

The ----- ensures project progress as per plan.

CS611 - Software Quality Engineering By Black Vigo

Choices:

☐ Project Requirements

☐ Design Document

☒ Tracking and Controlling

☐ Test Cases

Depending on nature of project, ----- reports can be generated.

Choices:☒ Multiple Status☐ Scrums☐ Week wise☐ Overall

To build a release, Features are provided by -----.

Choices:

Technical Team

Support Team

Domain Experts

Sales Team

To build a release, Environment Variables are provided by -----.

Choices:

☐ Sales Team

☒ Technical Team

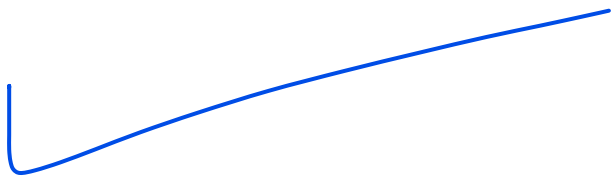

☐ Support Team

☐ Domain Experts

To reduce bugs, ----- are very effective QA alternative.

Choices:

☒ Inspections

☐ Domain Experts

☐ Content Writers

☐ Coders

In sanity testing, "reporting features" are identified with data that require -----.

Choices:

Outcomes

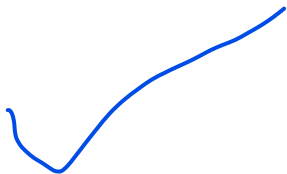

Test cases

Reports

Bug fixing

SQA team is considered to be the _____ customer of the product.

Choices:

External customer

Internal customer

International customers

National customers

Inspections are applied to_____ level.

Choices:

☐

Testing level

☒

Code level

☐

Requirement gathering level

☐

Design level

_____ ensures that all the necessary details about defects are provided to the development team.

Choices:

☐ Defect tracking

☒ Defect log

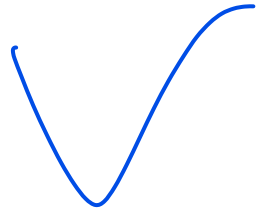

☐ Defect prevention

☐ Defects removal

Testing is conducted at _____ level.

Choices:

Different

Last

Middle

Production

Mentis is a tool used for _____.

Choices:

☒

Tracking defects

Mantis is one such tool used for keeping log and tacking details of the defects

☐

Defect handling

☐

Defect prevention

☐

Defect avoidance

Structural testing focuses on ----- implementation details.

Choices:

Internal

External

Design

Database

Testing is conducted at _____ level.

Choices:

☐ Different

☒ Last

☐ Middle

☐ Production

_____ ensures that all the necessary details about defects are provided to the development team.

Choices:

☐ Defect tracking

☒ Defect log

☐ Defect prevention

☐ Defects removal

Inspections are applied to _____ level.

Choices:

☐ Testing level

☒ Code level

☐ Requirement gathering level

☐ Design level

Software developers are not considered to be the domain specialist rather they are pure _____ resources.

Choices:

Management resources

Performance resources

Technical resources

Quality resources

To prevent rework, requirements should be validated and approved by_____.

Choices:

Developer

☐

Technical Team

☐

Quality Assurance team

☒

Project Manager

☐

SQA team is considered to be the _____ customer of the product.

Choices:

External customer

Internal customer

International customers

National customers

Depending on size and nature of feature, there can be multiple underlying-----.

Choices:

☐ Use cases

☒ Units

☐ Test cases

☐ Stakeholders

If an individual step fails then overall test case -----.

Choices:

☐ Success full

☐ Repeated again

☒ Fails

☐ Closed

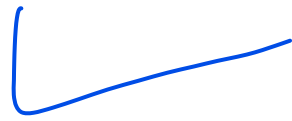

Software Quality Assurance is ----- process.

Choices:

One time

On going

Backward Engineering

Interface Design

----- are used to generate use case diagrams.

Choices:

Design Documents

Use Case Templates

Release Notes

Inspections

Functional testing focuses on ----- of the Software.

Choices:

☒ External behavior

☐ Internal implementations

☐ Use Case Diagrams

☐ SDLC phases

Why post-release defects are costly to fix?

Answer:

What are the three main activities in software testing?

Answer:

Do you agree that code is main artifact in testing. [Yes/No]. Also describe how testing is performed.

Answer:

Do you agree that “Requirement Engineering” is a purely Technical Activity? [Yes/No].
Justify your answer with solid reason.

Answer:

Do you agree that Software Requirements are similar to requirements in other domains?
[Yes/No] .Describe one difference or one similarity between Software Requirement and
requirements of other domains.

Answer:

Do you agree that correctness centric activities are basics of quality assurance? [Yes/No].
Enlist any two objectives of Quality Assurance.

Answer:

What is verified and ensured by Regression Testing? Explain with an example.

Answer:

Define Earned Value Management (EVM). Enlist three types of value used in EVM.

Answer:

█

To fulfill the new requirements in projects, how project team work performs?

Answer:

Why post-release defects are costly to fix?

Answer:
