Q.1 Which of the following is an example of slowly changing dimensions?

- A. Asset disposal**
 - B. Inheritance
 - C. Association
 - D. Aggregation
-

Q.2 Which is not a class of aggregation functions?

- A. Holistic
 - B. Distributive
 - C. Associative**
 - D. Algebraic
-

Q.3 Which is not an issue of ROLAP in the following?

- A. Maintenance
 - B. Standard hierarchy of dimensions
 - C. Aggregation pit-falls
 - D. Non-standard conventions**
-

Q.4 In Extract, Load, Transform (ELT) process, data transformation _____

- A. Depends on the nature of the source database
 - B. Does not take place
 - C. Takes place on the data warehouse server**
 - D. Takes place on a separate transformation server
-

Q.5 Which of the following is NOT an example of dimension?

- A. Region
 - B. Product
 - C. Date
 - D. Sales Volume**
-

Q.6 Simple scalar transformation is a _____ mapping from one set of values to another set of values using straightforward rules.

- A. One-to-one**
 - B. Many-to-one
 - C. Many-to-many
 - D. One-to-many
-

Q.7 Which of the following is NOT an example of derived attribute?

- A. Age

CS614 MIDTERM MCQS
LMS HANDLING AND FILES 0336 0668195

[JOIN Virtual University Whatsapp Group Click Here](#)

- B. Annual Salary
 - C. GPA
 - D. **Email Address**
-

Q.8 OLAP is:

- A. Physical database design
 - B. Implementation technique
 - C. None of the given options
 - D. **Framework**
-

Q.9 Which is not a class of anomalies in the following?

- A. Semantically Dirty Data
 - B. Coverage Anomalies
 - C. Syntactically Dirty Data
 - D. **Dirty Anomalies**
-

Q.10 _____ facilitates a mobile computing paradigm.

- A. MOLAP
 - B. **DOLAP**
 - C. HOLAP
 - D. ROLAP
-

Q.1 The divide and conquer cube partitioning approach helps alleviate the _____ limitations of MOLAP implementation.

- A. Security
 - B. Maintainability
 - C. Flexibility
 - D. **Scalability**
-

Q.2 Which of the following is NOT one of the advantages of changed data capture (CDC) technique?

- A. Flat files are not required
 - B. Extraction of changed data occurs immediately
 - C. **No incremental on-line I/O required for log tape**
 - D. Limited query interface is required for data extraction
-

Q.3 The main reason(s) for the increase in cube size may be

- A. All of the given options**
 - B. Increase in the number of dimensions
 - C. Increase in the cardinality of the dimensions
 - D. Increase in the amount of detail data
-

Q.4 _____ is the lowest level of detail or the atomic level of data stored in the warehouse.

- A. Fact
 - B. Cube
 - C. **Grain**
 - D. Dimensions
-

Q.5 Which is not an issue of ROLAP in the following?

- A. Aggregation pit-falls
 - B. Non-standard conventions
 - C. **Standard hierarchy of dimensions**
 - D. Maintenance
-

Q.6 _____ allows download of “cube” structures to a desktop platform without the need for shared relational or cube server.

- A. DOLAP**
 - B. HOLAP
 - C. ROLAP
 - D. MOLAP
-

Q.7 Which of the following is not an example of dimension?

- A. Sales amount**
 - B. ATM card no
 - C. ATM_Location
 - D. Time/Date
-

Q.8 The process of converting entity relationship model in to dimensional model comprises of ____ steps:

Q.9 Online Extraction is a kind of _____ data extraction.

- A. Multivalued
 - B. Dimensional
 - C. **Physical**
 - D. Logical
-

Q.10 Grain of a fact table means:

- A. Summary of aggregates in all fact tables
 - B. **The meaning of one fact table row**
 - C. Summary of aggregates in all dimension tables
 - D. The meaning of one dimensional table row
-

Q.1 Which of the following is NOT one of the advantages of changed data capture (CDC) technique?

- A. Flat files are not required
 - B. Limited query interface is required for data extraction
 - C. Extraction of changed data occurs immediately
 - D. **No incremental on-line I/O required for log tape**
-

Q.2 The biggest problem with _____ is the requirement of large main memory as the cube size increases.

- A. OLTP
 - B. ROLAP
 - C. **MOLAP**
 - D. Data Warehouse
-

Q.3 OLAP implementations are highly/completely _____

- A. **Denormalized**
 - B. Additive
 - C. Normalized
 - D. Predictive
-

Q.4 MDX by Microsoft is an example of _____

- A. **None of the given options**
 - B. HOLAP
 - C. DOLAP
 - D. ROLAP
-

Q.5 Which of the following is not a task of Data Transformation?

- A. Enrichment
 - B. **Full Data Refresh**
 - C. Conversion
 - D. Summarization
-

Q.6 Which people criticize Dimensional Modeling (DM) as being a data mart oriented approach?

