Being a teacher how will you handle problems of a student's faced in school?

1) Take Interest in Students' Lives

Try to take interest in the lives of the students. Because sometimes students bring their problems from home. So, it is okay to discuss their problems. Try to be a friendly figure in the classroom with whom students can discuss their problems. As a result, students feel lighter and sometime you may be the best person to resolve problems.

2) Be emotionally supportive:

Teacher should fully support the students. Because there are some problems which have **base at home**. So please be emotionally supportive to them. Try that they participate maximum in the classroom by giving them the required emotional support.

3) Refer Serious Cases to Counselors

Some problems require professional attention... Counseling services should be institutionalized in schools to address acute behavioral problems.

4) Promote Healthy Peer Relationships

When a teacher will encourage peer relationship, students will naturally share their knowledge with each other.

5) Identify the Needs of Problem Students

Use tools like:

- ❖ Student profiles
- ❖ Behavior portfolios
- ❖ Keen observation
- ❖ Peer interaction
- ❖ Liaison with parents and counselors

How outside surroundings can distract student and teacher attention inside classroom?

Outside surroundings can distract both students and teachers inside the classroom due to **external noise** and interruptions. Such distractions include:

1) Noise Level:

Noise level is a very important part of a physical dimension of a classroom. Noise is very important to control. Teaching and learning can get affected because of noise.

2) Traffic noise:

If School is at such place where there is much traffic noise so introduce such system through which noise **level can be less**. For example: If there are so many windows Ina classroom so make sure to close them in order to avoid the noise and also make sure that student should **not feel suffocate** in the classroom. there must be enough fans in the classroom.

3) Noise from adjoining classes:

please make sure that noise level of one classroom may not disturb another classroom. So please make good coordination with other colleagues and ensure that noise level is controlled.

4) Noise from the playground:

Please ensure that playground should be at side from the classroom.

5) Music room:

Noise of music room should be controlled

6) Staff talking to each other in hallways:

Teacher should speak low and voice level should be controlled while passing through hall ways.

Role of curriculum in the development of student's Social and development skills?

The role of curriculum in the development of students' social and developmental skills is crucial and multifaceted.

1) Promotes Social Interaction and Teamwork

The curriculum includes **group activities, collaborative tasks, and co-curricular events** that help students learn how to interact respectfully, share ideas, and work in teams. These experiences build **communication skills, empathy, and cooperation**, which are essential for social development.

2) Enhances Emotional and Moral Development

Through **moral education, stories, and role-playing**, the curriculum teaches students about values such as honesty, respect, responsibility, and fairness. This contributes to their **character building** and emotional intelligence.

3) Builds Confidence and Self-Esteem

The curriculum encourages students to **express themselves** in debates, presentations, art, and sports. These activities help students gain confidence, learn to handle success and failure, and develop **a positive self-image**.

4) Encourages Problem-Solving and Decision-Making

Through structured activities and real-life scenarios, the curriculum teaches **critical thinking** and **conflict resolution**, empowering students to make **thoughtful decisions and manage interpersonal challenges**.

Permissiveness approach?

OR

Permissiveness (Overt Classroom Management Approach)?

Unlike other approaches, it is considered a negative approach. Due to this reason, it is the **extreme opposite** of **intimidation**. Here the teacher promotes maximum student freedom in order to foster natural development of each individual's full potential.

In intimidation the teacher is in **threatening mode**. And maintains disciplines by fearing and threatening students. But in permissiveness teacher is in very loose control in the classroom. His/her objective is to deliver lecture to the class and the teacher is not concerned about having discipline in the class. So, this can be **very dangerous as per as teaching and learning** conditioned are concerned.

In permissiveness teachers thinks that his/her sole purpose in is to **deliver lecture and complete teaching targets** and if there is any behavioral issue in the classroom, he/she is totally ignoring the issue.

Dangers associated with PERMISSIVENESS:

- Students can go out of hand and create severe classroom management issues if the condition to act **responsibly is not constantly** enforced in the classroom. Teachers may not be able to complete/ achieve his/her teaching targets.
- The teacher can lose authority in the class and can be considered a **powerless figure**. The students can take a ride on the teacher. Students can feel that this teacher can be safely dealt with.
- So, permissiveness is **highly negative approach** and should be highly avoided by the teacher

Explain different assessments?

