SE601P - Quiz No.9

Date: 01 July 2025

Q.1 Which of the following is an example of a good class design guideline?

A. Avoiding code documentation and comments

B. Avoiding encapsulation and exposing class internals directly

C. Using composition over inheritance when appropriate

D. Having large classes with hundreds of lines of code

Q.2 Which of the following is a bad practice for class design?

A. Following the open-closed principle for class extension

B. Overusing global variables within a class

C. Having a class with only a single responsibility

D. Using appropriate access modifiers for class members

Q.3 Which of the following is a good guideline for class design?

A. Creating classes that adhere to the Single Responsibility Principle (SRP)

B. Using long and descriptive class names

C. Having a class with multiple responsibilities

D. Making all class members public by default

Q.4 Why is loose coupling considered a good design guideline for classes?

A. It enhances code reusability and modularity

B. It increases the chances of code conflicts and errors

C. It decreases the ease of testing and debugging

D. It reduces code readability and maintainability

Q.5 What is the purpose of the final keyword in the following Java code snippet? public class Calculator { public static final double PI = 3.14159; public double calculateCircleArea(double radius) { return PI * radius * radius; } public static void main(String[] args) { Calculator calculator = new Calculator(); double area = calculator.calculateCircleArea(5); System.out.println("Area: " + area); } }

A. It ensures that the Calculator class cannot be extended.

B. It specifies that the calculateCircleArea method cannot be overridden.

C. It indicates that the PI variable cannot be changed.

D. It prevents the area variable from being modified within the main method.
