted similar surveys
- Interviews with teachers to determine goals

Which of the following principles are concerned with what goes into a language course and the order in course?

Select the correct option

☐	Format and presentation
☐	Monitoring and assessment
☐	Strategies and autonomy
☒	Content and sequencing

appear in

These principles must be based on research and theory, and must be general enough to allow variety and flexibility in their application to suit a wide range of conditions in which language is taught. The principles have been divided into three groups. These three groups represent the three major divisions of the central circle in the curriculum design diagram.

Topic-046: Introduction to Twenty Principles-II

The first group of principles deals with **content and sequencing**. These principles are concerned with what goes into a language course and the order in which language items appear in the course. The aim of these principles is to make sure that the learners are gaining something useful from the course. It is possible to run a language course which is full of interesting activities and introduces the learners to new language items, but provides a very poor return for the time invested in it. This poor return can occur because many of the lessons do not contain anything new to learn, because the new items have very little value in the ordinary use of the language, or because they set out interference conditions which result in a step backwards in learning rather than a step forwards.

The second group of principles deals with **format and presentation**. These principles are

Question # 10 of 10 (Start time: 01:08:12 PM, 15 May 2024)

Which of the following principle does not imply that all of the attention of the teacher and learner is directed towards language?

Select the correct option

☐	Spaced retrieval
☐	Language System
☐	Teach-ability
☐	Frequency

formal f

to keep a note of the repetition of these. The group should probably not contain more than 20 items to make checking manageable.

Principle 4: Language System

The language focus of a course needs to be on generalizable features of the language system.

This principle does not imply that all of the attention of the teacher and learners is directed towards **formal** features of the language. What it means is that where attention is directed to language features these features should be predominantly regular features. A good command over these features will enable the learners to make “creative” use of the language. That is, to say or write and understand things that they have not met or produced before, and to understand things that they have not met or produced before. If the teacher wants to check that this principle is being applied in a particular lesson, then the teacher should ask this question, “Will today’s work help the learners to deal with tomorrow’s task?” If the answer is yes, then the principle is being applied.

To check if the principle is being applied in a course, a teacher needs to look at the learning goal of a particular lesson and then to evaluate that goal in terms of the uses that the learners will make of the

dependent

**Topic-037: Administering the Needs Analysis**

Planning a needs analysis involves deciding who will administer the needs analysis and collect and analyze the results. Needs analyses vary in their scope and demands, from a survey of a whole school population in a country to a study of a group of thirty learners in a single institution. Sometimes a team of personnel is assembled specifically for the purpose of doing the analysis; at other times two or three interested teachers may be the only ones involved. In some language programs, informal needs analysis is a part of a teacher's ongoing responsibilities.

Topic-038: Procedures for Conducting Needs Analysis

A variety of procedures can be used in conducting needs analysis and the kind of information obtained is often **dependent** on the type of procedure selected. Since, any one source of information is likely to be incomplete or partial, a triangular approach (i.e., for collecting information two or more different sources of information should be sought). For example, when a needs analysis of the writing problems encountered by foreign students enrolled in American universities is conducted, information could be obtained from the following sources:

- Samples of student writing
- Test data on student performance
- Reports by teachers on typical problems students face
- Opinions of experts
- Information from students via interviews and questionnaires
- Analysis of textbooks teaching academic writing
- Survey or related literature
- Examples of writing programs from other institutions
- Examples of writing assignments given to first-year university students

cater

and negotiated procedures.

A course should take account of individual differences and learning styles in two ways: (1) by providing opportunities for learners to work to their strengths, and (2) by providing opportunity and training for learners to try other ways of learning. An effective language course not only produces effective learning but also produces effective learners.

Topic-057: Third Group of Twenty Principles: Monitoring and Assessment (Principles 1-2)

Principle 1: Ongoing Needs and Environment Analysis

The selection, gradation, presentation and assessment of the material in a language course should be based on a careful consideration of the learners and their needs, the teaching conditions, and the time and resources available.

