EDU301 Final Term Subjective File by Tanveer Online Academy

What are the features of Problem Biased Learning?

Answer:

- Driving question or problem
- Focusing on interdisciplinary integration.
- Authentic investigation
- Production of artifacts and exhibits.
- Collaboration

What are the Approaches of Problem Biased Learning?

Answer:

- Modelling
- Guiding
- Fade out

What are the class properties that motivate students?

Answer: Class properties that motivate students include creating a supportive and inclusive learning environment where students feel valued and respected. Incorporating engaging and interactive teaching methods, such as hands-on activities, multimedia presentations, and discussions, can also boost motivation. Providing opportunities for student autonomy, choice, and personalization in their learning experiences further enhances motivation. Additionally, offering meaningful feedback and recognition for students' efforts and achievements can contribute to a positive motivational climate in the classroom.

What is integrated curriculum?

Answer: The integrated curriculum is a great gift to experienced teachers. It's like getting a new pair of lenses that make teaching a lot more exciting and help us look forward into the next century. It is helping students take control of their own learning.

Could you provide a comprehensive note on essential questions?

Answer: Essential questions are central inquiries that guide teaching and learning, fostering critical thinking, exploration, and deeper understanding of key concepts. These questions are open-ended and thought-provoking, often addressing complex issues or enduring dilemmas relevant to the subject matter. They encourage students to engage in inquiry, analysis, and reflection, rather than simply memorizing facts or information. Essential questions stimulate curiosity, promote discussion and debate, and serve as a framework for organizing curriculum and assessments. By grappling with essential questions, students develop higher-order thinking skills, make connections between ideas, and construct meaning in their learning journey. Ultimately, essential questions empower students to become active participants in their own learning process, cultivating a lifelong love for learning and a deeper appreciation for the complexities of the world around them.

Can you describe the structure of the discussion method?

Answer: The structure of the discussion method typically follows a systematic approach aimed at fostering meaningful dialogue and critical thinking among participants. Here's a general outline of the structure:

Introduction: The discussion begins with an introduction to the topic or issue at hand. The facilitator may provide background information, pose a thought-provoking question, or share relevant materials to engage participants and set the stage for discussion.

Opening Statements: Participants may be invited to share their initial thoughts, opinions, or experiences related to the topic. This helps to establish a foundation for further discussion and encourages active participation from the outset.

Main Discussion: The bulk of the discussion involves exploring the topic in depth, with participants sharing their perspectives, asking questions, offering evidence or examples, and responding to each other's contributions. The facilitator guides the conversation, ensuring that all viewpoints are respected and encouraging deeper analysis and reflection.

Subtopics or Themes: Depending on the complexity of the topic, the discussion may be organized into subtopics or themes to focus the conversation and ensure that key aspects are addressed comprehensively.

Summarization and Synthesis: Towards the end of the discussion, the facilitator summarizes key points, themes, and insights that emerged during the conversation. This helps to consolidate learning and identify areas for further exploration or action.

Closing Reflections: Participants are given the opportunity to reflect on their learning experience, share any final thoughts or questions, and express appreciation for the contributions of others. This fosters a sense of closure and reinforces the value of collaborative dialogue.

Overall, the structure of the discussion method is flexible and may vary depending on the goals, context, and dynamics of the group. The key is to create a supportive and inclusive environment where participants feel empowered to engage in meaningful discourse, challenge assumptions, and explore diverse perspectives.

What is the Social Learning Theory?

Answer: Social learning theory hypothesizes that individual's actions are influenced by the value particular goals hold for them and their expectations for success.

What are the Basic Inquiry Processes?

Answer: Following are the basic inquiry processes:

- Observing
- Classifying
- Inferring
- Using numbers
- Measuring
- Using space-time relationships
- Communicating
- Predicting
- Making operational definition
- Formulating hypotheses
- Interpreting data
- Experimenting

What is the feature of Adaptation in MAT?

