Q.1 In North West Corner Rule, we start initially from which of the following cell in the standard transportation table?

A. Upper middle

B. Upper left

C. From any arbitrary cell in first row

D. Upper right

Q.2 Which method is expected to give a better initial solution among NWC, LCM, and VAM?

A. All methods provide similar initial solutions

B. NWC

C. LCM

D. VAM

Q.3 The Transportation and Transshipment Models are types of ---------- models.

A. Variation

B. Inventory

C. Allocation

D. Network

Q.4 What is the significance of selecting the row or column with the largest penalty in VAM?

A. It denotes the final allocation step

B. It prioritizes the allocation to minimize penalties

C. It indicates the highest transportation cost

D. It represents the maximum supply or demand

Q.5 A balanced transportation model with '5'number of sources and '7' destinations has -------- number of constraint equations.

A. 12

B. 10

C. 2

D. 35

Q.6 How is the least cost method (LCM) different from the Northwest Corner rule (NWC)?

A. LCM considers unit costs of transportation

B. LCM allocates the maximum feasible amount

C. LCM follows a random allocation strategy

D. LCM starts from the bottom right corner

Q.7 If the primal has an unbounded solution, then the dual has------

A. no solution

B. bounded solution

C. optimal solution

D. infeasible solution

Q.8 The transportation problem can be represented mathematically as a linear programming model with the objective function of _____.

A. Minimizing the total profit

B. Maximizing the total production cost

C. Minimizing the total transportation cost

D. Maximizing the total transportation cost

Q.9 Dual of a Dual of Dual is------.

A. Double dual

B. Primal

C. Dual

D. Single dual

Q.10 For North West Corner method, in the first row and first column, each source and sink contain '5' units ; then after allocating the appropriate amount 'x11' in the cell (1,1), we will move towards which of the following cell?

A. Towards (2,1) if 2nd row contains more occupied cells than 1st row

B. Neither towards (1,2) nor (2,1) but move diagonally towards (2,2)

C. Towards (1,2) if 1st row contains more occupied cells than 2nd row

D. Arbitrarily either towards (1,2) or (2,1)
