

EDU402

Mid-Term (Solved)

ABSTRACT

This comprehensive collection of notes is accurately crafted to empower students to excel academically, ensuring they achieve a minimum of 80% marks in their examinations. The content is organized with clarity and precision, focusing on key concepts, critical analyses, and practical applications tailored to the syllabus. These notes serve as a reliable resource for both thorough preparation and last-minute revision. Designed to inspire confidence and mastery, this guide is an essential tool for students striving for academic excellence.

Maha Malik

Curriculum Development

Q. Curriculum History and Types

Curriculum History:

Definitions have evolved from "a course of study" to a broader concept including experiences planned and directed by schools. Influenced by scholars like Bobbitt, Tyler, Schwab, etc..

Curriculum as Cultural Reproduction:

It reflects and transmits the knowledge, values, and skills needed by a society. Schools ensure these are passed on to future generations.

Curriculum as Intended Learning Outcomes:

Focuses on the *ends* rather than *means*. It specifies what learners are expected to achieve, which guides all planning and instruction.

Types of Curriculum:

- ✚ **Explicit** (formal content)
- ✚ **Implicit** (informal lessons)
- ✚ **Null** (what's omitted)
- ✚ **Co-curricular** (non-academic, social learning).

Components of Curriculum:

- ✚ Aims and objectives
- ✚ Content
- ✚ Learning experiences
- ✚ Evaluation strategies.

Purpose of Curriculum:

To guide learning, prepare for life, instill values, promote critical thinking, and support societal development.

Q. Paradigms of Curriculum

Pre-modern Paradigm (Doll):

Emphasizes order, eternal truths, and harmony. Education transmits traditional knowledge to create wise, moral individuals.

EDU402_Curriculum Development
Mid-Term (Solved)

Modern Paradigm:

Focuses on efficiency, rationalism, empirical knowledge, and measurable outcomes. Education is goal-oriented and standardized.

Tyler's Paradigm (Technical):

Based on four questions: objectives, learning experiences, organization, and evaluation. Very structured and purpose-driven.

Schwab's Paradigm (Practical):

Curriculum is a balance of four commonplaces: teachers, learners, subject, and milieu. It emphasizes real-life settings and teacher judgement.

Henderson & Gornik's 3 Paradigms:

1. **Standardized Management**
2. **Constructivist Best Practices**
3. **Curriculum Wisdom**

Q. Curriculum Views and Philosophy

Curriculum as Subject Matter:

Traditional content focus like grammar, arithmetic, etc., structured by disciplines.

Curriculum as a Program of Planned Activities:

Emphasizes all learning activities, not just content—organized with scope, sequence, and strategy.

Curriculum and Philosophy:

Curriculum reflects philosophical beliefs about knowledge, reality, and learning, guiding how objectives and methods are selected.

Q. Objectives and Learning Experiences

Curriculum Objectives vs. Intended Learning Outcomes:

- ✚ **Objectives** guide planning and teaching
- ✚ **Intended outcomes** are what learners achieve—more concrete.

Ways of stating objectives:

Include desired behavior and content area for proper alignment and implementation.

Why students' interests matter:

Motivation and satisfaction increase when learning aligns with their needs and curiosities.

Role of Objectives in Curriculum:

Provide direction, guide evaluation, and ensure alignment with learner needs and societal goals.

Q. Learning Methods & Taxonomy

Hands-on experience & student learning:

Engages students in real-world problems, deepens understanding, and develops critical skills.

Student interviews through social investigation:

Allow direct insight into learner interests, helping tailor objectives.

Cognitivism:

Focuses on internal mental processes—information processing, memory, and prior knowledge. Learning is personalized and meaning-based.

Taxonomy domains:

1. **Cognitive** (thinking)
2. **Affective** (feeling)
3. **Psychomotor** (doing).

Top-down & Bottom-up processing:

- ✚ **Top-down:** uses prior knowledge to interpret input
- ✚ **Bottom-up:** builds understanding from data received.

Q. SCHOOL, COMMUNITY, AND SOCIETY

School and society:

School is a mirror of society. It reflects the values, beliefs, and changes in the community. Schools must adapt to social transformation to remain relevant.

Community:

A group sharing common interests, geography, or traditions. Influences education by shaping curriculum to meet social and cultural needs.

Community view of curriculum development:

Community life conditions curriculum. Curriculum should respond to changes in migration, resources, and social values.

