Q.1 Two matrices of same order can be.....

A. added and subtracted

B. added but not subtracted

C. multiplied

D. subtracted but not added

Q.2 Determinant of null matrix is---

A. 3

B. 0

C. 1

D. 2

Q.3 If the order of matrix A is 2×3 then what should be the order of matrix B such that addition of matrices A and B is possible.

A. 3×2

B. 2×2

C. 3×5

D. 2×3

Q.4 The Minor of an element in a third-order determinant is a ..... determinant obtained by deleting the row and column that contains the element.

A. fifth order

B. second order

C. fourth order

D. third order

Q.5 What is the determinant of the identity matrix of order 3?

A. 3

B. 2

C. 1

D. 0

Q.6 By changing the signs of all elements of a matrix, we obtained

A. negative of a matrix

B. identical matrix

C. determinant of a matrix

D. zero matrix

VU TOOLKIT

Q.7 If A is a matrix of order m×n, and B is a matrix of order n×p, what is the order of the product AB?

A. p×m

B. m×p

C. n×n

D. m×n

Q.8 Two matrices A and B are multiplied to get BA if

A. number of columns of A is equal to number of columns of B

B. number of rows of A is equal to number of columns of B

C. both have same order

D. both are rectangular

Q.9 Given a square matrix A, if there exists a matrix B such that AB = BA = I, then A is called the ..... of B

A. Adjoint

B. Additive inverse

C. Multiplicative inverse

D. Transpose

Q.10 [a b c] is a

A. column matrix

B. diagonal matrix

C. row matrix

D. zero matrix

VU TOOLKIT
