**EDU406 Midterm Preparation Handouts
BY PIN2 and MUHAMMAD
(MAS All Rounder)**

Which of the following about teacher's teacher's professional knowledge and understanding is true? Teachers need to develop reflection and evaluation to support their own and others practice

EDU406 Midterm Preparation Handouts BY PIN2 and MUHAMMAD (MAS All Rounder)

1. Reframing helps the reflective practitioner....? **Both a and b**
2. Personal attributes of critical thinkers include: **changing with the experiences**
3. a Limitations of self-reflection are..... **the difference between perception and reality**
4. Frames are influenced by **Metaphors**
5. Which of the following is not the attribute of reflective practice? **It challenge and change practice**
6. Kolb's reflective cycle..... **Emphasizes the role experience play in learning**
7. The first step in the reflective practice process is : **make a list of teaching strategies that you used in previous week**
8. Personal attributes of critical thinkers includes : **all of above**
9. Interpretation is the skills of **Understanding and transmitting**
10. Which reflective practice is done badly, ineffectively or inappropriately, it give rise to ----- -- concerns. **Professional**
11. Reflecting logically allows teachers to take control of their learning and helps them to develop overall----- **Competencies**
12. Epistemic stances **Change with the experiences**
13. All were the critiques on the Reflective practice movement except **Helps to improve teachers practice**
14. Critically reflective learning is nurtured by relationships between teacher and ----- **Learner**
15. The 4Ps reframing matrix are productive, planning potential and----- **People perspective**
16. One of the pedagogic concern raised by reflective teaching is called **Development readiness**
 - Conceptual understanding
 - Instructional planning
 - None of the above
17. Critical Reflection helps to support or challenge our views, practices and feelings by providing
 - Observation
 - Experience
 - Evidences**
 - Experiments
18. Critical Reflection involves which of the following?
 - Analysing and conceptualising
 - Analysing and evaluating**
 - Reasoning and evaluating
 - Conceptualizing and describing
19. Single loop learning has ----- strategies.
 - Automatic
 - Explanatory
 - Rigid**

20.----- quadrant of Jo-Han windows represent the things that are unknown by you and are unknown by others

Open area

Blind area

Hidden area

Unknown area

21. Concept is looked or understood differently by reframing core belief based on

Core belief

New supporting beliefs

Opposite supporting beliefs

Intuitions

22. A reflective practitioner is able to

Question assumptions and values

Think outside the box

Question other people's assumptions

All of the above

23. What is the evidence of reflecting thinking?

Reflective writing

Making judgments

Analyzing questions

Linking theory to practice

24. In 5-step model of critical thinking, the first step is:

Practice before your assess

Gather and review feedback

Learn through seeking answer

Determining goals/objectives

25. Theory that commands the thinking the action is known as

Theory in action

Theory in reaction

Critical theory

Theory in use

26. Micro- Outcomes involves:

The broad overall results of professional activity

The outcomes of very specific activities

The result of a partially completed activity

All of these

27. Reflective practice is important because it is used to:

Improve teacher's practice

Enhance the quality of learners
Promote school culture
Motivate teachers and students

28. Emancipatory phase of critical reflective enquiry helps to ----- in the class.

- Maintain discipline
- Promote rote learning
- Encourage different ways of thinking**
- Discourage values, beliefs and practice.

1. Reflective practices focuses on.....

a)improvement

b)change

c)theories

d)intrepretation

2. Looking is the part of the reflective process which.....

a) occurs before teaching

b) occurs after teaching

c) occurs as a precondition for reflection

d) occurs as a response to experiences

3. Frames are influenced by.....

a)Metaphors

b) Individual interests

c) Perceptions

d)Experiences

4. which of the following do not transfer but are locked in time, place or a situation..... a) concepts

b)ideas

c)facts

d)beliefs

6. Reflective action plan involves being helped to.....

a) select a specific target

b)Planned a programe of discussion and observation over a fixed period c)Evaluate your effectiveness

d)All of the above

7. core critical thinking skills are

a) Analysis

b) Inference

c)self regulation

d)All of these

8. Epistemic stances

a) Are the ways to orgainze knowledge

b)Never changes with the experiences

c) changes with the experiences

d) Are used to describe facts

9. what is the trickiest padagogic task according to stefhan

brookfield? a) Being fair with students task

b) Getting inside students heads

c) Maintaining professional relation with colleagues

d) Participating in promoting school culture

10. A reframing matrix is a tool used because different people have different..... **a) Experiences to approach the problems**

b))pace to cope up with the issue

c)protocols in the institution

d)Limitations to think

11. Reflective practice have been embraced by teachers researchers, teacher and educators since last

a) two decades

b)three decades

c)four decades

d)five decades

12. When a professionao practitioner is aware of the relevance of the skill it is called..... **a)concious incompetence**

b)concious competence

c)in concious competence

d)inconcious incompetence

13. A product for a teacher might include.....

a) Relationship with students

b) Approches to assessment

c)strategies for behaviour management

d)All of these

14. Learning to learn is

a) An ability to pursue in leaning

b) Identifying available opportunities

c) Building on prior learning and experience

d)All of the above

15. what are the indicators of a reflective practionar?

a) Intellectual quality

b)Higher order thinking

c)Meta language

d) All of the above

16. Reframing helps to reflective practionar.....

a) see alternative solutions and actions

b)see things from other perspective

c)both a and b

d)None of the above

17. Which of the following helps to reduceblind area and expand open area of a person in team context.....

a) feedback

b)support

c) Information

d)reflection

18. Personal attributes of critical thinkers include:

a) Honesty about emotions

b) Evaluation disposition brone from open- mindness

c) Personal awareness specially relating to personal bias

d) All of the above

19. Reflecting logically allows teachers to take control of their learning and helps them to develop overall

- a) Personality
- b) Competencies
- c) Practices
- d) Performance

1) which of the following is an example of warm feedback. Warm feedback consists of supportive, appreciative statements

2) The critical lenses refer to None of above

3) The practitioner accounts are considered none-problematic for all reasons expect No effort is made to foster reflection on language

5) The cognitive processes is characterized as essential to Higher order thinking 7) which of the following best describe a 'regular learning network': A place for a teacher to come together and discuss matter and concern

8) Technical rationally in reflection deal with the Behavior and skills

9) critical reflection involves which of the following Analysing and evaluating

11) reflective practitioner does not believe in One single truth/one right way

12) learning+ reflection= Experience Is know as Boud's triangular representation

The first step in the reflective practice process is: Examine teaching occasion particular that went badallows teachers to analyze what they have been learned and how they learned to take control of their development. Critical reflection

In reflective practice, practitioner engage in a continuous cycle of self-observation and..... Self evaluation

A 'product' for a teacher might include..... All of the above

Absolute knowing is a process of Learning from other

The stage-6 of critical thinking development is called as the thinker. Accomplished

Which of the following is NOT a 'best' practice? Follow the next closely to ensure coverage of the curriculum

Core Critical Thinking Skills are: All of the these

Reframing helps the Reflective Practitioner..... Both 'a' and 'b'

In reflective writing the two source of evidence are: your and academic reflection

Quiz 1...edu 406

Q1: To operationalize a best practice approach teachers must

Be committed to professional dialogue with other teachers

Be open-minded and committed to professionalism

See practice as a process of analysis

Be focused on technical proficiency

Q2: What is the impact of reflective practices on the teacher?

It leads higher quality practice

It leads to greater independence for the teacher

It sustains inclusive environments

Q4. The 'critical lenses' refer to

The perspectives that a teacher uses to generate different viewpoints

The focus given to the Reflective Practitioner by taking the o different viewpoints necessary to reflect on practice

A set of different viewpoints

None of the above

Q8. According to Brookfield, which is the most powerful lens for teaching? Select the correct option

The Self Lens

The Student Lens

The Peers Lens

The Theory Lens

Q9: Double loop learning involves

Changing personal assumptions

Changing personal approaches

Both a and b

None of the above

Q10. The Reflective Practitioner must _____.

Manage workloads as part of their role in planning and leading the profession
Ensure a suitable work-life balance

Both „a” and „b”

none of above correct

Q11. Benjamin Bloom major work in is Select the correct option

Affective

Management

Cognitive

Psychomotor

Q12. Conceptual innovation is Select the correct option

Like re-framing

The same as re-framing

Not re-framing

Identifying new questions

Q14. What are the major mechanisms involved in critical thinking for the reflective practitioner? Select the correct option

Self-regulation

interpretation

both a and b

None of the above

Q15. What is question/ analysis in the reflective cycle? Select the correct option. **Taking on the role of researcher**

Q16. one of the four steps in action research.

Identifying the research problem

Q17. What do systematic reflexivity and epistemic reflexivity focus on? Select the correct option **Suppositions, theories, beliefs and assumptions**

Q18. Which of the following not a component of the process involved in reflective practice? Select the correct option **Subject Knowledge**

Q19. Which of the following is NOT a best practice? Select the correct option **Educates the whole child**

Follows the text closely to ensure coverage of the curriculum

Students' active participation in learning

Challenging environments

**Q21. One part of learning from reflection relies on teachers being open minded
These characteristics include all but Select the correct option**

Accepting consequences of their decisions

Viewing situations from multiple perspectives

Searching for alternative explanations for classroom events

Using evidence to support or evaluate a decision or position

Q22. What does evidence suggest as being most important for a long-term commitment to Reflective Practice?

Reflection is more effective when conducted collaboratively

Collaborating with colleagues encourages the Reflective Practitioner to focus on what values inform his/her teaching

Guidance and structure are key factors for Reflective Practitioners

When the Reflective Practitioner knows what is best for children

Q23. What does „a lack of conceptual clarity“ mean?

The educational community has different interpretations of reflection

It confuses perceptions about what happens in the classroom

It includes too many viewpoints and so becomes confusing for the individual
does not account for students' perspectives

Q24. Creative Thinking is not critical thinking because

It is not logical

It is not problem-centred

It is emotive

It is not based on „black-and-white“ thinking

Q25. Reflection-on-action can be described as _____

Thinking about what to do

A reconstructive mental review

Problem resolution

Weighing the pros and cons of alternatives

Q26.

Critical thinking is _____.

Select correct option:

A biological process

A psychological and cognitive process

A communication process

All of the above

Q29. Critical Reflection involves which of the following?

Select correct option:

Analysing and conceptualising

Analysing and evaluating

Reasoning and evaluating

Conceptualizing and describing

Q30. What factor makes reflection seem time-consuming?

Select correct option:

Regular learning networks are very time-consuming

Lack of leadership for Reflective Practice

Regular learning networks are very time-consuming

Staff is too busy

Q32. Self-regulation is Select the correct option

A metacognitive process correct

A creative process

A psychological process

A communication process

Q34. To increase our 'understanding' we need to Select the correct

option Dismiss reasoning

R espect evidence and reason

Think critically

None of the above

1. The Reflective Practitioner must _____.

- Manage workloads as part of their role in planning and leading the profession
- Ensure a suitable work-life balance

▪ Both 'a' and 'b'

▪ None of the above

2. Reflection is NOT _____.

▪ A simple 'tick box' activity

▪ A routine activity for a teacher

▪ Both 'a' and 'b'

▪ None of the above

3. : Deductive learning is _____.

▪ From general to specific

▪ Rule base

▪ From unknown to known

▪ All the above

4. The Reflective Practitioner has adapted _____.

▪ Ways of knowing

▪ Patterns of reasoning

▪ Both 'a' and 'b'

▪ None of the above

5. Reflective writing focuses _____.

▪ On all aspects of an experience

▪ Critical incidences

▪ Specific details within an experience

▪ Ideas, concepts and opinions

6. : The Reflective Practitioner is concerned with _____.