Answer: Its functions are refining and problem. One a skill is achieved students should be able to relate or refine that skill to their practical life. Performance includes find connections and innovations.

What are the names of different Methodologies of Integration?

Answer: 10 different methodologies of integration:

- Fragmentation
- Connection
- Nested

- Sequenced integration
- Shared integration
- Webbed
- Threaded integration
- Integrated
- Immersed integration
- Networked integration

What are the Essential Questions of Wiggins and McTighe's?

Answer: Following are essential Questions of Wiggins and McTighe's

- Is there enough to go around (e.g. food, clothes, water)?
- Does art reflect culture or shape it?
- Are mathematical ideas inventions or discoveries?
- What do we fear?
- Who owns what and why?

What do you know about cooperative learning? Or Can you describe a cooperative learning concept?

Answer: Cooperative learning is a learning method. Cooperative learning is an umbrella term which covers many other methods. Cooperative learning methods are those in which more than one person work together. Cooperative learning is a method of instruction that has students working together in groups, usually with the goal of completing a specific task. This method can help students develop leadership skills and the ability to work with others as a team. Cooperative learning should have cooperative tasks, cooperative goals and cooperative rewards.

What considerations should be made about inquiry?

Answer: Following considerations should be made about inquiry:

- The inquiry learning cannot be rushed.
- Then how to cover the syllabus.
- Need to see the bigger picture.
- Remember, less is actually more.
- Students must find the pattern.

What is Observation?

Answer: Observation leads to questions and learning. Observation can be controlled or free. Controlled observation is the observation in which we are specific about the things we are observation. In free observation we observe everything in our surrounding. Both types of observation are important. In inductive mode there is free observation. It can be controlled. In deductive mode there is controlled observation.

What are the differences Between Problem-Based Learning and Project Based Learning?

Answer:

Problem-Based Learning:

The essence of problem-based learning consists of presenting students with authentic and meaningful problem situations that can serve as springboards for investigation and inquiry. PBL is designed primarily to help students develop their thinking, problem solving and intellectual skills and they actually learn through autonomous learners' opportunity.

Project Based Learning:

Project Based Learning is an instructional approach built upon authentic learning activities that engage student interest and motivation. These activities are designed to answer a question or solve a problem and generally reflect the types of learning and work people do in the everyday world outside the classroom.

Project Based Learning is synonymous with learning in depth. A well-designed project provokes students to encounter (and struggle with) the central concepts and principles of a discipline.

In problem base learning the focus is on process. In project learning the focus is on ultimate outcome and product. Inquiry base learning and project learning are the learning approaches. When we talk about learning approaches it has a lot of importance of process rather than product. If we talk about factories, at one time we assess them on the basis of product. Later on, it is assessed on the basis of process. Now both process and product are important.

What are the characteristics of critical thinking?

Answer: Here are five characteristics of critical thinking:

Analysis: Critical thinkers are skilled at examining information, arguments, or situations in a systematic and logical manner to identify patterns, relationships, and underlying assumptions.

Evaluation: They have the ability to assess the credibility, relevance, and validity of information or arguments, using evidence and reasoning to make informed judgments or decisions.

Inference: Critical thinkers can draw logical conclusions or implications based on available evidence and information, recognizing potential biases or fallacies in reasoning.

Problem-Solving: They excel at identifying and defining problems, generating and evaluating alternative solutions, and implementing effective strategies to address complex issues or challenges.

Creativity: Critical thinkers demonstrate creativity in generating innovative ideas, approaches, or solutions to problems, while also being open-minded and willing to consider diverse perspectives and viewpoints.

What are the features of a classroom?

