

PSY405 - Personality Psychology

Lesson no 23

ROGERS PERSON CENTERED APPROACH

Client-centered therapy

Client-centered therapy, also known as **person-centered therapy**, is a non-directive form of talk **therapy** that was developed by humanist psychologist **Carl Rogers** during the 1940s and 1950s. **Rogers** also suggested that people have an **actualizing tendency**, or a desire to fulfill their **potential** and become the **best people** that they can be. **Rogers** was deliberate in his use of the term **client** rather than **patient**. He believed that the term patient implied that the individual was **sick** and seeking a cure from a **therapist**. By using the term **client** instead, **Rogers** emphasized the importance of the individual in seeking assistance, controlling their destiny, and overcoming their **difficulties**. This **self-direction** plays a vital part in **client-centered therapy**. **Rogers** believed that the **therapist** should remain **non-directive**.

That is to say, the **therapist** should not direct the **client**, should not pass **judgments** on the client's **feelings**, and should not offer suggestions or **solutions**. Instead, the client should be an equal partner in the **therapeutic** process.

Principles

Client-centered therapy operates according to three **basic principles** that reflect the attitude of the therapist to the **client**:

1. The therapist is **congruent** with the client.
2. The therapist provides the client with **unconditional positive regard**.
3. The therapist shows an **empathetic** understanding to the client.

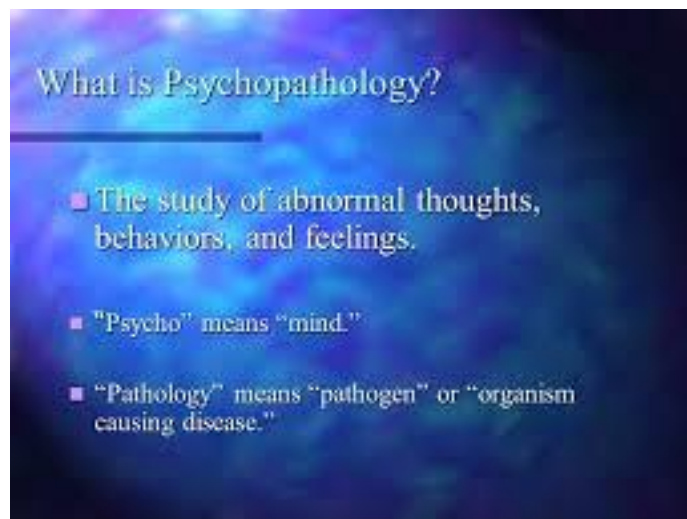

Personality disorganization

Personality disorganization therefore means that the individual is out of adjustment with society who has failed to organize the chief goals of his life into an integrated whole so as to achieve unity of the self. **Personality disorganization** may take the milder or serious forms of mental disorder.

Psychopathology

Psychopathology is a term which refers to either the study of **mental illness** or mental distress or the manifestation of behaviors and experiences which may be indicative of **mental illness**

Student Centered Teaching

Student-centered learning means inverting the traditional **teacher-centered** understanding of the learning process and putting **students** at the center of the learning process. In the **teacher-centered classroom**, **teachers** are the primary source for knowledge.

Lesson 24

KELLY'S COGNITIVE THEORY OF PERSONALITY THEORY

Cognitive theories of personality focus on the processes of information encoding and retrieval, and the role of expectations, motives, goals, and beliefs in the development of stable **personality** characteristics. ... **Cognitive theories of personality** are both nomothetic and idiographic.

George Kelly (1905-1966)

- Kelly was responsible for Personal Constructs Theory (PCT).
- A theory of cognitive personality that he developed in the 1950's.
- Cognitive theory of personality explains differences in personality as differences in the way people process information.

COGNITIVE THEORY

- Cognitive theory is focused on the individual's thoughts as the determinate of his or her emotions and behaviors and therefore personality.
- Many cognitive theorists believe that without these thought processes, we could have no emotions and no behavior and would therefore not function.

Personal Construct Theory

- The heart of Kelly's cognitive theory lies in the manner in which individuals perceive and interpret people and things in their environments.
- Labeling his approach personal construct theory, Kelly focused on the psychological processes which enable the person to order and understand the events of his or her life.

11

Core concepts of George Kelly's Cognitive Theory of Personality

- The Psychology of Personal Construct
- **Constructive Alternativism**
- **People as Scientists**
- **Personal Construct Theory**
- **Constructs: Templates for Reality**
- **Personality: The Personologist's Construct**

6

People as Scientists

Kelly's perspective that **people** are essentially natural **scientists** played a role in the later development of cognitive-behavioral therapy. His work is part of the early start of the cognitive movement in psychology and he is often described as one of the first cognitive theorists.