What is community record?

It includes data like health, education, employment, and migration trends used to design relevant objectives.

Q. CONTEMPORARY LIFE (CL) & CULTURE

Contemporary Life (CL):

Refers to the modern, ever-changing conditions in society. It's studied to identify relevant educational needs.

Sources of contemporary life:

Include individuals, social groups, and community-level data.

Society vs. Culture:

Society is a group of people; culture is the way they live, think, and behave.

Laments / elements of special pattern of culture:

Individuals absorb class-based cultural elements—views, tastes, and behavior shaped by social class.

Specialties in culture:

Unique traits or practices within specific subgroups (professions, classes, etc.).

Cultural core:

Central values, traditions, and skills passed on through education.

Alternatives in culture:

New ideas or values introduced through innovation, media, or migration.

How alternatives enter into culture?

Through exposure to other societies, technological changes, or internal shifts in values.

Q. LITERATE & URBAN SOCIETY

Characteristics of literate society:

Specialization, institutional learning, and organized instruction.

Characteristics of illiterate society:

Informal learning, oral traditions, and cultural transmission through interaction.

Recognition in urbanized society:

Determined by occupation, class, residence, and lifestyle.

Urban individuals:

Influenced more by specialized occupations than community values. Less personal social interaction.

Urban family:

Is a consuming, not producing unit. Members have independent roles and fewer shared responsibilities.

Q. SOCIAL AWARENESS & STRATIFICATION

Awareness of social curriculum:

Helps students internalize social roles, norms, and responsibilities.

Why social class awareness is important?

Students recognize class distinctions early, influencing friendships, behavior, and aspirations.

Division of labour and education system:

Specialization has fragmented education. Curriculum is divided, treating students as parts of a system.

Community's effect on individual learning:

Community norms, values, and family background shape motivation, access, and educational outcomes.

Q. CURRICULUM, OBJECTIVES & INVESTIGATION

Effects of science & technology:

Change social life, create job instability, and require new educational content.

Democratic values:

Respect for diversity, participation, equality, critical thinking, and freedom.

EDU402_Curriculum Development
Mid-Term (Solved)

Curriculum vs. intended learning outcomes:

Curriculum is the whole planned experience; intended outcomes are the specific goals.

Ways of thinking in social classes:

Influence behavior, aspirations, and interactions. Education must recognize these patterns.

Role of objectives in curriculum:

Guide selection of content, methods, and assessment.

Ways to state objectives:

Clearly, behaviorally, and in observable terms.

How to infer objectives from investigation:

Analyze data (needs, interests, gaps) to formulate appropriate learning goals.

Are all situations under control for evaluators?

No. Some are too complex; evaluators must find similar, manageable alternatives.

Evaluator's task in difficult situations:

Substitute with simpler but related scenarios that still reflect desired behaviors.

Why judgment is used in curriculum:

To interpret data, prioritize needs, and set feasible objectives.

Difficulties in comprehensive investigations:

Access issues, resistance, misinterpretation of data.

1st and 2nd arguments for educational purposes:

1. Address complex present life.
2. Learning is transferable when situations are similar.

How to study a community:

Gather data on health, migration, resources, and interpret for curriculum design.

Procedure to investigate student needs:

Define goals → gather data → analyze → infer educational needs.

Methods of investigation:

Interviews, observations, records, surveys.

Observation methods:

Watching behavior, media analysis, and activity analysis.

Student interviews in social investigation:

Help uncover interests, problems, and needs for setting curriculum goals.

If community is rapidly changing:

Curriculum must stay flexible, address current issues, and foster adaptive skills.

Levels of sources in curriculum investigation:

- ✚ Nation-wide
- ✚ Community-wide
- ✚ School-level.

Q. PSYCHOLOGY, NEEDS & LEARNING

Why psychology of learning is important:

It helps understand how students learn at different levels, aids grade placement, and helps plan realistic educational goals. It distinguishes between changes learning can bring vs. those it can't (e.g., height vs. health habits).

Psychological perspective of need:

Human beings seek to maintain equilibrium between internal and external forces. Needs, when unmet, create tensions. Education helps fulfill these needs constructively.

Prescott's three types of needs:

- ✚ **Physical:** Food, water, activity
- ✚ **Social:** Belonging, affection, status
- ✚ **Integrative:** Connecting to something greater, having a philosophy of life.