This principle stresses the importance of doing environment analysis and needs analysis during the planning of a course. It emphasizes various aspects of language teaching. These aspects are how to select and grade lexical or grammatical material. Overall, this principle analyzes that how well a language program caters various needs of the learners. It also touches upon the element of time and resources. In order to monitor a program, we, as language teachers, need to ensure the time and resource element.

The acronym NNES stands for _____.

Select the correct option

☐	None Native English Speakers
☐	Novel Natural English Speakers
☐	New Native English Speakers
☐	None of the given options

NNES

Needs analysis is a kind of assessment and thus can be evaluated by considering its reliability, validity and practicality. Reliable needs analysis involves using well-thought-out, standardized tools that are applied systematically. Instead of observing people performing tasks that learners will have to do after the course, it is better to systematize the observation by using a checklist or by recording and apply standardized analysis procedures.

Valid needs analysis involves looking at what is relevant and important. Consideration of the type of need that is being looked at and the type of information that is being gathered is important. Before needs analysis begins, it may be necessary to do a ranking activity to decide what type of need should get priority in the needs analysis investigation. The worst decision would be to let practicality dominate by deciding to investigate what is easiest to investigate.

Topic-043: Example in Need Analysis

The example is taken from Richards's book (2001) and it involves NNES (non-native English speaking students). In Auckland University, New Zealand, a needs analysis was conducted and the purpose of this analysis was to understand whether the current courses meet the needs of the students. It is conducted in 1997 in the largest university of New Zealand where the population was roughly 26000. During that year the strength of non-native English speaking student was increasing and the university faced the challenge to enhance the language proficiency of newly arrived students. In order to conduct needs analysis, the university got insight from previous surveys as well as two new questionnaires were designed.

These questionnaires mainly addressed the issues and problems faced by the students. With the help of this survey, the university gathered information about the problems faced by ESL learners. The questionnaires were used to gather demographic information and information about different language skills. In the light of this survey, some suggestions were made which focused on developing reading habits among NNES. Some changes in the syllabus were also proposed in the light of this survey.

Question # 9 of 10 (start time: 01:54:46 PM, 15 May 2024)

Which of the following principles deals with language-focused learning in the vocabulary and grammar?

☐	deliberate learning

Click to Save

focused lear

difference as having to move from a purely semantic analysis of the language to a syntactic analysis of it" (1985).

There are clearly other differences too. Speaking and writing require the retrieval of form and the development of productive skills. Biber's (1990) research shows the different occurrences and clustering of formal features in different text types. To gain a balanced coverage of the formal features of the language, it is necessary to make use of language across a representative range of discourse types.

Courses which aim at all four skills can be checked to see that about 25 per cent of the total learning time is given to activities involving language production. It is also worthwhile checking that either writing or speaking is not being neglected at the expense of the other. It is also worth checking that learners have to produce language in both formal and informal settings, for transactional and interactional purposes and in a variety of social roles and power relationships. Munby (1978) provides a useful list of equal and unequal relationships.

Principle 6: Deliberate Learning

The course should include language-focused learning in the sound system, vocabulary, grammar and discourse areas.

Language-focused learning can occur when the learners' attention is on language items not because the learner wants to receive or communicate a message in a normal way, but because the learner wants to learn some part of the language system. Language-focused attention can be directed towards the sound system, the spelling system, the vocabulary, the grammar system and discourse patterns.

Reviews of research on language-focused learning (Ellis, 1990; Spada, 1997) show that some language-focused learning in a language course has the following effects:

- It can speed up learning.
- It can help learners overcome barriers to their language development.
- It can have a positive effect on meaning-focused learning.

In general, courses containing appropriate amounts and types of language focused learning achieve better results than courses which do not include such learning.

Question # 7 of 10 (Start time: 01:53:34 PM, 15 May 2024)

Which of the following principle does not imply that all of the attention of the teacher and learners is directed towards form language?

Select the correct option

☐	Language System
☐	Frequency
☐	Spaced retrieval
☐	Teach-ability

Click to Save Answer & Move

not impl

...wanted items are learned.

Another possibility is to choose a small group of very useful, but likely to be neglected items and to keep a note of the repetition of these. The group should probably not contain more than 20 items to make checking manageable.