Constructs: Templates for Reality

- A construct is a category of thought that describes how events are similar to each other and yet different from other events.
- In Kelly's personological system, the key theoretical construct is the term Construct itself:
- "Man looks at his world through transparent patterns or templates which he creates and then attempts to fit over the realities of which the world is composed .The fit is not always very good. Yet without such patterns the world appears to be such an undifferentiated homogeneity that man is unable to make any sense out of it"

13

Constructs

Intelligence, motivation, anxiety, and fear are all **examples of constructs**. In psychology, a **construct** is a skill, attribute, or ability that is based on one or more established theories. **Constructs** exist in the human brain and are not directly observable.

Picture of Construct

WHAT IS A CONSTRUCT?

Personality: The Person ologist's Construct •

Kelley believed that **personality** is an abstraction made by **person ologists** of the psychological processes they observe in others. Someone's **personality** is to know how she or he construes personal experience

Lesson 25

CORE CONCEPTS OF GEORGE KELLY'S COGNITIVE THEORY OF PERSONALITY

The CPC Cycle

Circumspection, Preemption, Control

Circumspection phase - possible interpretations that can be labeled cognitive trial and error are tried

Preemption phase - no. of constructs that seems especially relevant to the situation are chosen

Control phase - the choice is made and a course of action is established.

construct system

A **construct system** is considered not simply as a form of knowledge representation but also as a knowing **system** that, according to the fundamental postulate of personal **construct** psychology, is able to generate psychological phenomena such as preferences, emotions, and reasoning.

Emotional States of Kelly

1. Anxiety
2. Guilt
3. Hostility

- **Fixed-Role Therapy** - procedure designed to produce personality changes in clients by constructing roles for them that help them overcome their weaknesses and enable them to reconstrue themselves and their life situations.

Lesson 26

GORDON ALLPORT: A TRAIT THEORY OF PERSONALITY

Trait:

A **trait** is a predisposition or way to respond in a manner to various kinds of stimuli. A **trait** can be thought of as a relatively stable characteristic that causes individuals to behave in certain ways.

Lesson 27

GORDON ALLPORT: A TRAIT THEORY OF PERSONALITY

Kinds of Traits

- i) Cardinal Traits
- ii) Central Traits
- iii) Secondary Dispositions

TYPES OF TRAITS

- **Cardinal Traits:** Traits that dominate an individual's personality to the point that the individual becomes known for them.
 - Examples: Mother Teresa = Caring...Hitler = Hate.
 - Very rare and only develop late in life.
- **Central Traits:** The major traits you would use to describe your own overall characteristics.
 - 5-10 Central Traits.
 - Examples: Hard working, creative, caring, dedicated, funny.
- **Secondary Traits:** Traits that only present themselves in certain situations.
 - Examples: A calm person becoming irritated when under lots of stress.

Idealized Self

- Real self
 - Represents what we are, those things that are true about us
- Idealized self
 - Represents what we think we should be and is used as a model to assist us in developing our potential and achieving self-actualization
 - Alienation
 - Tyranny of the should

Lesson 28

FACTOR ANALYTIC TRAIT THEORY (Raymond Cattell)

A Structure of Traits

- i) Unique traits
- ii) Common traits
- iii) Surface traits
- iv) Source traits
- v) Constitutional traits
- vi) Environmental traits
- vii) Ability and Temperament
- viii) Dynamic

The important **dynamic traits**, in **Cattell's system**, are of three kinds:

- i) **Attitudes**,
- ii) **Ergs**
- iii) **Sentiments—Self**

The Specification Equation

$$R = f (P,S)$$

In this formula R is person's reaction, f is the function, P is the person's personality, S is the situation, now how a person behaves is a function of both the person's personality and the given situation.

$$P_j = s_{ja}A \dots + s_{jt}T \dots + s_{je}E \dots + s_{jm}M \dots + s_{jr}R \dots + s_{js}S$$

P_j = Performance in a Situation

A = Ability Traits

T = Temperament Traits

E = Ergic Tensions Present

M = Meta Ergs (sentiments and attitudes)

R = temporary body states fatigue, illness. Anxiety

S_j = A weight or loading indicating the importance of each of the above influences in situation j.

Cattell distinguishes at least **three kinds** of learning that play important roles in **personality development**.

- 1- Classical-(Respondent)
- 2- Instrumental (Operant)
- 3- Structured (Integration)

integration learning

In **integration learning**, the individual learns to maximize total long-term satisfaction by expressing some ergs at any given moment and suppressing, repressing, others. Integration learning is a key aspect of the formation of the self and superego sentiments.