- Using a wider range of experiences and research to underpin the approach to teaching
- Using a wider range of pedagogies as a means to realize excellence in teaching ▪ **Both 'a' and 'b'**
- None of the above

7. : Working inductively means to _____ .

- **Identify a goal and explore strategies to achieve it**
- Plan a programme of discussion and observation to improve
- Reflect in an exploratory and trial-and-error fashion
- None of the above

8. : By having an open-minded attitude, the Reflective Practitioner is _____ . ▪ More reflective

- **Adaptable to changing conditions**
- Able to review experiences critically
- Is open to many new ideas

9. : Reflection can be negatively influenced by _____ .

- **A lack of objectivity**
- The Reflective Practitioner ignoring the truth
- None of the above
- Both 'a' and 'b'

10.: The Professional Development Journal is _____ .

- A personal diary
- An on-going discourse
- **A subjective dialogue**
- A list of critical incidents

11.: We understand frames through the use of _____ .

- Metaphors providing explain them
- Metaphors to clarify them
- **Metaphors to communicate logic**
- None of the above

12.: The study of parts of the community fall in _____ .

- Evaluation
- Synthesis
- Analysis
- **Knowledge**

13.: Concept-based learning means the Reflective Practitioner _____ .

- Transfers learning to new concepts easily

- Makes meaning and process information more deeply ▪
- Has a more thorough working knowledge of theories-in-use ▪
- Works with deeper levels of conceptual understanding**

14.: Being committed to the profession means _____.

- Being responsible for continuing professional development**
- Being responsible for managing change
- Being responsible for changing policy and practice
- None of the above

15.: Concepts determine _____.

- How a Reflective Practitioner's perceptions are explained
- How a Reflective Practitioner's beliefs are explained
- The frames for perception**
- The ways a Reflective Practitioner explains experience

16.: A Reflective Practitioner is able to _____.

- Question assumptions and values
- Think 'outside the box'**
- Question other people's assumptions
- All of the above

17.: We develop theories-in-use as Reflective Practitioners to _____.

- Understand theories as we apply them
- Predict what will happen when we apply theory to practice
- Explain situations**
- Generate schemas for translating theory into practice

18.: Exploring practice using inductive action planning requires

- _____.
- Clearly defined and expressed success criteria

- Clearly identified evidence sources**
- Both 'a' and 'b'
- None of the above

19.: An effective action plan is _____.

- Developmental
- Precise**
- Shared
- All of the above

20.: Professional knowledge relates to _____.

- Subject knowledge**

EDU406 Midterm Preparation Handouts BY PIN2 and MUHAMMAD (MAS All Rounder)

- Communication skills
- Social interaction
- All of the above

21.: A reflective action plan provides the Reflective Practitioner with _____.

• **Targets, planning, evaluation**

- Specific target-setting, identification of actions, evaluation of success
- Specific targets, activities, success criteria
- None of the above

22.: Reflective writing _____.

- Is personal
- **Links theory to practice**
- Questions experience

23. Our assumptions can be **revealed and explored through four lenses**.

24. A product for a teacher might include. **All of above**

25. A paradigm shift is. **Brings a new set of concepts**

26. Reframing for new learning is. **Focused on inventing new strategies**

27. The highest level of Bloom taxonomy is. **Evaluation**

28. Using a reflective action plan is valuable. **To set targeted action points**

29. The Professional development Journal supports the RP to. **Reflect on experiences**

30. Inductive learning is. **Specific to general**

84: We can make theory-in-use visible by..

a) **Construction someone's theory-in-use from observations of behavior**

b) Clues for discovering the theory-in-use

c) Developing ideas

d) Exploring concepts

85: A 'problem statement'

a) **Is not too specific**

b) Find solutions to problems

c) Does not find solutions to problems

d) Is not too general

88: The reflective practitioner uses 3-dimensional instruction

to .. b) Develop understanding of connection between topics/subject

c) Build use multiple intelligence in their teaching

d) **all of the above**

89: critically reflective teaching is .

. a) responsible for highly effective pedagogies

B) responsive and adaptable to meet learners' needs

c) a social process involving family and community

d) **all of the above**

According to moon what are the key aspects of reflective

practice. A). reflective practice is a form of mental processing

b. Relies of a cognitive re processing of experience

c. aims to understand complexity and confusion in experience

d. All of the above.

10. Which of the following is not the best practice?

ANS. Follows the text closely to ensure coverage of the curriculum

11. One part of learning from reflection relies on teachers being open minded . these characteristics include all but.?

Ans. Using evidence to support or evaluate a decision or position.

12. What is hyper reflexivity?

Ans. Deconstructing applications of knowledge in the classroom.

13. The most significant part of the model is...? Ans learning from

experience 14.DATA refers to...?The four steps analytical process necessary for guiding reflection

Which of the following about teacher's teacher's professional knowledge and understanding is true? Ans. Teachers need to develop reflection and evaluate to support their own practice

20) Personal attributes of critical thinkers include:

Honesty about emotions

Evaluation disposition borne from open-mindedness

Personal awareness especially relating to personal bias

All of the above

Kolb's reflective cycle:

Emphasis the role experience plays in learning

Illustrates the developmental nature of reflection

Both a, b

None of the above

Which of following is not the reason of reflective practice:

Reflective practice helps students learn

It encourages us to understand our learners and their needs

It is a professional requirement

Reflective Practitioners models reflective learning

What are three levels of reflection:

Technical, empirical, practical

Technical, practical, Critical

Rational, Technical, Critical

Rational, Practical, Critical

Processes in participatory reflection include all of the following except

Careful description

Thoughtful listening

Extending thinking

None of the above

knowing in action is described by Schon as:

Our knowing is ordinarily implicit in our patterns of action

When we cannot say what we know

When we go about spontaneous, intuitive performance of the actions of every day life All of the above

Interpretation is the skill of

Understanding and transmitting

Cognition and communication

Thinking and talking

Receiving and sending information

When we think habitually, we _____

Ans: Ignore Data

A learning 'hub' which challenges practice and policy.

Looking in is the part of the reflective process which _____

Ans: Occurs as a response to experiences

Which of the following is an example of warm feedback?

Ans: Warm feedback consists of supportive, appreciative statements

Self-regulation is _____

Ans: A metacognitive process

One principle of reflection in the Roth Model is that _____

Ans: It uses 'what', 'why' and 'how' questions

Question 1:

Which of the following about teacher's professional knowledge and understanding is true? •

Once reflection becomes a habit you will not need to develop your reflective skills further •

Everyone always learns from experience

• **Teachers need to develop reflection and evaluation of their practice**

Question No.2:

According to Stephen Brook, reflective practice is?

• Locates teaching within the context of the school agenda

• Empowers the teacher to appreciate the bigger picture surrounding teaching

• **a way for teaches to understand their problems**

• None of the above

Question 3:

Which of the following is NOT a 'best' practice?Pg.19

• Educates the whole child

• **Follows the text closely to ensure coverage of the curriculum**

• Students' active participation in learning

Question No.4:

What does evidence suggest as being most important for a long-term commitment to Reflective Practice? Pg294

- Reflection is more effective when conducted collaboratively
- Collaborating with colleagues encourages the Reflective Practitioner to focus on what values inform his/her teaching
- Guidance and structure are key factors for Reflective Practitioners
- When the Reflective Practitioner knows what is best for children

Challenging environments

Question 5:

Which of the following is considered the least effective form of teacher development?

- Certificated Courses
- Workshops
- n-school mentoring
- Communities of Practice

Question 6:

Knowing-in-action is described by Schon as _____.

- Our knowing is ordinarily implicit in our patterns of action
- When we cannot say what we know
- When we go about the spontaneous, intuitive performance of the actions of everyday life
- All of the above

Question 7:

What are the major mechanisms involved in critical thinking for the reflective practitioner?

- Self-regulation
- interpretation
- both 'a' and 'b'
- None of the above

question 8:

Creative Thinking is not critical thinking because

- It is not logical
- It is not problem-centred
- It is emotive
- it is not based on 'black-and-white' thinking

DATA refers to pg.40

- The analysis of an event
- The teacher describing, analysing, thinking and acting
- The four steps analytical process necessary for guiding reflection

3:

What is reflective practice?

- A process to evaluate teaching
- Process leading to activity in response to any aspects of the professional role
- Process of action to improve the professional role
- none of these

4:

What is the impact of reflective practices on the teacher

- It leads higher quality practice
- It changes teacher's values and beliefs
- It leads to greater independence for the teacher
- It sustains inclusive environments

5:

Which of the following about teacher's professional knowledge and understanding is true? Once reflection becomes a habit you will not need to develop your reflective skills further • Everyone always learns from experience

- Teachers need to develop reflection and evaluation of their practice
- teachers need to develop reflection and evaluation to support their own and others practice

6

What does 'a lack of conceptual clarity' mean?

- The educational community has different interpretations of reflection
- It confuses perceptions about what happens in the classroom
- It includes too many viewpoints and so becomes confusing for the individual
- does not account for students' perspectives

7

According to Brookfield, which is the most powerful lens for teachers?

- The Self Lens
- The Student Lens
- the peers lens, the theory lens

8

Which of the following is an example of 'warm' feedback?

- Warm feedback extends thinking and raises concerns about teaching
- Warm feedback consists of supportive, appreciative statements
- Warm feedback raises questions
- none

9

Which of the following is not reflection in a professional setting?

- Deliberate
- Theory-focused
- Object-led
- Purposeful

10

The 'critical lenses' refer to

- The perspectives that a teacher uses to generate different viewpoints
- The focus given to the Reflective Practitioner by taking the different viewpoints necessary to reflect on practice
- A set of different viewpoints
- None

2:

Reflection-on-action can be described as _____

• Thinking about what to do

- A reconstructive mental review
- Problem resolution
- Weighing the pros and cons of alternatives

3:

Which of the following is NOT a principle of Reflective Practice? Pg.8

Select correct option:

- It is problem-oriented
- It is based on action research
- It is data-driven
- It is research-led

6:

Critical thinking is _____.

Select correct option:

- A biological process
- A psychological and cognitive process
- A communication process
- All of the above

7:

What are three levels of reflection?

Select correct option:

- Technical, empirical and practical
- Technical, practical and critical
- Rational, technical and critical
- Rational, practical and critical

8

What is question/ analysis in the reflective cycle?

Select correct option:

- Taking on the role of researcher
- Using quantitative data to make decisions
- Describing a situation
- Asking many questions

1:

Interpretation is the skills of _____.

Select correct option:

- Understanding and transmitting
- Cognition and communication
- Thinking and talking
- Receiving and sending information

2

Critical Reflection involves which of the following?

Select correct option:

- Analysing and c

▪ Analysing and evaluating

- Reasoning and evaluating
- Conceptualising and describing

2:

Which of the following is NOT one of the four steps in action research? Select correct option:

Action Research is...Process, Collaboration, Improvement, Practice, Communication

pg.250

3

What is part of the analytical process for the practitioner?

Select correct option:

- The identification of own assumptions
- The examination of the underlying values base
- Both 'a' and 'b'
- None of the above

4

Why reflective practice is so important?

Select correct option:

- Research highlights the importance of reflective practice for changing personal values biases
- Research shows that reflective practice is essential for developing our understanding about teaching and learning
- Research shows that students grades increase when they are taught by a reflective practitioner
- Research shows that reflective practitioners are more profession

5

The most significant part of the model is ____.

Select correct option:

- Learning from experience
- Learning from reflecting
- Learning from information
- Learning from knowledge

6

What do systematic reflexivity and epistemic reflexivity focus on?

Select correct option:

- Beliefs, values and assumptions
- Methods and theories
- Suppositions, theories, beliefs and assumptions
- Praxis, values, theories and beliefs

7

When we think habitually, we ____.

Select correct option:

- Dismiss reasoning
- Have a fixed focus which distracts attention
- Ignore data
- None of the above

8

Double loop learning involves _____.