Answer:

- Some classroom features are within the teacher's control, while others, like multidimensionality and immediacy, cannot be readily influenced. The classroom is a multidimensional environment.
- Group processes and structures such as classroom goals, tasks, rewards, and participation levels are more directly managed by teachers. Teacher expectations are external, whereas personal goals are internal.
- Research reveals significant connections between teacher practices, student engagement, and academic success.
- Students typically respond more positively and engage more persistently in academic tasks in classrooms characterized by democratic processes. In contrast, authoritarian control is teacher-centric, while democratic processes involve students actively in problem-solving and decision-making.
- Influence in classrooms isn't solely from teachers; students also influence each other and affect teacher behavior. Peer support can serve as a significant motivational factor.
- Effective teachers foster productive learning communities by focusing on alterable factors like student motivation and group dynamics. Motivation strategies, such as peer

tutoring and fostering creativity, contribute to creating productive learning environments. Over time, external rewards may lose their effectiveness.

What is presentation?

Answer: A presentation refers to the act of delivering information, ideas, or content to an audience in a structured and organized manner. It typically involves using visual aids, such as slides or multimedia, to enhance understanding and engagement. Presentations are commonly used in educational settings, business meetings, conferences, and public speaking engagements.

How can teaching develop children's skills in the classroom?

Answer: Teaching can develop children's skills in the classroom by providing engaging and interactive learning experiences tailored to their needs and abilities. Teachers can employ various instructional strategies, such as differentiated instruction, hands-on activities, and cooperative learning, to foster the development of cognitive, social, and emotional skills. Additionally, offering constructive feedback and opportunities for reflection can further enhance children's learning and growth.

What is Guided Inductive Inquiry?

Answer: Guided inductive inquiry involves facilitating student-led exploration and discovery within a structured framework provided by the teacher. It encourages students to make observations, analyse patterns, and draw conclusions independently, with guidance and support from the teacher when needed. This approach fosters critical thinking, problem-solving skills, and deeper understanding of concepts.

How are induction and essential questions linked?

Answer: Induction and essential questions are linked as induction often serves as a means to explore and address essential questions. Essential questions guide the inquiry process by prompting students to delve into key concepts, analyze information, and draw conclusions through inductive reasoning. Inductive inquiry, in turn, allows students to explore these questions through hands-on exploration, observation, and analysis, leading to deeper understanding and critical thinking. In essence, essential questions drive the inductive inquiry process, shaping students' exploration and discovery.

What is the required age for the formal operational stage of Piaget's cognitive model?

Answer: 11+ years

How important are audio and video in the classroom?

Answer: Audio and video are essential tools in the classroom as they enhance engagement and comprehension for students with diverse learning styles. Visual aids like videos provide dynamic and interactive content, making complex concepts more accessible and memorable. Additionally, audio recordings can reinforce verbal instruction, assist in language acquisition, and accommodate auditory learners. Integrating audio and video resources enriches lessons, stimulates interest, and fosters a multimedia learning environment conducive to student success.

What are the characteristics of problem-based learning?

Answer: Characteristics of problem-based learning (PBL) includes:

- Authentic problems
- Student-centered approach
- Collaborative learning
- Inquiry and critical thinking

- Application of knowledge
- Facilitator role
- Reflection

What are the Skills of project-based learning?

Answer: Communication and presentation skills, organization and time management skills, research and inquiry skills, self-assessment and reflection skills, and group participation and leadership skills.

Is experiment a type of discovery learning? How?

Answer: Yes, experiments can be considered a type of discovery learning. Discovery learning is a method where students learn through exploration and discovery, often through hands-on experiences.

When students conduct experiments, they actively engage with the material, manipulate variables, observe outcomes, and draw conclusions. This process allows them to discover concepts, principles, and relationships first hand, rather than being told or shown by the teacher.

Through experimentation, students have the opportunity to explore, make connections, and construct their own understanding of the subject matter. This active involvement in the learning process enhances retention and comprehension of the material. Therefore, experiments align closely with the principles of discovery learning by promoting independent exploration and discovery.

What is teacher's control?