Q. CURRICULUM TYPES & ELEMENTS

What is a source plan?

A **preliminary, flexible teaching plan** that provides various materials and learning experiences for teachers, adjustable per group needs.

Example of objective curriculum:

If a school finds dietary deficiencies, it may set objectives in **health education** to address physical needs.

What is an attitude?

A learned tendency to respond to stimuli in a consistently favorable or unfavorable way.

Define data:

Information collected during an investigation using various tools (can be qualitative or quantitative).

Q. EDUCATIONAL PHILOSOPHIES

Perennialism – belief and characteristics:

Believes in eternal truths and classical knowledge. Focuses on moral and intellectual development through traditional disciplines.

Reconstructionism in schools:

Views education as a tool to reform and improve society. Encourages students to study and solve real-world issues like poverty, war, and pollution.

Humanistic curriculum – characteristic:

- ✚ Learner-centered
- ✚ Aims for personal growth
- ✚ Emphasizes dignity, freedom, and potential.

Q. CURRICULUM ROLES, HISTORY & APPLICATION

Critics of subject specialist approach:

It may ignore broader learning goals, student interests, and real-world integration, focusing narrowly on content.

Why hire subject specialists?

For accuracy, depth, and expert understanding in curriculum content.

Short note on curriculum history:

Scholars like Bobbit, Charters, Kilpatrick, and Tyler viewed curriculum as purposeful planning based on learners' needs and social functions.

Q. CURRICULUM TYPES: IMPLICIT & EXPLICIT

Define implicit curriculum:

The unspoken, informal values and lessons students learn through school culture and teacher behavior.

What is explicit curriculum?

The formal, written, structured curriculum with defined goals and content.

Definition of curriculum:

A structured set of planned learning experiences offered to students in schools.

Definition of philosophy:

In education, it's a system of beliefs that guides the choice of objectives, content, and methods.

Note on implementation:

Curriculum implementation needs teacher readiness, materials, planning, and evaluation strategies to be effective.

Common education:

Education should meet personal and societal goals, offering equitable learning experiences to all, regardless of class or background.

Integration:

Linking concepts and subjects across disciplines to promote holistic learning.

Q. TRADITIONAL & SOCIAL ELEMENTS

Two functions of traditional curriculum:

- ✚ Preserve cultural values
- ✚ Prepare individuals for societal roles.

What are alternatives (in curriculum or culture)?

New practices or values that enter a culture or system due to change, innovation, or exposure.

Two types of organization:

- ✚ Logical (subject-centered)
- ✚ Psychological (learner-centered).

Two-dimensional graphic chart:

A matrix showing objectives (behavioral vs. content), helping organize and evaluate curriculum.

Q. SOCIAL & FAMILY CONTEXT

What is industrial evolution?

The shift from agrarian to industrial society, bringing social changes and curriculum adaptations.

How to solve community problems:

Through **education, critical thinking, community engagement, and curriculum reforms** addressing societal needs.

Factors that solve community issues:

- ✚ Social awareness
- ✚ Problem-solving skills
- ✚ Education
- ✚ Curriculum reflecting current issues
- ✚ Student engagement in social action.

Basis of family:

Formed through cultural values, traditions, and roles—affecting curriculum design especially in early education.

Q. Traditional life in community:

Characterized by close, face-to-face relationships, guided by local traditions and shared values. Life was regulated by communal customs and was simpler than modern urban life.

Q. Role of school in reflecting society:

The school mirrors the society's beliefs, norms, and changes. It should evolve with society to avoid becoming outdated.

Q. Effects of science & technology on social and educational life:

Leads to cultural disruption, job displacement, urbanization, and the weakening of family/community structures. Education must address these changes.

Q. Social class – awareness and importance:

Children become aware of class differences from grade 4 onward, influencing friendships and self-perception. Social class affects upbringing, opportunities, and educational needs.

Q. Family – basis of family:

The family structure is influenced by cultural ideals and values. The role of family is foundational in instilling behavior and ideals.

Q. Urban vs. traditional families:

Traditional (rural) families were producing units with shared responsibilities. Urban families are mostly consuming units with less cohesion and increased individualism.

Q. Social position; how to determine:

Determined by class, occupation, residence, friends, and lifestyle. It affects education, aspirations, and societal roles.

Q. Democratic values and education:

Schools in democratic societies emphasize equality, respect, social justice, and development of critical thinking.

Q. Alternatives in cultures:

Alternatives enter culture through technological advancement, migration, and exposure to different lifestyles, contributing to cultural diversity and curriculum variation.

Q. Community and education:

Education serves the community by responding to its needs, preparing individuals for societal roles, and fostering civic responsibility.

Q. Common social problems and how to solve them:

Include class conflict, inequality, and moral breakdown. Can be addressed through socially-aware curriculum and problem-solving education.

EDU402_Curriculum Development
Mid-Term (Solved)

Q. Awareness of social curriculum:

Helps learners understand societal dynamics, roles, and responsibilities, promoting meaningful engagement.

Q. Social curriculum and student learning:

Shapes attitudes, behaviors, and civic engagement, encouraging learners to reflect social norms and values in their actions.

Q. Industrial evolution:

Brought urbanization, specialization of labor, and changes in family/community structures, influencing the curriculum to adapt to modern needs.

Q. Importance of social awareness in learning:

Social awareness helps students understand diverse perspectives, develop empathy, and act responsibly in society.

Q. Culture and society – differences:

Society is a group of people living together; culture is the shared beliefs, behaviors, and norms of that group.

Q. Cultural core:

Includes values, norms, and universal knowledge vital to societal stability and individual conduct.

Q. Specialties of culture:

Refers to distinctive practices or perspectives held by social classes or professional groups.

Q. How alternatives enter culture:

Through innovations, external influences, or internal needs for change, affecting social patterns and educational goals.

Q. Laments of special pattern of culture:

Individuals tend to internalize the values and behaviors of their social class, which shapes their worldview and responses.

Q. Culture as reproduction:

Culture is transmitted across generations through social institutions like family, education, and religion.

Q. Elements and specialties of culture:

Elements include values, traditions, skills, and norms; specialties refer to subgroup practices based on profession or class.

Q. Social investigation – methods & examples:

Includes surveys, interviews, observations, and data analysis of community trends and problems.

Q. Observation as investigation – methods described:

Observing behavior of individuals or groups, analyzing media and documents to gather data about social issues.

Q. Process of investigation:

Identify problem → collect data → analyze and interpret → infer objectives and solutions.

Q. Comprehensive investigation – school difficulties:

May face resistance, limited access to data, or lack of community cooperation. Needs planning and flexible tools.

Q. Student investigation – how schools conduct it:

Through interviews, surveys, follow-up studies, and observations to understand learner needs.

Q. Community study – procedure:

Examine resources, population changes, health data, migration trends, etc., to draw curriculum-relevant inferences.

Q. Prescott's needs (physical, social, integrative):

- ✚ Physical: Survival, health
- ✚ Social: Belonging, identity
- ✚ Integrative: Coordination of social roles and values.

Q. Integrative need – definition:

The need to reconcile various social roles and expectations to maintain personal and societal harmony.

Q. Needs of learners as basis for objectives:

Educational objectives should reflect learners' physical, emotional, and social needs for relevance and engagement.

Q. What is the psychological perspective of need?

Needs are motivators that drive learning behavior and development. Curriculum must align with learners' psychological development.

Q. Community needs and curriculum design:

Curriculum should address local issues, values, and goals to remain relevant and effective for learners.

Q. Explicit curriculum – definition and characteristics:

The written or overt curriculum includes defined missions, subjects, skills, lessons, plans, and assessments. It is measurable, observable, and planned.

Q. Implicit curriculum – definition:

The informal, unintentional curriculum includes values and norms absorbed by students from the school environment, not formally taught.

Q. Hidden curriculum:

It includes lessons not explicitly intended like social expectations, gender roles, and moral attitudes learned from school culture.

Q. Common education curriculum – characteristics:

It's based on universal cultural elements, focuses on stability, values, and shared knowledge for all members of society.

Q. Core curriculum – brief note:

Combines broad fields and specific subjects to provide essential knowledge and promote integration across disciplines.

Q. Social curriculum:

Involves the transmission of societal values, beliefs, and behavioral norms through curriculum.

Q. Objective curriculum:

Focuses on clearly defined, measurable learning outcomes that guide instruction and assessment.

Q. Humanistic curriculum – definition and focus:

Emphasizes learner-centered experiences, personal growth, and the development of human potential and dignity.

EDU402_Curriculum Development
Mid-Term (Solved)

Q. Hands-on learning experience:

Engages students directly in practical, experiential tasks. Encourages real-world learning and deeper understanding.