Select correct option:

- Changing personal assumptions
- **Changing personal approaches** pg.51
- Both 'a' and 'b'
- None of the above

9

What factor makes reflection seem time-consuming?

Select correct option:

- **Regular learning networks are very time-consuming**
- Lack of leadership for Reflective Practice
- Regular learning networks are very time-consuming
- Staff is too busy

1. Is not reflection in a professional setting? **Object-led**
2. Best practice approach teachers must . **Be committed to professional dialogue with other teachers**
3. Why reflective practice is so important? **Research shows that reflective practice is essential for developing our understanding about teaching and learning.**
4. True about teacher's professional knowledge and understanding?
5. What is reflection practice? **Process of action to improve the professional role**
6. Best describes a regular learning network. **A learning "hub" which challenge practice and policy**
7. According to Moon. What are the key aspects of reflective practice? **Reflection is a form of mental processing**
1. One part of learning from reflection relies on teachers being open-minded. These characteristics include all but.....
 - a) **Using evidence to support or evaluate a decision or position**
2. What is hyper-reflexivity?
 - a) **Deconstructing applications of knowledge in the classroom**
3. Kolb's reflective cycl
 - a) **Both 'a' and 'b'**
4. Which of the following is not a reason for reflective practice?
 - a) **Reflective practitioner models reflective learning**
5. To operationalize a best practice approach teachers must
 - a) **Be committed to professional dialogue with other teachers**
6. Rapid reflection is all but
 - a) **Contemplative**
7. Processes in participatory reflection include all of the following except a) **None of the above**
8. A critical friend can be defined as
 - a) **A trusted person who asks provocative questions, provides data to be examined through another lens, and others critiques of a person's work as a friend**
9. Bloom's model which guides the lowest level of reflection might use all the following except a) **What instructional strategies were used?**

- 10: Which of the following about teacher's professional knowledge and understanding is true?
♦ **Teachers need to develop reflection and evaluation of their practice**
- 11: According to Stephen Brook, reflective practice is?
♦ **None of the above**
- 12: Which of the following is NOT a 'best' practice?
a) **Follows the text closely to ensure coverage of the curriculum**
- 13: What does evidence suggest as being most important for a long-term commitment to Reflective Practice?
♦ **Guidance and structure are key factors for Reflective Practitioners**
- 14: Which of the following is considered the least effective form of teacher development?
♦ **Certificated Courses**
- 15: Knowing-in-action is described by Schon as _____.
♦ **When we go about the spontaneous, intuitive performance of the actions of everyday life**
- 16: What are the major mechanisms involved in critical thinking for the reflective practitioner? ♦ **both 'a' and 'b'**
- 17: Creative Thinking is not critical thinking because
It is emotive
- 18: in a school, a critical friend can be all of the following except
a) **A friend from another school**
- 20: Personal attributes of critical thinkers include
a) **All of the above**
- 22: DATA refers to
♦ **The four steps analytical process necessary for guiding reflection**
- 23: What is reflective practice?
♦ **Process of action to improve the professional role**
- 24: What is the impact of reflective practices on the teacher
♦ **It leads higher quality practice**
- 25: Which of the following about teacher's professional knowledge and understanding is true?
♦ **Reflection becomes a habit you will not need to develop your reflective skills further**
- 26: **Teachers need to develop reflection and evaluation of their practice** teachers need
What does 'a lack of conceptual clarity' mean?
♦ **It includes too many viewpoints and so becomes confusing for the individual**
- 27: According to Brookfield, which is the most powerful lens for teachers? ♦ **The Self Lens**
- 28: Which of the following is an example of 'warm' feedback?
♦ **Warm feedback consists of supportive, appreciative statements**
- 29: Within a critical thinking framework, 'reasoning' is conducted from
a) **Both 'a' and 'b'**
- 30: Which of the following not a component of the process involved in reflective practice
Subject knowledge
- 31: Which of the following is not reflection in a professional setting?
♦ **Object-led**
- 32: The 'critical lenses' refer to
♦ **The focus given to the Reflective Practitioner by taking the different viewpoints necessary to reflect on practice**

3. Reflection-on-action can be described as _____. Thinking about **A reconstructive mental review**
- 35: Which of the following is NOT a principle of Reflective Practice?
Select correct option:
♦ **It is data-driven**
- 37: Re-theorising is the means by which Reflective Practitioners _____.
Select correct option:
♦ **Critically examine practice and theories in the light of theories**
- 38: Critical thinking is _____. **All of the above**
- 39: What are three levels of reflection? **Technical, practical and critical**
- 40 What is question/ analysis in the reflective cycle? **Asking many questions** 41: Interpretation is the skills of _____. **Cognition and communication** 42 Critical Reflection involves which of the following? **Analysing and evaluating** 43 : According to Schon, reflection-in-action and reflection-on-action are the mechanisms reflective practitioners use that permit them to..... **Both 'a' and 'b'** 45: What is part of the analytical process for the practitioner? **Both 'a' and 'b'** 46: Why reflective practice is so important? **Research shows that reflective practice is essential for developing our understanding about teaching and learning**
- 47: The most significant part of the model is _____. **Learning from experience** 48: What do systematic reflexivity and epistemic reflexivity focus on? **Suppositions, theories, beliefs and assumptions**
- 49: When we think habitually, we _____. **Ignore data**
- 50: Double loop learning involves _____. **Both 'a' and 'b'**
- 51: What factor makes reflection seem time-consuming? **Staff is too busy** 52: Which of the following best describes the benefits of reflective practice? **It determines what counts as knowledge**
- 53: What does the idea of reflective practice dismiss? **Fixed perception of the nature of the learning**
- 54: To operationalize a best practice approach teachers must **Be committed to professional dialogue with other teachers**
55. Looking in is the part of the reflective process which **Occurs as a precondition for reflection**
- 56: Which of the following Best describes a 'regular learning network'? **A placed for teachers to come together and discuss matters of concern**
- 57: According to Moon. What are the key aspects of reflective practice? **All of the above** 58: The Reflective Practitioner must _____. **Both 'a' and 'b'**
- 59: Reflection is NOT _____. **A simple 'tick box' activity**
- 60 :Deductive learning is _____. **From general to specific**
- 61: The Reflective Practitioner has adapted _____. **Both 'a' and 'b'**
- 62: Reflective writing focuses _____. **Specific details within an experience** 63:The Reflective Practitioner is concerned with _____. **Both 'a' and 'b'**
- 64:Working inductively means to _____. **Identify a goal and explore strategies to achieve it** 65: By having an open-minded attitude, the Reflective Practitioner is _____. **Adaptable to changing conditions**
- 66: Reflection can be negatively influenced by _____. **Both 'a' and 'b'**

- 67: The Professional Development Journal is _____. **A subjective dialogue** 68: We understand frames through the use of _____. **Metaphors to communicate logic** 69: The Reflective Practitioner has adapted _____. **Both 'a' and 'b'**
- 70: The study of parts of the community fall in _____. **Knowledge**
- 71: Concept-based learning means the Reflective Practitioner _____. **Works with deeper levels of conceptual understanding**
- 72: Being committed to the profession means _____. **Being responsible for continuing professional development**
- 73: Concepts determine _____. **The frames for perception**
- 74: A Reflective Practitioner is able to _____. **Question assumptions and values**
- 76: We develop theories-in-use as Reflective Practitioners to _____. **Understand theories as we apply them**
- 77: Effective writing in a Professional Development Journal _____. **Both 'a' and 'b'**
- 78: Exploring practice using inductive action planning requires _____. **Both 'a' and 'b'**
- 79: An effective action plan is _____. **All of the above**
- 80: Professional knowledge relates to _____. **All of the above**
- 81: A reflective action plan provides the Reflective Practitioner with _____. **Targets, planning, evaluation**
- 82: Reflective writing _____. **Links theory to practice**
- 83: Benjamin Bloom major work in is.... **Cognitive**
- 84: We can make theory-in-use visible by.... **Construction someone's theory-in-use from observations of behavior**
- 85: A 'problem statement' **Is not too specific**
- 86: Professional knowledge relates to **All of the above**
- 88: The reflective practitioner uses 3-dimensional instruction to **all of the above**
- 89: critically reflective teaching is **all of the above**

Topic 1 What is Reflective Practice?

- Teaching should value reflection and evaluation of their own practice and their continuing professional teachers.
- There is one quality above all that makes a good teacher-the ability to reflect on what, why and how we do things and to adopt and develop our practice.
- Most teachers spend time thinking about what they did in class but they don't always take it a step on their actions and make plans to do things differently.
 - What is the implication of this for reflective practice?
 - In a professional setting, reflection is:

- Deliberate
- Purposeful
- Structured
- A process which links theory to practice □ Deep learning.
- John Moon says:
 - —Reflection is a form of mental processing that we use to fulfill a purpose or achieve some anticipated outcome.
 - applied to gain a better understanding of relatively complicated or unstructured ideas and is largely based on the reprocessing of knowledge, understanding and
 - possibly, emotions that we already possess. (Moon, 2005:1)

Topic 2 Why the interest in Reflective Practice?

It encourages us to understand our learners and their needs and abilities

Stephen Brookfield (1995:92) believes that of all the pedagogic tasks teachers face, getting inside students' heads is one of the trickiest. It is also the most crucial.

Reflective teachers are more likely to develop reflective learners

Why the interest in Reflective practice?

- Finally and most importantly, reflective practice is the key to improvement. **Why Reflect?**

- Reflective practice leads to:

- Higher quality practice and better outcome for learners

- Awareness of value and beliefs

- More likely to challenge and change practices

- Leads to inclusive environment

Why Reflect?

Reflective practice leads to:

- Leads to seeking research, resources and advice

- Promotes collaboration between professionals □ Why is Reflective practice so important? • Research shows that reflective practice is a crucial way of learning and extending professional understanding.

Why reflect?

Reflection and critical reflection are highly personal processes that require the professional to take daily experiences, internalize them, turn them over in their mind and filter these new thoughts through previous lived experiences and personal values and biases before deciding how best to proceed. **Why is Reflective Practice so important?**

Research also shows that teacher who regularly reflect on what they do, why they do it and how this new knowledge can be used to improve their practice achieve the best outcomes for students. **The Place of Reflective practice in Teaching**

Consider this task to help you understand the place of reflective practice in teaching: a) Make a list of teaching strategies that you have used over the last 2-3 weeks (e.g. small group work, lecture, demonstration). Consider this task to help you understand the place of reflective practice in teaching:

b) Analyze each teaching strategy: what is your role, what is the role of the learners, what tasks are used? Consider this task to help you understand the place of reflective practice in teaching: c) Examine one teaching occasion which went 'badly', list the unexpected factors and try to explain them. Discuss with a colleague- how could you change your practice?

A culture of Reflective practice is essential. Further research demonstrates that in order to provide high quality teaching there must be a commitment to on-going learning, professional development and reflective practice (Comer, 2008; Howard, 2003).

This is not necessarily tied to specific training or in-service courses but instead can begin with looking at daily practice and being able to say, —that hasn't gone well, why might that be? Reflective practice is a process by which you stop and think about your practice, consciously analyze your decision making and draw on theory and relate it to what you do in practice. Critical analysis and evaluation refocuses your thinking on your existing knowledge and helps generate new knowledge and ideas.

Topic 3 What is to be Gained from Reflected Practice

It provides a real shift in power over who determines what counts as knowledge what counts knowledge.

The move is from a deterministic or even patriarchal mentality to one where there is considerable scope for genuine dialogue about the nature of our work.