- **Formal assessment:**

Includes class test, written assessment in classrooms. Formal students should be monitor in a way that it can show about how much knowledge student has gained? How much learning is more required for a student?

- **Informal assessment:**

They are very important part of assessment. It can be **simple question answers and Simple worksheets** to see that how much student has learnt?

- **Project work:**

When we give work in projects to student, this is a way to monitor their learning.

What is important is that teacher should be more active in the class. **By being proactive teacher** give feedback on proper time. If you give feedback after ten minutes, students can forget the concept. So, giving the feedback at proper time is very important and is very important part of monitoring student's learning.

Student in well-disciplined class room?

A **student in a well-disciplined classroom** benefit from a structured, supportive, and positive environment that promotes effective learning and personal development. discipline is a key element of classroom management and student success.

A student in a well-disciplined classroom follows rules, respects others, and remains focused on learning. Discipline creates a **safe and supportive environment**, helping students develop self-control, responsibility, and social skills. It allows for smooth classroom functioning where students can fully participate and engage in **academic activities** without unnecessary distractions.

Why some student become boredom in class?

OR

Causes of Boredom?

students often become bored in class due to several instructional and environmental factors that reduce engagement and interest in learning.

Key Reasons Students Become Bored in Class:

- 1) **Doing a task for a prolonged period:** (if a student is continuously doing reading or writing all the time so he can get bore)

- 2) Repetition of tasks:** (If you are doing one thing again and again and never change the ways student can get bore)
- 3) Continuous sitting at one place:** (Student get bore when they keep on sitting on one place all the time so give them chance to get up from the chair, give some exercise to their body in order to avoid boredom)
- 4) Continuous listening to teacher talk:** (Give chance to students to speak. It should not be teacher centered class)

It is necessary to bring changes in student's behavior by providing a variety which would invite the display of different behaviors. Sometimes they are doing on desk work; sometimes they are **sitting on the carpet** or doing some other kind of work so you expect different behavioral happenings from them regarding the lesson. This will bring in variety and hence will ensure discipline in the classroom.

four important dimensions for teaching?

There are four important dimensions for teaching that a teacher must consider:

- 1) Content knowledge**
- 2) Pedagogical knowledge**
- 3) Classroom management**
- 4) Social emotional management**

What is social-emotional learning?

Social emotional learning deals with the domain of '**affective education**' and refers to:

- **Social networking**
- **Communal feelings**
- **Sharing and caring** connections students have in schools

Elements of classroom Management?

1) Classroom control:

Classroom control is a very important element of classroom management. Without classroom control, there can be no classroom management. Teachers are the biggest sources to maintain class control.

2) Governance of Rules:

It is considered a highly important element of classroom management. **Teaching and learning** are a **rule governed activity**. Students and teachers must stick to certain rules in order to have effective teaching and learning in the classroom.

- ❖ Rules should be a strong part of **school policy**
- ❖ Rules should be adhered to strictly
- ❖ Warnings and penalties must incur on failure to abide by rules.

Rules should:

- Be for every stakeholder.
- Be properly documented.
- Be en-cultured also through the **hidden curriculum**.

3) Counseling Services in Schools:

Counseling services is the **key element** of classroom management, but unfortunately there are many schools where there are no counseling services. Counseling services are needed to **identify the behavioral problems**.

4) Physical seating & classroom management: (Separate short Question)

While doing seating arrangement of students, there are many choices;

- ❖ Group seating in classroom
- ❖ Individual seating in classroom
- ❖ Pair seating
- ❖ Seating on a carpet etc.

Write Effective teaching skill? And explain any two

- 1)** Preparation
- 2)** Planning for student success
- 3)** Attention
- 4)** Establishing opening focus
- 5)** Maintaining ongoing focus
- 6)** Clarity
- 7)** Questioning
- 8)** Monitoring
- 9)** Feedback
- 10)** Summarizing
- 11)** Reflection

Questioning:

Questioning techniques are very important in effective teaching skills.

❖ **Ask open ended and probing questions:**

Ask the questions which are **critical and reflective** for the students. With the help of open-ended question, a teacher knows where the student stand in learning. Ask open ended question as opposed to close ended questions.

