Thanks a lot Aneeqa and Fatima

Compiled by PARAGON's TEAM

Q. What is mean by IRE? (3) (Google)

The most documented and most common form of talk in classroom interaction is a three-turn sequence referred to as initiation-response-evaluation (IRE) or initiation-response-feedback (IRF). This type of interaction has been considered somewhat of a norm or the "default pattern" in classroom communication. It Is characterized by the teacher asking a question or giving a prompt, students response and the teacher giving an evaluation, feedback or follow up this pattern of interaction is most noticeable during teacher-led activities in which the teacher controls the both the topic of conversation and the allocation of turns.

Q. Responsible code switching (Topic#198)

Responsible code switching means to carefully control the quantity and quality of switching between languages in the classroom so as to serve the objective of the lesson. Van der Walt, Mabule, and De Beer (2001) caution, however, that teachers must monitor both the quantity and the quality of their code-switching. In terms of quantity, the main part of classroom instruction needs to take place in the language being developed. As to quality, teachers should code-switch to offer meaningful instructional support and not merely to give orders, instructions, call attention, discipline, or follow the language input of the child. That is, code switching cannot be simply random.

Q. Role of code-switching in the reinforcement of subject matter. Or why is there need for creating awareness of code-switching in the teacher education progress (Topic#199)

Responsible Code-Switching: The negative associations with code-switching in the classroom have been increasingly questioned by scholars. For example, Ferguson (2003) says that the evidence suggests that "CS [code-switching] is a useful resource for mitigating the difficulties of learning through a foreign language. There is a good case, then, for moderating official hostility to CS, for acknowledging its prevalence and, indeed, for incorporating awareness of CS as a resource into teacher education curricula." It has been found that teachers use code-switching to focus or regain students' attention and to clarify or reinforce lesson material. Code-switching is a scaffolding technique in bilingual classrooms, making the additional language more comprehensible. It is not necessarily code-switching that is bad, but rather how language is used, and by whom, that shapes the students' perceived value of the two languages in a bilingual classroom affect the outcome.

Language shift and language maintaince

Fishman (1968) argues that "The study of language maintenance and language shift is concerned with psychological, social or cultural processes, on the other hand, in populations that utilize more than one

speech variety for intra-group or for inter-group purposes." Language shift or maintenance does not happen in a vacuum, it occurs only when certain societal conditions are present:
1. Co-existence of more than one language – bilingualism;
2. Differences in power, value, and status conferred on each of the two languages that lead the group to maintain or abandon the home language;
3. Pressure in political, economic, or social forms from one of the two language groups.

Three periods of sociohistorical and sociolinguistics bilingualism (Note I'm note sure about answer) Guessed answer

1. 1968
2. 1990
3. 2001

Flexible convergent (Topic#189)

Flexible language use that drives towards convergence, that is, whose goal is to encourage language shift, is used in subtractive bilingual frameworks, and generally follows two patterns:
• Random code-switching
• Monoliterate bilingualism

Lexical borrowing Imedadze (1978)

and Swain and Wesche (1975) have suggested that in some cases bilingual children identify a referent with the lexical item in the language that was first or most frequently used to label it. They might insist on using that word at all times when talking about that referent regardless of the linguistic context. These instances of mixing due to lexical borrowing could be viewed as overextensions of the type observed in monolingual children (Griffiths, 1986) with the difference that bilingual children overextend inter-lingually as well as intra-lingually while monolingual children overextend intra-lingually only. In the case of first-language acquisition, it has been observed that particular overextensions of nominals usually cease once the child has learned what mature speakers of the language would consider a more appropriate word. This also seems a reasonable interpretation of bilingual overextensions (see also Goodz, 1989) and, in fact, accords with the tendency for bilingual children to mix less as their proficiency increases as noted earlier.

what is dialect? Three types of Dialect? (Topic#124)

For linguists, the term "dialect" is a neutral term used for variants of a specific language. Romaine (1994) defines dialect as "a subordinate variety of a language," and refers to regional dialects, associated with a place, social dialects, associated with social class, and historical dialects referring to ancestors of present language varieties. There are also ethnic dialects spoken by ethnolinguistic groups. However, people often reserve the term "dialect" for languages or ways of using language that are socially stigmatized.

Types of Dialect:

1. Social Dialect:
The kind of language that upper class people speak.
2. Place Dialect:
Dialect related to ethnicity. People belonging to a certain region and speaking the same language might speakdifferent varieties or different dialects of the same language.

Historical Dialect:
A dialect which has been used in a time which has passed away but over time this dialect is no more in use.

Constructive approach Constructivist pedagogy

on the other hand, is built on the conviction that learning should involve social negotiation and interaction with others in authentic contexts that are relevant to the learner. In this tradition, teachers serve primarily as facilitators of learning (Cummins, 2001; Villegasand Lucas, 2001).

Intentionality Model

The purpose of the longitudinal research reported in this monograph was to examine language acquisition in the 2nd year of life in the context of developments in cognition, affect, and social connectedness. The theoretical focus for the research is on the agency of the child and the importance of the child's intentionality for explaining development, rather than on language as an independent object. The model of development for the research has two components: the engagement in a world of persons and objects that motivates acquiring a language, and the effort that is required to express and articulate increasingly discrepant and elaborate intentional state representations. The fundamental assumption in the model is that the driving force for acquiring language is in the essential tension between engagement and effort for linguistic, emotional, and physical actions of interpretation and expression.