Achieving Best Practice:

- From David Halberstam's novel —The Reckoning
- Hal Sperlich, an executive of Ford Motors, on one of his visits to Japan in the early 1970s, notices that there were no repair bays for defective cars:
 - — Where do you repair your cars? Sperlich asked the engineer with him.
 - — We don't have to repair our cars, the engineer answered.
 - — Well, then Sperlich asked — where are you inspectors?
 - — The workers are the inspectors, his guide answered.

(Halberstam, 1986: 716)

During the last two decades, the slogan of reflective teaching has been embraced by teachers, teacher educators and educational researchers all over the world.

The move toward seeing teachers as reflective practitioners is also a rejection of top-down forms of educational reform that involve teachers only as conduits for implementing programmed, curricular and ideas formulated elsewhere.

On the surface the reflected practice movement involves a recognition that teachers should be active in formulating the purposes and ends of their work. And that they need to play leadership roles in curriculum development and school reforms.

Most importantly, reflection helps us to develop our own learning and teaching framework. Stephen Brookfield (1995) proposed the following framework:

What is to be gained from reflected practice?

Stephen Brookfield (1995) proposed the following framework:

- RP allow us to consciously develop our own repertoire of strategies and techniques to draw upon in our teaching which are relevant to our particular context and discipline.
- RO helps us take informed actions that can be justified and explained to others and that we can use to generate answers to teaching problems.
- RP allows us to adjust and respond to issues and problems. For instance, rather than being upset by a poor teaching evaluation. It allow us to investigate and understand what underlies these evaluations and to take appropriate action, which might be to adjust our teaching.
 - RP helps us to become aware of our underlying beliefs and assumptions about learning and teaching so we understand why we do what do and what might need to change.
 - RP helps to promote a positive learning environment. Through reflection, our teaching becomes responsive to student feedback and needs which can serve to build trust in students when they see their feedback is valued and taken seriously through changes to teaching.
 - RP helps us to locate our teaching in the broader institutional and social context and to appreciate the many factors that influence student learning. IN this way reflection helps us to keep our perspectives and to avoid blaming ourselves for every problem that arises in our classrooms.

Topic 4 Advantages and Drawback of Reflective Practice

Critique of Reflective Practice

Schon (1983) coined the term reflective practice in his book — The Reflective Practitioner.

Reflective practice has been adopted in a wide range of professional group.

A number of critiques of the theory of reflective practice have been articulated. Lack of conceptual clarity

Too much focus on the individual

Failure to acknowledge ongoing discourses in practice

Failure to understand the complexities of practice We shall look at each of these in turn.

Lack of Conceptual Clarity

What do we mean by reflective practice and indeed what is reflection?

Van Manen (1995) says the nature of reflection is changing and may refer to a complex array of cognitively and philosophically distinct approaches and attitudes. Bleakley (1999) says that reflective practice is becoming a catch-all term for an illdefined process.

- Different authors frame reflective practice and its applications differently, emphasizing one aspect of the theory and ignoring others.
- Similarly in practice the theory is interpreted and applied in many ways, with different institutions and by various professions.
 - This all leads to confusion.

- Consequently the concept remains elusive □ -ill-defined.
- It is open to multiple interpretations
- It is applied in a wide variety of ways in practice environments.

Focus on the Individual

The theory places too much emphasis on the individual

Sandwell (1996) discusses the limits of reflection saying that the other (i.e. the wider educational community, including students) is excluded in every aspect of reflection (p 240). • In Sandwell's views, an emphasis on individual reflection fails to consider the accounts of other within the community within which reflection occurs.

- Taaylor and White (2000) note that reflective practice opens up uncertain ambiguous and complex world and tends to close much of this down again by obscuring student perspectives and freezing as true representations of what happens.
- Schon's theory does not acknowledge the problematic nature of language as a discourse within practice environment.
- Practitioner accounts are non-problematically viewed as true and no effort is made to foster reflection on language use or on the manner in which discourse construct means for us to name, describe and depict and manage our perceptions.

Discourses in Practice

Lather (1991) draws attention to the language which we use to frame our thinking. When such an understanding of language is applied to practice this raises the question of who frames account is put forward

Where is the other?

There is a danger of treating those with whom we are reflecting (our students or colleagues) as objects or things.

Without a proper consideration of human encounters we are in danger of confronting others as a thing to be objectified and manipulated (Gardiner 1999: 64).

Topic 5 Why is Reflective Practice Important?

Reflecting critically allows us to synthesise different perspectives (from others or literature) to help explain, justify or challenge what we have encountered in our practice. It may provide evidence to support our views or practices or it may explicitly challenge them.

Critical reflection also allows us to analyze what we have learned and how we have learned to enable us to take control of our own development. It is in light of these two functions that a great deal of importance is placed on critical reflection in the professional development of teachers. Many teachers already think about their teaching and talk to colleagues about it too. You might think or tell someone that —my lesson went well or —my students didn't seem to understand or —my students were so badly behaved today.

Why it is important?

However without more time spent focusing on or discussing what has happened, we may tend to jump to conclusions about why things are happening.

We may only notice reactions of the louder students for example reflective teaching therefore implies a more systematic process of collecting, recording and analyzing our thoughts and

observations as well as those of our students and then going on to making changes. If a lesson went well we can describe it and think about why it was successful.

If the students didn't understand a learning point we introduced, we need to think and why it may have been unclear.

If students are misbehaving-what were they doing when and why?

Working in this reflective way allows us to take control of our learning and development and to make changes in our practice that will develop our overall competence.

This preparation allows us to be prepared should the same events or others similar occur in future. **How RP can develop your work further**

Addressing students' needs

- By thinking about the way you have responded to your students individual needs, you can develop new/better strategies.

Working with colleague

- Reflecting on the way you interact with colleagues can help you to create better relationship
- This can help you to enjoy your work more

Your role with your students

- By thinking about the effectiveness of the way you work with student, you can tailor your approach to suit their needs and interests

Planning students learning

- By considering the effectiveness of your plans, you can help to develop new systems of planning and recording that are faster and more effective.

Working with external agencies/parents

- By thinking through how you work with external agencies or parents, you may be able to develop strong working relationships and lines of communication.

Over to you

- Consider how you have used reflective practice previously and how the reflection changed your outcomes.
 - Think about how your practice improved and any impact this had on others around you.

Topic 6 How can reflection be used for practice

Principles of RP

1. RP is problem oriented: problem posing as well as problem solving.
2. RP is based on action research. Action research is a powerful tool for change and improvement.
3. RP ensures that teaching and learning are research-led.
4. RP is data-driven ownership of the data is central to professional development.

If reflection is thinking – How is the thinking done?

It is important to consider how the thinking is done (the cognitive process), why it has occurred and what it involves (the stimulus) as well as learning and changes in practice (the outcomes). **How is the thinking done?**

Hatton and smithe (1995) say that three specific types of reflection can develop. **3 specific types of reflection can develop:**

Technical rationality (behavior and skills)

Reflection on action (involving descriptive reflection, description and justification, exploration multiple perspectives and factors.

Reflection-in-action (thinking in the moment).

Topic 7 Definition

Reflection

The term :reflective practice derives from the work of Dewey (1910,p6) wrote that reflective practices is —the active persistent and careful consideration of any belief or supposed form of knowledge in the light of the grounds that support itll.

This means you will have a questioning approach you will consider why things are as they are and how they may be.

Dewey went on to say that being reflective enables us to direct our actions with foresight... it enables us to know what we are about when we act. This is important in teaching.

What you do in the classroom and how you behave should have been carefully planned, informed by theory and experience and be purposeful.

Schon (1983) presents a slightly different view. He regards reflection as having two aspects: reflection in action and reflection on action.

Reflection in action refers to the quick thinking and reaction that occurs as you are doing, for example in the classroom you may be teaching a topic which you can see the pupils are not understanding. Your reflection in action allows you to see this consider why it is happening and respond by doing it differently.

Reflection on action is what occurs outside is what occurs outside the classroom when you consider the situation again. You may think more deeply about why the pupils did not understand, what caused the situation what options were open to you, why you chose one option and not another. Your responses will depend on you existing level of knowledge and experience you understanding of theories and your values.

In reflective practice practitioners engage in a continuous cycle of self-observation and self-evaluation in order to understand their own actions and the reactions they prompt in themselves and in learners. (Brookfield, 1995: Thiel, 1999).

The goal is not necessarily to address a specific problem or question defined at the outset as I practitioner research but to observe and refine practice in general on an ongoing basis. (Curriculum, 2001).

—Practitioners frame the problem of the situation they determine the features to which they will attend the order they will attempt to impose on the situation, the directions in which they will try to change it. In this process, they identify both the end to be sought and the means to be employed. (Schon, 1983). Consider these questions:

- Which definition do you prefer and why?
- Based on these definitions which elements do you think are most important for reflection?
- Is there something missing that you think should be included in a definition of reflection?

Topic 8 Types of Reflection

Hatton and Smith (1995) distinguish between dialogic reflection and critical reflection and the level of engagement associated with each.

Dialogic Reflection

Dialogic reflection refers to a less intensive approach that involves discourse with the self to explore a given event or incident.

It involves considering the decision and judgments made and possible reasons for these. An example of dialogic reflection is the basic model proposed by Brockbank and McGill (2000). The individual thinks about what they are going to do in their teaching about the information they'd like to convey, the methods they intend to use the level of engagement and so on in advance of the delivery of the class.

Afterwards they then consider how well they achieved their intended goals and which aspects require further attention.

As with all forms of reflection this approach is based in constructivism and required the individual to re-evaluate their own personal view of education, teaching and learning.

Have I been innovative and creative to engage and sustain student's interest? While this is an important first step and may lead to increased confidence or sense of pride awareness alone doesn't necessarily result in an improvement of the situation (Moon, 2004).

Critical Reflection
This refers to efforts accounting for the broader historic, cultural and political values in framing practical problems to arrive at a solution (Hatton and Smith, 1995). This process has been described by Boyd and Fales (1983) as :

—the core difference between whether a person repeats the same experience several times becoming highly proficient at one behavior or learns from experience in such a way to be cognitively or affectively changed. (1983 p, 100)

Therefore critical reflection facilitates transformational learning that can happen either gradually or from a sudden or critical incident and alter the way people see themselves and their world.

What do these considerations mean for RP

- RP is non-judgmental collaborative
- Should allow for flexibility open mindedness
- To be an effective reflective practitioner you must recognize that learning from what does not work is on the same path as learning what does work. There must be room for failure in the reflective process.

Topic 9 Critiques of Reflective Practice

There are cultural and personal risks involved in RP and not everyone ends up feeling empowered (Brookfield 1994, 1995).

- Moreover busy over stretched professionals are likely to find reflective practice taxing and difficult. Bland mechanical routinized and unthinking ways of doing reflective practice are too often the result.
- Ash (2002) agrees that teachers can —choose not to reflect on their practice constructively

and critically preferring to fall back on preconceived understanding of how they and their pupils should conduct themselves in the classroom. (cited Hbbs, 2007, O. 406).

Similarly, Bond and Walker (1998) say that reflection can be turned into a recipe –following checklists which they work through in a mechanical fashion without regard to their own uncertainties questions and meaning (1998, p. 193).

- **Ethical concerns**

- The teaching and application of reflective practice have generated a range of ethical concerns. • These relate to confidentiality right to privacy informed consent and professional relationships. • Practitioners who are engaging in reflective practice need to be aware of the risks and also of the potential for conflicts of interests.

A further problem to do with the impact on the individual reflector is the way reflection can involve constant striving for self-improvement. It can lead to feelings of self-disapproval and self-rejection (Quinn, 1988/2000). Further, if an individual understands the word critical to mean negative, they can end up in an unduly negative frame of mind.

Professional Concerns

Professional concerns come to the fore when reflective practice is done badly, ineffectively or inappropriately. In such cases, the point of RP is missed and its value goes unrecognized. Then RP may simply rationalize existing practice.