❖ **Ask frequent question:**

It is good to ask frequent question from students. Otherwise, students go **distract** from learning.

❖ **Questions all students over time:**

Sometime, teachers fixed student for questioning. It is not good for student learning. Ask questions from all students. A teacher focus should be all students.

❖ **Invite student questions:**

Encourage students to ask question to you. First of all, invite questions and encourage students for questioning at any time during lesson.

Clarity:

To be clear in communication with students involve:

- **Giving clear instruction**
- **Using precise terminology**
- Having students restate instructions before doing work

Types of Students who take counseling?

Counseling in schools is essential for supporting students who face various emotional, behavioral, academic, or social challenges.

Behaviors that may require counseling:

- ❖ Students who insult others -
- ❖ Students who tease others -
- ❖ Students who abuse others -
- ❖ Students who bully or harass others -
- ❖ Students who lie -
- ❖ Students who steal -
- ❖ Students who are aggressive -
- ❖ Students who lack confidence -
- ❖ Students who are victims of bullying

Dimensions of classroom organization?

Seating:

Are students seated in rows, pairs or groups? It should be according to the lesson plans

Teacher position:

Is the teacher standing at a position where she is visible to all? It is important for teachers to not to STAND at one position.

Bulletin boards:

Are there enough bulletin boards in the classroom? There should be a moderate number of bulletin boards. If **they are more in number**, they can be a **source of distraction**. But its important to have bulletin boards in classroom. It adds color in the classrooms.

Display of student work:

Is student work displayed on bulletin boards? Students take pride when their work displayed publicly and **bulletin boards are great source** to display students' words according to different subject area.

Blackboards:

Is the blackboard visible to all students? It is common observation that some students who sit at back side, they are not able to see the black board clearly due to their weak eye sight and they distract other students.

Student corner:

Is there a student corner where students can go to read, draw or do other work? Students who complete their work, they can go to their corner and indulge in any other activity. Thus, in this way, students will not disturb other students.

Teacher sitting plan and why it is important?

A teacher seating plan is a structured layout created by the teacher **to assign and organize** where students will sit in the classroom. It is a key part of classroom management and directly affects the learning environment, student behavior, and teacher efficiency.

Importance of a Teacher Seating Plans

- 1)** Helps Learn Student Names Quickly
- 2)** Supports Classroom Discipline
- 3)** Eases Administrative Tasks

- 4) Accommodates Student Needs
- 5) Improves Focus and Participation
- 6) Facilitates Group Work and Learning Stations

Teachers' Laissez faire philosophy?

This is totally **apposite to the strong control philosophy** exercise by a teacher in the classroom. According to this philosophy, teachers teach the classroom as a relaxed, "laissez-faire" place of learning. This management style or philosophy is very relaxed and **"hands-off."** The teacher is not in the full command of the students. Teacher gives full permission to their students that they can do anything in class which students wants to do. Teacher has lost control and students have the liberty to do any think they want. There are a lot of management issues that have a teacher and school **administration in the classrooms**. A teacher has no link with classroom management.

Teachers who use this style of management are very flexible and respond to changes easily. Teachers may not be aware of student problems and do not bother about adhering to certain rules for classroom discipline.

Laissez-Fair Teacher's role:

Teachers do **minimal planning**, and while they can be quite prepared to deliver course content and material, they dislike rigid control and value the ability of response to changes. For example, Teacher comes in the classroom deliver lecture and go out from the classroom. A teacher did not know about classroom management techniques. He just fulfills his duty and go away. This is not a good philosophy for a **healthy classroom environment**. A teacher has a lot of teaching content with zero managerial qualities. This philosophy or teaching style cannot be adopted in every type of school. The focus in this type of classroom is a comfortable, relaxed atmosphere where the teacher **tolerates reading, talking and late arrivals/early departures**. Usually, the more attentive students sit in the front, and the teacher speaks to them. It can compromise classroom management and effect teaching and learning environment. This style or philosophy is **not suitable** for best teaching and learning environment.

How teacher use negative reinforcement to handle large classes?

Negative reinforcement is a **classroom management strategy** where an **undesirable stimulus** is **removed** to encourage **positive behavior**. Unlike punishment, it's about increasing good behavior by taking away something the student dislikes.