Q. Threats of home language

threats of home languages

- Languages of the — minority are ruthlessly disregarded
- Home languages — a pathology
- Self-esteem and — confidence threatened
- Language ideologies perpetuated
- The voice of the minority students suppressed
- The same disregard taught for minority language

Q. How languages spread by the help of technologies (3) (Topic#07) or language co present with the help of technology

The forms of language undergo constant changes due to social changes, emergence of new technologies and contact with other languages. New forms apply to old functions, as when a new expression is used by teenagers; in the same way old forms apply to new functions, as for example; the English word save in using a computer; or new forms can be developed for new functions (e.g. new terminology)

How students work side by side in different language through computer assisted institution

Sometimes, students work side by side in different languages, through computer-assisted instruction. In the primary classroom they often listen to books on tape in the two languages, sometimes different students listening to different languages, other times the same students going back and forth to one or the other language in co-languaging ways.

What type of special skills we need to complete school task and academic task

To complete school tasks, and especially assessment tasks, another different set of language skills is needed. Students in school need to be able to use language without any extralinguistic support, in ways that very different from the way in which we use language most of the time in real life. This decontextualized language is what is needed in order to participate in classrooms. Decontextualized language is also what students need in order to write the academic essays that require an unknown audience with whom communication is important, and in taking multiple-choice tests that force only one answer. Cummins (1981b) calls them Cognitive Academic Language Proficiency (CALP).

Example of hegemony of language

For instance, hardly ever in Punjab you believe that Punjabi can be used as an academic language. It won't even question it, and very recently from an established school system there was this circular, in which they said, No one is allowed to use foul language, nine, Punjabi. So this is, again, a hegemonic idea. So language itself and how we speak about it. Our discursive practices are one of the most obvious examples of hegemony in which we all, and especially educators, participate.

Phonological language borrowing.

It is one type of the clanguage borrowing. Language borrowing can also be phonological, that is related to the sounds of the language from one language to the other. OR
Phonological Borrowing: a situation where a language adopts a new sound from another language that it is incontact with.Example: the “3” sound was introduced into the English language from French through borrowing of words like leisure and measure.

How does language attrition perpetuate in the society (5) (Topic#09)

“Language Valorization to major languages and ignorance to minor languages are the cause of language perpetuate”. As certain functions are valorized more than others, e.g. the cognitive function in school. If different varieties of language, e.g. accents, are present in the society, one variety may be valued to the detriment of others. A similar situation happens in the case of multilingual societies. One or more languages will be highly valued, while others will be devalorized. At the individual level a similar mechanism operates. To the extent that the adults around the child value the use of language for certain functions. The extreme importance of valorization is evidenced at all societal and individual levels. At the societal level, if a minority language is not valorized and used as a tool for education, language attrition and language shift are likely to occur. At individual level, the positive valorization of a language will trigger off a motivational process forlearning and using those aspects of language.

Home school co operation

Van der Walt, Mabule, and De Beer (2001) argue that code-switching is a way of strengthening the connection to the students’ home language and of providing meaningful input. The students’ home language, as we have been arguing is an important resource to solve problems in the additional language and to develop that language (Cummins, 1979; 2000). Thus, it stands to reason that banishing the students’ home language when instruction is taking place in a language they do not know well (even for half a day) is not appropriate.

Translanguaging

Translanguaging, another way in which a more dynamic bilingualism can be nurtured in students, is by following bilingual curriculum that uses the methodology that Cen Williams has called “translanguaging.” According to Baker (2001), translanguaging, developed specifically as a curriculum arrangement by Cen Williams in Wales, involves the hearing, signing, or reading of lessons in one language, and the development of the work (the oral discussion, the writing of passages, the development of projects and experiments) in another language. That is, the input and output are deliberately in different languages

Language beliefs

- About language
- Aboutlanguageuse
- Ideologies

The interactive way in which language is planned (or unplanned) and dictated from the top down, and the ways in which it is interpreted, negotiated (or planned) from the bottom up makes it impossible to differentiate between one level and the other and language beliefs and ideology interact with the two levels.

Terms language. (3) (Google)

The method of human communication, either spoken or written, consisting of the use of words in a structured and conventional way.
People use language for

- Expression: expressing themselves
- Interaction: Interaction with others

Name the models of bilingualism? (3) (Lesson#28)

1. Subtractive Bilingualism;
2. Additive Bilingualism;
3. Recursive Bilingualism;
4. Dynamic Bilingualism;
5. Plurilingualism

Elective bilingualism or language by choice or three characteristics of elective bilingualism (Topic#162 handouts + video slides)

Some individuals choose to develop bilingual abilities, often the result of studying the language in school or through personal effort. That is, their bilingualism is optional. This type of bilingual has been referred to as“elite bilingual” by Fishman (1977b) and “elective bilingual” by Valdés and Figueroa (1994).
In elective bilingualism Bilingual Development may be a choice:

- Learnt at schools or language centers.
- Elective or elite bilingualism (Fishman 1977)
- Formal learning-high status

Borrowing of meaning

to take and use a word or idea from another language or piece of work:

English has borrowed many words from French.