If applied uncritically, reflections can reinforce prejudices and bad practice, leading practitioners unwittingly to collude with dominant cultural assumptions.

Reflective practice at the level of the individual practitioner can also be a means by which organizations divest themselves of responsibility.

Fostering good practice here becomes matter for the individual rather than the organization. **Pedagogical concerns**

Reflective teaching raises two main pedagogic concerns

Developmental readiness and

The extent to which forcing teachers to reflect may prove counter-productive. **Developmental readiness**

Teachers need to be developmentally ready to engage in critical reflection and that some individual may be incapable of doing so. The respective abilities of novices and experts are relevant here. There is evidence that novices by definition lacking practical mastery are inclined to follow models mechanically and also that such reliance on models lessons with experience. **Forced RP**

Teacher reflection can end up being superficial strategic and guarded if teachers are forced to undertake RP rather than making a personal choice. Where appraisal follows, any genuine honest, critical self-examination may well be discouraged.

Conceptual concerns

A problem is posed by the way practitioners appropriate and embrace models of RP in uncritical piecemeal and reductionist ways. Often ideas are transplanted without sufficient care across philosophical disciplinary and cultural boundaries in the process becoming distorted or diminished.

Conceptual concerns

It can be understood in multiplicity of ways, according to the aims and functions of the exercise at stake and the theoretical /methodological traditions engaged (Finlay, 2003). **Conceptual concerns**

Some may see it primarily as a personal confessional account while for others it is a means to deconstruct socially situated action.

Topic 10 Formal and informal Reflection

Informal Reflection

- Involved self-questioning
- Develop our awareness our own assumption

Formal Reflection

- Draws on research & theory
- Provides guidance & framework for practice

This relies on experiential learning.

Such an approach is:

- Often dysfunctional, always incomplete
- Reliant on using present experience to test our beliefs, correcting the misinterpretations we have made.
- Often manipulated to fit our beliefs
- Biased as we usually see and hear selectively
- Can be planned or unplanned but usually conscious awareness that learning is taking place • A by-product of some other activity usually unintentional, unexamined and embedded in closely held systems
- Requires becoming aware of conscious learning in a non-routine situation as people reflect on experience
- Requires an awareness of learning to surface which make tacit assumptions explicit. This is call mindfulness.

Learning from formal reflection:

Formal reflection requires models or framework which provide a specific and structured approach All formal models rely on the following parameters

Formal Reflection

Learning

Behavior	Visible behavior Function: teaching, maintaining professional relationships
Reasoning/ Judgment	Students oriented understanding Function: problem solving

Professional thinking	Critical appraisal of literature and own practice Function: optimizing teaching based on experience
Personal reflection	Awareness, exploring Function: balance

Topic 11 What do professionals reflect on?

1. Philosophy
2. Value and beliefs
3. Practice
4. Practice that are taken granted
5. Reflecting on your

Reflecting on your philosophy

- Your perceptions of children, parents and families and yourself as a professional
- Children's rights and the extent to which children's views are taken into account in practice
- Professional roles in children's and families lives
- Professionals influence in children and families lives
- Your perceptions of children, parents and families and the extent to which your practices reflect cultural competence: that is your understanding of and respect for families and children's cultures and communities
- How to give children opportunities to express their own thoughts and feeling and support their sense of agency
- Your own prejudices and biases
- Your beliefs and values
- Yourself e.g. I am student-oriented, I see myself as providing a service, I have professional expertise
- Families e.g Families are the most important people in children's lives, families are the problem'

Reflecting on beliefs

- Children e.g . children are capable: children are interested learners from birth, children are needy and vulnerable

Reflecting on values

Inform decisions

- Come from life experiences, especially early ones within the family and community
- Come from professional study and experience

- Can be shared values and belief in every setting e.g. How children learn and develop Professionals reflecting
It is important to be aware of your own assumptions, values and beliefs and their impact on your practice.

Topic 12 Assumptions

Assumptions 1:

The reflection takes place in the classroom, conducted by and for the teacher. Research is contextualized and private.

Assumption 2:

Teachers reflect and act on what they observe Considered as research PLUS action.

Assumption 3:

Understanding requires dialogue (Kemmis and MC Taggart, 1992: Wells 1999, Vygotsky, 1999)

A social constructivist model of learning

Assumptions

A social constructivist model of learning:

The mind is mediated by language

Understanding is jointly constructed through dialogue

Knowledge is socially derived

Learning occurs through collaborative effort.

Assumptions and reflective practice

RP is therefore about becoming aware of our own assumptions, how these assumptions govern our practice, how these assumptions must shift to embrace change.

Understanding resistance to assumption shift and finally to change assumptions to support a better state of affairs.

Assumption

The Reflective practitioner is therefore someone who lives reflection in everyday practice.

Becoming a Reflective Practitioner takes time commitment, responsibility and discipline. **Key points about our assumptions**

Reflective teaching involves discovering and researching own assumptions.

Our assumptions can be revealed and explored through four lenses.

Autobiographical writing

Student feedback

Discussion with colleagues

The literature

Stephen Brookfield identifies these lenses:

Teaching in a critically reflective way involves teachers trying to discover the assumptions that frame how they teach. Teachers have four complementary lenses through which they view their practice.

The lens of their own autobiographies as learners, the lens of student eyes, the lens of colleagues perceptions and the lens of educational literature. Brookfield (2002:32)

Why these lenses are important?

Reviewing practice through these lenses helps surface the assumptions we hold about pedagogic methods, techniques and approaches and the assumptions we make concerning the conditions that best foster student learning.

Topic 13 Achieving best practice

Why best practice?

The 21 st century is different from the one in which we were educated

To survive in a new globally competitive world, children will need creativity problem-solving abilities a passion for learning , a passion for learning, a dedicated work ethic and lifelong learning attributes.

Through RP the teacher can provide the required opportunities and achieve best practice. **What does best practice?**

Look like for the reflective practitioner?

Students are engaged and focused on their work

Teacher use collaborative and authentic tasks which place students at the center of learning. There is a joyful feeling of purposeful movement, industrious thinking and a vital and vibrant atmosphere and environment.

Core Best Practices

- ☐ The teacher:
 - Educates the whole child
 - Teaches based on knowledge of how children develop and learn
 - Prepares children for success in school and for life
 - Provides an enriched environment
 - Creates active participants rather than passive observers.
 - Provides challenge.
 - Employs rigorous assessment of learning.

Core Worst Practices

- ☐ The teacher:
 - Plans and teaches in isolation

- Teaches to the test
- One size fits all
- Teaches without assessing student needs □ Teaches the text.
- Stays within a comfort zone of subjects.
- Applies student-centered/ activity-based approaches in name only.

Operationalizing best practice

- How might we summaries our understanding of those honored with the title and status of teacher as a skill reflective practitioner?
- Be concerned with the consequences of education, as well as what might be called technical proficiency.
- How might we summaries our understanding of those honored with title and status of teacher as a skill reflective practitioner?
 - Be prepared to experiment with the unfamiliar and learn from their experiences
 - Be committed to professional dialogue in collaboration with colleagues in school and beyond.
 - Have working patterns characterizes by a process of action evaluation and revision.
 - Assume as life long learners, responsibility for their ongoing professional development.

Topic 14 Implications for achieving best practice

To achieve best outcomes for children teachers need to reflect in practice as well as on practice The evidence demonstrates the importance of reflection in practice (thinking on your feet and reflection on practice (thinking after the event) if teachers are to achieve the best outcomes for children.

Implications for achieving best practice

Reflecting on one's own values and attitudes must accompany reflection on wider issues of practice such as the effect of child-adult relationship on children's overall learning outcomes. Teachers need guidance and structure if RP is to bring about positive change. To make changes teachers need to deepen their understanding of their own and others value base. For this to happen formal guidance and structure should be in place.

Studies indicate that without structured tools e.g. recording formats guided questions or example of others reflections and how they linked to improvements in practice- there can be a lack of commitment to reflective practice from staff.

Reflection also needs to be embedded as part of normal day-to day practice.

Collaboration with others.

Evidence suggests that while guidance and structure are important factors in engaging a professionals long term commitment to reflect practice, reflection is substantially more effective when the process involves others. Another professional can bring a different perspective to the reflection and encourage a teacher to think about what values they hold, why they hold them and what works best for children and their learning

Regular Learning Networks

Reflecting regularly with other professional comfortable and predictable world has been proven to create reflective teaching hubs.

Such hubs focus on policy development learning and pedagogy sharing best practice and challenging taken-for-granted practices.

Time and Space for Reflection

Research emphasizes that without tangible leadership commitment to reflective practice and time regularly set aside for staff to reflect, met or attend local learning

Network, reflection is viewed as little more than a time-consuming exercise. Research tells us that effective reflective practice is regular and included both reflection in practice and reflection on practice.

Informed by contemporary research

The one off in service training calendar which training calendar which dominates many professional development opportunities required refocusing moving away from single, isolated workshop towards more strategic and collaborative suite of longer term inter-related professional development programs.

Comparison with traditional models of teacher learning

The traditional model of teacher learning focuses on giving and receiving public knowledge that is available to all and that is not personal or based on individual experience. The primary assumption is that acquisition of shared knowledge will lead to behavioral change. Theory, thoroughly understood and carefully applied, means good practice. The traditional approach to professional development then reflects an underlying assumption that information is a stimulus for behavioral change. That individual receiving knowledge will use it to improve performance.

Topic 15 The Reflection Process

Modern teachers can use to support reflection all follow the same basic remises: •

- Reflection is cyclical
- Reflection is iterative

The Reflection process

The Cyclical Nature of Reflection Collecting Information

- Talking to children colleagues, parents others
- Observing colleagues as they teach
- A colleague observes your teaching and gives feedback
- Observing your own teaching (Video recording)
- Reviewing lesson plans (yours and others)
- Review your lesson evaluations

Question/Analysis

- Looking for a solution to correct a problem (single-loop learning)
- Examination of assumptions and theories –in use (double-loop learning)

- View things from different perspectives □ Asking why?

Plan

- Develop hypotheses
- Reflective practice strategies: Reflective journals or diaries; meeting with mentor or critical friend; reflective practice blog; Action research; video or observation Theory to practice Asking so what?

Act/Do

- Testing assumptions
- Engaging in behavioral experiments Asking now what?

Review

- Asking what happened?
- Van Manen, process three major
- Hierarchical levels at which reflection:

Review

Technical Reflection is the most basic level of reflection. It focuses on what works in the classroom.

At this level, teachers are concerned with applying knowledge to achieve instructional outcomes and actions taken are evaluated on the basis of their success or failure in the classroom. Practical Reflection is the next level of reflection. It focuses on the learning experience of the student.

It goes beyond technical-rationality into investing, questioning and clarifying the end objectives and the assumptions behind teaching activities designed to achieve those objectives. Critical Reflection is the highest level of reflection. It focuses on what knowledge is of value and to whom.

At this level, teachers are not simply concerned about the goals, the activities and the assumptions behind them but they reflect upon the larger context of education and question and question their practices critically, particularly in connection with ethical and moral issues.

Topic 16 Reflexivity

Reflexivity for professionals means engaging in both personal reflection and broader social critique

What are the skills which underpin teacher's reflexivity?

The Reflective Teacher

Skills underpinning Reflexivity

Critical thinking having roots in skepticism and critical theory-identifying and challenging assumptions, challenging the importance of context to imagine and explore to imagine and explore alternatives which leads to reflective skepticism.