Principle 4: Language System

The language focus of a course needs to be on generalizable features of the language system.

This principle does **not imply** that all of the attention of the teacher and learners is directed towards formal features of the language. What it means is that where attention is directed to language features these features should be predominantly regular features. A good command over these features will enable the learners to make "creative" use of the language. That is, to say or write and understand things that they have not met or produced before, and to understand things that they have not met or produced before. If the teacher wants to check that this principle is being applied in a particular lesson, then the teacher should ask this question, "Will today's work help the learners to deal with tomorrow's task?" If the answer is yes, then the principle is being applied.

To check if the principle is being applied in a course, a teacher needs to look at the learning goal of a particular lesson and then to evaluate that goal in terms of the uses that the learners will make of the language. This evaluation needs to check that the goal of the lesson is allowing the learner to make the widest possible use of the language features involved. If a course does not do this well, teachers can change the focus of the course by adapting the exercises and activities.

Topic-049: First Group of Twenty Principles: Content and Sequencing (Principle -5-6)**Principle 5: Keep moving forward**

A language course should progressively cover useful language items, skills and strategies.

This principle means that the course should have explicit language teaching goals and that there should be some way to ensure that there is opportunity for the goals to be achieved.

Lesson-10

TWENTY PRINCIPLES -II

Topic-051: Second Group of Twenty Principles: Format and Presentation (Principle 1-2)**Principle 1: Motivation**

As much as possible, the learners should be interested and excited about learning the language and they should come to value this learning.

This principle stresses the importance of the learners' attitude to what they are studying. Motivation is a very important determinant of the amount of time, involvement and effect that learners give to learning. The best motivation is "intrinsic", springing from within the learner, rather than "extrinsic", coming from some outside integrative or instrumental reward.

Intrinsic motivation can develop as a result of extrinsic motivation. Learning for reasons of gain can result in a genuine love of learning and involvement in the activity. If learners are not interested in learning, it is worthwhile beginning by looking at ways to attract them and involve them in learning. The following ways can be considered in this context:

- Make the subject matter of the lessons relevant and interesting to them. Surveys of wants and attitudes can help gather information to guide this.
- Give the learners some control and decision-making over what they do. A negotiated or partly negotiated syllabus is one way to do this.
- Set tasks with clear outcomes and with a high possibility of the learners completing them successfully.
- Set many short achievement tests to encourage the learners to work and to show them that they can be successful learners.
- Show the learners how to keep records of their progress so that they can see their continuing success. These records can include speed reading graphs, standardised dictation scores, number of graded readers completed and movement through the levels, scores on split-information tasks and writing-accuracy graphs.

Question # 5 of 10 (Start time: 01:52:11 PM, 15 May 2024)

Which of the following principle of language curriculum design projects that students should be exposed to remarkable in activity in both listening and reading?

Select the correct option

☐	Frequency
☒	Comprehensible input
☐	Fluency
☐	Four strands

Click to Save Answer & Move

recep

This principle is concerned with the relative amount of time given to the four main strands of a language course – meaning-focused input; language focused learning, meaning-focused output and fluency development.

The rough rule of thumb is that on average equal time should be given to each of these four strands in the total language experience of the learner. That means that time in class and out of class can be considered if, during these times, the learner is gaining appropriate language activity that can be classified as fitting into these strands. For example, if a learner is doing a lot of graded reading outside class time and is gaining truly comprehensible input outside of class time, this would mean that the time allocation for meaning-focused input could be met outside class and so the time in class could be given to language-focused learning, meaning-focused output and fluency development.

Topic-052: Second Group of Twenty Principles: Format and Presentation (Principle 3)

Principle 3: Comprehensible input

There should be substantial quantities of interesting comprehensible receptive activity in both listening and reading.