Answer: Teacher's control refers to the level of authority and guidance that a teacher exercises over the classroom environment and instructional activities. It involves setting and maintaining expectations, managing behavior, directing learning activities, and ensuring that the

educational objectives are met. Effective teacher control strikes a balance between providing structure and fostering student autonomy, creating a conducive learning environment where students can thrive.

What are the skills of critical thinking?

Answer: Attributing, Compare/contrast, Classifying, Sequencing, Prioritizing, Draw conclusions, Determining cause/Effect

What is critical thinking?

Answer: The process of determining the authenticity, accuracy, or value of something; characterized by the ability to seek reasons and alternatives, perceive the total situation, and change one's view based on evidence. Also called "logical" thinking and "analytical" thinking.

What is information processing theory?

Answer: Information processing theory posits that human cognition operates like a computer, with the mind encoding, storing, and retrieving information in various stages. It emphasizes how individuals acquire, process, and use information to solve problems, make decisions, and learn new concepts. This theory highlights processes such as attention, perception, memory, and problem-solving, offering insights into how cognitive functions interact to facilitate learning and behavior.

What is seating plan in class?

Answer: A seating plan in class refers to the arrangement of students' seating positions within the classroom. It is designed to optimize the learning environment by strategically placing students to promote engagement, focus, and interaction. Seating plans can vary based on factors such as classroom layout, teaching style, and student needs. They may include arrangements

like rows, circles, or groupings, aiming to facilitate classroom management, promote collaboration, and enhance learning outcomes.

What is unguided inquiry and its relation to the teacher?

Answer: Unguided inquiry and the teacher:

A teacher is a classroom clarifier, guiding students to develop logical thinking skills.

Students will make generalizations that are too broad, infer single cause –and-effect relationships where there are several, and perceive cause-and-effect relationships where none exist.

If errors exist in the student’s logics or inferences, teacher needs to point them out. But teacher should not tell the student what the correct inference is. As there is much less direct teacher probing in unguided learning inquiry.

Under unguided inductive inquiry, during initial stage teacher should ask students to work alone. When students work alone, they tend to do most of the work themselves. If at initial stage, Teacher divides the students in pair or groups, one in the group usually takes the leadership role and dominates the group’s thinking, so that there are really only one participant and two observers.

When students demonstrate the necessary aptitude to use the inductive method successfully in an unguided fashion, teacher can assign small groups to work together. Unguided learning is important as well but teacher’s role is very passive in the sense that teacher is not the active participant in the inquiry process. But to make students actively participate in the process, teacher needs to be there in the form of a prompter. If students do not tell the correct inference, then teacher must not tell them the correct inference. They are there to just guide the students.

What is dialogic discussion?

Answer: Dialogic discussion also called as interactive discussion. This has come from Socrates method. In second script there was dialogue. First script is monologic because there was a lot of teacher control.

What are the three things of cooperative learning?

Answer:

- Social Skills
- Academic Achievement
- Tolerance and Acceptance of diversity

What is inductive inquiry?

Answer: Inductive inquiry is a learning approach where students derive general principles or concepts from specific examples or observations. It involves gathering data, making observations, identifying patterns or trends, and then formulating hypotheses or generalizations based on the evidence. This method encourages critical thinking, problem-solving, and the development of analytical skills by allowing students to explore and discover knowledge through their own investigations. Inductive inquiry promotes active engagement and deeper understanding of concepts, making it an effective tool in various educational settings.

How does experiment fit into the type of discovery learning?

Answer: Experiments are a fundamental component of discovery learning as they offer hands-on experiences where students actively engage with concepts, materials, and phenomena. Through experimentation, learners explore variables, make observations, and draw conclusions, fostering a deeper understanding of the subject matter. This process encourages critical thinking, problem-solving, and the construction of knowledge through direct experience, aligning closely with the principles of discovery learning. By allowing students to

investigate and discover concepts independently, experiments facilitate a more meaningful and enduring learning experience.