In Large Classes, Teachers Use Negative Reinforcement by:

- 1) Removing Extra Assignments When Students Behave Well

If the class follows instructions or remains quiet, the teacher might cancel extra homework or a repetitive task.

2) Reducing Restrictions as a Reward

In a class where students often misuse freedom, the teacher might initially restrict certain activities. Later, if the class behaves well, those restrictions are lifted.

3) Removing Seating Constraints

Once the class shows maturity, the teacher may allow students to choose their own seats, removing the enforced seating chart.

4) Shortening a Tedious Task When Students Stay on Task

If students show discipline and engagement, the teacher may shorten a lengthy or repetitive assignment.

Hidden curriculum?

Hidden curriculum is everything students learn through the environment, teacher behavior, peer interactions, and school culture, **rather than through direct instruction**. Hidden curriculum is mainly communicated through values and norms that a school already has. It is also communicated through the behavior patterns of teachers, principals, administrators and other senior students. It shapes a student's character and social skills significantly.

why teacher professional development is needed?

Teacher professional development refers to ongoing training, workshops, courses, and reflective practices that help teachers **enhance their skills, update their knowledge**, and improve classroom performance.

- 1) To fine-tune and improve one's own knowledge as a teacher:** (Professional development is important so that the teacher is able to fine tune his/her pedagogical techniques. A teacher should refresh and update their knowledge with time and it is only possible through professional development of teachers. Because knowledge never **remains static**. It is an ongoing process. And there is no stop to one's learning as a teacher. That's why it is important for a teacher to maintain their knowledge through professional development).
- 2) To improve student learning:** (A teacher needs to have techniques which can be used in classrooms to improve students' learning. Students' learning cannot be just improved in one **linear fashion**. There are diversified techniques that can be utilized in classrooms to improve students' learning).

- 3) **To Enhance Classroom Management Skills:** Workshops on behavior management, conflict resolution, and emotional support equip teachers to handle challenges in large or diverse classrooms
- 4) **To become a ‘critical friend’ of oneself and others:** (It is extremely important to **critically evaluate yourself**. It is extremely important to know the current trends in teacher education or in your own professional development. So, in order to improve yourself become your critical friend. Look critically at your own teaching and learning, it is the best way to **improve yourself**. So always reflect on your actions. Also make a culture of having critical friends around you. Ask your friends to monitor your teaching in class. That is a good way to improve yourself. Have observations of your own teachings).

How teacher used Strong control philosophy to handle large classes?

Strong Control:

Teacher is in a strong control of what happen in the classroom. A teacher is completely responsible for his classroom activities. Treat the classroom as a **“sacred temple of learning.”** This management style or philosophy is marked by a **strong notion** of control and preparation. Teacher must be fully prepared for all the circumstance in the classroom. Ultimate goal of a teacher is **to achieve student learning**.

How Teachers Apply Strong Control Philosophy in Large Classes:

- 1) **Set Clear Rules and Expectations:** Establishing clear rules from the beginning helps students know what behavior is expected.
- 2) **Use Firm and Consistent Discipline:** In large classrooms, the teacher must be consistent with consequences to maintain control.
- 3) **Assign Permanent Seating Plans:** Permanent seating arrangements help teachers learn names and maintain order.
- 4) **Minimize Distractions:** Do not stand stationary in front of the chalkboard.
- 5) **Control Transitions and Movement:** Smoothness is shown by the teacher continuing the lesson without digression.

How counseling handles the student behavior?

Counseling in schools is a supportive process where a trained professional (or teacher in a guidance role) helps students understand, manage, and change their behavior by addressing emotional, social, or psychological challenges.

How Counseling Helps Manage Student Behavior:

- 1)** Identifies Root Causes of Misbehavior
- 2)** Provides Emotional Support
- 3)** Teaches Self-Regulation and Coping Strategies
- 4)** Improves Student-Teacher Relationships
- 5)** Reduces Repeated Disciplinary Issues
- 6)** Involves Family and Teachers When Needed

Why professional development is necessary for today's teachers?

Professional development refers to ongoing learning and training that helps teachers enhance their knowledge, teaching practices, and effectiveness in the classroom.