In a very practical and well-conducted experiment, Elley and Mangubhai (1981) replaced part of drill-based English lessons for Fijian learners of English with self-directed reading of interesting children's books. Eight months later, with four English classes per week, it was found that the learners in the experimental group had made 15 months' progress on a variety of proficiency measures of English. The large amounts of reading that the learners did were not in addition to their usual English course. It replaced about one-third of the usual course. Other experiments, although not as large-scale or as well-designed as the Elley and Mangubhai study, indicate a similar effect for large quantities of listening. The theoretical justification for such an approach to language learning rests on the idea that learners need to build up and are capable of building up an understanding of the language system before they are called on to produce language (Nord, 1980).

The requirements of such an approach to learning are that the learners have access to large quantities of interesting reading or listening material at a roughly suitable level and that although the use of such material may be monitored by the teacher it is not the excuse for quantities of carefully checked follow-up exercises. There are various ways in which teachers can build up class sets (not all of the same

ENG519 - Curriculum Design (Quiz No.2)

Question # 10 of 10 (Start time: 01:50:50 PM, 15 May 2024)

Which of the following principle of language curriculum design projects that students should be exposed to remarkable input

Select the correct option:

☐ Four strands☒ Comprehensible input☐ Frequency☐ Fluency

recept

**fluency development.**

The rough rule of thumb is that on average equal time should be given to each of these four strands in the total language experience of the learner. That means that time in class and out of class can be considered if, during these times, the learner is gaining appropriate language activity that can be classified as fitting into these strands. For example, if a learner is doing a lot of graded reading outside class time and is gaining truly comprehensible input outside of class time, this would mean that the time allocation for meaning-focused input could be met outside class and so the time in class could be given to language-focused learning, meaning-focused output and fluency development.

Topic-052: Second Group of Twenty Principles: Format and Presentation (Principle 3)**Principle 3: Comprehensible input**

*There should be substantial quantities of interesting comprehensible **receptive** activity in both listening and reading.*

In a very practical and well-conducted experiment, Elley and Mangubhai (1981) replaced part of drill-based English lessons for Fijian learners of English with self-directed reading of interesting children's books. Eight months later, with four English classes per week, it was found that the learners in the experimental group had made 15 months' progress on a variety of proficiency measures of English. The large amounts of reading that the learners did were not in addition to their usual English course. It replaced about one-third of the usual course. Other experiments, although not as large-scale or as well-designed as the Elley and Mangubhai study, indicate a similar effect for large quantities of listening. The theoretical justification for such an approach to language learning rests on the idea that learners need to build up and are capable of building up an understanding of the language system before they are called on to produce language (Nord, 1980).

The requirements of such an approach to learning are that the learners have access to large quantities of interesting reading or listening material at a roughly suitable level and that although the use of such material may be monitored by the teacher it is not the excuse for quantities of carefully checked follow-up exercises. There are various ways in which teachers can build up class sets (not all of the same title) of reading texts. Here are some of them:

Question # 3 of 10 (start time: 01:50:24 PM, 15 May 2024)

The previous knowledge that is brought to second-language learning comes from the learners' _____.

Select the correct option

☒	first
☐	second
☐	native
☐	nonnative

comes from

that the order of ideas in the message is: "John arrives when?" Between this order and "when will John arrive?" two rearrangements are needed. This means that the sentence "When will John arrive?" is more psychologically complex than "Will John come?" Notice also that the rearrangement needed to produce "Will John come?" is also needed, along with another rearrangement, to produce "When will John come?" The learning of the rearrangement to produce "Will John come?" can be considered a prerequisite to learning "When will John come?"

On the basis of this kind of analysis and on evidence from second language acquisition studies, Pienemann and Johnston (1987) have made a sequenced list of structures. The sequence of the items in the list is the same as the sequence in which second-language learners learn them.

Topic-050: First Group of Twenty Principles: Content and Sequencing (Principle 7-8)

Principle 7: Learning Burden

The course should help the learners to make the most effective use of previous knowledge.

Much of the previous knowledge that is brought to second-language learning comes from the learners' first language. The effect of this knowledge on second-language learning has been a matter of debate with some arguing that the first language has a major effect on second-language learning (Lado, 1957; Ringbom, 1987) and others arguing that second-language learning like first-language learning occur without the influence of other languages.