Types of Reflexivity

- Where reflexivity is seen as introspection we can consider:

- Hyper- reflexivity that is the deconstruction of praxis
- Systematic reflexivity, that is looking at our suppositions theories and methods **Types of Reflexivity**

Where reflexivity is seen as introspection we can consider:

Epistemic reflexivity that is the exploration of our belief and assumptions. Consequently reflexivity situates reflective practice into our day-to-day experience in the classroom

17 Topics for critical reflection

Pedagogy and how it connects with the practice principles and learning and development outcomes, how practices and the physical environment acknowledge and encourage children's sense of agency. **Topics for critical reflection**

Induction and orientation for families who are new to the setting and the extent to which they set the stage for partnerships. The variety and effectiveness of communication with families sense of agency who is not attending?

Why? What strategies might change that? The physical environment and possible improvements. The extent to which the environment reflects the cultures, communities and lives of the families and children. Practices that are taken for granted.

30 critical Questions

Modeling reflection with students:

1. Was this activity successful ...why or why not?
2. If we do this again what can I do differently to help you learn more?
3. Did this activity help you learn more than other we have done? Why?

Classroom culture questions to ask about your rules and relationship:

4. Are the relationships that I have with my students helping or hindering their ability to learn? Classroom culture questions to ask about your rules and relationships:
 5. Could the problems I solved by pre-teaching my expectations or developing rules/procedures to deal with these issues?
 6. Was my demeanor and attitude towards my class today effective for student learning?
 7. Am I excited to go to work today?
 8. Are my students excited to come to my class today? (How much does #6 impact #7?)
 9. What choices have I given my students lately?
 10. Can I explain at least some thing about each of my student personal lives?
 11. Does my assessment accurately reflect student learning?
- Does my assessment is really reflecting learning or merely task completion or memorization skills?
13. Why did I really choose this particular lesson to cover this objective?
 14. What evidence do I have my students are learning?
 15. What new strategies have tried lately that might benefits student I am struggling with?
 16. In what ways am I challenging students who are clearly being in my classroom?
 17. What do I do when students aren't learning in my classroom?
 18. Which students benefited from this activity?

19. Which students did not benefit from this activity?

20: IN what area can I still improve professional?

What' s areas can I still improve professionally?

21. What's stopping me from improving in these areas?

22. In what ways can I support my colleagues in their student's learning?

23. Do my actions as a teacher show my belief that all students can learn at a high level? 24: DO my actions as a teacher show that I take pride in my work?

25. Are the relationships I have my colleagues conducive to creating a collaborative culture focuses on learning?

26. Are the relationship I have with my student's parents conducive to improving? 27. What new ideas have I tried n my classroom lately to keep myself energized about teaching? 28. What have I done lately to relieve stress and focus on my own health, to ensure I remain an effective teacher?

29. What thing am I currently doing that I could realistically make less of a priority in my professional? 30. How much time have I spent with my friends and family in the last two

weeks? **18 Learning from Reflection**

Reflection as a learning to gain further understanding and add meaning to our daily lives. Reflection is associated with learning that has occurred through experience and is an activity that helps you make sense of and learn from situations.

Reflection therefore is a means of assisting us to think to explore our thoughts and feelings and to work through an experience,

It is the active consideration of and learning from our thoughts and actions together with the further use of these thoughts and actions As a means of developing reflective thinking.

The most important aspect of engaging in reflection for your on-going personal and professional learning is that you are able to demonstrate your profession towards achievement of standards of proficiency.

The process of reflective writing leads to more than just a gain in our knowledge, it should also challenge the concepts and theories by which you make sense of knowledge when you reflect on a situation, you do not simply see more you see differently.

This different way of viewing a situation is reflected in statements about a commitment to action. Action is the final stage of reflection.

What do you know about and how confident are you about: The roles and responsibilities of a teacher

- Learning styles
- Planning a course
- Planning a lesson
- How people learn

Learning from Reflection

- What do you know about and how confident are you about:
- Lifelong learning
- Communication skills

- Presentation skills
- Demonstration skills
- Questioning and explaining
- Using a range of teaching methods
- Designing and uses resources
- Using ICT
- Assessing learning
- Reflection
- Subject knowledge and skills

Learning from Reflection

Reflective practice assumes a holistic approach to learning beginning with individual behavior, anything related to it becomes part of the process. At the very least, this includes the individual's background and cultural context.

The concept of cognition also expand from a narrow emphasis on information gathering or recall to the development of analytic and conceptual skills that enable the individual to create knowledge needed to respond to the diverse demands of practice.

This means that in reflective practice learning is cooperatively based.

Collaboration extends beyond the learner- facilitator relationship to include all of the individuals in an interdependent learning process.

19 Method of Reflection

Reflecting in and on practice

Dewey was among the first to identify reflection as a specialized form of thinking. He considered reflection to stem from doubt, hesitation or perplexity related to a directly experienced situation. Dewey argued that we think the problem through in order to formulate hypotheses in trial an error reflective situations and then use these to plan action and to test out our ideas. Dewey's ideas provided the basis for the concept of reflective practice which gained influence with Schon's work on —The Reflective Practitioner: How

Professionals Think in Action|| (1983)

His main concern was to facilitate the development of reflective practitioners. One of the most important and enduring contributions from this was to identify two types of reflection:

Reflection-on-action

After-the event thinking

Reflecting-in-action

Thinking while doing

Reflection-on-action

Teachers consciously review, describe, analyze and evaluate their past practice with a view to gaining insight to improve future

Teachers examine their experiences and responses as they occur

Reflective in and on action

In both types of reflection, teachers aim to connect with their feelings and attend to relevant theory. Teachers seek to build new understandings to shape their action in the unfolding situation. **The Core of Reflection**

For Schon, reflection-in-action was the core of professional artistry

He contrasted this with the 'technical rationality' favored by positivist theorists. In Schon's view technical rationality failed to resolve the dilemma of rigor versus relevance which teachers face.

Schon explained this by saying that teachers have to do more than follow set procedures. Teachers need to draw on both practical experiences and theory as they think on their feet and improvise. Teachers act intuitively and creatively

Reflection-in-action and reflection-on-action allows teachers to revise, modify and refine their expertise.

20 Level of Reflecting

Grushka, Hinde- McLeod and Reynolds (2005)

Distinguish between 'reflection for action', 'reflection on action' and 'reflection in action'. They offer a series of technical, practical and critical questions for teachers to engage with, for example: under 'reflection for action' teachers are advised to consider their resources and how long the lesson will take (i.e technical) For example: how to make the resources relevant to different learning styles (i.e practical)

Teachers questioning why they are teaching in a particular way (i.e critical)

Zeichner and Liston (1996)

Differentiate between five different levels at which reflection can take place during teaching. For example

Rapid Reflection

- Immediate
- On-going
- Automatic action by the teacher

Repair

In which a thoughtful teacher makes decisions to alter their behavior in response to student's cues **Review**

When a teacher thinks about, discusses or writes about some element of their teaching **Research**

When a teacher engages in more systematic and sustained thinking over time, perhaps by collecting data or reading research.

R-theorizing and reformulating

The process by which a teacher critically examines their own practice and theories in the light of academic theories

Topic 21 Guided Reflection

Johns (1994) developed the concept of guided reflection.

This involves engaging with a series of questions that help the teacher to explore and reconsider their motivation or rationale for actions.

These can be designed by the teacher or by another (e.g. school directorate or principal). These can be designed to form a reflective diary with one side of the page consisting of the descriptive material and the other consisting of the reflection and exploration.

Examples of questions that guide reflection

1. Maughan and Webb (2014)
2. What is most important/ interesting/useful/relevant about the object, event or idea?
3. How can it be explained (e. with theory)?
4. How is it similar to and different from other issues/events?
5. What does this mean for my future teaching?
6. Biggs and Tang (2007)
7. What was the problem? What went wrong? What is the evidence for the problem? How did you deal with the problem then?
8. Biggs and Tang (2007)
9. How did your solution to the problem relate to your theory of teaching and learning?

Guided Reflection and Bloom's Taxonomy

Questions which support guided reflection can be structured to parallel Bloom's taxonomy. What questions might teachers ask themselves as they move from lower order reflection to higher order reflection?

First, let's reflect on Bloom's taxonomy of reflection:

A Taxonomy of Reflection Bloom's remembering :

What did I do?

Teacher Reflection

What was the lesson? Did it address all the content? Was it completed on time? How did students —scorell on the assessment?

Bloom's understanding: what was important about what I did? Did I meet my goals? Teacher reflection: Can I explain the major components of the lesson? Do I understand how they connect with the previous/ next lesson?

Where does this fit into the curriculum? What instructional strategies were used? Did I follow best practices

Topic 22 Action Research

- Reflective practice can be more formally encouraged and directed as action research. Action research involves systematically changing your teaching using on the ground evidence that suggest the changes you make are in the right direction and enhancing student learning.
 - The target of action research is the teacher not the change that is being implemented.
 - Educational Action Research as a Critical Social Science- carr and Kemmis
 - Carr and Kemmis say action research is a form of research carried out by practitioners into their own practices.
- Action research is a participatory, democratic form of educational research for educational improvement.
 - Action research emphasizes practices a committed action or praxis
- Action research expresses a commitment to the improvement of practices not to argue for or against a theory.
- Action research is seen as a form of practical enquiry characterised by a self- reflecting spiral of cycles of planning, acting, observing and reflecting.
 - Some Suggestions for thinking about practice
- Bryant states that there are many themes and aspects of practice to question about action research before even looking at any theories.
 - They are:
 - Setting (where the activities are taking place)
- Play (looking at ideas in terms of a game where there are rules: these rules can be both enabling and constraining).

Topic 23 The Critical Friend

The critical friend's process focuses on developing collegial relationship and encouraging reflective practice.

This process is based in cooperative adult learning.

It also addresses a situation in which many teachers find themselves working as Independent units certified as knowing all that is needed to know: feeling like the continuation of professional learning is not essential to the creation of an exciting rich, learning environment.

It is currently in use by an estimated 35000 teachers, principals and professors in over 1500 schools and universities.

Providing an effective balance between informal supportive friendship and critical analysis.

Asking _why' things are being done in particular way seeding to gain a sense of the context within which the teacher works and challenge assumptions.

Thinking creatively and encouraging others to do so.

Key contribution from the critical friend

- Facilitating friendly, honest and critical analysis, shared professional reflections and horizon scanning.
 - Using their skills to ask _naive' questions which promote reflection and self-evaluation.
 - Providing advice and practical suggestions

Critical Friend Ethos

- Maintaining a —close distancell.
- Critical friends help others to be reflective but do not hold the role of evaluator.
- Critical friends must be knowledgeable about the subject the teacher teaches.
- Critical friends identify challenges but have no responsibility for overcoming them instead; they support objective and reflective debate to find solutions
- Critical friends maintain confidentiality frankness, sensitivity and independence.

Topic 24 Participatory Methods for Reflection

- Putting aside time regularly for focused discussion about practice with colleagues helps to ensure that reflection becomes regular practice.
- Important to have a facilitator who uses critical questions to stimulate discussion and deep thinking and to record the discussion and the action that arise.
 - Conversation and debate with
 - Colleague
 - Other professionals working in the same setting
 - Professionals working in another setting
 - A professional network
 - Families and children

Method

- Careful description
- Thoughtful listening
- Questioning feedback

Types of questioning feedback

- Warm feedback consists of supportive appreciative statements
- Cool feedback offers different ways to think about teaching and raises questions
- Hard feedback challenges and extends thinking and raises concerns.

The participatory process

Participating with others in RP allows colleagues and others to share issues and seek suggestions for positively overcoming them

Best in small groups where teachers feel comfortable sharing complex issues Hard feedback challenges and extends thinking and raises concerns

What is reflective practice?

- It is ongoing, dynamic process of thinking honestly, deeply and critically about all aspects of professional practice What is reflective practice?
- It occurs spontaneously as well as in planned reflection activities
- Reflective practice leads to action

Routine action Vs Reflection Action

Dewey's models is based on the fundamental difference that he sees between routine action guided primarily by tradition, instruction and imitation (quoted in Furlong and Maynard:

31) Which action amount to prejudices that is pre-judgments proper that rest upon a survey of evidencell. (Dewey 1910: 4-5), and Reflection action.