Reasons Why It Is Necessary Today:

- 1)** To Stay Updated with Educational Innovations
- 2)** To Meet Diverse Student Needs
- 3)** To Improve Student Achievement
- 4)** To Strengthen Classroom Management
- 5)** To Foster Reflective and Lifelong Learning
- 6)** To Align with Policy and Curriculum Changes
- 7)** To Boost Teacher Confidence and Morale

What should teacher plan before teaching students in a variety of steps?

- Plan the Content
- Sequence of Activities
- Prepare and Organize Materials
- Room Management
- Use Advance Organizers
- Differentiate Activities
- Preview and Reflect

What does the term “proactive” means in giving feedback to students?

By being **proactive** teacher give feedback on proper time. If you give feedback after ten minutes, students can forget the concept. So, giving the feedback at proper time is very important and is very important part of monitoring students learning. This helps students remember concepts better and correct mistakes early. It is a key part of effective classroom monitoring and improves both understanding and classroom behavior.

What are two techniques of assessment to teach a lesson?

1) Formative Assessment (Continuous Assessment):

Formative assessment is used **during instruction** to provide **ongoing feedback** to both teachers and students. It helps monitor learning and guide instructional decisions. Formative assessment is **a continuous assessment**. In formative assessment, teacher must aware the students about their classroom performance at regular bases. **Classroom management evaluation should also be formative in a way that it provides continuous feedback as a way to improve learning.**

In formative assignment we can use observation **sheets, portfolio development, behavioral charts** at the end and middle of the week to check how students respond to different teaching styles and classrooms management styles.

Examples:

- ❖ Asking questions during the lesson
- ❖ Providing immediate feedback
- ❖ Observing student work
- ❖ Using quick exit tickets or short summaries

2) formative assignment:

Summative assessment is a type of evaluation conducted **at the end of an instructional period** to measure student learning against set objectives or standards. Classroom management evaluation should also be summative, i.e. **an end of term assessment to check the effectiveness** of classroom management strategies. It is one point assessment that may happen at the end of a term or at the **end of the academic year**.

Examples:

- Final exams
- End-of-unit tests
- Standardized tests

- Term projects or presentations

How do noisy surroundings affect students and teachers?

Noisy surroundings negatively affect both students and teachers by disrupting the learning environment, reducing concentration, and increasing stress.

Impact of Noisy Surroundings on Students and Teachers

- 1) Disrupt Learning and Concentration**
- 2) Causes Stress and Frustration for Teachers**
- 3) Increases Behavioral Issues**

Key Elements of Classroom Management?

1) School wide discipline through curriculum:

classroom discipline is not possible without school wide discipline, so it is very important to make classroom management a part of curriculum.

2) Classroom discipline:

Both the teacher and students must know how to behave in classroom environment. School discipline is such an element that the teachers must teach it to the students at the very start of their schooling. It is only possible through **curriculum and school wide Discipline**.

3) Classroom based rules:

Classroom discipline is made through classroom rules. There are **certain rules** for both students and the teachers to follow in classroom. We need to set some boundaries and we need to respect the rules in order to learn in the classroom.

4) Identification of needs of students:

It is **very important** for the teacher to **identify the needs of the students**. Management issues in classroom arise because sometimes teachers don't know the student needs. Teacher must know students interests and their individual needs. It is very important for the teacher to have age appropriate and need based rules in classroom so that students can follow them easily.

5) Importance to social-emotional learning:

Empathetic and pro-social learning in the classroom is very important which part of social emotional learning.

6) Physical seating in the classroom:

Are students sitting in rows, groups or pairs?

7) Role modeling by teachers and caregivers:

Students learn from the teachers so it is important to have proper behaviors in the classroom so both the teachers and the students have good reputation.

Write The major stakeholders?

The major stakeholders are students themselves, teachers, parents, school administration, principals, coordinators, classroom community, outside community.

Write a note on Authoritarianism?

There is a difference between authoritative teacher and an authoritarian teacher. **Authoritative teacher** still **maintains discipline but in a friendly manner** unlike **an authoritarian teacher**, who establishes things in **classroom through a dictatorial approach**.

Authoritarianism sets and enforces rules **in a dictatorial way**, using obtrusive discipline as necessary. He sets the limits in classroom through commands. It is the coercive use of power by the teacher. It is a **negative approach** to have discipline in the classroom. It is **not permanent** solution. This should be avoided and a teacher should be an authority figure in the classroom and not an authoritarian figure in the classroom because through authoritarian rule in the classroom you achieve and maintain **discipline temporarily** in the classroom. Students may resort to the undesired behaviors once you are out of the classroom because they follow you and obey you because they are fearful of you. So, the element of fear brings indiscipline. That's why it is **negative technique** used by the teacher.

What is the process of Overlapping?

Overlapping is also very important **classroom management strategy**. Overlapping means handling **two or more situations** or activities simultaneously.

A teacher who can instruct a group of students while responding to student concerns from outside of the group can keep an entire classroom working smoothly. So, overlapping is a very important trait to have in a teacher and a teacher continues with her lesson and then without disturbing any of the classroom proceedings.

Practicing overlapping:

Make eye contact with, move closer to, or stand beside a misbehaving student to deter off task behavior while continuing to direct other activities.

Direct a question to a student who has not been paying attention to regain his/her attention.

Remove an object a student is playing with without interrupting a presentation.

Overlapping is a very powerful way of saving teacher's time. it not only saves teacher's time but it also brings continuity in the lesson. For this you should be skillful enough to handle these issues.

Models of Classroom Management? LONG

- Assertive discipline
- Logical consequences
- Teacher effectiveness training

Assertive Discipline:

This model was developed by **Lee Canter in the 1970s**. Rules and regulations are very important in this model. It is very important for teachers to establish rules and regulations and communicate properly and appropriately to the students. In this model rules and regulations are developed in systematic way and with mutual consent. Rules should be **age appropriate**.

Usually, it has been noted that teachers only concentrate on pedagogy. They only concentrate on development of effective lesson plans. They only concentrate on the delivery of a lesson. But teachers who use this model; they give equally importance to rules and regulations as lesson plans. This approach is often characterized as focusing on **rewards and punishment**.

Rules can be different for:

- ❖ Classrooms
- ❖ Laboratories
- ❖ Playgrounds
- ❖ Walkways
- ❖ Auditorium
- ❖ Art room
- ❖ Computer room

Overall rules should be followed **consistently and firmly**.

Logical Consequences:

Logical consequences are a very important model and it refers to the psychological principles that may lay behind the misbehavior of students. This model was articulated by **Rudolf Dreikurs in 1968**. This model is based on **Alfred Adler's idea** that students' misbehavior is based on their unmet needs. When students meet does not fulfill, they behave oddly in frustration. Sometimes students also don't know about their particular behavior. According to Adler the misbehaviors of children is primarily based on **unmet needs in the past**. Alfred Adler, a philosopher and **psychiatrist**, stressed the need to understand individuals within their **social context**.

According to Adler all students desire and need **social recognition**. So logical consequence that is a kind of model in which the teacher and the students are in **some kind of power struggle** and the teacher will have to know the unmet needs and desires of the students so that such behaviors can be handled appropriately. **Teacher stance** is very necessary in logical consequence model.

teacher's effectiveness training:

This model was advocated by **Thomas Gordon in 1977**. Gordon conceptualizes effective management **of a classroom** as facilitating the shift of management responsibilities from teachers to students. He said that manifestations of **effective behavior** are their responsibility. Students should know about right kind of behaviors. It is not the responsibility teachers to tell every time that what appropriate behaviors are. So, basically the responsibility of behavior management has **shifted** from the **teacher to student**. Students are in more responsible role as per as behavior management is concerned.

He highlights the value of using **intrinsic motivators** and the value of **I-messages** when talking to students about problematic classroom behavior. It is not important to only display good behaviors for an **extrinsic motivation** for rewards or something else. Sometimes students display appropriate behaviors for awards. So good behaviors, accepted behaviors. They need to be manifested for an **intrinsic cost**.

For this we should teach I-messages to students.

What are I-Messages?

I-messages focus on the **speaker's feelings and perspectives** (a teacher's) as opposed to what the student has done wrong.

For Example:

If students misbehave in the classroom how would the teacher feel or how would the others feel if a **student misbehave** in the classroom. So, it is a good way to regulate human behavior. So, I-messages are extremely important. **Extrinsic motivation** is an extremely important. And it is extremely important for teachers to tell students that how to regulate their own behavior. Student should learn with an **intrinsic motive** because they want to learn. This model gives responsibility to students. Teachers are there to maintain behaviors and students are responsible for their own behavior patterns.