Q. Integration in curriculum:

Achieved by linking subjects, themes, and real-life issues, reducing fragmentation and enhancing meaningful learning.

Q. Awareness of social curriculum:

Helps students understand how society works, including norms and institutions, to function effectively as citizens.

Q. Subject specialist approach:

Relies on experts in fields to ensure depth and accuracy of content, but can overlook broader educational goals.

Q. Note on implementation:

Implementation requires planning, resources, training, and monitoring to ensure curriculum goals are met in practice.

Q. Tyler's paradigm and definition of education:

Education is a process of attaining clear objectives through selected, organized experiences, and evaluating outcomes.

Q. Schwab's curriculum planning paradigm:

Emphasizes interaction among four commonplaces: teachers, learners, subject matter, and milieu.

Q. James Henderson & Rosemary Gornik's three paradigms:

They include technical, practical, and critical/emancipatory paradigms for understanding curriculum design and practice.

Q. Pre-modern paradigm:

Values order, tradition, and eternal truths. Aims to form well-rounded individuals through stable, established content.

Q. Modern paradigm – Doll's classification:

Emphasizes rationalism, standardization, empirical knowledge, and linear progression of learning.

Q. Paradigm types (3):

**EDU402_Curriculum Development
Mid-Term (Solved)**

- Pre-modern
- Modern
- Postmodern.

Q. Humanism theory – focus and characteristics:

Learning is personal, promotes self-actualization, freedom, and the development of the whole person.

Q. Perennialism – belief and characteristics:

Believes in enduring truths and classical knowledge. Focuses on moral and intellectual development through timeless content.

Q. Reconstructionism – school-related application:

Advocates schools as agents of social change, engaging students in solving societal issues and encouraging action.

Q. Social investigation methods:

Includes data analysis, community surveys, interviews, and field studies to gather insights for curriculum development.

Q. Humanistic theory:

Learning is driven by the individual's need to realize potential. Emphasizes respect, empathy, and a supportive environment.

Q. Psychological perspective of need:

Views needs as drivers of behavior and learning. Recognizes individual differences and emphasizes motivation and engagement.

Q. Follow-up studies:

Evaluate the long-term impact of education on learners by tracking their achievements post-schooling.

Q. Methods for studying learners:

Includes tests, interviews, observations, surveys, and analyzing students' work to infer needs and interests.

Q. Student interviews as investigation:

Help identify students' interests, opinions, and needs directly from the learners themselves.

Q. Procedure to investigate students' needs:

Select familiar schools, define goals, gather data through tools, and analyze it to infer needs and set objectives.

Q. Highest level of student learning:

Involves synthesis, evaluation, and application of knowledge—skills that show deep understanding and mastery.

Q. Hands-on experience:

Real-world, engaging learning that allows active participation. Encourages problem-solving and practical application.

Q. Top-down & bottom-up processing:

- ✚ Top-down: Learner uses background knowledge to understand new info.
- ✚ Bottom-up: Learner builds understanding from raw data and details.

Q. Domains of taxonomy:

- ✚ Cognitive (knowledge)
- ✚ Affective (attitudes)
- ✚ Psychomotor (skills).

Q. What is an attitude?

A learned tendency to evaluate things in a certain way, affecting behavior and choices.

Q. Importance of education in society:

Fosters individual growth, social integration, economic development, and national progress.

Q. Urban life – how people live:

Involves impersonal, structured relationships in large groups, affecting curriculum by requiring new values and skills for social adaptation.

Q. Definition of curriculum:

Curriculum is derived from Latin meaning "a racecourse." It refers to all the learning experiences a pupil undergoes at school. It includes content, methods, objectives, time tables, and more.

EDU402_Curriculum Development
Mid-Term (Solved)

Q. Curriculum as a subject matter:

This is the traditional view where curriculum is equated with subjects like grammar, rhetoric, arithmetic, etc., taught in schools.

Q. Curriculum as intended learning outcomes:

Emphasizes the outcomes or end-goals of education, specifying what learners are expected to achieve.

Q. Curriculum as cultural reproduction:

Reflects society's values and prepares future generations by transmitting knowledge and skills essential for societal function.

Q. Purpose of curriculum:

To develop students into confident individuals, responsible citizens, and agents of change. It serves behavioral, global, and evolving educational purposes.