Reflective action is instead based on active, persistent and careful consideration (1910: 6), based on the need to solve a problem. For Dewey, it is in problem solving that we find—the steadying and guiding factor in the entire process of reflection and without which the course of suggestions flows on at fandum.

Reflection as Rationality

Teacher John Dewey, saw reflection as a further dimension of thought, and as such in need of education: while we cannot learn or be taught to think, we do have to learn to think well, especially acquire the general habit of reflection (Dewey, 1933).

For Dewey, reflection is a rational and purposeful act, an active persistent and careful consideration of any belief or supposed form of knowledge in the light of the grounds that support it and further conclusions to which it leads it includes a conscious and voluntary effort to establish belief upon a firm basis of evidence and rationality (Dewey 1933)

Reflection as rationality

Interestingly, from a modern educational perspective, Dewey's reference to different forms of belief and knowledge may reveal his willingness to apply objective rationality to more affective and emotional concerns.

Dewey's 5 Stage Model

1. We identify a problem that is perplexing and felt
2. We observe and refine the identified problem to create a fuller understanding
3. We develop a hypothesis or an understanding about the problem, its origins and possible solutions. We subject the hypothesis to scrutiny and reasoning, we test the hypothesis or understanding in practice
4. Dewey placed great emphasis on reflective thought and saw it as an important part of a cycle that enabled us to learn from experience.
5. He believed that reflective thought began when we found ourselves having an experience that raised some difficulties or dilemmas.

26 Donald Schon, 1983

Reflecting in and on practice

As we have seen, Schon developed the notions of reflecting in action and reflecting on action This can be represented in the following way:

First step

Teaching and learning session

- Reflection in action
- Observation yourself
- Monitoring
- Writing notes immediately on completion of the session

Second step

Planning the next session

- What can I incorporate from my reflections?
- Shall I try something new?
- What works with these learners on this course?

Third step

Reelection an action

- Time to ponder mull over what happened why things happened: how does it relates to theory, what have I learned, what can i use in future planning?

Forth Step

Teaching and learning session

- Reflection in action
- Observing yourself
- Monitor
- Writing notes immediately on completion of the session

Development of Schon „s Model

Schon believed that reflection begins in working practice with confusing situations. Teachers may have the theoretical knowledge (technical rationality) on their subject or the practice of teaching, it but this does not explain how their practice actually is.

From teachers real life experience in the classroom, teachers can develop tacit knowledge a synthesis of theory and practice which they have developed for themselves.

27 Kolb's Reflective Cycle (1984)

This model is based directly on Kolb's experiential learning cycle where active experimentation leads to a transfer of learning from current cycle to a new cycle

Components of Kolb's Modle Applied to RP

The experiential learning cycle can be detailed for RP:

1.concrete experience

Doing having an experience
(what happened)

2. Reflective observation

Reviewing , reflecting on the experience
(why did it happen that way includes taking feedback)

3. Abstract conceptualism

Concluding, learning from experience
(what can I learn from this?)

4. Active experimentation

Planning, trying out what you have learned
(How I plan to improve)

Components of Kolb's Model Applied to RP

Concrete experience

This relates to the incident or event prompting the reflection and involves the physical act of being involved in or having hands-on experience.

Although in theory you can enter the model at any stage this tends to be the main point of entry. **Reflective Observation**

After the event comes the initial reflection. This entails stepping back and viewing the event or incident from an objective perspective.

This should provide some insight into what you did and why you did it.

Abstract conceptualization

The initial reflections are then explored in greater detail.

Conceptualization involves interpreting events and actions looking for connections between these and the process of applying some theoretical.

Active Experimentation

Once this deeper understanding has been established, the individual translates it into predictions about what is likely to happen next or what actions should be taken to refine the way similar events may be handled in future.

28 Greenaway's 3-Stage Model (1995)

Greenaway outlined three simple steps to help learn from experience- these are plan-do-review and are seen as reflective cycle:

Do: Have an experience

Review: Review what happened and what can be learned

PLAN: Plan a way to approach the next round of experience

Benefits of Greenaway's 3-Stage Model

Easy to apply

Being experiential it is grounded teachers everyday practice Not time consuming.

Can be the foundation for more complex models.

Can be easily applied to many aspects of the teacher's role in school.

When to use „Plan-Do-Review“

- As a model for continuous improvement
- When starting a new class
- When developing a new or improved approach
- When defining a repetitive work process
- When planning data collection and analysis in order to verify and priorities problems or root causes.
- When implementing any change.

The Plan-Do-review procedure

Plan: recognize an opportunity and plan a change.

Review: Analyze the results and identify what you've learned.

The test into wider changes. Use what you learned to plan new improvements beginning the cycle again.

Questions to ask for planning

- What data indicates a change is required?
- What changes is to be made?
- How do you know the planned change is appropriate? What other alternatives are there?
- What sequence of steps is needed to implement this change?
- Who will be responsible for carrying our each step?
- Who will need to be consulted?
- Who will be the change affect?
- How long will the change take?

29 Roth (1989)

Roth (1989) summarizes reflective practice processes as follows:

Questioning what, why and how one does things and asking what, why and how other do things

- Seeking alternatives
- Keeping an open mind
- Comparing and contrasting
- Seeking the framework, theoretical basis and or underlying rationale
- Viewing from various perspectives Asking what if?
- Asking for others ideas and view points
- Using prescriptive models only when adapted to the situation
- Considering consequences

- Hypothesizing
- Synthesizing and testing
- Seeking and resolving problems

Roth describes 24 procedures of a reflective practitioner. The procedure range from those that correspond to cognitive models of reflection and teaching techniques to an embracing of uncertainty like adapt and adjust to instability and change to more formal procedure like —hypothesize, synthesize and test

The Griffith and Tans (1992) provide a very comprehensive way of categorizing reflective processes that considers both time frame and purposes.

They identify the dimensions of rapid reflection, repair, review, research and theorizing, contending that all are cognitive accomplishment.

Topic 30 Peter (1991)

Peters (1991) described a four-step process called DATA:

- Describe
- Analysis
- Theorize
- Act

1. Describe

In the first step the critical aspect of practice is described. This is a detailed and honest account. This involves paying attention to what happened, who was involved and their thoughts feeling and emotions as they related to the incident.

2. Analyze

The second step includes the identification of assumptions that support practitioners. Current approaches and underlying beliefs, rules and motives, governing teaching and learning. Here the teacher explores why this practice operates as it does examines the underlying values, beliefs and assumptions that maintain the practice and consider what sources of information they draw on to make sense of situation.

3. Theories:

In the third step, practitioners theories about alternative ways to approach learning, taking theory developed from the previous step and creating a new theory.

This requires teachers to think about new or additional sources of knowledge that may be helpful to make sense of what happened.

4. Act

In the fourth step, the practitioner tests the new theory. Success occurs only through additional thought and reflection. In the final stage of this model, the teacher put their new way of thinking into practice by trying out a new or a different way of doing things in order to enhance and improve their practice.

Teachers can use this model as part of a cycle of on-going learning and continuous improvement. **Goal:** To integrate scientific and practical theory (or application of theory), one must reflect on one's practical theory.

Topic 31 Brookfield's Critical Lenses

Brookfield (1995) suggests that we employ four —critical lenses through which to view and reflect upon our practice. These are:

1. Our own view (autography)
2. That of our students:
3. That of our fellow professionals:
4. The various theoretical perspectives found in educational literature.

Brookfield's critical Lenses:

Self-lens

Student lens

Peer lens

Theory lens

Despite the fact that teachers personal experience might be dismissed as anecdotal Brookfield asserts that our autobiographies are one of the most important sources of insight into teaching to which we have access (1995 p.31).

Teachers should consider whether the learning experience was inclusive and motivational: This is why.... The most fundamental meta-criterion for judging whether or not good teaching is happening is the extent to which teachers deliberately systematically try to get inside students head and see classrooms and learning from their point of view (Brookfield, 1995).

Reflection becomes critical when teachers consider:

- a) How power supports and also distorts the educational process
- b) How to challenge our own untested assumptions to uncover practices that appear to make teaching easier but actually work against our own long-term interests.

Applying the four Lenses

Among the strategies suggested by Brookfield which enable teachers to engage in critically reflective practice:

- A) The critical incident questionnaire (CIQ)
- B) Critical Practice Audit (CPA)
- C) Brookfield's CIO which guide journal writing as reflective practice

Critical incident questionnaire

- A) At what moment in class did you feel most engaged with what was happening?
- B) At what moment in class were you most distanced from what was happening?
- C) What action that anyone (teacher or student) took did you find most affirming or helpful?
- D) What action that anyone took did you find most puzzling or confusing?

E) What surprised you the most? (This could be about your own reaction to what went on, something that did, or anything else that occurs).

Topic 32 Johns Model for Structured Reflection (2000) The model requires looking in on the situation which includes focusing on your and paying attention to your thought and emotions.

It then advises looking out of the situation and writing description of the situation based on five sources of knowledge, each of which has a number of cues:

Look in

- Find a space to focus on self
- Pay attention to your thoughts and emotions
- Write down thoughts and emotions that are significant in realizing desirable

work. **Look out**

Write a description of the surrounding your thoughts and emotions What issues seem significant?

The description can be focused in the following ways:

Aesthetics

What was I trying to achieve?

Why did I respond as I did?

Personal

Why did I feel the way I did within this situation?

Ethics

Did I act for the best?

What factors were influencing me?

Empirics

What knowledge did or could have informed me?

Topic 33 Rolfe, Freshwater and Jasper (2001): The What Model

They advocate using three simple questions to reflect on a situation

- What?
- SO what?
- Now What?

The Levels

In the first level the individual reflects on the situation in order to describe it.

In the second level they construct their own personal theory of understanding about the event incident in order to learn from it.

In the final level they reflect on action, about what can be done to improve the incident and about the consequences of such action.

The Descriptive Level of Reflection

What....

-is the problem /reason for being stuck etc.?
-was my role in the situation Action did I take?
-were the consequences for me? For the students?

So what....

- ...does this tell me/imply about my teaching etc.?
-did I base my action on?
-should I have done?
- ...is my new understanding of this incident?

Now what...

-do I need to do to improve situation/prevent recurrence?
- ...are the broader issues?
-are the consequences?
- can I do to transfer this learning from other contexts?

Topic 34 Rodgers (2002)

The reflective cycle by Rodgers encompasses Dewey's conception of reflective thought. Rodgers illustrates reflection as a cyclical process comprised of four phases:

1. Presence in experience: learning to see
2. Description of experience: learning to describe and differentiate
3. Analysis of experience: learning to think from multiple perspectives and form multiple explanations
4. Experimentation: learning to take intelligent action

According to Rodgers teachers move forward and backward through the reflective cycle, especially between description and analysis.

Presence in Experience

The more a teacher is present, the more he can perceive, the greater the potential for an intelligent response. Presence as inclusive of several acts that together comprise the whole process of reflection seeing, differentiating its parts giving it meaning and responding intelligently in the moment and from moment to moment.

Description of experience

It is the differentiation and naming of an experience's diverse and complex elements so that it can be looked at, seen and told from as many different perspectives as possible. It

should be clear from the discussion of presence that what a teacher is able to describe is largely dependent upon what he has been able to apprehend in the experience.

Topic 35 Gore and Zeichner (1991)

They propose that each of the following four types of reflection is important. They indicate four major aspects of your professional work. You need to ask and reflect on pertinent questions about each of these aspects in order to develop a deep understanding of your classroom interactions. The purpose is to gain a holistic understanding of your professional work and your role in supporting successful learning by your students.