Part of the reason for the debate has been that second-language learning occurs in a variety of circumstances. Where the language is learned as a foreign language with little opportunity for contact and

Select the correct option

☐	Teach-ability
☒	Language System
☐	Spaced retrieval
☐	Frequency

not im

such checking. The simplest and possibly the most useful way to check is to test frequently whether wanted items are learned.

Another possibility is to choose a small group of very useful, but likely to be neglected items and to keep a note of the repetition of these. The group should probably not contain more than 20 items to make checking manageable.

Principle 4: Language System

The language focus of a course needs to be on generalizable features of the language system.

This principle does **not** imply that all of the attention of the teacher and learners is directed towards formal features of the language. What it means is that where attention is directed to language features these features should be predominantly regular features. A good command over these features will enable the learners to make "creative" use of the language. That is, to say or write and understand things that they have not met or produced before, and to understand things that they have not met or produced before. If the teacher wants to check that this principle is being applied in a particular lesson, then the teacher should ask this question, "Will today's work help the learners to deal with tomorrow's task?" If the answer is yes, then the principle is being applied.

To check if the principle is being applied in a course, a teacher needs to look at the learning goal of a particular lesson and then to evaluate that goal in terms of the uses that the learners will make of the language. This evaluation needs to check that the goal of the lesson is allowing the learner to make the widest possible use of the language features involved. If a course does not do this well, teachers can change the focus of the course by adapting the exercises and activities.

problems in different situations

- Suggestions and opinions about different aspects of learners' problems
- Frequencies of linguistic items or units in different texts or situations

Topic-042: Evaluating Needs Analysis

Needs analysis is a kind of assessment and thus can be evaluated by considering its reliability, validity and practicality. Reliable needs analysis involves using well-thought-out, standardized tools that are applied systematically. Instead of observing people performing tasks that learners will have to do after the course, it is better to systematize the observation by using a checklist or by recording and apply standardized analysis procedures.

Valid needs analysis involves looking at what is relevant and important. Consideration of the type of need that is being looked at and the type of information that is being gathered is important. Before needs analysis begins, it may be necessary to do a ranking activity to decide what type of need should get priority in the needs analysis investigation. The worst decision would be to let practicality dominate by deciding to investigate what is easiest to investigate.

Topic-043: Example in Need Analysis

The example is taken from Richards's book (2001) and it involves NNES (non-native English speaking students). In Auckland University, New Zealand, a needs analysis was conducted and the purpose of this analysis was to understand whether the current courses meet the needs of the students. It is conducted in 1997 in the largest university of New Zealand where the population was roughly 26000. During that year the strength of non-native English speaking student was increasing and the university faced the challenge to enhance the language proficiency of newly arrived students. In order to conduct needs analysis, the university got insight from previous surveys as well as two new questionnaires were designed.

These questionnaires mainly addressed the issues and problems faced by the students. With the help of this survey, the university gathered information about the problems faced by ESL learners. The questionnaires were used to gather demographic information and information about different language skills. In the light of this survey, some suggestions were made which focused on developing reading

demand

Many learners of English as a foreign language experience this difficulty. Their language knowledge of vocabulary and sentence patterns may be substantial (the result of several years' learning) but their ability to access and use this knowledge fluently is extremely low.

Fluency is often contrasted with accuracy (Brumfit, 1984), and is seen as a way of making consciously studied material become available for less conscious use. Ellis (1987) sees fluency activities as a way of making features of learners' "careful" style of language use become available in other less monitored styles.

Fluency activities depend on several conditions to achieve their goal. In various techniques, learners work in pairs with one acting as the speaker and the other as listener. The speaker talks for four minutes on a topic while her partner listens. Then the pairs change with each speaker giving the same information to a new partner in three minutes, followed by a further change and a two-minute talk.