Q. Benefits of curriculum:

- ✚ Organizes learning
- ✚ Ensures consistency
- ✚ Facilitates evaluation
- ✚ Promotes goal-directed instruction.

Q. Curriculum objectives:

Objectives guide the selection of content and experiences. They include cognitive, affective, and psychomotor goals.

Q. Curriculum aims:

Aims are broad goals derived from societal, cultural, or philosophical sources and inform more specific objectives.

Q. Example of objective curriculum:

E.g., "Develop problem-solving skills in health" or "Foster interest in reading a variety of books".

Q. Role of curriculum in community:

Reflects and shapes societal values. It helps learners integrate into society by teaching rules, values, and cultural knowledge.

Q. Role of investigation in curriculum development:

Investigation helps identify learner needs and societal demands, guiding the creation of meaningful objectives.

Q. How we infer objectives from investigation:

By analyzing data and issues in community life, educators can set relevant, achievable educational objectives.

Q. Role of literate society:

A literate society supports curriculum development by influencing the choice of knowledge and values to be taught.

Q. Curriculum importance:

It is essential for planning, implementing, and assessing education. It ensures coherent learning aligned with societal and learner needs.

Q. Curriculum development and its challenges:

Challenges include balancing content, teaching strategies, learner needs, societal changes, and integrating educational philosophies.

Q. Universal statement in curriculum:

Refers to cultural core elements such as fundamental knowledge, skills, and values necessary for societal stability and individual development.

Q. Curriculum planning – Joseph Schwab:

Schwab emphasized that curriculum planning should involve multiple stakeholders and balance different perspectives including subject matter, learners, teachers, and milieu.

Q. Subject-centered curriculum:

Focuses on content mastery. Curriculum is structured around subjects rather than learners or societal needs.

Q. Role of subject specialists in curriculum design:

Specialists ensure content accuracy and depth, crucial for subject-focused curricula.

Q. Criticism of subject specialist approach:

It may neglect learners' interests and societal context, leading to rigid, less engaging learning experiences.

Q. Why learner needs are a source for educational objectives:

Learner-centered objectives ensure relevance, engagement, and practical application of knowledge in real-life situations.

Q. Define data:

Data is the information collected in an investigation using various tools and methods. It can be in the form of lists, statements, or tabulated formats.

Q. Source plan – what is it?

A source plan is a **preliminary flexible teaching plan**. It provides a **collection of possible materials** for teachers, is **modifiable**, and includes a **wide range of learning experiences**.

Q. Two types of organization:

- ✚ **Logical organization:** Designed by experts based on content structure.
- ✚ **Psychological organization:** Designed from the learner's perspective based on how they understand content.

Q. Two-dimensional graphic chart:

It presents educational objectives in two aspects—**behavioral** and **content**—and is useful for selecting learning experiences and evaluating outcomes.

Q. Evaluation in difficult situations:

If a situation is too hard to manage, evaluators should find simpler situations with similar outcomes that can still reveal the desired behavior.

Q. Are all situations under control and accessible to evaluators?

No. Some situations are not easily accessible or controllable. Evaluators must find suitable alternatives to assess the same behavior.

Q. Contemporary life – analysis and sources:

It involves analyzing community or national data such as newspapers, surveys, health stats, etc., to infer educational needs and develop objectives.

Q. Critics of contemporary life (CL):

Critics emerge by analyzing problems in areas like education, health, environment, or social structure and proposing educational objectives to address these.

Q. What are alternatives (general)?

Alternatives generally refer to different **learning experiences, content organizations, or teaching methods** that may better suit the needs of specific student groups or situations.

Q. Definition of philosophy:

In curriculum context, philosophy refers to the **underlying beliefs and principles** that guide educational decisions and practices.

Q. What are the benefits of curriculum?

- ✚ Guides instruction
- ✚ Ensures continuity and sequence
- ✚ Enables evaluation of learning outcomes
- ✚ Helps define clear objectives.

Q. How to analyze contemporary findings:

By collecting and interpreting data, comparing with standards, and identifying educational gaps to set objectives.

Q. How teacher learning is important in planning curriculum:

Teachers' understanding of content, student needs, and teaching methods influences curriculum design and implementation. Their active role in planning improves relevance and effectiveness.

Q. Subject specialist – reasons for hiring:

Hiring subject specialists ensures **content accuracy, depth of knowledge, and better instructional quality** in their areas.