Lesson 30

HENRY MURRAY'S PERSONOLOGY

-The Dynamics of Personality

- Need
- Press

- Tension Reduction
- Thema
- Need Integrate
- Unity-Thema

Types of Needs

- i) Primary and Secondary
- ii) Overt needs and Covert needs
- iii) Focal needs and Diffuse needs
- iv) Proactive needs and Reactive needs.
- v) Process activity, Modal needs, and Effect needs

Lesson 31

HENRY MURRAY'S PERSONOLOGY (CONTINUED)

Tension Reduction

alleviation of feelings of **tension**. A variety of techniques may be used for this purpose, including relaxation therapy, tranquilizing drugs, muscle relaxants, hypnotic suggestion, periods of meditation, verbal catharsis, or movement therapy.

THEMA

a uniting "theme," or unit of interaction, between a person and their surroundings wherein a need and a press engage with each other to produce pleasure or gratification. **THEMA**.

Integration

Integration, according to Jung, is the process during which both the individual and collective unconscious are **integrated** into the personality. **Integration** is a positive **psychological** development that indicates **psychological** maturity and may help an individual move past negative habits

Vector-Value Scheme

Murray proposed that behavioral tendencies be represented in terms of **vectors** that represent broad.

-Principles of Observational Learning

- i) Attentional Process
- ii) Retention Processes
- iii) Production Process
- iv) 4-Motivational Processes

The Self-System

- i) Self-Observation
- ii) Judgmental Process
- iii) Self-Reaction 6-Applications to Therapy
- 7- Research
- 8- Summary
- 9-Evaluation

Lesson 33

ALBERT BANDURA'S SOCIAL LEARNING THEORY

The **social learning theory** of **Bandura** emphasizes the importance of observing and modeling the behaviors, attitudes, and emotional reactions of others. ... **Social learning theory** explains human behavior in terms of continuous reciprocal interaction between **cognitive**, behavioral, and environmental influences

-Principles of Observational Learning

- i) Attentional Process
- ii) Retention Processes
- iii) Production Process
- iv) Motivational Processes

Lesson 36

SKINNER'S THEORY OF PERSONALITY

Classical Conditioning

Classical conditioning (also known as Pavlovian **conditioning**) is learning through association and was discovered by Pavlov, a Russian physiologist. In simple terms, two stimuli are linked together to produce a new learned response in a person or animal.

Operant conditioning

is a method of learning that occurs through rewards and punishments for behavior. Through **operant conditioning**, an individual makes an association between a particular behavior and a consequence (Skinner, 1938)

Lesson 37

SKINNER'S THEORY OF PERSONALITY

B. F. Skinner's Theory of Behavior

- B.F. Skinner (1904-1990) was an American behaviorist and philosopher who invented operant conditioning
- Skinner's theory of personality is based on **operant conditioning**, which is a type of learning where behavior is controlled by consequences that involve **reinforcement** and **punishment**
- Reinforcement increases certain behaviors and punishment decrease or ends them
- Skinner thought personality develops as a result of learning through these and other experiences

Systematic Destination

is a technique given by **Joseph Wolpe**. It is used in treatment of phobias and anxiety; it is based on **classical conditioning**.

Definition

- Systematic desensitization is a technique used to treat phobias and other extreme or erroneous fears based on principles of **behavior modification**.

Buzzle.com

Aversive Conditioning Example

Problem
Nail biting

Solution
Apply bitter-tasting coating on the nails.

Assertiveness training

is a form of behavior therapy designed to help people stand up for themselves—to empower themselves, in more contemporary terms. ... **Assertive** responses promote fairness and equality in human interactions, based on a positive sense of respect for self and others.

Behavior modification

is a therapeutic approach designed to change a particular undesirable negative **behavior**. By using a system of positive or negative consequences, an individual learns the correct set of responses for any given stimulus.

Token Economy Institutions

such as mental hospitals, prisons and institutions for special children demand that when **individuals** behave in **desirable manner** such as getting up in time, taking breakfast, medicines, taking a bath, making one's bed get a reward with tokens – tickets, money, but failure to perform the **desirable behavior** also results in withdrawal of the tokens. The **tokens** can be exchanged for candy, cigarettes, games, movies, time out of the **institution**