What are the characteristics of inquiry in teaching?

Answer: Following are the characteristics of inquiry in teaching:

Questioning: Inquiry-based teaching involves posing open-ended questions that encourage critical thinking, problem-solving, and exploration of concepts.

Exploration: Students engage in hands-on activities, experiments, or investigations to explore phenomena, gather data, and construct knowledge.

Collaboration: Inquiry-based learning often promotes collaboration among students, fostering peer-to-peer interaction, discussion, and the sharing of ideas and perspectives.

Reflection: Learners are encouraged to reflect on their experiences, observations, and findings, promoting metacognition and deeper understanding.

Student-centered: Inquiry-based teaching shifts the focus from the teacher to the student, emphasizing active participation, autonomy, and ownership of learning.

How does adolescence change brain processes?

Answer: During adolescence, the brain undergoes significant structural and functional changes, particularly in regions associated with higher-order cognitive functions and emotional regulation. These changes include synaptic pruning, myelination, and increased connectivity within neural networks. Adolescents often experience heightened sensitivity to rewards and social stimuli, alongside fluctuations in impulse control and risk-taking behavior, reflecting the

ongoing development of the prefrontal cortex and limbic system. These neurological changes contribute to the cognitive, emotional, and social transformations observed during adolescence.

What is the name of the first category of integration phase?

Answer: Fragmentation

What is the seating arrangement of class by the teacher?

Answer: Seating arrangement of a class should be in such a manner that the children can easily interact with one another and they could work together. They could share ideas.

Placing students in circles or using U-shaped seating arrangements facilitates classroom discussions. Socratic Method is basically a discussion method. It is also called dialogic method. We can develop knowledge through this method.

What are the planning phases?

Answer: Following are the planning phases:

- Prior to instruction
- During instruction
- After instruction

What is communication?

Answer: Communication is the process of exchanging information, ideas, thoughts, or feelings between individuals or groups through verbal, nonverbal, or written means. It involves encoding and decoding messages to convey meaning and understanding. Effective communication is essential for conveying intentions, building relationships, and fostering collaboration.

What are the symbolic stages of Bruner's cooperative learning?

Answer: Following are the symbolic stages of Bruner's cooperative learning:

- Enactive
- Iconic
- Symbolic

What are the names of integration types?

Answer:

- Fragmentation
- Connection
- Nested
- Sequenced integration
- Shared integration
- Webbed
- Threaded integration
- Integrated
- Immersed integration
- Networked integration

What are guided and unguided inductive inquiry?

Answer:

Guided inductive inquiry involves providing students with some level of structure, support, or direction as they engage in the process of inquiry. This may include providing guiding questions, resources, or frameworks to assist students in making observations, identifying patterns, and formulating hypotheses.

Unguided inductive inquiry, on the other hand, offers students more autonomy and freedom to explore concepts or phenomena without specific instructions or support from the teacher. Students are encouraged to independently observe, experiment, and draw conclusions, fostering greater self-directed learning and critical thinking skills.

What is the dialogue method?

Answer: The dialogue method is a teaching approach where the instructor facilitates discussions and exchanges of ideas between students to promote active learning and critical thinking. It involves creating an environment where students can freely express their opinions, ask questions, and engage in collaborative problem-solving. Through dialogue, students not only learn from the instructor but also from their peers, fostering deeper understanding and perspective-taking.

What are the uses of cooperative learning?

Answer: Cooperative learning in the general method of teaching offers several benefits. It promotes collaboration among students, enhancing communication and interpersonal skills. By working together on tasks and projects, students develop a sense of responsibility and accountability, fostering a supportive learning community. Additionally, cooperative learning encourages active engagement and participation, leading to deeper understanding and retention of content through peer interaction and shared knowledge construction.

What are the milestones for 5 year old children?

Answer:

- Physical development
- Intellectual development
- Social development

How is a computer program helpful for teaching?