More examples

Can I borrow a couple of bucks?

Do you have a Birmingham to London train timetable that I could borrow?

You have to sign books out when you borrow them from the library.

He's a bit possessive about his CDs - I wouldn't dare ask to borrow them.

Just because I'm lending you my dress for tonight doesn't mean you can borrow it whenever you want to.

Pidgin and Creole

A creole is “created” when the utterer of a pidgin language become gains a strong hold over utterers of another. This can be in the form of social or political hold over. Therefore, the pidgin language used in speech between these two groups may become the first language of the minority community.

Pidgins are defined as a type of spoken communication with two or more languages. It has fundamental grammar and vocabulary. It is also meant to facilitate people who do not speak a common language. Lastly, it is not spoken as a native language. An example is the “Lingua Franca” which was first created among traders. This is called business language.

Three aspects of BICS

It is accompanied by paralinguistic strategies used.

• Context place very important role in understanding or interpreting each other accurately. It might be physical on the other had context might be somehow virtual or somehow inherent in the shade experience of the one you are communicating with.
• Both context and paralinguistic strategies are absent from academic language.

What are metalinguistic skills? (Google)

Metalinguistic as a field of study examines the relation between language and culture. Metalinguistic skills are strategies that are applied, either consciously or automatically, to an oral or written linguistic interaction to allow one to think about language and a linguistic message, to analyze a message, and to control language processing within the communicative culture (Bialystok, 1986).

Understanding the power of unequal dynamic

In situations of unequal power between languages, however, it is not enough to allow the use of minority languages in responsible code-switching when instruction is taking place in the majority language. For responsible code-switching to lead to bilingual abilities there must also be space for classroom instruction in the minority language itself even if translanguaging is allowed there. In situations of unequal power, when instruction is in the minority language, responsible code-switching into the majority language should be minimized by the teacher, so as to protect the minority language.

Immersion bilingualism

The belief here is that the two languages are best developed in isolation. What characterizes this model of bilingual teaching is the explicit carving out of a space for both languages so that each would function with theprivilege of a majority language. Thus, all schools using this bilingual teaching have a clear and explicit languagepolicy of teaching monolingually for bilingualism. This immersion bilingual teaching is often used when the minority language has to be protected because of the encroachment of the majority language, or in cases where one of the languages is being revitalized.

Convergent bilinguals (Google)

Broadly speaking, bilingual convergence describes increased similarity between some elements of a bilingual's two languages. This implies that bilinguals must either develop or maintain two

separate,monolingual-like naming patterns in their two languages or in some way develop a more shared semantic system.

5 types of borrowing

The 5 types of borrowing are:

Phonological borrowing

phonetic borrowings,

translation loans, s

emantic borrowings,

and morphemic borrowings.

Q. Threshold hypothesis (Google)

Students whose academic proficiency in the language of instruction is relatively weak will tend to fall further and further behind unless the instruction they receive enables them to comprehend the input (both written and oral) and participate academically in class.In learning a second language, a certain minimum 'threshold' level of proficiency must be reached in that language before the learner can benefit from the use of the language as a medium of instruction in school.(Cummings, 2001)

Q. Three basic steps of bilingual education. (Google)

1. Transitional Bilingual Education 2. Two-Way or Dual Language Immersion Bilingual Education.
3. Another type of dual language program teaches students using the following steps: 1) Teachers instruct students in a second language but are able to understand students when they must ask questions in their native languages

Bilingual activities in Europe school (Topic #216)

An investigation in to language behavior of multilingual adolescents, all of whom must learn and use a minimum of three languages in the school program in the European School of Brussels, show the language repertoire of all pupils oscillates between the exclusive use of the official languages of their lessons at the appropriate times, and translanguaging in unmonitored, informal interactions.

Write an example of a classroom where code-switching is effective (5)

Example#1(Topic#202 video slides)

Chinese in US English class rooms:

- Encouraging use of Chinese in English writing classes
- Developed writingskills faster
- Cross-linguistic analysis
- Difference instrategies

Detail of above points:

You have this Chinese classroom in a US state, and research actually showed that when the Chinese students were allowed to use Chinese rather encouraged to use Chinese when learning how to write in English language that writing process itself was expedited, they were able to learn writings English language writing skills faster. And they also showed a lot of cross linguistic analysis, because constantly as we discussed earlier they were able to make comparisons between their Chinese writing skills and English language writing skills, and the demands of that language style itself. So they were also able to by doing this, talk about strategies that they used in when writing in Chinese, and the strategies that are demanded of them when they are going on to read, or to write in English language. So the way the language is structured, the way the verbs are used on the verb endings are used in English language, and does not happen in the Chinese language, and by talking about it clearly. The Chinese students were able to pick this up faster.