From the point of view of fluency, this activity has these important features. First, the user is encouraged to process a large quantity of language. This is done by allowing the speaker to perform without interruption and by having the speaker make three deliveries of the talk. Second, the demands of the activity are limited to a much smaller set than would occur in most uncontrolled learning activities. This can be done by the teacher's control as is the case in most receptive fluency activities such as reading graded readers or listening to stories, or can be done by choice, planning or repetition by the learner. In activity the speaker choose the ideas, language items and way of organizing the talk. The four-and three-minute deliveries allow the speaker to bring these aspects well under control, so that fluency can become the learning goal of the activity. Third, the learner is helped to reach a high level of performance.

Topic-054: Second Group of Twenty Principles: Format and Presentation (Principle 5-6)

Principle 5: Output

The learners should be pushed to produce the language in both speaking and writing over a range of discourse types.

Question 2 of 10 (Start time: 01:43:07 PM, 15 May 2024)

Principles of language curriculum design helps to evaluate existing course and can be used for _

Select the correct option

☒	language
☐	teacher
☐	classroom
☐	relation

development

The course should include language-focused learning in the sound system, vocabulary, grammar and discourse areas.

Language-focused learning can occur when the learners' attention is on language items not because the learner wants to receive or communicate a message in a normal way, but because the learner wants to learn some part of the language system. Language-focused attention can be directed towards the sound system, the spelling system, the vocabulary, the grammar system and discourse patterns.

Reviews of research on language-focused learning (Ellis, 1990; Spada, 1997) show that some language-focused learning in a language course has the following effects:

- It can speed up learning.
- It can help learners overcome barriers to their language development.
- It can have a positive effect on meaning-focused learning.

In general, courses containing appropriate amounts and types of language focused learning achieve better results than courses which do not include such learning.

The following activities are all examples of language-focused learning:

- Dictation
- Listening for particular words or phrases
- Repetition and substitution drills
- Memorizing dialogues and scenes

Question # 10 of 10 (Start time: 01:42:11 PM, 15 May 2024)

TWENTY PRINCIPLES -I

Topic-045: Introduction to Twenty Principles-I

This lesson aims to critically analyze how learning can be encouraged with the framework of language curriculum design. The purpose of this lesson is to provide a sensible basis to guide teachers and help them design courses based on certain principles.

35

These principles must be based on research and theory, and must be general enough to allow variety and flexibility in their application to suit a wide range of conditions in which language is taught. The principles have been divided into three groups. These three groups represent the three major divisions of the central circle in the curriculum design diagram.

Topic-046: Introduction to Twenty Principles-II

The first group of principles deals with **content and sequencing**. These principles are concerned with what goes into a language course and the **order in** which language items appear in the course. The aim of these principles is to make sure that the learners are gaining something useful from the course. It is possible to run a language course which is full of interesting activities and introduces the learners to new language items, but provides a very poor return for the time invested in it. This poor return can occur because many of the lessons do not contain anything new to learn, because the new items have very little value in the ordinary use of the language, or because they set out interference conditions which result in a step backwards in learning rather than a step forwards.

The second group of principles deals with **format and presentation**. These principles are concerned with what actually happens in the classroom and during the learning. Most practically, they relate to the kinds of activities used in the course and the ways in which learners' process the course material. It is in this aspect of curriculum design that teachers may have their greatest influence on the course.

The third group of principles deals with **monitoring and assessment** and to some degree **evaluation**. In each of these groups, the principles have been ranked in order of their importance i.e. the first principle in the group is the most important of that group; the second principle is the next most important and so on.

Question # 7 of 10 (Start time: 01:39:35 PM, 15 May 2024)

Which of the following principle of language curriculum design aims to give the learner ready access to what is already known?

Select the correct option

☒	Fluency
☐	Comprehensible input
☐	Frequency
☐	Four strands

Click to Save Answer & Move to

already know

focused learning can also result in subconscious implicit knowledge of language items. This is the kind of knowledge which is needed for normal language use. Deliberate learning of vocabulary items can result in both kinds of knowledge (Elgort, 2007). For most grammatical features however deliberate learning is likely only to contribute to conscious knowledge. Such conscious knowledge can be useful when learners have time to check their production as in writing, but it is also useful as a stepping stone to implicit knowledge when the items are later met in meaning-focused input or fluency development activities.