Answer: The computer program can serve as teaching tool. Students are using internet for surfing and information they get is very vast. If teacher is using these things to prepare a lesson with pictures etc. and using multimedia technology, these are also serving as a teaching tool. Graphic organizers are very good teaching methods teachers use because they store more information to mind rather than information provided in words.

What is immersed integration?

Answer: The immersed methodology focuses all curricular content on interest and expertise. With this methodology, integration takes place within the learners, with little or no outside intervention. Immersed learners continually make connections between their chosen topic of interest and subjects.

What are the facts about child development?

Answer: Facts about child development:

- At birth, a baby's brain already has 100,000,000,000 cells. This is about the same number of stars in the Milky Way. It is very interesting fact.
- Unlike the rest of a new baby's body. The brain is not complete at birth. In order to start working, the cells need to communicate with each other.
- As a baby starts to experience life, connections are made between cells- the more connections are there, the more the brain can do. Brain development continues till the age of 8. Brain develop very fast in the first year after birth. The process slowdown in the later years.

- A baby's brain develops so fast that by age two a child who is developing normally has the same number of connections as an adult has. By the three, a child has TWICE as many brain connections as an adult.

Why is group learning essential in development?

Answer: Group learning is essential in development because it fosters social skills, collaboration, and empathy. Through interactions with peers, individuals learn to communicate effectively, negotiate differences, and work towards common goals, mirroring real-world experiences. Group learning also promotes critical thinking and problem-solving as diverse perspectives are shared and integrated, leading to more comprehensive understanding and innovative solutions. Overall, group learning cultivates a supportive environment that nurtures personal growth and prepares individuals for success in various social and professional contexts.

What kind of steps can be taken to provide better learning development tools?

Answer: To enhance learning development tools, steps can include conducting thorough needs assessments to identify learners' requirements, preferences, and challenges. Additionally, investing in technology and resources that support diverse learning styles and promote engagement can improve effectiveness. Furthermore, regular evaluation and feedback mechanisms should be implemented to continuously refine and tailor learning tools to meet evolving needs and goals.

What is supplementary reading?

Answer: Supplementary readings are those which supplement your textbook knowledge. If children use to read some books other than textbooks, parents usually discourage them. Supplementary readings are very important tool for learning.

What is social development?

Answer: Social development refers to the process through which individuals acquire and refine social skills, behaviors, and attitudes that enable them to interact effectively with others and navigate social environments. It encompasses the development of communication skills, empathy, cooperation, and conflict resolution abilities, among others. Social development is crucial for building relationships, fostering collaboration, and contributing to a sense of belonging and community within society.

According to you, what is a shadow teacher?

Answer: A shadow teacher is a professional who provides one-on-one support to a student with special educational needs within a mainstream classroom setting. Their role is to assist the student in understanding and completing tasks, managing behavior, and promoting social interaction while ensuring inclusion and access to the curriculum. Shadow teachers work closely with educators and parents to tailor interventions and accommodations that meet the individualized needs of the student, facilitating their academic and social development.

What are 5 general proficiencies schools should adopt to maintain?

Answer: 5 general proficiencies schools should adopt to maintain

Critical Thinking Skills: Encouraging students to analyze, evaluate, and synthesize information to make informed decisions and solve complex problems.

Effective Communication: Providing opportunities for students to express ideas clearly, listen actively, and engage in meaningful dialogue to convey and receive information effectively.

Collaboration and Teamwork: Fostering environments where students collaborate with peers, work in teams, and learn to appreciate diverse perspectives to achieve common goals.

Creativity and Innovation: Nurturing students' creativity by encouraging them to generate new ideas, explore unconventional solutions, and apply imaginative thinking across disciplines.

Emotional Intelligence: Supporting the development of emotional awareness, self-regulation, empathy, and interpersonal skills to promote healthy relationships and well-being.

What are Piaget's learning theory stages?