Recursive Bilingualism (Topic#150)

The concept is used in cases when bilingualism is developed after the language practices of a community have been suppressed. When a community engages in efforts to revitalize their language practices, this is called recursive bilingualism as, for example in the case of the Maori of Aotearoa/ New Zealand, individuals are not starting from scratch and adding simply a second language. The ancestral language continues to be used in traditional ceremonies and by many in the community to different degrees. Therefore, bilingualism is not simply additive, but recursive. These bilingual individuals and communities often move back and forth along a bilingual continuum and in so doing, the language is not added whole, but in bits and pieces, as ancestral language practices are reconstituted for new functions. Indeed in these cases bilingualism is recursive because it reaches back to the bits and pieces of an ancestral language as it

Q. language dominance (Topic #155)

The dominant bilingual was defined as one for whom competence in one of the languages was superior to the competence in the other. Objecting to the use of speed tests to determine language dominance of bilinguals, Fishman et al. (1971) argued that where bilingualism is socially constructed, and not merely an occupation or hobby, the concept of language dominance as determined by speed tests is irrelevant. Bilinguals are much more than just two monolinguals, and often, as we will see, it is difficult to disentangle abilities and functioning in one language from that in the other

3 characteristics of elective bilingualism

Learnt at schools or language centers.

- Elective or elite bilingualism (Fishman 1977)
- Formal learning-high status

short note on invisible Bilingualism (5) (Topic#140)

Technology-enabled communication facilitates complex languaging practices that question monolingual realities. In bilingual speech, Lüdi (2003: 175) tells us, “Rules and norms are activated that overlap single languages and govern the harmonic, i.e. the ‘grammatical’ mixing of elements from differentlanguages.

What we have is multiple discursive practices or translanguaging. Despite the ability of bilinguals to translanguage, monolinguals are often oblivious to the presence of these bilingual practices (what Hélot, 2003, 2006, 2007 calls “invisible bilingualism”), or dismissive of their significance, with any difference in languagepractices often evaluated as a deficiency. These practices are in no way deficient, they simply reflect greater choices, a wider range of expression than each monolingual separately can call upon, and convey not only linguistic knowledge, but also combined cultural knowledge that comes to bear upon language use.

2 kinds of language

syntactic and

morphological

Q. Corpus Planning. (5) (topic#176 +google)

Changing the form of the language itself through standardization (standardizing language forms), graphization (developing a writing system), modernization (coining new words and terms). Corpus planning creates new words, expressions or changes old ones to have a new meaning. Corpus planning is involved with creating standards for a language, such as spelling and grammar, or to create dictionaries. Linguistic purity is about Goals of ager 2001 OR What is language policy goals (5)

(Topic#178) Ager (2001) discusses seven goals of language policy:

1. Identity, as when states impose certain languages as a link to specific identities. For example, France has maintained that it is a perfect hexagon and that only French is tied to French identity, thus silencing, until very recently, the other languages of France – Basque, Breton, Catalan, Corsican, Flemish, German, and Occitan.

2. Ideology, as when states or groups impose different languages or standards as a result of an ideology. An example is the United States’ recent federal law, No Child Left Behind, mandating students’ annual progress reports that are based on written Standard English assessments (Menken, 2005, 2008).
3. Image creation, as when states try to ensure that a favorable view is taken of their history and language by projecting its language. It is well known, for example, that the British Council and the U.S. government have supported the greater use of English in international communication (Phillipson, 1992).
4. Insecurity, as when states or groups are wary of others and their languages.

5. Inequality, as when states or groups act on language in order to correct inequalities in society. This is the case, for example, of non-sexist language that came to be used especially during the 1970s and 1980s
6. Integration with a group. This was the case when, for example, in Wales, following the Education Act of 1870, Welsh children were not only required to learn English in school, but prohibited from speaking Welsh.

7. Instrumental motives, as when groups or individuals acquire a second language because it will give them advantages, usually economic ones, in the market or in career

Flexible bilingualism in classroom (3) (Topic#194)

Flexible bilingual arrangements in the classroom are not in themselves bad. The problem is that often these practices are put to the service of the majority language, as we have seen before, encouraging switching towards the dominant language only, and used progressively to take space and time away from the language until it disappears completely. Bilingual practices in the bilingual classrooms, and in particular code-switching, have been looked upon as bad practice. Scholars and educators have repeatedly held that code-switching violates diglossia and creates a linguistic hegemony that favors the language of power, thus leading to language shift.

Q. What happened in a teacher determine separation classroom of bilingual education program (3) (Topic#186)

Here one teacher speaks only one language, and the second teacher solely speaks the other language. There are different manifestations of teacher-determined language-structuring:

Two Teachers, Two Classrooms

This is the strictest of this teacher-determined separation. It combines teacher-determined with time determined separation. Here one teacher teaches in one language at some time of day, while at the same time another teacher teaches in the other language. At an alternate time, the two teachers switch children. For example, in a bilingual Chinese–Italian school, teacher A teaches group A in Chinese which consists of twenty five children. At the same time, teacher B teaches another twenty-five children in Italian, group B. At some determined time (afternoon, the next day, and the next week) teacher A teaches group B in Chinese, whereas teacher B teaches group A in Italian. This arrangement is known as side- by-side and requires, at the primary level, two teachers who are bilingual but who in effect function as a monolingual teacher.