- A. **Those that consider Data mart as part of data warehouse**
 - B. Those that consider dimensional modeling as denormalization approach
 - C. Those that consider ER model as Data marts
 - D. Those that consider business processes as Data marts
-

Q.7 Which of the following is not a technique of "Changed Data Capture" in currently used Modern Source Systems?

- A. Triggers
 - B. Timestamps
 - C. **Dimensional Modeling**
 - D. Partitioning
-

Q.8 Grain of a fact table means:

- A. Summary of aggregates in all fact tables
- B. The meaning of one dimensional table row
- C. Summary of aggregates in all dimension tables
- D. **The meaning of one fact table row**

Q.9 Which of the following is not an example of fact?

- A. Per unit sales price
- B. **Account no**
- C. Sales amount
- D. Sales quantity

Q.10 _____ can be created in operational systems to keep track of recently updated records.

- A. Triggers
 - B. ETL
 - C. Partitioning
 - D. **Timestamps**
-

Q.1 Simple scalar transformation is a _____ mapping from one set of values to another set of values using straightforward rules.

- A. One-to-many
 - B. Many-to-one
 - C. **One-to-one**
 - D. Many-to-many
-

Q.2 Which of the following is NOT an example of a typical grain?

- A. Monthly aggregates
 - B. Individual Transactions
 - C. Daily aggregates
 - D. **Normalized attributes**
-

Q.3 Which of the following statement is/are TRUE regarding Entity relationship modeling?

- A. **ER modeling helps retrieval of individual records having certain critical identifiers**
 - B. It does not really model business; but models the micro relationships among data elements.
 - C. All of the given options
 - D. ER modeling does not have "business rules," it has "data rules"
-

Q.4 "Sometimes during data collection complete entities are missed". This statement is an example of:

- A. **Missing tuple**
 - B. Missing aggregate
 - C. Semantically dirty data
 - D. Missing attribute
-

Q.5 Which of the following is not a task of Data Transformation?

- A. Conversion
 - B. Summarization
 - C. **Full Data Refresh**
 - D. Enrichment
-

Q.6 One of the possible issues faced by web scrapping is that:

- A. **Web pages may contain junk data**
 - B. Web pages does not support transformation
 - C. Web pages do not contain multiple facts
 - D. Web pages do not contain multiple dimensions
-

Q.7 OLAP implementations are highly/completely _____

- A. Normalized
- B. **Denormalized**
- C. Predictive
- D. Additive

Q.8 If actual data structure does not conform to documented formats then it is called:

- A. Semantically dirty data
- B. **Syntactically dirty data**
- C. Extraction issue
- D. Coverage anomaly

Q.9 The divide and conquer cube partitioning approach helps alleviate the _____ limitations of MOLAP implementation.

- A. Flexibility
- B. Security
- C. Maintainability
- D. **Scalability**

Q.10 Which Logical Data Extraction has significant performance impacts on the data warehouse server?

- A. **Online Extraction**
 - B. Incremental Extraction
 - C. Offline Extraction
 - D. Legacy vs. OLTP
-

Q.1 Suppose the amount of data recorded in an organization is doubled every year. This increase is _____ .

- A. Quadratic
 - B. Logarithmic
 - C. Linear
 - D. **Exponential**
-

Q.2 _____ segregates data into separate partitions so that queries do not need to examine all data in the table.

- A. Collapsing tables technique
 - B. Vertical splitting technique
 - C. **Horizontal splitting technique**
 - D. Pre-joining technique
-

Q.3 Which of the following is NOT an example of derived attribute?

- A. CGPA
 - B. Age
 - C. Area of rectangle
 - D. **Height**
-

Q.4 Data warehouse stores _____.

- A. Operational data
 - B. **Historical Data**
 - C. Meta data
 - D. Log files data
-

Q.5 De-normalization usually speeds up _____.

- A. Data insertion
 - B. Data sharing
 - C. Data deletion
 - D. **Data retrieval**
-

Q.6 The online high performance transaction processing was evolved in _____

- A. 1975
 - B. 1977
 - C. **1965**
 - D. 1980
-

Q.7 The trade-offs of denormalization is/are:

- A. **All of the given options**
 - B. Storage
 - C. Ease-of-use
 - D. Performance
-

Q.8 The relation R will be in 3rd Normal Form if

CS614 MIDTERM MCQS
LMS HANDLING AND FILES 0336 0668195

[JOIN Virtual University Whatsapp Group Click Here](#)

- A. It is in 2NF and each cell contains single value.
- B. **It is in 2NF and every non-key column is non-transitively dependent upon its primary key.**
- C. It is in 2NF and each non key attribute is dependent upon other non key attribute.
- D. It is in 1NF and each non key attribute is dependent upon a single column of composite primary key.

Q.9 In the data warehouse, data is collected from _____ sources.

- A. External
 - B. Internal
 - C. **Heterogeneous**
 - D. Homogeneous
-

Q.10 The hardware (CPU) utilization in data warehouse environment is full or _____.

- A. **Partial**
 - B. Fixed
 - C. Not at all
 - D. Slow
-