Answer:

- Sensorimotor
- Preoperational
- Concrete operational
- Formal operational

How does problem-solving help in the classroom?

Answer: Problem-solving skills are essential in the classroom as they empower students to tackle challenges, apply knowledge, and develop critical thinking abilities. By engaging in problem-solving tasks, students learn to analyze situations, identify relevant information, and explore alternative solutions. This process fosters creativity, resilience, and confidence, enabling students to become active learners who can adapt to various academic and real-world scenarios effectively. Additionally, problem-solving activities promote collaboration and communication skills as students work together to address complex problems.

What are some activities for developing verbal expressions in school?

Answer: Activities for developing verbal expressions in school include debate clubs, storytelling sessions, poetry readings, role-playing exercises, and oral presentations. These activities promote critical thinking, creativity, language exploration, and effective communication skills among students.

What are the differences between direct instructions and discovery learning?

Answer:

Direct instruction: Direct instruction involves the teacher delivering content explicitly to students, often through lectures or structured lessons, emphasizing clear explanations and guided practice.

Direct instruction provides a more structured and efficient way to transmit information.

Discovery learning:

Discovery learning encourages students to explore concepts independently, often through hands-on activities or inquiry-based tasks, promoting critical thinking and problem-solving skills through self-discovery.

Discovery learning fosters deeper understanding and retention through active engagement and exploration.

What are the learner outcomes for problem-based learning?

Answer:

Learner Outcomes for Problem-Based Learning

How to plan cooperative learning tasks?

Answer: Firstly, you need to identify learning outcomes in the light of academic achievement, social skills as well as tolerance and acceptance of diversity. Once you have identified the outcomes, you need to identify the course content, which you are going to teach or you think that students need to learn or master. Then you need to think about the tasks. The tasks must be interdependent that could not be achieved by working alone. You need to identify the goal structure and plan reward system.

What is teacher control?

Answer: Teacher control refers to the level of authority and guidance that a teacher exercises over the classroom environment and instructional activities. It involves setting and maintaining expectations, managing behavior, and directing learning experiences to ensure educational objectives are met. Effective teacher control balances structure with autonomy to create a conducive learning environment.

What is language development?

Answer: Language development refers to the process through which individuals acquire and refine their language skills, including listening, speaking, reading, and writing. It involves the gradual mastery of vocabulary, grammar, syntax, and communication strategies, facilitated by exposure to language input and interaction with others. Language development plays a crucial role in cognitive, social, and emotional growth, enabling individuals to express thoughts, share ideas, and engage in meaningful communication.

What makes an effective integration curriculum?

Answer: An effective integrated curriculum seamlessly combines multiple subject areas, fostering connections and relevance across disciplines. It promotes inquiry-based learning, critical thinking, and problem-solving skills through real-world applications. Additionally, it

accommodates diverse learning styles and interests, providing opportunities for personalized exploration and deeper understanding.

What are Esteem needs?

Answer: Esteem needs, as described by Maslow's hierarchy of needs, encompass the desire for self-respect, recognition, and appreciation from others. These needs involve achieving personal goals, gaining confidence, and earning the respect of peers and society. Meeting esteem needs contributes to feelings of accomplishment, competence, and self-worth, facilitating psychological well-being and fulfilment.

Can you explain the relation and feedback?

Answer: Relation and feedback are closely interconnected in the context of communication and interaction. Feedback involves the exchange of information or responses between individuals or systems, providing valuable input for adjusting behavior or performance. The quality of feedback often influences the dynamics of the relationship, as constructive feedback fosters mutual understanding, trust, and growth, while ineffective or negative feedback can strain relationships and hinder progress. Therefore, fostering a healthy balance of open communication and constructive feedback is essential for nurturing positive relationships and promoting personal and professional development.

How is cooperative learning used in schools?