Academic Reflection

Do I know my content really well? Am I using appropriate pedagogical strategies for my students' needs? Am I well-organized and resourced in readiness to teach? Have I sequenced the content suitably for my student's needs and the defining characteristics of my discipline? Have I completed the planning cycle with suitable, relevant assessment strategies to evaluate student learning? Have I been innovative and creative?

Developmental Reflection

Am I providing teaching and learning contexts, tasks and instruction that are suitable and appropriate for my students from a developmental perspective? Have I evaluated my students' skills and thinking to determine the stages at which each of them is able to engage in different learning contexts?

Have I planned suitable instructional and task modification to accommodate the difference in the students' thinking, emotional and physical capacities? Have I designed teaching and learning activities that are interesting for diverse groups of students? Have I taken into account and effectively utilized students' various interests to design lessons and curriculum?

Social Reconstructionist (Critical) Reflection

What do I believe to be the purpose of education? Do I have specific philosophical beliefs or viewpoints about the values, purposes and function of education?

Topic 36 Gibbs Reflective Cycle (1988)

This model encourages the teacher to think about different aspects of a given situation or event to evaluate it, and establish an action plan for dealing with such a scenario should it arise again.

It helps the teacher to consider how they think and respond within a given situation and provides insight into self and practice.

Model of Gibbs Reflective Cycle

Description: What happened?

Describe in detail the event you are reflecting on.

Include: Where were you: who else was there: why were you there; what were you doing; what were other people doing; what was the context of the event; What was your part in this: what parts did the other people play; what the result.

Feeling: What were you thinking and feeling?

- Try to recall and explore those things that were going on inside your head;
- Include: How you were feeling when the event started; what you were thinking about at the time; how did it make you feel;

• How did you feel about the outcome of the event; what do you think about it now? **Evaluation:** What was good and bad about the experience? Try to evaluate or make a judgment about what has happened.

Analysis: What sense can you make of the situation?

Break the event down into its components parts so that can be explored separately. **Analysis:** What sense can you make of the situation?

• Include: what went well; what did you do well; what did others do well; what went wrong or did not turn out how it should have done.

Conclusion: what else could you have done?

- Different from the evaluation stage in that you have explored the issue from different angles and have a lot of information to base your judgment.
- Detailed analysis and exploration in the earlier stages means valuable opportunities for learning are not missed. What else could you have done?
 - Ask what you could have done differently.

Action Plan: If arose again what would you do?

During this stage you should think yourself forward into encountering the event again to plan what you would do. Would you act differently or would you do the same thing?

Topic 37 Boud's Triangular Representation

There are many different models of reflection as we have seen. Using models or at least being aware of their similarities and differences, can help you to deconstruct experiences, ensuring you are accessing the deeper level reflective questions and issues and ultimately providing a way to structure your learning from situations.

David Boud (1987) has defined reflection as:

- — A conscious activity in which we engage to explore our experiences and develop new understanding and conceptualizations. II
- (Boud, 1987)
- David Boud (1987) has defined reflection as:
 - Learning from experience is one of the most fundamental forms of learning.
 - Many models are cyclical in nature representing the idea that reflection leads to learning. Cyclical learning is never completed nor transferable without reflecting further in different contexts.

The simplest model can be seen in **Boud's Triangular Representation**

Boud's Triangular Representation Learning + Reflection =

Experience

- This model, although capturing the essentials (that experience and reflection leads to learning), has limitations.
 - It doesn't guide us as to what reflection might consist of or how the learning might translate back into experience.
1. Return to an event incident or experience and record it
 2. Consider it in detail at an emotional and cognitive level

3. Re- evaluate the event in the light of experience, knowledge and experimentation. Seek to understand the meaning of the experience
4. Plan for what you might change.

Topic 38 Atkins and Murphy Model

Atkins and Murphy (1993) address many of the criticisms identified by Boud with their own cyclical model:

Stage 1:

Awareness of uncomfortable feelings (usually due to new unfamiliar or negative situations) **Stage 2:** Examination of components of the situation

Stage 3: Analysis of the components of the situation

Stage 4: Summary of outcomes of reflection

- This model explicitly supports the deeper level reflection that was described previously. This is not to say that the other models aren't useful but it is important to remain alert to the potential to provide superficial responses as the critical, questioning and challenging elements of critical reflection are not as explicit as they are here.
- Atkins and Murphy suggest that for reflection to make a real difference to practice, we need to follow reflection with a commitment to action.
- The problem with such models of reflection is that they do not take account of the importance of reflection before action.
- This is when the teacher plans out before acting what s/she wants to do **Self-awareness (mindfulness)**
 - Insight into personal sensations, emotions, thoughts and actions
 - Acceptance/ownership of responses
 - Recognition/ acceptance of emotions sensations, thoughts in others involved
 - Involved honest examination of how the situation has affected the individual and how the individual has affected the situation

Description

- Comprehensive account of the situation either verbally or in writing
- Involve the ability to recognize and recollect accurately salient events and key features of an experience

Critical analysis

- Involve examining the components of a situation
- Identity personal cognitive and emotional schema
- Identify existing knowledge
- Identify biases and assumptions
- Imagine/explore alternatives

Synthesis

- Integrating new understanding
- Predict likely consequences of actions

Topic 39 John Smyth's Framework for Reflection on action

(1993) Smyth's framework takes the teacher through a number of phases

- A descriptive Phase
- A Reflective Phase
- An emancipator Phase

The Descriptive Phase

- Descriptive accounts and narrative

The Reflective Phase

- Reflective analysis against adopted theories
- Reflective analysis of the situation
- Reflective analysis of intentions

The Emancipator Phase

- Critique of practice regarding conflicts distortion and inconsistencies
- Engagement in emancipatory and change processes
- Self-critique and emancipation

Smyth operationalizes these phases of reflection for teachers as a set of activities developed from question cues:

Activity: describe

Cue: What did I do?

Smyth proposes reflection for teachers as a set of activities developed from question

cues: **Activity:** Inform (analysis)

Cue: What does this mean?

Smyth proposes reflection for teachers reflection for teachers as a set of activities developed from question cues:

Activity: confront (self-awareness)

Cue: How did I come to be like this?

Topic 40 Agyris and Schon 1978

Agyris and Schon pioneered the idea of single loop and double loop learning. The theory is built around the recognition and amendment of a perceived fault or error. Single loop learning is when practitioner or when a practitioner or organization, even after an error has occurred and a correction is made, continues to rely on current strategies, techniques or policies when a situation again comes to light.

In contrast, double loop learning involves the modification of personal objectives, strategies or policies so that when a similar situation arise a new framing system is employed (i.e. new approaches are used to solve it).

From Theory to Practice

i. Single Loop learning

Involve connecting a strategy for action with a result. For example, if an action we take yields results that are different to what we expected through single-loop learning, we will observe the results, automatically take in feedback and try a different approach.

ii. Double Loop Learning

The cyclical process of applying a new strategy applying a new strategy to achieve an outcome may occur several times and we may never succeed. Running out of strategies may push us re-evaluate the deeper governing variables that make us behavior the way we do. Re-evaluating and reframing our goals, values and beliefs is a more complex way of processing information and involves a more sophisticated way of engaging with an experience. This is called double-loop learning and looks at consequences from a wider perspective. In situation where teachers employ double loop learning, not only will we evaluate our own goals and beliefs but also those of the people we interact with. To have a constructive outcome, we may need to modify and adapt some of these variables to create an attitude that is open to many cultural values and application methods.

Topic 41 Mezirow (2000)

Mezirow (2000) argues that reflection only leads to learning if it leads to learning if it leads to transformation. Merizow suggests that transformation occurs where the original starting point causes a dilemma that needs to be addressed and then suggests that there are a series of possible phases which may be gone through:

Mezirow"s Transformational Learning

- A disorienting dilemma loss of job, divorce, marriage , back to school or moving to a new culture
- Self-examination with feeling or fear, anger, guilt or shame
- A critical assessment of assumptions
- Recognition that one's discontent and the process of transformation are shared
- Exploration of options for new roles relationships and action
- Implementing one's plans
- Provisional testing of new roles
- Building competence and self-confidence in new roles an relationships
- A reintegration into one's life on the basis of conditions dictated by one's new perspective
- What is particularly striking about Merizow's ideas is the emphasis on conscious, self-managed learning.

Learning is not a direct result of the experience, it happens because the individual takes charge of their critical reflection and explicitly plans and carries out steps to learn from it. The following is a sequence for reflectivity draw from Mezirow's model:

- A disorientating dilemma
- Picture the event
- Critical assessment of assumptions
- What does it mean to you to feel this?
- What advice are you giving yourself in the picture
- How do you interpret what is happening

Critical assessment of assumptions What is your intention? Exploration of new roles

- How would you prefer this to be different?
- When this begins to occur for you, what will be different about you?
- How do you interpret what is happening?
- What is your intention?

Topic 42 Criticisms of Reflective Practice

- A number of writers discuss key concerns of RP in terms of its problematic side:
 - Brookfield (1994, 1995) explains the cultural and personal risks involved
- Ash and Moore (2002) say that new teachers can choose not to reflect constructively and critically, falling back on pre-conceived understandings. There are four areas of concern about reflective practice:
 - Ethical
 - Professional
 - Pedagogic
 - Conceptual

Ethical criticisms of RP

Concerns relate to confidentiality, rights to privacy, informed consent and professional relationships. Practitioners

Engaging in RP need to be aware of the risks and the potential for conflicts of interest. A further problem is the way reflection can involve constant striving for selfimprovement. It can lead to feelings of incompetence and self-disapproval.

When an individual understands the word critical to mean negative, they can develop a negative frame of mind.

Professional Concerns

- Relevant when RP is done badly or inappropriately. In this case the value of RP is missed and it simply rationalizes existing practice.
 - It can reinforce prejudices and bad practice
 - The inappropriate use of RP may devalue teachers professional work instead of promoting it.
- Where teachers follow RP models in mechanical, routinized or instrumental ways they fall into the trap of engaging neither critical analysis or their emotions
- At the level of the individual teacher it can be means for organizations to ignore their responsibilities so that fostering good practice is a matter for the teacher rather than the organization
- 2 key concerns relate to developmental readiness and the extent to which forcing student teachers to reflect may prove counter productive

Pedagogic Concern: Developmental Readiness

- Teachers need to be developmentally ready to engage in critical reflection and some individual may not be capable (ready) for reflection.
- The respective abilities of novice and expert are relevant here. Novices tends to follow models mechanically and experts tend not to rely on models.
- As compulsory element of teacher education courses or of organizational requirements, RP ends up being superficial, strategic and guarded.

Conceptual concerns

- Problems are posed with the way teachers embrace RP in uncritical and reductionist ways • Often ideas are transplanted without sufficient care across philosophical, disciplinary and cultural boundaries
- Reflexivity is concept which is easily miscommunicated: it can be understood in many different ways according to the aims and function of the RP activity

Criticism of RP

Regarding these issues therefore, care needs to be taken to recognize complexity and problematic what is involved in RP rather than accepting it as fact or as self-evident. The ethical, professional, pedagogic and conceptual concerns presented here neither condemn RP nor suggest that it should not be used.

Topic 43 Introduction to Critical Thinking Part 1

In this lecture we will explore the following question- What is critical thinking?

- How do you know when you are thinking critically?
- What are the characteristics of teachers who are good at critical thinking? Critical thinking involves:

- Analyzing
- Conceptualizing
- Defining
- Examining
- Inferring
- Listing
- Questioning
- Reasoning
- Synthesizing

What is Critical reflection?

With a purpose to evaluate information in a disciplined way to help us evaluate and refine our thinking. As reflective practitioners we must want to be better at thinking, to seek out and be guided by knowledge and evidence that fits with reality:

1. Belief