What is cookbook management?

It is an approach which is used by the teacher by hosting other approaches. It is an elected approach and various approaches are used in this an approach to have control in the classroom. It is very **popular approach** through which various approaches are utilized by the teacher to handle classroom discipline issues.

As stated, earlier cookbook management is an eclectic approach that may consist of applying a prescription of ‘dos and don’ts’, without any obviously consistent rationale. It may consist of **adaptation of a number of most effective approaches** which suit the situation or group of individuals.

Cookbook management is the most **practical approach** to be used in the classroom to solve daily classroom problems as stated earlier this is the combination of effective approaches and is not the name of one particular approach.

How to manage classroom temperature?

Students need to be made aware of their own temperature preferences and encouraged to dress accordingly. Physical conditions of any classroom or physical conditions of any human being is need to be monitored (physical dimensions and appropriate temperature are part of school curriculums these thing need to treat professionally.)

Temperature preferences:

Temperature preferences can vary **dramatically**. Most children can’t concentrate when they are either too cold or too warm. Some students cannot work in very cold conditions as well as some cannot work in very hot conditions. It’s all depending on the **geographical location** of the school. So, you have to base your school calendar on the geographical position you are in. For example: when it is too hot in Punjab so summer vacations get an extension by Government and same is the case in a part of Baluchistan where an area is so cold so winter vacations get an extension because students cannot study in so cold condition. It is also very important to see **physical monitoring** of students in terms of **temperature tolerance** because it has direct impact on students teaching and learning. A teacher also cannot study in so hot as well as in cold condition. A teacher’s lesson plan and teaching methodologies can get effect.

Temperature Conditions:

The classrooms should be ready to handle extreme **weather conditions**. There should be enough fans in the rooms in summers. The rooms should be well **ventilated**. Similarly, in cold conditions electric or gas heaters should be provided in classrooms. The classrooms should be protected from chilly winds from outside.

Student Number:

The number of students in each classroom is also subject to the weather conditions in cities. For example, **large classes should be avoided** if the weather conditions are **extremely hot** for most parts of the year.

So, please make sure that your rooms are properly insulated in cold conditions and your rooms are properly ventilated in hot conditions and please have your school calendar spread in a way

that in extreme hot and extreme cold conditions you **give vacations** to students otherwise teaching and learning can become an issue. That's why it is necessary to determine school calendar. **So, monitoring of room temperature and temperature** outside the school is necessary.

Write down the classroom accessories where should these accessories kept?

Classroom accessories include:

- 1) **White board/chalk board** (In classroom accessories chalk board hold a great importance. It is mostly used by teacher. It should be considered that its placement must be perfect that all students should view it easily)
 - 2) **Bulletin boards** (How many bulletin boards are there and what things are placed over them. some classrooms don't have bulletin board so it should be placed in classroom for students to display their charts etc.)
 - 3) **Multimedia/overhead projector** (Its placement at good place is very important so all students can see it. Chalk board is not the only solution. In modern era of technology, projectors are also a necessary AVI aid)
 - 4) **Hands-on materials** (If there is any work which required chart papers etc. so teacher should make sure that she has enough hands-on-material that all student use it properly)
 - 5) **Reading/writing corners** (when you are teaching primary level students so there Reading and writing corners are much important)
 - 6) **Teaching platform/rostrum** (Teacher Rostrum should be placed at such position that all students can see it easily)
- ❖ All classroom accessories should be placed at the **sight level of students**.
 - ❖ Students should have an easy access to them (Everything should be in excess of students and teacher should not say students).
 - ❖ Students works should **be displayed on bulletin boards**
 - ❖ Students should take ownership of classroom facilities It is responsibility of a teacher and school to provide all these accessories to students.

How teacher manage talk in class?