Here are some of the activities which could occur in the language focused learning strand of course – intensive reading, pronunciation practice, guided writing, spelling practice, blank-filling activities, sentence completion or sentence combining activities, getting feedback on written work correction during speaking activities, learning vocabulary from word cards, memorizing collocation dictation and the explicit study of discourse features.

The fourth strand of a course is a fluency development strand. Fluency involves making the best use of what is already known. Thus, the fluency development strand of a course does not involve the learning of new language features, but involves becoming fluent with features that the learners have already met before. The conditions for the fluency development strand are: (1) easy, familiar material, (2) a focus on communicating messages, (3) some pressure to perform at a faster speed, and (4) plenty of opportunities for fluency practice.

There needs to be fluency practice in each of the four skills of listening, speaking, reading and writing. Listening fluency practice can involve listening to stories, taking part in interactive activities, and listening to lectures on familiar material. Speaking fluency activities can involve repeated speaking where learners deliver the same talk several times to different listeners, speaking on very familiar topics, reading familiar material aloud, and speaking about what has already been spoken or written about before. Reading fluency activities should involve a speed reading course within a controlled vocabulary.

Such courses can bring about substantial fluency improvement with just a few minutes practice two or three times a week for most learners. Such courses need to be within a controlled vocabulary because they should not contain vocabulary which is unfamiliar to the learners. It is very difficult to develop fluency when working with material which contains unknown language features. Other reading fluency activities include repeated reading where the learners read the same text several times, and extensive reading involving very easy graded readers. Writing fluency activities involve the learners in writing about things where they bring a lot of previous knowledge. A very useful activity in this strand is ten-minute writing. In this activity, two or three times a week, the teacher asks the learners to write under

☐	Second Language Accusation

second lan

that learning goals can include language items, content material (ideas), skill elements including the development of fluency with language and skill items that have already been met before, and discourse features such as text structure or dialogue maintenance strategies. It is often useful to inform learners about the learning goal of the task. If a course includes activities that do not have an obvious learning goal or that have a goal that does not fit the overall goals of the course, it is worth adapting or replacing the task accordingly. An additional way of keeping the course directed towards learning goals is to have regular goal-directed tests. These can have a positive effect on the teaching and learning.

38

Principle 6: Teach-ability

The teaching of language items should take account of the most favorable sequencing of these items and should take account of when the learners are most ready to learn them.

Pienemann et al. (1988) and others have conducted research into the sequence in which language items are learned in second language acquisition and into the effects of this sequence on teaching a second language.

The psychological complexity of a structure depends on the amount of rearranging that is needed when the message that the speaker wants to communicate is expressed in language. For example, if a speaker wants to ask someone a question about the arrival of a friend (the message), it is necessary to express this idea in language: "When will John arrive?" This sentence however has a particular word order which has to be learned. We know from studies of young native speakers of English that it is likely that the order of ideas in the message is: "John arrives when?" Between this order and "When will John arrive?" two rearrangements are needed. This means that the sentence "When will John arrive?" is more psychologically complex than "Will John come?" Notice also that the rearrangement needed to produce "Will John come?" is also needed, along with another rearrangement, to produce "When will John come?" The learning of the rearrangement to produce "Will John come?" can be considered a prerequisite to learning "When will John come?"

On the basis of this kind of analysis and on evidence from second language acquisition studies, Pienemann and Johnston (1987) have made a sequenced list of structures. The sequence of the items in the list is the same as the sequence in which second-language learners learn them.

Lesson-10

TWENTY PRINCIPLES -II

40

Topic-051: Second Group of Twenty Principles: Format and Presentation (Principle 1-2)**Principle 1: Motivation**

As much as possible, the learners should be interested and excited about learning the language and they should come to value this learning.

This principle stresses the importance of the learners' attitude to what they are studying. Motivation is a very important determinant of the amount of time, involvement and effect that learners give to learning. The best motivation is "intrinsic", springing from within the learner, rather than "extrinsic", coming from some outside integrative or instrumental reward.