Two Teachers, One Classroom

Another arrangement is to have two teachers within one classroom who speak only one language to the students but are able to facilitate their learning in the other language because they themselves are bilingual. This is the usual arrangement when there are enough resources, especially in early childhood. The advantage of this is that it provides language separation, while always ensuring that children are supported in the language they know best.

Difference Flexible Convergent

Flexible language use that drives towards convergence, that is, whose goal is to encourage language shift, is used in subtractive bilingual frameworks, and generally follows two patterns:

- Random code-switching
- Monoliterate bilingualism

Flexible multiplicity

Flexible multiplicity is another form that bilingual education programs might takes. It is usage of the multiple languages flexibly throughout the educational program.

Linguicism. (Topic#133)

It is a term coined by Skutab-Kangas (2000) and it is similar to linguistic racism. The discrimination between language in term of power and the status that goes to its speakers is called linguicism. It is an arbitrary linguistic hierarchy (Imposed hierarchies)

- Language of the powerful
- Language of the majority or the language of the minority elite.

There are many examples worldwide of using language to limit educational and occupational opportunities to those who speak the privileged language. This actually accentuates social differences, since they can only be acquired through formal education and not everyone has access to school. Pennycook (2002) has also shown how language use in education may create “docile” people, able to cooperate in their own exploitation. Colonolization is the example of linguicism.

Q. Equity encourages equal opportunities to participate. Explain. (Topic#232

Explained by teacher in video lecture) So when we talk about social justice equity. It also means that the classroom should provide equal opportunities to all to participate. For instance, if we are using this immersion program in certain degree or not yet what profession to talk about content in a specific language or ask questions in a given specific language, then essentially the opportunity to participate is curtailed.

Difference

Transmission pedagogy is built on a western empirical tradition which views knowledge as separate from the knower and as a collection of facts and concepts. Learning is viewed as the consumption, storage, memorization, and reproduction of information. Thus, students are perceived as empty vessels or buckets (Freire, 1970) that have to be filled, as they receive knowledge from teachers and textbooks. Teachers breakdown information in to small pieces and proceed in a linear fashion, attempting to cover content and going from the most basic to the most complex (Oakes and Lipton, 1999).

Constructive approach Constructivist pedagogy, on the other hand, is built on the conviction that learning should involve social
negotiation and interaction with others in authentic contexts that are relevant to the learner. In this tradition, teachers serve primarily as facilitators of learning (Cummins, 2001; Villegasand Lucas, 2001).

Communication Approach (3) or Q. what does communication approach say about the context of learning a language (topic#229)

Whereas the grammatical approach was based on behavior, the communicative approach is derived from a constructivist theoretical framework that suggests that language learning occurs as students draw meaning from experience and interpersonal interaction.

The two most important language learning methods under the communicative approach are: immersion instruction and integrateconten based instruction (ICB). Immersion methodology became popular as a result of the growth of immersion bilingual education in Canada in order to develop bilingualism in a minority language. Pedagogically, teachers plan content and language objectives concurrently. The method promotes the use of language that is slow and simplified, with guarded vocabulary and short sentences, while the grade level curriculum is used, although modified. Teachers generally use thematic instruction. Immersion methodology is also used throughout the world for revitalization of languages but the immersion instruction method is also used in countries that do not support bilingualism and has become most popular in monolingual instruction for immigrants and refugees, under the label "sheltered instruction."

Benefits of adult to learn an additional language

Bilingual children learn faster and easier, have improved problem solving skills and creativity, and have more career opportunities in adulthood. They also find it easier to connect with other cultures which makes them more open-minded and tolerant of diversity, and they are less likely to experience age-related mental illness as they reach old age. Most importantly, it's much easier to learn a second language at an early age.

Language ideologies (Topic#174)

Language ideologies represent the cultural system of ideas about social and linguistic relationships, in addition to political and moral interests. Attitudes, values, and beliefs about language are always ideological, and are enmeshed in social systems of domination and subordination of groups, relating to ethnicity, class, and gender. One of the most popular ideologies is precisely that there is, or that there has to be, a link between language and identity, but it is important to recognize that this is a result of the homogenizing work of school in imposing a national standard. This is linked to Bourdieu's concept of linguistic practices as symbolic capital. This symbolic capital is distributed unevenly in the speech community, and as such, there is symbolic violence because the dominant ideas are naturally assumed and the oppressed recognizes the dominant group as superior

what are the reasons that the adults learn an additional language more quicklythan children.3 (Topic#169)

Older students can make quick progress. Singleton (2001) has also shown that early second-language learners are neither more successful nor more efficient in acquiring a second language. The same has been found in foreign-language learning contexts because children have more time to practice and develop their bilingual competence, and because often the social and educational settings in which they participate are more conducive to authentic practice, it turns out they often appear to be more successful in developing their bilingualism. Yet, in formal educational settings, adults, able to use their metalinguistic skills in a first language more efficiently, learn more quickly than younger learners.