Lesson 38

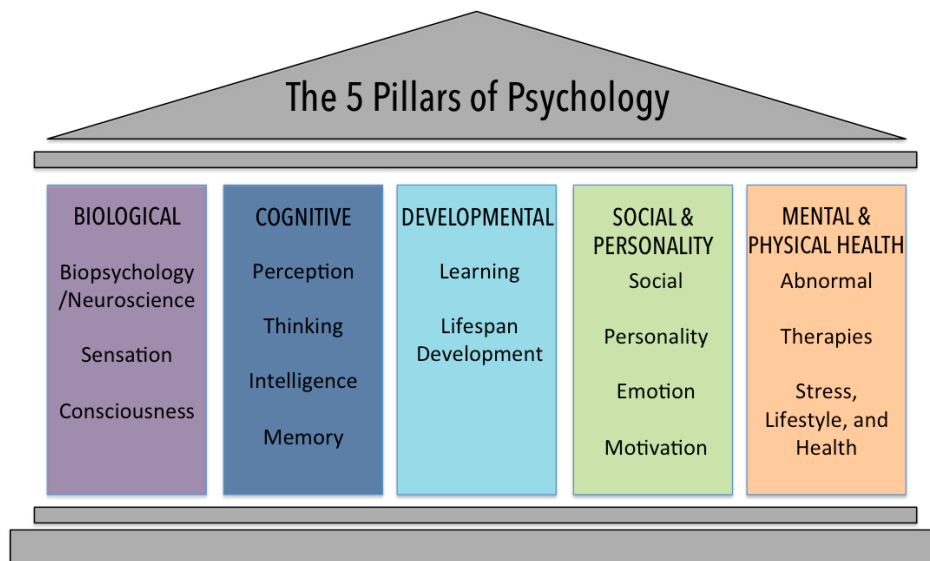

ALBERT ELLIS THEORY OF PERSONALITY

Albert Ellis is known as the father of cognitive-behavioral therapy and founder of **Rational Emotive Behavior Therapy (REBT)**. His work was based on how an individual's beliefs strongly affect their emotional functioning and behaviors. Ellis called these **irrational beliefs**, because they made people feel depressed, anxious, and angry and led to self-defeating behaviors. REBT is a humanistic approach that focuses on our ability to create our own positive and negative emotions. According to REBT, our belief system impacts whether we achieve success and self-actualization in our lives. The goal of REBT is to make changes to irrational thinking patterns, behaviors and emotional responses, using reasonable and rational thinking.

REBT can be used to treat people affected by disorders such as anxiety, depression and stress. An REBT therapist helps clients by disputing irrational beliefs

Lesson 40

PERSPECTIVES OR DOMAINS OF PERSONALITY PSYCHOLOGY

Perspective	Founding Theorists	The Viewpoint in a Sentence:
Psychodynamic	Sigmund Freud, Carl Jung, and others	People are viewed as struggling between their animal instincts and the pressures of socialization
Personality Trait	Gordon Allport and Hans Eysenck	People exhibit consistent psychological traits such as extraversion or deceitfulness.
Humanistic	Carl Rogers and Abraham Maslow	People are viewed as seeking personal growth and striving toward becoming their full selves.
Social-Cognitive	George Kelley and Walter Mischel	People behave according to how they cope with social pressures and solve social problems

Lesson 43

THE GRAND THEORY OF PERSONALITY

There are three **forces** in Psychology.

- 1- The first force is Psychoanalysis or Psychodynamic or intra-psychic
- 2- The second force is Behaviorism
- 3- The third force is Phenomenology or Humanistic Psychology.

Basis of Character Types

Major event is Oedipal Complex

Anxiety = threat

Reality: danger in external world

Personality Psychology Neurotic: fear of id out of control

Moral: fear of conscience

Ego defends against anxiety--often unconscious, more and less mature/primitive

The Collective Un-conscious It refers to our ancestral experiences, memories from untold millions of years, so it is fragments of all human history that we inherit from our forefathers. **Jung** labeled these ancestral experiences as

Archetypes.

- Persona
- Anima
- Animus
- Shadow

- Self

The **Rational Emotive Behavior A-B-C Theory Personality** “A” refers to an activating event. “B” refers to the belief system of the individual. “C” refers to the consequence.

Lesson 44

PERSONALITY APPRAISAL

Personality Assessment

- ❑ Personality Assessment assists counselors in:
- ❑ Understanding the behavior of a particular individual
- ❑ Helps counselor come to a conclusion about a possible future course of action
- ❑ Helps counselor make predictions about a person's unique future behavior.

Lesson 45 PERSONALITY PSYCHOLOGY: NEW DIRECTIONS IN THE DISCIPLINE

- Personality Assessment Sources of Personality Data

- 1- Self Report Data (S-Data)
- 2- Observer Report Data (O-Data)
- 3- Test Data (T-Data)
- 4- Life Outcome Data (L- Data)