Student talk can be managed through:

- 1) **Raising of hands** (It is necessary for students that whenever they want to talk so they must raise hands. **Until they raise their hands**, teacher will not listen to them. Its very time taking but student talk is very important to make any classroom activity effective. Usually when teacher ask any question in the classroom so all the students raise their hands altogether and start speaking and as a result it is not comprehensible that what students are saying. So again, it has some decorum or a procedure. So, student talk can be managed through raising of hands.
- 2) **Chorus responses** (Teachers may tell students that whatsoever she will **ask everyone** will give answer all together. This is known as **Chorus responses**.
- 3) **For both, teachers need to signal as to when which response is required** (In both situations, a teacher must tell students what is required and when is required and that is something very important. Teacher needs to tell students that either answer is needed in **Chorus response** or with hand raising. these things need to be determined in the start of class. Usually, problems do occur when teacher start things without determining rules. If later she says that you should not raise hand so students are not mentally prepared for it and all of them start talking at once and them it become difficult for the teacher to handle a classroom. So, this thing should be kept in consideration).

How teacher rules discipline in class?

1) Lay down rules at the start of the school year:

Rules and regulation should be laid at the very start of the school year. Not only students but all the stakeholders should be informed about the rules so that rules are followed and that rules are obeyed. This is very important.

2) Make classroom rules with the students:

It is very important to make the rules together with the students because then students have a stake in it and then they own the rules).

3) Issue contracts on non-compliance:

It means when you make the rules then also tell the students that if they break the rules then they will punish for breaking the rules in the form of contract from less harmful to most harmful. Break can be closed for students; Students are detained after school. so these are the kinds of contracts that are issued on non-compliance. Because students should know that non-compliance is a big issue. So, with every rule there are contract that are issued and contracts are to be followed very strictly by the teachers.

4) Reinforce rules:

It is very important that rules are reinforced. It is necessary to tell rules gain and again so that students comply.

5) Enforce rules uniformly:

Rules are equal for all. They should be implemented equally on all. Rules are followed across the board. There should be no favoritism. If teacher cannot implement rules uniformly, he /she may encounter classroom discipline issues.

Being a teacher which instruction in laboratory and project work?

- 1) Provide Clear Instructions Before Starting**
- 2) Form Purposeful Student Groups**
- 3) Monitor Progress Actively**
- 4) Teach Self-Control and Responsibility**
- 5) Ensure Safety and Order**

As a teacher, will you see the prepared lesson before implementing to the class? Why?

Yes, a teacher should review the prepared lesson before delivering it to the class to ensure effective instruction, classroom control, and meaningful learning.

1) A positive climate:

which means the conditions in the classroom should be conducive to learning

2) Selection of relevant content:

it is very important to understand that the teaching content should be age appropriate and should also be based on the needs and interests of the learners

3) Competent use of appropriate teaching and learning strategies and skills:

content knowledge together with pedagogical knowledge ensures effective instruction in the classroom

4) Use of reasonable routines and procedures:

reasonable routines and procedures need to be pre-decided so that effective instruction can go on which means the teachers needs to be absolutely prepared to conduct the lesson with her or his content knowledge, **pedagogical knowledge**, management knowledge and also division of the lesson plan should be considered extremely important and should be divided very effectively within the time span that the teacher has.

Emergency Repairs of classroom?

Emergency repairs take place when a facility **breaks down** and **urgent measures or steps are to be taken** to remedy the situation. This normally occurs where people lack maintenance culture. It is expensive because the extent of damage may demand total replacement or high cost of repair. (For example: if you have been told that a computer is not working properly so make a **repair as soon as possible** otherwise the computer can get crash and data can lose. Try not to have emergency repairs because it is the sign of **good management**. It shows that you have good system in school that you never need it.) It is very important to add preventive management and routine management in academic calendar of a school.

What is Predictive maintenance?

Here computer software is **used to predict equipment failure**. (It is also an important part and for this there must be proper teams in the school. Administrative staff should be active to manage and tackle such issues or to avoid such conditions.) This is **based on age**, user demand and performance measures (If things are getting old so try to replace them rather than repairing)

As a teacher, three methods of sitting arrangements?

- 1) Group seating in classroom
- 2) Individual seating in classroom
- 3) Pair seating
- 4) Seating on a carpet

Define Positive classroom in your own words.

A positive classroom is a learning environment where students and the teacher share **mutual respect, warm relationships**, and the atmosphere **is supportive, safe, and conducive** to learning. It encourages student participation, reduces behavioral issues, and fosters emotional well-being.

Best of luCk!