Answer: Cooperative learning is implemented in schools through various strategies such as group projects, collaborative problem-solving activities, and peer tutoring sessions. Students work together in small groups to achieve common goals, fostering teamwork, communication skills, and mutual support. Teachers provide structure and guidance to facilitate effective collaboration, ensuring that all students are actively engaged and contributing to the learning

process. Cooperative learning promotes social interaction, critical thinking, and academic achievement, making it a valuable approach in diverse educational settings.

What is symbolic stage of Bruner?

Answer: The final stage was “Symbolic” in which the learner develops the capacity to think in abstract terms. In this stage child can think abstractly. Algebra starts from grade six. It does not offer in earlier classes because the main reason is that its expressions are abstract. Small children cannot learn this.

What are emotional behaviors in a 5-year-old child?

Answer: Emotional Behaviors of 5 years old children:

- Self-assured
- Stable
- Home centred
- Likes to associate with mother
- Capable, of some self-criticism

What should be known about 5-7-year-old children?

Answer: Children aged 5-7 are typically in the early stages of formal schooling and undergo significant cognitive, social, and emotional development. They show increased independence, curiosity, and creativity, eager to explore their environment and learn through hands-on experiences. This age group demonstrates rapid language development, enhanced problem-solving skills, and emerging literacy and numeracy abilities. Additionally, they thrive on positive reinforcement, social interactions, and structured routines to support their growth and development.

What are the advantages of group discussion?

Answer: Advantages of group discussion:

- Enhanced learning
- Improved communication skills
- Critical thinking development
- Collaboration and teamwork
- Increased confidence

Why is integrated curriculum important?

Answer: An integrated curriculum is important as it promotes meaningful connections between different subject areas, fostering holistic understanding and relevance for learners. By incorporating interdisciplinary approaches, students can grasp concepts more deeply and apply knowledge across diverse contexts, preparing them for real-world challenges. Additionally, integrated curricula support personalized learning experiences, catering to individual interests and learning styles while promoting collaboration and critical thinking skills essential for success in the 21st century.

What are the essentials of cooperative learning?

Answer: The essentials of cooperative learning:

- How to form heterogeneous groups?
- How students are to work in their groups?
- How rewards are to be distributed?
- How much time is required?

What are the Group roles of orientation?

Answer: Group roles of orientation

- Task oriented role
- Process oriented role

What are the strategies of Cooperative Learning?

Answer: Cooperative learning strategies are:

- Think-pair-share
- Number heads together
- Jigsaw reading
- STAD (Student Teams Achievement Division)
- Academic controversy

What is cooperation?

Answer: Cooperation is working together toward shared goals, involving mutual support, collaboration, and shared responsibility. It fosters teamwork, synergy, and positive social interactions, leading to collective achievement and success.

What is immersed and networked integration?

Answer:

The immersed methodology focuses all curricular content on interest and expertise. With this methodology, integration takes place within the learners, with little or no outside intervention. Immersed learners continually make connections between their chosen topic of interest and subjects.

The network methodology is totally student-centered. It professes that only the learner can direct the integration process. The methodology professes that the learner knows their topic and can self-direct their focus on the necessary resources both within and across subject areas.

How are classroom discussions assessed?

Answer: Classroom discussions are assessed through various methods such as observation rubrics, participation grades, and structured assessments. Teachers evaluate students based on their contributions, critical thinking skills, active listening, and ability to support arguments with evidence. Assessments may also include peer evaluations or self-reflections to provide comprehensive feedback on discussion participation.

15th August 2023

EDU 301

Final Term 9:30 a.m

Short Questions

- ① Language Development of Child
- ② Self actualization
- ③ How does one know students are ready for Project Base Learning?
- ④ Step for Teacher Base Learning
- ⑤ Importance of Group interaction
- ⑥ Cooperative Learning

Long Questions

- ① De Bono Six Thinking Hats.
- ② Flow Problem Base Learning
- ③ Write social development Activities
Syntax for presentation method.