Intrinsic motivation can develop as a result of extrinsic motivation. Learning for reasons of gain can result in a genuine love of learning and involvement in the activity. If learners are not interested in learning, it is worthwhile beginning by looking at ways to attract them and involve them in learning. The following ways can be considered in this context:

- Make the subject matter of the lessons relevant and interesting to them. Surveys of wants and attitudes can help gather information to guide this.
- Give the learners some control and decision-making over what they do. A negotiated or partly negotiated syllabus is one way to do this.
- Set tasks with clear outcomes and with a high possibility of the learners completing them successfully.
- Set many short achievement tests to encourage the learners to work and to show them that they can be successful learners.
- Show the learners how to keep records of their progress so that they can see their continuing success. These records can include speed reading graphs, standardised dictation scores, number of

| ☐ | Frequency |
| ☐ | Fluency |

Click to Save

both li

This principle is concerned with the relative amount of time given to the four main strands of a language course – meaning-focused input; language focused learning, meaning-focused output and fluency development.

The rough rule of thumb is that on average equal time should be given to each of these four strands in the total language experience of the learner. That means that time in class and out of class can be considered if, during these times, the learner is gaining appropriate language activity that can be classified as fitting into these strands. For example, if a learner is doing a lot of graded reading outside class time and is gaining truly comprehensible input outside of class time, this would mean that the time allocation for meaning-focused input could be met outside class and so the time in class could be given to language-focused learning, meaning-focused output and fluency development.

41

Topic-052: Second Group of Twenty Principles: Format and Presentation (Principle 3)

Principle 3: Comprehensible input

There should be substantial quantities of interesting comprehensible receptive activity in both listening and reading.

In a very practical and well-conducted experiment, Elley and Mangubhai (1981) replaced part of drill-based English lessons for Fijian learners of English with self-directed reading of interesting children's books. Eight months later, with four English classes per week, it was found that the learners in the experimental group had made 15 months' progress on a variety of proficiency measures of English. The large amounts of reading that the learners did were not in addition to their usual English course. It replaced about one-third of the usual course. Other experiments, although not as large-scale or as well-designed as the Elley and Mangubhai study, indicate a similar effect for large quantities of listening. The theoretical justification for such an approach to language learning rests on the idea that learners need to build up and are capable of building up an understanding of the language system before they are called on to produce language (Nord, 1980).

The requirements of such an approach to learning are that the learners have access to large quantities of interesting reading or listening material at a roughly suitable level and that although the use of such material may be monitored by the teacher it is not the excuse for quantities of carefully checked follow-up exercises. There are various ways in which teachers can build up class sets (not all of the same

**Topic-042: Evaluating Needs Analysis**

Needs analysis is a kind of assessment and thus can be evaluated by considering its reliability, validity and practicality. Reliable needs analysis involves using well-thought-out, standardized tools that are applied systematically. Instead of observing people performing tasks that learners will have to do after the course, it is better to systematize the observation by using a checklist or by recording and apply standardized analysis procedures.

Valid needs analysis involves looking at what is relevant and important. Consideration of the type of need that is being looked at and the type of information that is being gathered is important. Before needs analysis begins, it may be necessary to do a ranking activity to decide what type of need should get priority in the needs analysis investigation. The worst decision would be to let practicality dominate by deciding to investigate what is easiest to investigate.

Topic-043: Example in Need Analysis

The example is taken from Richards's book (2001) and it involves NNES (non-native English speaking students). In Auckland University, New Zealand, a needs analysis was conducted and the purpose of this analysis was to understand whether the current courses meet the needs of the students. It is conducted in 1997 in the largest university of New Zealand where the population was roughly 26000. During that year the strength of non-native English speaking student was increasing and the university faced the challenge to enhance the language proficiency of newly arrived students. In order to conduct needs analysis, the university got insight from previous surveys as well as two new questionnaires were designed.

These questionnaires mainly addressed the issues and problems faced by the students. With the help of this survey, the university gathered information about the problems faced by ESL learners. The questionnaires were used to gather demographic information and information about different language skills. In the light of this survey, some suggestions were made which focused on developing reading habits among NNES. Some changes in the syllabus were also proposed in the light of this survey.