Q. Bilingual activities in Europe school?

An investigation in to language behavior of multilingual adolescents, all of whom must learn and use a minimum of three languages in the school program in the European School of Brussels, show the language repertoire of all pupils oscillates between the exclusive use of the official languages of their lessons at the appropriate times, and translanguaging in unmonitored, informal interactions.

Characteristics of a bilingual kg class in US

Kindergarten (/ˈkɪndərˌgɑːrtən/, US: /-dən/ (About this soundlisten); from German [ˈkɪndɐˌgaːɐ̯tn̩] (About this soundlisten)[1]) is a preschool educational approach based on playing, singing, practical activities such as drawing, and social interaction as part of the transition from home to school. Such institutions were originally made in the late 18th century in Bavaria and Alsace to serve children whose parents both worked outside home. The term was coined by the German Friedrich Fröbel, whose approach globally influenced early-years education. Today, the term is used in many countries to describe a variety of educational institutions and learning spaces for children ranging from 2 to 6 or 7 years of age, based on a variety of teaching methods.

Monoliterate Bilingualism

This bilingual arrangement requires that literacy be reserved only for the dominant language. The local vernacular is never read or written; it is merely used to support understandings and instruction. An example of this monoliterate bilingual arrangement is the one used in Mali. Since 1994, Malian teachers have used what they call pédagogie convergente (convergent pedagogy) in which there is convergence, or simultaneous use of both the children's mother tongues and French. During the first stages and until fifth grade, when French becomes the medium of instruction, the thirteen national languages, Bambara and Fulfulde being the most prevalent, are used to encourage dialogue and storytelling, with French only used in written expression (Traore, 2001).

Language management

Language management – also known as language planning, language intervention, language engineering, or language treatment, and referring to direct efforts to manipulate the language situation

Cognitive Approach

The cognitive approach emerged in the1980s as a view of learning based on the process of children's construction of meaning by using thinking and reasoning strategies. That is, learning is recognized to be as much cognitive as it is social and interactive. The emphasis on this approach is on the learner's metacognitive processes, that is, the active control over the cognitive processes that are used in learning (Flavell, 1979). The cognitive approach also emphasizes the students' interactions with text and discourse structures present in the classroom. It distinguishes between three types of knowledge: declarative knowledge, what we know; procedural knowledge, what we know how to do; and conditional knowledge, the knowledge of when, why, or where to use information and skills. Learning occurs in the interaction between these three types of knowledge which

are stored in long-term memory frame works or schemata (in the case of declarative and conditional knowledge), or in production systems (in the case of procedural knowledge).

Benefits of code switching (Google)

According to Metila (2009) code switching helps to improve class participation by inducing a relaxed class atmosphere that allows students to perform much better. Abad(2005) contends with Metila that code switching manages to lower the effective filter and this consequently establishes rapport and creates an atmosphere of informality in the classroom between the teachers and students aiding in a more democratic and critical learning environment for the students. More so, Lee (2006) in his research affirms that the discourse(code switching) used by the students outside the classroom should be allowed inside the classroom discussion process because it helps the students contribute in the discussions process and bridges any social and cultural gap. Jacobson (1990) argues that socio-psychological factors play a significant role in code switching in a bilingual classroom. He further argues, that code switching helps the speakers to express themselves and present pragmatic meanings. In essence, using code switching in the classroom fosters a positive ambience according to Metila (2009).Bautista (1996) concurs with Metila that code switching can transform the atmosphere of a classroom from being too formal to informal thereby allowing collaborations among the students in group works and also aids in the interactions and discussions in the classroom. According to Bautista (1996) code switching is the simplified strategy that students with poor .English language proficiency use. Whilst Metila (2009) agrues that the use of code switching in a bilingual classroom fulfills a pedagogical function when it makes a challenging subject matter comprehensible to students. In other words, the use of code switching in a bilingual classroom seems beneficial because it helps in explaining abstract concepts and in defining difficult terms to students. This indicates that code switching makes explanations easy to understand for the students by the teachers. Code switching helps students to communicate easily with one another and in the classroom, it helps students to understand lesson contents, helping the students seek clarification concerning some topics. It also helps the students to bridge communication gaps in the classroom. Lastly the use of code switching in a bilingual classroom aids in the modification of classroom ambience.

Meticulous planning.

Sign language should not be confused withbody language, a type ofnonverbal communication.

Sign language

Sign languages (also known as signed languages) arelanguagesthat use the visual-manual modality to convey meaning. Sign languages are expressed through manual articulations in combination withnon-manual elements. Sign languages are full-fledged natural languages with their own grammar and lexicon. Sign languages are not universal and they are notmutually intelligiblewith each other, although there are also striking similarities among sign languages.

Linguists consider both spoken and signed communication to be types ofnatural language, meaning that

both emerged through an abstract, protracted aging process and evolved over time without Meticulous planning. Sign language should not be confused withbody language, a type ofnonverbal communication.

Code switching delay in learning additional language?

