Q.1 Which of the following is NOT an internal flow?

A. water flow in a pipe

B. unbounded fluid flow over the surface of a wire

C. liquid flow between the two parallel plates

D. hot gas flow in a duct

Q.2 The friction between the fluid layers causes the fluid velocity to

A. increase

B. decrease

Q.3 In steady flow, ___.

A. properties gradually change with time.

B. properties do not change with time

C. velocity does not change

D. pressure changes

Q.4 The unit of velocity is ____.

A. m-1s

B. ms

C. ms-1

D. m-1s-1

Q.5 Which one of the following is NOT a secondary dimension?

A. Velocity

B. Temperature

C. Momentum

D. Acceleration

Q.6 In inviscid flow region, the viscous forces are negligibly small compared to___.

A. inertial or pressure forces

B. Both (a) and (c)

C. gravitational forces

D. buoyant forces

Q.7 The boundary layer is developed very close to the wall by flowing fluid due to ____.

A. Surface Tension

B. Viscosity

C. Gravity

D. Density

VU TOOLKIT

Q.8 The substance in liquid or gas phase is referred as

A. plasma

B. electrolyte

C. ions

D. fluid

Q.9 Which of the following may NOT have a free surface?

A. An open container filled with oil

B. An open container filled with water

C. An open container filled with liquid mercury

D. An open container filled with hydrogen gas

Q.10 The flow of an unbounded fluid over a surfacel is classified as being ____.

A. forced flow

B. external flow

C. natural flow

D. internal flow