The negative associations with code-switching in the classroom have been increasingly questioned by scholars. For example, Ferguson (2003) says that the evidence suggests that "CS [code-switching] is a useful resource for mitigating the difficulties of learning through a foreign language. There is a good case, then, for moderating official hostility to CS, for acknowledging its prevalence and, indeed, for incorporating awareness of CS as a resource into teacher education curricula." It has been found that teachers use code-switching to focus or regain students' attention and to clarify or reinforce lesson material. Code-switching is a scaffolding technique in bilingual classrooms, making the additional language more comprehensible. It is not necessarily code-switching that is bad, but rather how language is used, and by whom, that shapes the students' perceived value of the two languages in a bilingual classroom affect the outcome

Plurilingualism:

Plurilingualism is helpful in that it enables us to shed concepts of balanced bilingualism, or the idea that children be equally competent in two languages in all contexts and with all interlocutors. It extends the mastery of two or more standard languages to include hybrid language practices. Thus the concept of plurilingualism confirms the idea that one plus one does not always equal two. Increasingly, the world seeks to develop bilingual citizens who function within the plurilingual dynamics of the twenty-first century. For example, Posner (1991) suggests the concept of polyglot dialogue with everyone speaking their language, but understanding everyone else's.

Explain the concept of BICS:

• It is accompanied by paralinguistic strategies used.
• Context place very important role in understanding or interpreting each other accurately. It might be physical on the other had context might be somehow virtual or somehow inherent in the shade experience of the one you are communicating with.
• Both context and paralinguistic strategies are absent from academic language.

Q. Role of school in standardized language?

Standardization is not an inherent characteristic of language, but the result of a deliberate process. Standardization occurs by fixing and regulating such features as the spelling and the grammar of a language in dictionaries and grammar books which are then used for prescriptive teaching of the language. Schools pay a lot of attention to the teaching of language itself. Language is central in school because it is also the means through which teaching and learning occurs. Often times, however, this use of language in school, as controlled by the teacher and limited to what is considered "the standard," as such it has little to do with encouraging children's intellectual inquiry and creativity or with children's languaging. The ability to use the standard language is a developmental goal of education, but restricting the languaging of students may severely limit their communicative and intellectual potential, and their possibilities of becoming better educated.

Adult VS. Child Bilingualism

Children: Children do appear to be better bilinguals and proficient users of L2 primarily because communicative needs are simpler. Children are more proficient than the adults. They do not need to negotiate with others or in business deals. They do not need it in persuade others. They do not need to read complex material where language does become definitely more complex.
Learning better supported with gestures and visuals.
 The child has much more richer resources to learn the second language.
 Expectations from adults are different.Adults:
 Communicative needs are complex.
 Learning is less supported – Urgently. More language anxiety – Motivation.
Less evidence for:
Critical Period –evidence not enough except for accent.
Problem in learning L2 in adulthood.

However, Adults may be less able to achieve native competence in accent.
Proficiency in different L2 skills may be at different or similar leve

History of bilingualism

Since the first colonists arrived on American shores, education has been provided through languages other than English. As early as 1694, German-speaking Americans were operating schools in their mother tongue. As the country expanded, wherever language-minority groups had power, bilingual education was common.

Clil/ Emile research in Europe about code switching

in recent years, CLIL/EMILE research in Europe has shown how code-switching, if properly understood and suitably applied, can in fact enhance cognitive skills for the content-matter of non-language subjects such as mathematics or history.

Minority Language

A minority language is a language spoken by a minority of the population of a territory. Such people are termed linguistic minorities or language minorities.

Co language Co-languaging means using both languages simultaneously. Use of technology also affects the ways in which curriculum is structured and instruction is delivered. For example, in Africa, a university's efforts to integrate students and include non-Afrikaans-speaking students rest on delivering the curriculum in a bilingual mode in the power point, with Afrikaans and English co-present. Having both langcauages present on the screen, each in a different color, enables the inclusion of all students while reserving room for Afrikaans, the language traditionally used in the university. Especially at the

secondary and tertiary level, co-languaging is becoming a familiar curricular language arrangement when the content has to be delivered to different language groups simultaneously.

Capability Approach (CA) and inequality

The capability approach (CA) provides an evaluative framework for measuring inequality in social institutions and policies, which are sensitive to local socio-cultural contexts—a consideration not accounted for by other approaches. It goes beyond the human rights approach to education by emphasizing that just legal provision of the rights to education and within education is not enough for ensuring equitable outcomes (Robeyns, 2006; Tikley & Barett, 2011).

Marginalization

When a language is not recognized for a certain function in which space is accorded to other languages within the same linguistic ecology, it is marginalized and the phenomenon is known as marginalization

Role of communication strategies

In the course of learning a second language, learners will frequently encounter communication problems caused by a lack of linguistic resources. Communication strategies are strategies that learners use to overcome these problems in order to convey their intended meaning. Strategies used may include paraphrasing, substitution, coining new words, switching to the first language, and asking for clarification.

Diference between learning and acquisition

Children acquire language through a subconscious process during which they are unaware of grammatical rules. This happens especially when they acquire their first language(s). They repeat what is said to them and get a feel for what is and what is not correct. In order to acquire a language, they need a source of natural communication, which is usually the mother, the father, or the caregiver. Children who grow up with multiple languages, will acquire these languages in the most natural way

Language learning, on the other hand, is the result of direct instruction in the rules of language. Language learning is not an age-appropriate activity for very young children as learning presupposes that learners have a conscious knowledge of the new language and can talk about that knowledge. They usually have a basic knowledge of the grammar

Q. Divide language by kungs

Kung /ˈkʊŋ/ (**!Xun**), also known as **Ju**, is a dialect continuum (language complex) spoken in Namibia, Botswana, and Angola by the !Kung people, constituting two or three languages. Together with the ǂ'Amkoe language, !Kung forms the Kx'a language family. !Kung constituted one of the branches of the putative Khoisan language family, and was called **Northern Khoisan** in that scenario, but the unity of Khoisan has never been demonstrated and is now regarded as spurious. Nonetheless, the anthropological term "Khoisan" has been retained as an umbrella term for click languages in general.[5]

!Kung is famous for its many clicks, such as the ! in its name, and has some of the most complex inventories of both consonants and vowels in the world. It also has tone. For a description, see Ju|'hoan. To pronounce *!Xuun* (pronounced [ǃχũːˀǀ] in Western !Kung/!Xuun) one makes a click sound before the *x* sound (which is like a Scottish or German *ch*), followed by a long nasal *u* vowel with a high rising tone.

Q. Co language

Colanguage (plural colanguages) A language used jointly alongside another language or languages.

Three periods of history

Another common way world history is divided is into three distinct ages or periods:
Ancient History (3600 B.C.-500 A.D.),

the Middle Ages (500-1500 A.D.),

and the Modern Age (1500-present

Model of internationality

International and intercultural communication and their respective cognate constructs, political international and cultural international communication, are redefined and interrelated in order to create a clearer definitional base for theory building in communication among nations and peoples. International communication is any symbolic interaction between people of different nation states. Political international communication is politically significant symbolic internation between nation states. Intercultural communication is communication between people of different cultures in which cultural values are an obvious factor in the nature of the interaction and/or determining the outcome of the interaction. Cultural international communication is intercultural communication between people of different nation states. There are four advantages of this model over existing constructs. The model: (1) unifies yet distinguishes among each different type of communication (2) focuses attention on political significance (3) separates cultural international from intercultural communication (4) argues that international communication is inherently persuasive and that intercultural communication is an interpersonal transaction.

Q. Co present

copresent(Verb) To **present** along with others. They copresented the TV show. **copresent**(Adjective) **present** along with others.

T factor of bilingualism

TESL, TESOL, TEFL, are the factors affecting second lanmguage

What is meant by language shame

a feeling of guilt, regret, or sadness that you have because you know you have done something wrong. : ability to feel guilt, regret, or embarrassment. : dishonor or disgrace.

Five types of bilingualism

Early bilingualism –

Late bilingualism

Additive bilingualism

subtractive bilingualism –

Passive bilingualism

Three types of bilingual teaching methods

What's the Bilingual Method?

There are three widely-recognized methods of teaching a language:

1. The Grammar-Translation Method

2. The Direct Method

3. The Bilingual Method

Often referred to as the traditional method**, the grammar-translation method** is derived from the classical approach to teaching Latin and ancient Greek. This method places a strong emphasis on the grammatical structure of language and is heavy on rote memorization for learning. Lessons are undertaken in the students' native language (L1) and involve extensive translation to and from the students' target language (L2).

The direct method has been strongly favored among language teachers for many years now. The direct method utilizes L2, employing visual aids and role-playing extensively, and encourages students to use an inductive approach to discover the rules of the target language. It attempts to simulate the conditions through which we acquire our native language and, therefore, heavily discourages the use of the mother tongue.

Our focus here is on the third method: the bilingual method. This method was developed by C.J. Dodson in the 1960s and 1970s. Dodson set out to make improvements to the audio-visual method (which has much in common with the direct method outlined above). The bilingual method makes use of the traditional three P's: presentation, practice, production. The three P's are the three main stages of any language lesson. First, you present material. Then you all practice together and students are expected to produce something with their new knowledge.

The bilingual method advocates the use of the L1 in learning the L2. It's distinct from the grammar-translation method in that it places a strong emphasis on oral language. Later in this post we'll examine in more detail how these principles can benefit learning in your classroom.

Role of academies in language construction

academies, encouraged the preparation of grammars, dictionaries, and treatises to strengthen and standardize languages, and encouraged the enumeration of languages in ways that masked their differences or similarities.

Bilingual education program are inherently chancing.

bilingual education programs use the language as a medium of instruction; that is, bilingual education programs teach content through an additional language other than the children's home language. More than anything else, bilingual education is a way of providing meaningful and equitable education, as well as an education that builds tolerance towards other linguistic and cultural groups. In so doing, bilingual education programs provide a general education, teach in two or more languages, develop multiple understandings about languages and cultures, and foster appreciation for human diversity.

Traditional second or foreign-language programs often aim to use only the target language in instruction, whereas bilingual education programs always include some form of more than one language in at least some parts of instruction. Although the approach may be different, the development of some type of bilingualism is accomplished in both language-teaching programs.

Language-teaching programs in the twenty-first century increasingly integrate language and content, therefore, coming to resemble bilingual education; and bilingual education programs are paying more attention than ever to explicit language instruction also.
